C N Edgell	82	76—158	D E Warfield	52	51—103	

The totals have been received in two recent matches between Loveland and Warfield, of the local club, and the Seeds brothers, of Wilmington, Del., each man 15 shots, Standard target:

	First.	Second.		First.	Second.
W C Loveland	124	114	J E Seeds	96	101
G R Warfield	120	118	H B Seeds	96	95
	244	232—476		192	196—398

SHOOTING THE FOUNTAIN.—St. Louis, March 24.—Shooting of the fountain is a new style of rifle practive introduced in St. Louis by Julius Lange, and now exceedingly popular. It is a novelty. The range of shooting is about 60ft. and the target is an egg shell or small cork ball. The charm of the invention lies mainly in the fact that the target is entirely beyond the control of any one. The fountain is a small water pipe extending upward through a V-shaped basket, throwing a stream about the size of an ordinary lead pencil. The empty egg shell or cork ball is borne up and kept dancing in the air by the stream of water, and the irregular pressure of the water keeps it constantly in motion. Should the ball or egg shell be thrown to either side by the jet of water, it simply falls into the V-shaped basket, rolls to the bottom, where it is caught by the water jet and elevated again, all in less time than it takes to write it. The stream has a pressure sufficient to keep the egg shell at an elevation of from 5 to 6ft. from the bottom of the basket, sometimes diminishing so as to allow the object to come down almost to a level with the rim of the basket, then up she bounds and dances about merrily in mid air. A stop-cock regulates the pressure of the fountain. The sport is very fascinating, calling into action all the qualities necessary for good markmanship, and is now quite the rage here.

LAWRENCE, Mass., March 26.—The members of the Lawrence Rifle Club shot in a gale of wind to-day, but succeeded in making the following scores, 200yds., standard American target:

O M Jewell	7	8	9	9	9	10	8	9	9	10—88
C M Hill	8	7	8	9	8	10	9	6	8	5—78
J W Bean	9	6	10	10	6	6	7	6	8	9—77
D P Norris	9	7	6	6	7	5	7	4	10	10—71
C Frost	5	5	8	9	6	8	6	5	5	9—67
E A Rogers	6	6	8	4	7	9	9	5	7	4—65
F Clark	8	9	5	6	4	6	5	4	6	9—62
P Wood	9	3	8	8	7	4	4	2	2	6—58
C A Strout	6	6	9	4	3	3	9	3	7	2—52

JAMESTOWN, N. Y., March 26.—At the regular club shoot for medal yesterday, 200yds. off-hand, varying light, wind ranging in force, from 8 to 12 points (on the Wm. 22-15-45) from 9 o'clock. The scores were:

W H Ross	5	7	3	6	6	10	7	10	10	8—72
Dr L Hazeltine	7	9	4	5	10	6	10	8	6	6—71
E E Capple	4	4	10	6	8	6	7	10	3	10—68
R H Burns	5	4	5	6	8	9	6	3	8	9—63
N J Baker	4	6	6	10	4	5	5	7	6	5—58
Dr R N Blanchard	9	4	9	6	6	3	7	4	6	4—58
Dr A F Ward	7	5	6	3	6	3	6	7	7	4—54

ZERO.

NEWARK, N. J.—The members of Our Own Gun Club held their weekly shoot over the 25yds. range for the diamond badge on Thursday, March 24, with the following result: Snellen Team—Weeks 102, Dietzel 97, Gill 104, Weider 93, Smith 103, Drexler 101, Klem 91, Limberger 64, Jamenoes 61, Wilms 39, Snellen 118; total 1,004. Fred Freiensehner Team—Bertram 100, F. A. Freiensehner 97, Friedheit 104, J. M. Kiefer 93, O. A. Keifer 95, Condit 77, Kroeplin 90, Barder 63, Ochsner 71, Fred Freiensehner 110, Blank 95; total 995....The team selected for the match with the Rutgers Rifle Club is as follows: Dietzel, F. A. Freiensehner, Drexler, Bertram, Smith, Friedenheit, Weeks, Gill, Werder, Ferd Freiensehner; J. M. Kiefer and O. A. Kiefer subs. This match is looked upon to be an interesting one, as the clubs are well matched together.

WILLIAMSPORT, Pa., March 24.—Friendly contest between Mr. John D. Kelley, a member of the Williamsport Rifle Club, and Mr. Lou DuBois of Renova, Pa., at the latter place, 200yds., off-hand, standard American target, two strings, ten shots each:

First Round.

J D Kelly	10	10	10	10	10	9	10	10	9	8—96
Lou DuBois	9	10	10	9	9	10	9	9	10	9—94

Second Round.

J D Kelley	9	8	10	10	10	10	9	10	10	10—96
Lou DuBois	10	9	9	9	10	9	9	8	9	8—90

C. H. B.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y. city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

WAYNE GUN CLUB.—Philadelphia, Pa., March 26.—The Wayne Gun Club of Philadelphia held its first annual meeting and election of officers March 12. The following officers were elected: President, P. F. Yost; Vice-President, John Siddle; Secretary, Gus Hessler; Treasurer, Aibert Ulary; Field Marshall, Gus Hessler. The club was organized last September, and is now in a very flourishing condition. We may have a team in the FOREST AND STREAM match. Below find scores of practice shoots, clay-pigeons, one Ligowsky clay-pigeon trap, screened, and trap changed each bird, 18yds., cold, windy day:

Hugh Kane	1011011101—7	Sparks	0001010000—2
Sam Davis	1100010111—6	John Siddle	1001011000—3
P F Yost	0110101101—6	Al Whartenby	1101111101—7
Gus Hessler	1011111010—7	Wm Ulary	0101111111—8
Frank Hessler	0111001001—5		

Miss and out: Al. Whartenby 0, Thos. Scargle 1, Sam Davis 1, Geo. Scargle 2, P. F. Yost 6, Hugh Kane 3.

Match at clay-pigeons, 18yds.:

Albert Ulary	0011010110—5	Sparks	0000000000—0
Wm Ulary	1000110100—4	Frank Hessler	0101101011—6
Sam Davis	1001011011—6	Al Whartenby	1101111110—8
P F Yost	1001111011—7	Geo Scargle	0111011101—7
Graham	0010101001—4	John Siddle	0100010110—4
Jackson	1100100101—5	Thos. Scargle	1100011001—5
Gus Hessler	1101111011—8	Hugh Kane	0000011110—4

PHILADELPHIA, March 24.—A match was shot at Point Breeze track to-day between John L. Brewer and Miss Annie Oakley, of the Wild West Company. The terms were: 50 live birds, Hurlingham rules. Brewer—80yds., 1¼oz. of shot. Oakley—25yds., 1oz. of shot. Score: Brewer 44, Oakley 43. Forty-three is said to be the highest score ever made with 1oz. shot under the rules, and Brewer says it was the hardest match he had ever won. When he beat Bogardus he only killed 43.

OTTAWA, March 21.—In a competition for the Ligowsky clay pigeon championship badge at Carleton Place on Saturday, Thomas Glover defeated S. Glover, the former holder, scoring 17 to 16. W. L. Cameron, of this city, who was unsuccessful on Saturday, has challenged the winner. The series of competitions for this badge close in June. The total scores of the leading men are now: Cameron 31, S. Glover 29.

PROVIDENCE, R. I., March 17.—There was a gathering of more than a hundred at the grounds of the Narragansett Gun Club this afternoon, and some of the best shooting was seen that has been done on the grounds for a long time. The air was keen and the wind blew freshly, but there were but few who cared to seek the shelter of the club house, preferring to watch the shooting and keep run of the scores of the favorite shooters. From the right hand trap clay-pigeons were sprung all the afternoon, while the center trap sent blue rocks whirling in the air. The main event of the day was the shoot for the Rhode Island Kennel Club champion cup, presented to the club two weeks ago. The conditions call for 10 weekly shoots at 50 blue rocks and the man or men making the highest score at each shoot counts one point toward the cup, the holder of the most points at the end of the 10 weeks to be the winner. To-day there were 10 entries in the race and though the first 60 birds did not rise well the shooting was excellent. The interest throughout was intense and the score card was watched with the closest attention. Each man shot at 6 birds in turn and the shooting on the last six was trying to those with nerves, for a single slip might lose the race. The birds flew strong, going away with the wind in a very lively fashion. The scores were as follows:

E S Smith	45655—25	C M Sheldon	35464—22
P H Randall	04564—25	E W Tinker	35445—21
W H Sheldon	56354—24	W G Crandall	44264—20
C B Potter	05554—23	I Barney	12343—16
C C Gray	45546—22	C F Baldwin	33352—16

Messrs. Smith and Randall making the highest score were each credited with a point toward the cup.

In the meantime the 50 bird race (clay-pigeons) had been begun, and this also was a most exciting contest. The scores made were as follows:

C M Sheldon	5858434555—46	E W Tinker	3435445343—38
C M Adams	4544435554—43	C C Gray	5443245243—36
W H Sheldon	4544455534—43	I Barney	3254422355—35
P H Randall	5534434253—40	Geo Barney	3234123554—32
C B Potter	4554325435—40	E S Smith	1442423343—30
Geo Carey	3335544445—38	G T Naylor	2333311244—27

The next on the programme was a 25-bird (clay-pigeon) sweepstake:

C Sheldon	55554—24	Gray	54432—18
Randall	55344—21	G Carey	33355—17
Potter	45545—21	I Barney	22544—17
Adams	45444—21	G T Naylor	23543—15
W Sheldon	45444—21	E Smith	14424—15
Tinker	34454—19	G Barney	32314—13

A second sweep at 25 clay-pigeons was then started, and this found as many more ready to enter and shoot. The shooting in this was equally good, and Messrs. C. M. Sheldon, C. A. Adams and W. H. Sheldon tied on 22 birds out of 52, and divided first money, George Carey taking second. C. B. Potter third and C. C. Gray fourth. The scores were as follows:

C M Sheldon	34555—22	P H Randall	34255—19
C M Adams	35554—22	G Barney	23554—19
W Sheldon	55554—22	C C Gray	15245—18
G Carey	44445—21	I Barney	32355—18
E W Tinker	45345—19	E S Smith	23343—15
C B Potter	25435—19	G T Naylor	11244—12

CINCINNATI, O., March 25.—Never in the history of trap-shooting in this city had the shooters such difficult and puzzling wind to contend against as that of yesterday. From the opening to the close of the shoot it blew a perfect gale, and in consequence very few straight scores were made. The occasion was the dedicating of the East End Gun Club's team of fine championship pennant won by a team of five of that club the latter part of 1886. At precisely 12 o'clock noon the pennant—a handsome silk streamer some 16ft. in length, blue in color, and with the word "Champions" inscribed in gold letters thereon—was hoisted to the top of the 65ft. flagstaff (relic of the ill-fated steamer Bob Morgan) and three ringing cheers rang out from the throats of the 300 enthusiasts present. Following this the Columboo was announced by the president of the club, and all present were cordially invited to make themselves at home. The "Columboo," which up to yesterday had so much mystery attending it, is a grand spread of luncheon, comprised of roast wild duck, turkey, chicken, boiled eggs, sandwiches of all kinds, and no end of other catables, with appetizing salads and vegetables, hot coffee and tea, set off with cigars as a finis. There was an over supply of everything, and everybody appeared good-natured and happy. An attendance numbering, including the participants, some 500, with a sprinkling of ladies, witnessed the shooting. Barring the terrific gale which blew, the weather was fine; the good, warm sun shining, made what would otherwise have been a chilly day comfortable. The birds shot were the newly patented clay tongue Ligowsky clay bird, donated by that company to the shooters present to test. There was very little breakage attending the trapping, and the flight and breaking qualities are excellent, far superior to their old paper tongue bird. Many of the birds sprung, with the assistance of the wind, flew fully 100yds. Teipel, Briggs, Shott, Bando, Wick, Parker, Taylor and Miller especially distinguished themselves by their shooting, and all turned out fairly good winners. Over 3,000 birds were sprung, but only the scores made in the sweepstake matches kept for publication. Appended are the official scores:

Match No. 1—10 single Ligowsky clay birds: Al Bandle 9, Parker 9, F. Ferris 3, Wick 5, Taylor 7, Cole 5, J. E. Miller 8, Briggs 9, Bing 4, Bemis 5, H. Robinson 5, T. Herr 5, B. Teipel 9, Shott 7, Snider 5, Irwin 7. Bandle, Parker, Teipel and Briggs divided first, Miller won second, and Taylor, Shott and Irwin divided third.

Match No. 2—5 Ligowsky clay birds: Bandle 2, Parker 4, Cole 3, Briggs 3, T. Herr 4, Bemis 2, Teipel 3, Bing 4, Miller 2, McGraw 3, Cider 3, Irwin 4, Ferris 0, Wick 5, Shott 5, Robinson 3, Taylor 5, Snider 0. Wick, Shott and Taylor divided first, Parker and Cider in shoot off won second, Briggs and Teipel in shoot off won third, and Bemis won fourth alone.

Match No. 3—Single Ligowsky clay birds: Bandle 5, Herr 2, Bing 4, Ferris 3, Irwin 6, Taylor 5, Shott 5, Teipel 6, Parker 7, Jones 6, Wick 7, McGraw 5, Bemis 2, Briggs 5, Bruce 3, Miller 6, Snider 4, Cole 6, Gun 1, Cider 3. Wick and Parker divided first, ties on six each divided second, and Briggs in shoot off won third.

Match No. 4—7 single Ligowsky clay birds: Bandle 5, Taylor 5, Teipel 7, Bing 3, Briggs 5, Irwin 4, Bemis 4, Cole 4, Ferris 3, Parker 3, Bruce 4, Miller 7, McGraw 0, Herr 2, Jones 4, Robinson 2, Cider 0, Dick 2, Wick 4, Shott 4. Teipel and Miller divided first, Bandle, Briggs and Taylor divided second, Irwin, Shott and Cole divided third, after shoot off, and Bing and Parker, after shoot off, fourth.

Match No. 5—7 single Ligowsky clay birds: Bandle 5, Miller 4, Keno 3, Cole 3, Bruce, Briggs, 4, Wick 5, Parker 5, Bing 1, Stewart 3, Teipel 7, Shott 7, Ferris 2, Richards 4, Bemis 3, Irwin 3, Herr 3, Spring 4, Taylor 5. Teipel and Shott divided first, Bandle, in shoot off, won second alone, and Briggs, in shoot off, third alone.

Match No. 6—7 single Ligowsky clay birds: Teipel won first money, Bandle, Wick and Briggs divided second, Irwin and Taylor divided third, and Shott won fourth alone.

Match No. 7—Miss and out: Shott and Briggs divided on 7.

Match No. 8—Miss and out: Cheek and Irwin divided on 3.

NEW JERSEY TRAP NOTES.—R. Bustard and S. Cartwright shot a match at Paterson, on Tuesday, March 22, Bustard giving Cartwright two live birds. Each killed seven, and an agreement was made to shoot at double the number of birds for $100 in two weeks. The first match was for $50, and Bustard shot at ten while Cartwright shot at twelve.....The monthly shoot of the Essex Gun Club was held on Thursday at Erb's. Each member shot at ten live birds with the following result: R. H. Breintnall, 30yds., killed 10; C. M. Hedden, 28yds., 7; F. Class, 30yds., 8; Roberts' 26yds., 10; C. R. Hedden, 26yds., 7; Hunt, 30yds., 10; Freeman, 26yds., 5; Youmans, 30yds., 9; William Graham, 30yds., 9; A. Whitehead, 28yds., 7; Froche, 28yds., 8; Kinsey, 30yds., 6; Ford 30yds., 10; A. Herman, 28yds., 7; Dr. Nicholas, 30yds., 8; Thomas, 26yds., 4; Terrill, 26yds., 8; Hayes, 30yds., 8; Hawk, 28yds., 5; C. Heath, 28yds., 9. Referee, Mr. Charles Sworer. The third monthly shoot of the Essex Gun Association was held on Wednesday, March 23, at the grounds of the South Side Club. The conditions were teams of five men from each club in the organization to shoot at twenty clay birds each at 18yds. rise. The club trophy, a tall silver cup, embellished with seven guns, was won for the third time by the South Side Gun Club. The individual scores were as follows: Mountain Gun Club—Miller 15, Conover 16, Badgley 7, Councilman 7, McGall 7; total 52. Woodside Gun Club—Coeyman 7, Evans 6, Geoffrey 8, Maxwell 7, Shepherd 3; total 31. Nimrod Gun Club—Goldsmith 9, S. Castle 12, Cockefair 8, F. Castle 4, W. I. Beatty 8; total 41. East Orange Gun Club—Thomas Dukes 12, A. W. Wheaton, 13, H. S. Babbage 6, C. R. Hedden 7, L. Dents 9; total 47. Mountain Side Gun Club—Burnett 9, Bond 3, Clarkson 4, Seggins 16, Williamson 16; total 38. South Side Gun Club—Breintnall 16, Hunt 16, Whitehead 11, Edwards 13, O. Von Lengerke 16; total 72.

CHATHAM CENTRE, N. Y., March 12.—Match at Peoria blackbirds, Peoria blackbird trap, 18yds., new Long Island rules:

Milton Powell	1100111100—6	Geo Bogardus	0001010000—1
Jesse Goodrich	1010100101—5	Edgar More	0001001000—2
Bush Chichester	0100000000—1	Chas Minisee	0011100101—4
James Williams	1000000010—2	Frank Fowler	1011110100—6
Abe Van Alstyne	1000000000—1	Bert Lanoree	0101101111—7

CROWS IN A TRAP.—The South Side Gun Club, of Newark, is a live club. They have a roll of something like seventy members, many of whom are also members of other clubs, to wit, the Essex, the Jersey City Heights, New Jersey, etc. It is emphatically a clay-pigeon club, and the champion of Essex county in that particular, having won the county trophy and beaten all other clubs with whom they have shot. Thursday, the 26th inst., was their first attempt as a club at anything really alive. Before trying their skill at the fleeting bluerock or the lightning Antwerp, they proposed a larger living target. It was a members' subscription match, members putting down their names for a certain number of crows each. The crows arrived, 300 or more, and the boys were on hand about 2 P. M., with a large crowd of curious spectators, on their club ground, Emmet street station, where they have a commodious club house and all the paraphernalia for imitation target shoots. If any one expected to see extra lightning birds and extraordinary fine and quick shooting they were disappointed. The *Corvus* is not that kind of a bird, at least not from a trap, though he evidently gets away as fast as he can. As the trap is sprung he throws his eye quickly first on one side then the other, makes a clumsy jump, throwing out one leg with a quawk and a look behind, saying, "Good-bye, this is no place for me," and rather lazily flops off, generally direct away from the trap, but he affords an easy mark for a pigeon shooter. Nevertheless, the boys had considerable fun, and some of the farmers were evidently much pleased at the destruction of what many believe to be a pestiferous varmint. The following are the sweeps, Hurlingham rules, with exception that the first two sweeps were at 25yds. instead of 30yds., and no handicapping of guns; all ties divided throughout; Jacobstaff as referee had an easy job. Many of the birds dropped dead just out of bounds, notably Old South Paw's; he used No. 8 or pigeon shot, where No. 6 or seven would have been better. Some lost their birds through laughing at the comical action of the creatures or the ludicrousness of the situation.

First sweep, 25yds.:			
Brintnall	11122—5	Stringer	02212—3
Phillips	22210—4	Paul	02020—2
C R Hedden	10001—2	H Unger	11222—5
O Von Lengerke	12101—4	W Siegler	01112—4
Old South Paw	00212—3	C Leroy	11211—5
D D Terrill	02110—3	C M Hedden	12221—5
White	12210—4		
Second sweep, 25yds.:			
Brintnall	22211—5	Siegler	11112—5
Phillips	11111—5	Leroy	11110—4
C R Hedden	02221—4	C M Hedden	21111—5
O Von Lengerke	21121—5	Stile	01120—3
Old South Paw	01011—3	Fisher	20000—1
White	11222—5	Becker	21111—5
D D Terrill	11201—4	I H Terrill	11020—3
H Unger	21101—4		
Third sweep, 30yds.:			
Brintnall	11111—5	C M Hedden	12112—5
Phillips	12111—5	Still	10001—2
C R Hedden	22110—4	Fisher	00001—1
O Von Lengerke	10011—3	Becker	10112—4
Dr. Nicholas	22112—5	I H Jewell	22111—5
Unger	11121—5	Beatty	12001—3
Siegler	11022—4	Stringer	00010—1
Leroy	21101—4	McDougall	20020—2
Fourth sweep, 30yds.:			
Brintnall	10111—4	Siegler	11111—5
Phillips	00110—2	Leroy	21222—5
C R Hedden	11012—4	C M Hedden	21111—5
L O Hedden	00211—3	Still	02022—3
Unger	20211—4	Beatty	20220—3
Fifth sweep, 30yds.:			
Brintnall	1101—3	C R Hedden	1221—4
Still	2101—3	O Von Lengerke	1221—4
Unger	1220—3	Siegler	1012—3
Leroy	1012—3		

Last sweep Oscar Von Lengerke and Leroy shot with only one hand. C. M. Hedden killed his 20 birds straight, and may well be crowned champion crow shot of the State. Brintnall followed close after with 19, attributing his one miss to a single shell he had of powder which is, he says, "slower than a crow." Crow shooting from a trap may do once in a while for variety, but it is poor business and far from sportsmanlike, and they are good for nothing when dead. Since the Audubon Society's philanthropic movement even the lady hat trimmers won't purchase them.—JACOBSTAFF.

PETTICOATS AT THE TRAP.—*Editor Forest and Stream:* Mrs. W. B. Kennedy, otherwise known as "Mexis, the Rifle Queen," shot on exhibition here the past week, and although the shotgun she used was one she had never seen before, and one entirely too heavy for her, yet she performed some very difficult feats, which won for her the applause and admiration of all those who witnessed it. The biros were thrown in a high wind, the fourth notch was used and Ligowsky clay-pigeons were sent all over the field for all they were worth. At 18yds. she broke 17 out of 20 singles. At another time she broke 15 consecutive blackbirds without a miss. With her back to the trap she broke 4 out of 5. Calling "pull" with gun lying upon the ground she broke 5 straight. Calling pull with gun upon the ground 15ft. away broke 4 out of 5. Increasing the distance to 25ft. she broke 4 out of 5, and standing 40ft. from the gun she broke 5 consecutive birds without a miss, running and picking up the gun after the trap was sprung. She is still suffering somewhat from injuries received in a railroad disaster in the West in January last. Her style of shooting is easy and graceful, and the way she "snuffs out" Peoria blackbirds and clay-pigeons is proof that her birds are well centered. Her shooting was witnessed by a large crowd of spectators.—C. C.

BROOKLYN, March 23.—The regular monthly shoot of the Washington Gun Club took place to-day at Dexter's Park. On account of the strong northwest wind blowing, many birds got away. S. Newton 25yds., A. C. De Graw 25yds., and J. Simpson 25yds., killed 6 out of 7, the latter winning the club badge on the shoot off.

BROOKLYN, March 15.—The Ivanhoe Gun Club, of Ridgewood, held their regular monthly shoot for the club badge to-day. The scores were:

W Dean	11111—5	A W Rollo	11110—4
E Dean	11110—4	J M Lawrence	11011—4
C H Bund	01111—4	A Killian	11101—4
E Southard	11110—4	H B Southard	10111—4

A sweepstake was then shot and G. H. Litchfield and B. Jones divided the prize, having made a clean score.

SAN FRANCISCO, March 13.—The pigeon shooting contest arranged by the Golden Gate Gun Club to take place at McMahon's Station to-day, was postponed because the ground was not in good order. Members of the club made improvements upon it and decided to hold the first club shoot of the season next Sunday. This year five traps will be worked instead of three as last year. The first tournament of the season will be held on the first Sunday in April, the entrance fee to which is $2.50. The contest for first prize will be 15 pigeons at 18yds. rise, and second prize ten pair doubles at 15yds. rise. There will also be a series of sweepstakes, single and double matches.

TORONTO, March 25.—Nearly a score of members of the Toronto Gun Club met at Charley Agre's place to-day and shot a number of sweepstake matches with the following result: First sweep at 9 birds each—D. Black 9, W. Brigg 7, G. Pearsall 6, D. Blea 5, E. LeRoy 4, G. Leslie 4, C. Ayre, 4, H. George 3, W. Jefferson 3, J. Ayre 3. Second sweep, at 12 birds each—B. Black 9, C. Ayre 9, H. George 8, G. Pearsall 7, E. LeRoy 6, W. Jefferson 6, J. Ayre 5, B. Pearsall 5, G. Leslie 4, D. Blea 4. Third sweep, at 12 birds—D. Blea 11, E. LeRoy 10, H. George 10, J. Ayre 6, W. McDowall 4, G. Leslie 4.

BREWER VS. GRAHAM.—There is considerable excitement in regard to the Brewer—Graham match to take place on the J. C. H. C. grounds, Marion, N. J., on the 31st, if Brewer is not again ailing; also in the match between Cannon (the one-arm shooter) and Geo. Davis, on the same grounds, the 21st of next month. Both contestants, we understand, are training birds for the occasion, and it will be a close thing.—JACOBSTAFF.

Give distance and target when you send scores.

The FOREST AND STREAM appears this week with four additional pages, making thirty-two in all. It has always been the leading journal with all lovers of the rod and gun, and the increase of four pages proves its willingness to please all patrons.—*Wellsville, N. Y., Reporter, March 5.*

C. E. WILKINSON, manufacturer of medals and badges, whose advertisement has appeared in our columns continuously for a number of years, has lately removed to No. 42 John street, more commodious quarters, and is prepared to fill orders for medals, etc., of all descriptions. He will furnish designs on application.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A CRUISE OF THE WASHINGTON C. C.

PART I.

OFF for a cruise! Hurrah, boys! Shake off the languor born of a twelve months' indoor application, come with us and breathe deep drafts of the ozone of the woods and waters. Throw off the conventionalities of city life with your frock coats and standing collars. Cast care aside as you fling the pen on the desk, and donning a blue flannel shirt and knickerbockers, prepare to unbend and come down, or rather rise up, to the enjoyment of the freedom of the demi-savage.

We were seven—most of us just beginning to feel, in the want of appetite and the disinclination to active exercise which follow too constant application to desk work, the necessity for a change—for an unbending of the tightened bow. Spring had come; the merry month of May was at hand. The canoes were brought out, inspected, duly scraped, caulked, varnished and their fittings overhauled. Sails were bent to yards, and club and private flags drawn from dusty resting place; and then one fine Monday afternoon, the 3d of May, the little fleet of white-winged crafts stood prettily out from the boat house, and down the stream from Georgetown, with a cloudless sky overhead, and the rippling wavelets, stirred by a gentle breeze, glinting and flashing under the rays of a declining sun.

The Petrel, manned by the youngest of the party—the "boys" as we dubbed them—was the first into the water and off; then the Mermaid, a heavy centerboard boat, sailed by an old navigator who had sailed round and about the world in many sorts of crafts before finally settling down to canoeing; next the Iola, a graceful but skittish creation of the Wisconsin boat builder's skill, sailed by an excise man, with a novice in canoeing acting, somewhat passively it is true, as crew; and lastly, the commodore in the Meteor, with Corporal Hatch as his crew.

A light wind and an ebb tide were the accompaniments when we started, and we sailed free to Long Bridge. The four canoes danced merrily over the water until that was reached, when the wind failed altogether and the fleet lazily drifted for a half hour or more, when paddles were reluctantly taken out and leisurely plied until Alexandria was reached. A short stop here by the Lola and Meteor and we are off again, determined at least to get out of hearing of the hum of the city before making our first camp.

As we start off the paddles are again brought into requisition, but only leisurely used, for most of us want to enjoy the beauty of the evening with as little distraction as possible. And it is here that the novice begins to appreciate the delights of canoeing. Seated with ease in the bottom of the boat, which rests as lightly as a feather on the surface of the stream, and by a series of gentle strokes impelling it quickly through the water while facing in the direction of his progress, he can admire the beauty of the scene presented to his gaze. Above him the rich azure of the sky; below him, but so near that he can lave his finger tips, the broad waters of the grand Potomac, swelling up from the sea without a ripple to disturb the glassy surface; on either side the gently undulating and wooded banks of the mighty river—over all a stillness as refreshing to the tired nerves as a soft couch to a weary traveler.

For an hour or more was this scene presented to the view, every bend in the river unfolding new beauties, and then it suddenly changed and another feature of canoeing was presented to the cruisers. The sun had hardly sunk beneath the horizon and the echoes of the sunset gun discharged at Arsenal Point had not ceased reverberating along the wooded shores, before the face of the river changed as if magically. A sunset breeze had sprung up, coming at first in gentle puffs that made cat'spaws on the water, but gradually strengthened until it blew with a vigor and steadiness that roughened up the stream.

It had been our purpose when we found that paddling was the order of the day, to camp just above Fort Foote, but this breeze, which overtook us just as we reached that point, was not to be lost, so sails were hastily run up and soon we were scudding along at a lively rate.

The sudden change from the quiet of the moment before was marvelous, and acted like a stimulant. In two minutes, the four canoes, which had been drifting along so closely together that a blanket might have covered them all, were widely dispersed and, strange sight to the novice, seemed to be pointing each in a different direction.

The Mermaid quickly plunged ahead, standing well down the river, the Iola took second place, with the Meteor and Petrel close together behind. After a half hour's sail the Iola stood in to shore, and the crew, keeping a good lookout "for'ard," picked out a promising landing-place. Here the craft was beached, and a shrill "whoop-pee" notified the nearest of the fleet, who signaled the others, and all came ashore in fine style just as night was setting down. We had reached Broad Creek, making our first run of about four hours.

The boats were hauled up or anchored and made secure, one man started a fire, others set up the tents, others gathered wood, and the cook getting out the provision chests and kitchen utensils set to work at our first *al fresco* meal.

Our first night out. What recollections will in the future linger round this first night out; the novelty of it all; the bustle of landing, gathering of drift wood for the fire, putting up of tents, unpacking of provisions and blankets and other dunnage, the cooking itself, and the supper round the camp-fire!

The camping place, hastily selected after landing, was at the mouth of a charming ravine, the steep slopes inclosing which were covered with fine trees in all the freshness of their spring dress. Where the ravine debouched on the beach the tents were staked, facing up the gully, and 20ft. away, at the foot of a grand monarch of the forest, the fire was built.

How readily a properly-constituted man can adapt himself to circumstances! Here were seven of us, mostly fresh from office work and from all the conventionalities of city life, suddenly become demi-savages, and dropping as readily into the ways of the child of nature as if to the manor born. True canoeists most of the party were—ready and willing, aye rejoiced, to rough it for the time being.

Imagine the supper! Here is the bill of fare: Oxtail soup (piping hot), potted corn beef, hard-boiled eggs, hard tack, pilot bread, raisin bread, cheese, tea.

Canned ox-tail soup drank out of tin cups, which afterward served as the vehicle of communication between the teapot and our mouths, chipped corn beef, hard-boiled eggs, bread and cheese, and last, but by no means least, a raisin loaf contributed by the captain of the Mermaid and bearing the encouraging indorsement of his boarding-missis as to its freedom from dyspepsia-inducing qualities—the last link between our present state and the civilization we had left.

A somewhat rude meal, but then, think of the accessories! Picture the dining-room in which we ate, more spacious even than the famed baronial halls of feudal times, the fresh greensward the best of carpeting, the blue vault of heaven for a roof, the rugged trunks of trees, gilded by the light from a rare wood fire, whose many tongues of flame shooting up united in one grand pyramid and leaped madly on high as if in an effort to overlook the forest for columns supporting the dome.

And the after-supper siesta, when lounging in picturesque attitude about the fire, the song and the story went around, enlivened with hearty laughter, while those of us who were smokers lay dreamily puffing the blue smoke from our lips and drinking in deep drafts of peaceful enjoyment. Can any other sport conjure up anything that will more strongly appeal to the lover of out-of-door life. And then, when a yawn or two proclaimed the approach of the drowsy god, with what assurance of fresh, invigorating sleep we sought the shelter of our tents. Here, on couches made by strewing the ground with young branches of trees and then dried leaves, over which rubber cloth and oilskins were spread to keep down the dampness, we stretched ourselves, and each man, wrapping a blanket about him, wooed slumber, lulled by the ceaseless swish of the waves on the beach.

The Vice-Commodore, skipper of the Mermaid, and the "boys" occupied one large tent, the skipper of the Iola slept solus in that craft under a pretty boat tent that was as comfortable as it was picturesque; and the crew of the Iola, with Corporal Hatch and the Commodore, occupied a second marquee tent. No watch was set, but occasionally one or other of the party got up and replenished the fire.

Before sunrise the party was up and stirring, and while the cooks prepared the breakfast the captain and crew of the Iola, after some calisthenic performances to get the stiffness out of their joints, stripped and took a plunge into the river, and the Petrel's crew saluted the rising sun with their heavy artillery.

How invigorating and freshening the atmosphere was in the early morning. How delightful the *al fresco* breakfast eaten in the midst of fresh green woods, where the air was laden with the perfume of the dogwood blossoms and melodious with the carolling of the birds. Our breakfast menu was simple: Fried beef, hard-boiled eggs, pilot bread, cheese, coffee and tea; and this disposed of the party set to work with eagerness at the preparations to get under way and take advantage of a fresh breeze.

The glorious freedom of it all, unhampered by the restraints of city life, and unflecked by care for the day or morrow, not only conduced to, but compelled mirth, and the song, the shout, the hearty laugh following a mirth-provoking sally, kept the air constantly ringing. This is the history of one day's cruise and one night's camping, and in its general features is the story of every succeeding day and night of the cruise, for the abandon of the party grew as the days passed, as the appetites increased, and their lungs filled with the ozone of the woods.

Tuesday, May 14, 1886.—About 7 A. M., the fleet got off. Destination, Mount Vernon. Wind southwest. Tide fair. Bright sunshiny morning and the sky flecked with fleecy clouds which had the promise of plenty of wind in them. The Petrel took about a half mile start, followed by the Iola, with Meteor and Mermaid standing out close together about five minutes later. The Mermaid demonstrated her superiority as a sailer from the outset by standing down almost in the eye of the wind, while the others were compelled to tack back and forth across the river. The Iola developed a particular crankiness, refusing to hold up into the wind on the starboard tack, making distance at the expense of speed, her captain being obliged to hold her up in the wind until she would almost lose steerage way. The Commodore sailed the Meteor quite close, but could not do as well as the Mermaid. The Petrel sailed but little better than the Iola, but her jib helped her to come about so that she beat the other in running off on a new tack.

The fleet under sail made a pretty picture, and as the little boats darted along hither and thither, careening gayly over the roughening water, parties of all sorts and sizes thronged the river, we could see people come to the sides of those vessels to gaze at and speculate about us, and we often got a hail from them, frequently with remonstrances against our foolhardiness in venturing out in such shells. They did not know the sea-going qualities of canoes.

Presently those qualities were put to the test, for the breeze soon increased to half a gale and blew directly up the stream and, meeting an ebb tide, rapidly raised a commotion on the surface of the water. From far down the stream, the white horses came racing up to meet our little craft, and as they broke over bow or gunwale to drench us with spray, still we rode merrily on, now plunging into the trough of the sea, and now rising lightly to its crest and shaking the bright water from the bow as a mettled horse would shake his mane.

As we passed Fort Washington the waters looked angry, and such of the canoes as sailed close to the shore could see scores of people watching our progress interestedly—many of them doubtless, in the expectation of seeing us blown out of the water or overturned. But we kept on without accident and reached Mount Vernon at 10:30 A. M., after three hours and a half of pretty sailing, just exciting enough to keep the nerves at an exhilarating tension.

The Mermaid reached a landing an hour ahead of the rest of the fleet, the others coming in close together. The Iola had dropped two or three miles astern near the start, it being found necessary to run her in shore to fasten the peak of her mainsail, and when in to wait a quarter hour or more while the mate labored to get an eccentric pipe in working order, but in the freshening breeze she had gradually worked up to the others by going clear over to the other shore on her starboard tack, so as to get a good head down the stream and then making exceedingly long legs down the river. She overhauled the Petrel, which had been outsailed by the Mermaid and Meteor, and sailed past her on the last tack across the river for Mount Vernon, and had there been another mile to go, would undoubtedly have caught up with the Meteor, which landed about five minutes ahead of her.

At Mount Vernon we had lunch, the Vice-Commodore officiating as cook and doling out to us steaming hot Boston baked beans, with plenty of hard tack, pilot bread with cheese, and coffee. Note was made of the fact that the crew of the Iola, who had no appetite when leaving Washington, disposed of four plates of beans, and in view of this tendency to devour the supplies, the commissariat department concluded to add to their stores, and laid in four dozen eggs, some potatoes, and in addition had their minds relieved by the present of two monstrous fresh-caught shad, from the ex-Vice Commodore of the club, who came down to meet the fleet at Mount Vernon.

About 2 P. M. the fleet again put out, and now the novice of the party got his first experience in what canoe sailing really was. He also, as he afterward confessed to his skipper, first learned on this sail the full force of the phrase "Look out for squalls." When we left Mount Vernon the wind was still southwest but "puffy," with a head wind, tide and heavy sea. The skipper of the Iola cautioned his crew to look out for squalls, whose approach could be noted by the flattening out of the waves off to windward. The crew kept a lookout. He so soon became impressed with the necessity of "keeping an eye to windward," another nautical phrase the application of which he realized after a while. Truth to tell, he soon found abundant occupation for his "weather eye." He kept it open to windward, as well as the drifting spray would permit him, but due regard for truth compels the historian of the cruise to say that that was not much more than half the time. His signal of "squall coming" became very monotonous after a while, for the squalls came thick and fast until finally they settled down into a hard blow that sent the whitecaps tearing fast in an exciting race.

The Petrel had an early start and kept in advance for a long time; the Mermaid did not leave until the rest of the fleet had been standing off and on for half an hour; then the solitary cruiser pulled up anchor and mounted the deck of his vessel, and sailing right up almost in the eye of the wind, passed the other boats in quick succession. He went flying almost past every sailing vessel on the river. The Iola, second at the start, soon dropped to the rear, and the crew of that perverse beauty had an excellent opportunity to watch the maneuvers of the rest of the fleet. The Meteor behaved splendidly on this trip, being second only to the Mermaid. The skipper of the Iola, sailor-like, cast around for some Jonah on whom to fix the blame of the natural perversity of his craft, and hit upon the cranky pipe carried by the crew, and once this idea was adopted he quickly spread distrust of the unfortunate pipe among all the cruisers. There was no question but the Iola behaved badly. She would sail only on one tack and consequently fell off on that. The climax was reached when abreast of Pohick Creek. For an hour her skipper tried in vain to weather the northerly jaws of the creek's mouth. Tack after tack was tried, but no progress; time after time the angry looking waste of waters was crossed to starboard and to port, but the Iola invariably fell short of crossing what seemed to be a "dead line." Now she would run off on the starboard tack, dipping her nose under wave after wave, tossing the spray back on her crew, and giving him a succession of cold shower baths at intervals of fifteen seconds, with growing promise all the time of an immediate plunge bath, until the leeward shore was reached, when she would come about and head off to windward, and wallow in the trough of one sea after another, all the time shipping water until her cockpit was ankle deep. Then when she had twice crossed the river it would be found that she was not more than ten yards below her starting point. At length her skipper became disgusted, and finding that she was making water and that the rest of the fleet were out of sight down the river, ran in to shore and prepared to make camp.

The Iola, her cockpit ankle-deep with water and her stowed cargo soaked through and through, was hauled ashore, bailed and sponged out. Then her forward hatch was opened and found full of water, and the dunnage afloat. She was turned over, the hatch emptied and dried, a fire was built and the wet blankets and clothing hung up to dry. Then it was discovered that the camp had been made on swampy ground. The crew also made a discovery—that the Mermaid had carried off the shad presented for dinner. The more the crew pondered over this the hungrier they became. The spectacle of those shad, cooked in all their juicy lusciousness, was projected upon the canvas of his imagination with exceeding great clearness, and as he pictured the other fellows eating and enjoying them in his absence, his feelings became too deep for speech. Finally, the breeze from down the river seemed to waft to him from the camp, we supposed already formed below, the odor of broiled shad. He stood this as long as he could, but at last suggested that he and the skipper 'up stakes' again and paddle down to the other camp. Quickly the skipper whose mind harbored similar thoughts, agreed; the dunnage was again stowed, the fire trodden out, the Iola launched and propelled by a "poplar breeze," making headway down the stream. It was slow work and the paddling against a flood tide seemed hard work, but just as it was getting dark the camp-fire came in sight and a half hour later a "whoop-pee" notified the party on shore of the approach of the Iola. A hearty welcome was extended to the belated ones, and to their eager inquiries, the response came that the shad had not yet been cooked.

This was Camp Silsbee, located on Holland's Point, and it was the most delightful camping place of the cruise. A low sandy beach led from the water to a charming glade, backed by wooded hills. The tents were already up and dinner was soon ready. It consisted of fried shad, boiled eggs, bread and cheese, raisin loaf and tea; enjoyed none the less by the skipper and crew of the Iola because of the recollection of how near they came to missing this camp-dinner.

After dinner there was a pleasant hour about the camp-fire, some of the party smoking, and the rest getting off a few fireworks, and then all retired to their couches and to refreshing slumber.

PATENTS AND PATENT LAWS.

Editor Forest and Stream:

The communications resulting from the claims recently made upon the canoeists of this neighborhood under the Griswold Reefing Gear patent have suggested to me that a few general remarks on the subject of patents may be not only interesting to many of the community which you represent, but also useful as clearing away some of the misty ideas which prevail.

In the first place a patent is not a bare monopoly, as is too often assumed, but a simple contract between an inventor and the Government, with a valuable consideration on each side. The inventor gives the public the benefit of his discoveries, and the Government in return secures to him the sole use of the invention for a certain limited period, at the expiration of which the community become possessed of the benefits. In order to obtain this contract the individual must meet some requirements, which are best stated in the exact words as follows:

"Sec. 4886. Any person who has invented or discovered any new and useful art, machine, manufacture or composition of matter, or any new and useful improvement thereof, not known or used by others in this country, and not patented or described in any printed publication in this or any foreign country, before his invention thereof, and not in public use or on sale for more than two years prior to his application * * may * * obtain a patent therefor."

This passage prescribes the elements on which a patent is founded, and they must be all and severally present to insure its integrity, for if a single one is wanting the claims of the inventor fall to the ground, and this is so whether the absence of one of these requisites is discovered during the preliminary proceedings or after a patent has been issued for the supposed invention.

As a preliminary to the issuing of a patent, the existence of the above conditions is ascertained by the affidavit of the inventor and the examinations of the Patent Office. But the averments of the inventor freely subscribed to, often in complete ignorance of their nature or contents, and, I regret to add, sometimes in wilful ignorance, and such hasty examinations as are possible by the inadequate and underpaid force at the Patent Office often enables improper and mischievous patents to slip through. This, however, is not the fault of the system, and when a patent has once been issued—the contract entered into—it must be observed until recalled by proceedings equally as formal, equitable and strictly observed as those which are supposed to govern its granting, and these proceedings can be had only in a court of the United States.

Among the different reasons for annulling a patent that of want of novelty is by far the most common, and is the one which is put forward, and apparently on good grounds in the reefing gear case; and if we examine the passage from the statute carefully we find several ways indicated by which this defense may be established. We may show that the device was known or used by others in this country, and before its alleged discovery or invention. If it had been used in this country the knowledge of it would be concomitant. If it had been used in a foreign country this fact would be no defense by itself, but if knowledge of such foreign use existed in this country, this knowledge is competent. From this we see that the use by Mr. Stephens may have been subsequent to Griswold's invention of the device, although prior to his application for a patent. So with regard to the Chinese sails this use is of no avail, but a comprehensive knowledge of the use undoubtedly existed in this country before the date of the invention, of which date we are as yet in blissful ignorance.

In the case of printed descriptions these will avail, if they were published sufficiently early, without reference to place of publication.

The defense of "public use or sale for more than two years prior to application" is on the ground of abandonment, or want of diligence in demanding a patent.

Patents which are improperly issued are undoubtedly a source of serious public inconvenience and expense, but the public is itself largely to blame for their existence. Any plan for reducing the expenses of the Patent Office has always been sure of popular approval, and the result is a force totally inadequate, both in numbers and ability, for properly transacting the necessary business of the office, and this in the face of the fact that this is one of the very few departments of the Government which is not only self-supporting, but which turns in a large surplus each year to the treasury. How many people know that the Patent Office has—since it ceased to support the agricultural department—paid into the treasury some three millions of dollars?

Only allow the inventors to have the use of the money which they themselves supply, and a larger part of the troubles arising from improper patents will disappear. W. F. HAPGOOD.

NEW YORK CITY.

NEW CANOE CLUBS.

Editor Forest and Stream:

On Feb. 7 the Belleville Athletic Club elected the following officers: Pres., H. V. Cole; Vice-Pres., G. W. Watson; Recording Sec., C. L. Denison; Corresponding Sec., G. P. Douglass; Treas., B. H. Timpson; Executive Committee, G. W. Watson, G. H. Casebolt, W. T. Clark. This club has a membership of thirty, and the increased interest in canoeing is very marked, as only a year ago there was not one, where now about one half of the members (as well as all of the officers) are canoeing and boating men. Last year we held two regattas and a series of sailing races for the championship flag of the club, which was won by C. P. Douglass in canoe Old Ironsides. We have a large house on the Passaic River where all canoeists are welcome.

GEO. P. DOUGLASS, Cor. Sec. B. A. C.

BELLEVILLE, N. J., March 28.

Editor Forest and Stream:

On March 19, 1887, the Poughkeepsie C. C. was organized, with constitution and by-laws similar to the New York C. C. The officers are; G. E. Buckout, Com.; M. G. Du Bois, Vice-Com.; Dr. H. F. Parker, Sec. Treas. A club house is soon to be built, and when finished a welcome will be extended to all canoeists. Every member of the club is to be a member of the A. C. A., and all races are to be held under their sailing rules. The club now numbers eight active members. Although tardy in organizing we hope to have some lively contests and cruises to report. Any information in regard to navigable waters, hotels, etc., will be cheerfully furnished. DR. H. F. PARKER, Sec.-Treas. P. C. C.

A meeting was held in Peterboro, at which was organized the Otonabee C. C., the name being given in honor of the stream which flows through the town to Rice Lake. The officers are: Com., John Miller; Vice-Com., H. W. Stock; Sec., A. E. Dixon; Assistant Sec., A. E. Scott; Treas., Gordon Smith; Managing Committee, W. H. Darmon, A. E. Thompson, A. H. Turner and W. H. Mill.

A NORTHERN DIVISION.

FOLLOWING out the new plan of reorganization by divisions the canoeists of Lake Ontario and the St. Lawrence have organized a Northern Division, with the following officers: Vice-Com., Col. H. C. Rogers, Peterboro; Rear-Com., Col. S. D. Fairtlough, Kingston; Purser, J. D. Collins, Peterboro; Executive Committee—D. B. Jaques, Toronto; A. D. F. McGachen, Lindsay; Dr. C. M. Douglas, Lakefield; Colin Fraser, Toronto; F. S. Rathbun, Deseronto; Mr. Minus, Bobcaygeon. The following clubs were represented at the meeting on March 19 at Peterboro: Lindsay, Lakefield, Galt, R. M. C. of Kingston, Bobcaygeon, Peterboro, Otonabee, Toronto, Brockville, Ubique. A meet will be held at Stony Lake from Aug. 1 to Aug. 12, and a special invitation is extended to canoeists from the United States.

A. C. A. MEMBERSHIP.—Trenton, N. J., March 26.—*Editor Forest and Stream:* The following named gentlemen have applied for membership in the A. C. A.: H. C. Littlefield, J. T. Norton, John F. Rathbone, G. Lundburg, C. V. Winne, Dr. W. J. Nellis, Albany, N. Y.; A. H. Forbush, C. H. Worcester, Boston, Mass.; John V. L. Pierson, Bloomfield, N. J.; Irving E. Bigelow, Worcester, Mass.—WM. M. CARTER, Sec'y A. C. A.

THE SECOND CRUISE OF THE PILGRIM.

PART III.

THE weather cleared at last, the wind came out northwest, we hauled into the club house and filled the water tank, and got underway for the east. We ran up to Little Chebeag, through Chandler's Cove, across the inner end of Luckse's and Broad sounds, between Birch and Horse islands and Upper Flag Island and Thrumbcap into Pott's Harbor. It was only 10 A. M., the wind was light, the tide flood, and we kept on north of Haskel's Island for Harpswell Sound. The passage around the lower end of Harpswell Neck is narrow and beset with rocks. When we arrived at the worst part of it the wind was not sufficient to drive us against the strong flood tide that was setting to the westward north of Haskel's, and we had to send the boat ahead and tow the Pilgrim very hard, or she would have been swept upon the ledges to the west of her. It was a close shave, and we were very anxious till we reached the sound to the eastward of Ram Island buoy. Here it fell flat calm and we let her drift to the northward, thinking of a haven at Harpswell, while we examined and admired the pretty cottages and hotels along the neck. Haskel has a high wooded hook that projects toward the northeast and forms the cutest little harbor behind it, where several small boats were lying. A cottage stands among the trees, swept by the wind from all sides, and the view must be magnificent. I coveted that little paradise, contrary to the law, and wondered if the owner was a stolid, unromantic fisherman, or one of nature's adorers. There was not water enough in the cove for the Pilgrim, so I did not go ashore to inquire the price, but sighed as the castle of my sudden fancy faded in the misty blue. As the sun drove us into the shadow of the mainsail, and a little steamer puffed past on her way up the sound, for a moment I wished for steam power, then I banished the idea as unworthy a true yachtsman and made myself comfortable with a cigar.

We had not long to wait for the cool zephyrs of the northwest. They came and filled our sails, and soon we were dancing along and around Jaquish Island, in company with a heavily laden sloop that had come through Mark Island passage, the regular entrance to Broad Sound. We set the spinaker and had a lively and enjoyable run to and inside of Fuller's Rock off Cape Small Point, where the spinaker was taken in and the big sloop slowly drew away from us. The wind freshened, the gafftopsail was hauled down inside of Sequin, the Pilgrim had all she could carry, and several large schooners bound up the Kennebec took in their kites, but the dreaded river's mouth was passed in safety and with only a moderate sea running. The Cuckolds were upon the beam, Squirrel Island ahead, we were sure to make Townsend before dark, and we did, though we had ebb tide, a choppy sea and a hard headwind to beat against. I now have so much confidence in the Pilgrim's weatherly qualities on account of her behavior in just such emergencies that I discount the pleasure of arrival long before her anchor is down in the harbor. In beating in we gave the large schooner yacht Winniel considerable trouble to beat us, but Charley's hat went overboard and I hove to and sent him after it, as hats were rather scarce aboard. Heaving to with helm alee, main sheet flat aft and staysail to windward, makes considerable drift, and I often let all sheets fly to hold position better. The Pilgrim was anchored close in toward the mouth af the creek, the anchor light was hung out, and we treated ourselves to baked beans and turkey for the fine ten hours' run we had made.

There was a breath of spruces out of the creek at 5 A. M. next day, and we used it to waft us out of the harbor. A sloop hugged the right shore and used an oar for miles; a large schooner hugged the left shore and made no movement, while the Pilgrim went right out in mid stream at a rate of a mile an hour, and we laughed at the bad judgment of the natives.

Jack was below getting breakfast, and Charles looked down the little hatch forward and asked him what made so much blaze. He answered the wicks, then he called me to come quickly. I ran down and found a great blaze covering the stove, filling the box and extending up to the deck. I looked a moment in dismay and thought the boat was doomed, then I grabbed a lot of wet towels that lay by the mast and covered over the flames and stifled them. It was a critical moment and I felt a little shaky after the danger was passed, but upon reflection I concluded there was not so much risk of explosion as of communicating fire to the surrounding woodwork, because the stove is admirably adapted to prevent the access of flame to the oil tank in its base.

Booth Bay never looked more beautiful than this morning in August. It was clear along shore, pale blue ripples marked the course of the gentle morning breeze in the channel, the evergreens of the right bank were bright green in the morning sun, and those on the left darkened and deepened the shadows of the hillsides. Squirrel Island was still asleep, a few chimneys in Townsend were sending up feathery tufts of white and gray smoke, and the distant islands were lifted by the mirage from their watery beds into mists of soft mellow tints of heavenly blue. It was romantic, and our little craft with all sail set and the rough old schooner gave that life which makes a picture complete. While enjoying the balsamic air and the scene to the utmost, I began to sneeze, which reminded me that I had not had my coffee—a most important beverage before all great and important undertakings—and Jack gave us a mugful and some crackers to counteract the dampness and the cold of the early morning.

The wind increased from the northeast when off Linnekin's Bay, and we went bowling along finely. I had seen a small schooner pass inside a buoy ahead and concluded I would do likewise, so over-confident had I become from my success in navigating strange places. I hauled to and was steering to go inside the buoy, when I saw the gleam of breakers from the buoy to the shore. Then I found by the chart and a glimpse of another buoy ahead that I was running for Card's Ledge, which would certainly have picked us up and battered us to pieces. I was not long changing the course, gave Gangway Ledge a wider berth than usual, saluted the light house upon Ram Island at 5 A. M., and took breakfast in the cockpit as we sped by Pemaquid Point within the swell and roar of its monstrous breakers.

It fell calm before we had sailed half way to Egg Rock, and the wisdom of an early start was again emphasized. There was nothing to do but to endure the pitching and slatting of sails, watch the nearby boatmen hauling trawls, and examine the vessels out to sea to notice how they had the wind. Catspaws were all around us; one would come from the northwest and fill the sails upon one side, and then one from the southeast and force us to trim over, and soon the boat would work in a glassy streak and pitch and slat as before. We could see the vessels outside heeling to a strong southeast breeze some time before it reached us, but it came at last; we passed Egg Rock and Davis's Straits and headed for Hooper's Island. One must go well over toward the shore of this, as if going into Herring Gut—now more euphoniously called Pride's Cove—before turning toward Mosquito Island to enter its sound, as the reef at the north end of Hart's Island extends very far into the channel and has its extremity marked by a black buoy. Once rounded, we swept gracefully past Marshall's Light, through inside of Mosquito and out to sea again, and shaped the course for the white rock with the little house and light house called Whitehead, which guides to Penobscot Bay, and is generally dashed by thundering breakers.

We were soon across, and Jack took the helm and guided the Pilgrim past the head and up the Mussel Shoals channel. We saw two battered, painless, old-fashioned steamers hunting for porgies, and numerous vessels around, one of which was a beautiful

schooner yacht bound to the westward, whose colors were not made out. We had hardly passed the light before the wind came out southwest and piped strongly, and sent a tumbling, riotous sea after us, which picked us up and plunged us onward with a swing to starboard or to port, threatening to jibe the mainsail or knock our stern out with the tender. The wind freshened so much that we took in the gaff topsail. I relieved my boy, who had found considerable more work steering than he had had any ideal of. This channel is considered rather dangerous, but it is well buoyed throughout, and unless one has to beat through it in the dark, it is clear sailing.

We went through Owl's Head Bay like a race horse. The wind drew through fiercely, and was so nearly aft that, as the seas caught us under the long overhang and lifted us onward, they turned us right and left in spite of the rudder, and gave me as much work as I cared for to handle the tiller and keep from jibing. I was laughed at several times Down East for not having a small wheel to give more room in the cockpit, but it is in just such rough winds and waters that the value of a long tiller is appreciated. One can feel just what a boat is going to do and correct her eccentric gyrations very rapidly. One cannot judge of the motion so well by a wheel and cannot watch the lazy turn of the bow as in a large vessel. I doubt if in this scudding I could have prevented a jibe and a probable disaster if I had not had a tiller. It is equally valuable upon the wind in any kind of a sea, and I shall stick to the crooked stick in all weathers. It rises above the knees, and does not interfere much with occupants of the cockpit. If there are any other reasons in its favor, I'd like to hear them. I do not wish to pose as an oracle, because I am still an amateur in yachting, but why does not some FOREST AND STREAM contributor say something upon such practical points? It strikes me an experienced cruiser might tell us much of value about anchoring in sandy, muddy, or rocky bottoms; about the best way to manage and heave to a sloop or cutter in a gale; about trimming sails to get the most propelling force from the wind; about the value of a gaff topsail or a jibtopsail upon the wind; and about handling the tiller in all kinds of weather.

It piped stronger after we had rounded the light and pointed for the steamboat wharf at Rockland, and we had the pleasure of beating a little fishing schooner into the anchorage to the left of the landing where a little fleet of small yachts was lying unwatched and deserted. It was 3 P. M. when the anchor was let go and we had concluded another good run—about 50 miles in 10 hours.

We might have gone on to Belfast before dark, but mail, cigars, clothes, etc., had been ordered to this place, and we wanted them. Besides, I had made a resolve some time before never to run ahead of the mail. It is such a disappointment to wait for the slow coach who forward uncalled for letters, and it takes so long to get an order one way and the answer back. So I furled up, sent the boat ashore, and started the oil stove for a late dinner and early supper in one square meal. There was so much swell in this so-called harbor—all open upon side—that the Pilgrim swelled around rather lively and every drop the bow took the flames of the gas stove wicks would shoot up and send a cloud of smoke against the beams and up the little hatchway, driving the cook aft, and the soot among the dishes, but a fine beefsteak was fried in butter, some boiled potatoes sliced and fried, and a pot of coffee made, and, with the bread and milk from the shore, we feasted long and heartily. Then the lamps were lighted, the lanterns hung up on the stay, the cigars passed round, the letters and newspapers read, and a jolly evening passed

Four large steamers lay at the wharf till after 9 o'clock, one bound to Boston, one bound to Eastport, one to Bar Harbor, and one to the islands of Penobscot Bay. A revenue cutter came in and anchored near us, but did not inquire about our papers and clearance, though they must have noticed our foreign appearance in comparison with the native craft.

The next morning what was our disgust to find only a faint air from the northeast ahead. It was too provoking, but we got started after breakfast, found the breeze stronger out in the bay and spent the whole day beating about twenty miles to Temple Heights, a summer resort of a dozen cottages, established by spiritualists and called the Spiritualists' Camp Ground. Here we tied up at the end of the wharf and were very glad to get fast because there was no harbor near, the water was very deep and a strong ebb tide was running against us.

The low tide brought the crosstrees down even with the wharf and we took advantage of this to put a sheet of brass around the mast where the gaff worked its jaws around and into the wood. A piece of leather was also nailed around the mainboom where it chafed on the backstays. The piles of the wharf were covered with myriads of starfish of all sizes, from that of a pin's head to the size of a man's hand, and sea urchins were fixed among them, moving their green bristles slowly, resembling the little tufts of the pine trees upon the hillside. Jack got out the lines and we fished for cunners and sea-perch, but caught nothing but sculpins, true old patriarchs of the bay. Some were ten and twelve inches long, hard immense spines, enormous mouths and a devilish appearance. We did not venture to unhook them until they were smashed against the piles mercilessly of course we could catch nothing else when these sea-bottom marauders were so plentiful, and after killing many, to give the other poor little fishes a chance, we wound in our lines and took a stroll over the land.

It was a laborious climb over the foothills of the Lincolnville range, but the paths were good and the main road dry, and the lovely views across the bay fully repaid us. Three or four miles away lay Isleboro, and over the streak of the eastern bay beyond, Dyce's Head and Cape Rosier could just be distinguished through the evening mist. The bluff was covered with a heavy growth of spruces, pines and maples, and roads had been cut and lots laid out and cleared at a great expense of time and labor. A rough board building was the store and post office, and near this were a dozen pretty cottages, all deserted except two, where lived persons who were engaged clearing and preparing lots for the next season's operations. With the perverseness which characterizes human nature, regardless of the shortness of the season and of life, and oblivious of the necessity to health of the pallid rays of the sun that seems like reflections from an iceberg in this northern region, these Spiritualists had passed right over a beautiful adjoining grassy slope, fringed by pines, and plunged into the wilderness for a location, only to set to work with axe, mattock, pick axe and spade to destroy it. The cottages were of planed matched boards or clapboards, with bare timbers inside, but they had odd little windows and gables and piazzas, and looked very cosy and homelike. The inexpensive furniture is not molested during the cold season, and the sojourners rough it in a measure in those little homes from three to six weeks in summer. The cost of a lot and house is about $500, so that the owners, who mostly live inland, do not pay very dearly for their annual smell of salt water, and the improved health which change of scene, habits and sustenance generally bring. All along the coast of Maine and upon her islands just such little summer cities are building, and they add greatly to the pleasure of a yachting trip eastward.

It was calm till 10 A. M. next day, then a light breeze sprang up from the southwest and we pushed off and made sail. The summer cottages of Northport were nearly all tenantless, but the Waverly House was still open, and a group of men and women saluted us from the end of the long wharf as we stood past. Belfast had not grown any since the previous year, and we found the old anchorage and were soon anchored and snugged up again in the home port, where many old-time friends and blood relations were expecting us.

It is astonishing how an iron-keeled cutter will forge ahead after the wind is out of her sails. Many a time have I ran far beyond the chosen spot of anchorage and had to make sail and work back. We were fooled so many times that I tried taking sails off of the Pilgrim in mid stream and letting her creep slowly into the selected place. But this took too much time and she took cable too slowly, so we finally made a so-called flying mooring, threw the anchor broad off the bow and let the cable run, as she was brought around head to the wind and tide, and then hauled in to the requisite scope. The cable was less liable to foul and we had things fixed much sooner than by anchoring the other way.

Small cutters have a way of horsing around at anchor that is troublesome and often uncomfortable. The Pilgrim would lie broadside to the wind and sea awhile, swing head on, then back again until the wind was upon the quarter and blew down the companionway. Then she would swing around again, ride over her cable, have it upon one bow and the anchor upon the opposite quarter, and play a tune upon the bobstay. I found by experiment when the tiller was hard over to port with starboard anchor down or *vice versa*, she would lie head to wind and tide. I thought at first her restlessness was due to the low ballast, but concluded later it was owing to the peculiar rig, as lowering the furled staysail and the spinaker boom improved matters considerably. Of course, with tide and wind in different directions, the problem became more difficult of solution. CARESWELL.

NEWARK Y. C.—Messrs. C. H. Mayhew, E. M. Grover and Wm. Murray have been appointed on the regatta committee of the N. Y. C., and are making arrangements for the Decoration Day regatta, which will be open to all. Heretofore the annual club regatta for the champion pennants has been held on Decoration Day, but this year they have decided to make it in addition to the pennant races, an open sweepstake with handsome special prizes added.

THE OCEAN RACE.

FOR the past ten days yachtsmen have watched anxiously for some news of the two yachts from some of the many ocean steamers that have arrived, but nothing of importance was reported, and it was not until last Sunday morning that the first reliable news came, that Coronet had arrived in safety, the winner of the race. The steamers British Prince, Kansas, Pavonia, and Saale, each reported passing one or two schooners bound eastward, but it was impossible to tell which was the leader, though the opinions were generally in favor of Coronet. On March 27, however, all doubts were set at rest by the news that Coronet had crossed the finish line at Queenstown at 12:40 local time, after a run of 14 days, 23 hours, 33 minutes and 40 seconds apparent time. Dauntless was not heard of until Monday afternoon, finishing at 6:45 P. M., after a run of 16 days, 1 hour, 43 minutes, 18 seconds. Both yachts had bad weather for the entire trip, encountering heavy gales and at times being obliged to heave to. The best day's run of Coronet was 291 miles, while Dauntless logged 328 miles on March 25. Neither met with any serious mishap, though the passage was anything but a pleasure trip, and both testify to the value of oil in calming the waters. The weather was an alternation of gales with occasional calms, the yachts being under reduced canvas the greater part of the time, but at times under full sail. On the third and fourth days out Coronet encountered a heavy gale from S.W., running under jib and close-reefed trysails. There was at times several feet of water on the decks, and on Wednesday night the vessel took a sea over the stern that nearly swept two men overboard. Next day the squaresail was split and a day later the yacht ran into the path of a cyclone and was obliged to heave to for an entire night, with fires and lights out and the seas coming in the cabin skylights. On the ninth and tenth days another gale was met and the yacht hove to under close-reefed fore stormtrysail. An attempt to tack her failed and she was obliged to wear. From this time out the weather was better and more sail was carried to the finish. Dauntless experienced the same sort of weather, though at no time near Coronet, and on the tenth and eleventh days was obliged to heave to. The cockpit was at times full of water and once two men were washed out of it and only saved by the lifelines. Oil was used during this time with excellent results. Some sails were split and some damage done to the standing rigging, but beyond this the old craft came out all right.

The distances run each day were as follows:

	Coronet.			Dauntless.		
March.	Lat.	Lon.	Miles.	March.	Lat.	Lon. Miles.
13	39.55	68.41	246	13	40.03	68.28 232

THOSE PLANS OF THE THISTLE.

JUST three months since the FOREST AND STREAM had occasion to question the great "scoop" of the Boston *Herald*, and to prove that in reality it amounted to a very small and insignificant scooplet indeed. Now that the challenge is in the hands of the N. Y. Y. C. and the truth can no longer be concealed, the *Herald* seeks to save itself by a long and labored explanation, that only serves to show how far it is at sea, or more properly ashore, in matters relating to yachting. On March 26 it published a picture at once pathetic and comical, no less than a view of the tightly battened shed in which the Thistle is being built, with a solitary figure in the foreground, presumably the *Herald's* representative looking for a convenient knothole, or perhaps waiting for the launch. On the following day it published, under the heading "Plans Changed; the Predictions of the *Herald* Verified," this cable message:

"GLASGOW, March 26, 1887.

"*To the Editor of the Herald:* Square stern; build carvel, and clincher; 98ft. long, 20 3-10ft. broad, 14 1-10ft. deep; tonnage, without deduction, 100⅔ tons; in cubic metres, 284 9-10."

Which meagre details were confirmed by the arrival of the challenge next day.

In the three-column article in which it seeks to soften the blow of the boomerang which it threw last Christmas, two distinct and contrary lines of defense are introduced, the method of argument being very much like the boy's excuse over the borrowed kettle; the kettle had a hole in it, and he didn't borrow no kettle anyhow.

The first plea, outlined in the heading and still further in the following paragraph, is that as soon as it was known that the plans had appeared here the owners decided to change them, and at once proceeded to build a boat of 90 instead of 80ft.:

"The Scotch syndicate evidently took a second thought, and finally decided to build the Thistle 10ft. longer than she appeared in the estimate plans. * * * The Scotch syndicate has done its work well and has kept all matters secret as long as it could. It probably awaited the views of the American press on the plans published in these columns, and from the hints received, finally decided to build a yacht longer than any of our American sloops. The suggestion thrown out by these gentlemen to the New York Y. C., that the yacht would in all probability be a second class yacht, is in accord with all their cunningness regarding the Thistle and her plans."

In close juxtaposition to this is the following:

"In regard to the plans the *Herald* claimed that they were the working drawings of the Thistle as she was intended to be at the time they were given out to several builders to estimate on. The *Herald's* correspondent came into possession of them honorably, and Mr. George L. Watson was not an unwilling party to their delivery. They were not obtained from any of the builders, as has been frequently stated. Mr. Watson well knew how they came into the possession of the *Herald*, and it is now too late for him to deny the fact that the *Herald's* Scottish correspondent had every reason to believe that the plans when presented to him, while they were not the detailed plans, having all the waterlines and the other dimensions, were, to all intents and purposes, the plans furnished the builders of a yacht like what the Thistle was to be, and estimates for the plans were asked for by Mr. Watson."

If this means anything it means that Mr. Watson allowed the *Herald* to have the plans for publication and encouraged the belief that they were the actual plans of the boat he was building. The full defense of the *Herald* then stands thus: Mr. Watson allowed them to have, or practically gave them the true plans of the boat; but when he found that they had these plans he at once threw aside the design and started a larger boat. The contradictory character of the two statements is sufficient, but it might easily be shown how absurd the second plea is, and that no change in the plans was needed. Still another excuse is tacked on in the following rider: "The *Herald* was the first paper to make the announcement that the Thistle was to be an 'A' class cutter, and practically this was the all important thing to be found out. New Yorkers doubted that she was to be a large cutter, and to-day the advocates of the 'B,' or second class cutter, number many in the metropolis."

For the information of the *Herald* we may state what all yachtsmen know, that there is no such thing as A or B class in the sense in which it is used here, but that the A class includes all racing yachts, the B class all ex-racers, and the C class the cruisers. In commenting on the new boat the *Herald* falls into some amusing errors when it says:

"Her beam is immense for a cutter, being 20 3-10ft. extreme. No cutter, either for cruising or racing, has ever been built with such a wide beam, and this means extra large sail area. Her draught has been altered but slightly from the estimate plans, and she is one-tenth of an inch deeper than in her estimate plans. As the scale on the sheer plan, in the estimate plans, was one-fourth of an inch to the foot, it can be easily seen how such a slight error might be made, as the width of a pencil mark on such a small scale would make the difference—one-tenth of an inch. Her draught is 14ft. and one-tenth of an inch."

Surely such an authority must at some time have heard of Oimara, the famous cutter, 95ft. waterline and 20ft. beam, while of the "picturesque rig," the Florinda, Latona, Corisande and Condor go to prove that there is nothing extraordinary about the reported dimensions. In regard to the draft the *Herald* has fallen into a serious error, in confusing draft and depth. The despatch reads "14 1-10ft. deep," and this statement is lugged in to prove the accuracy of the alleged plans, because the latter showed a boat of 14ft. draft. The depth of the *Herald* Thistle is 15ft. 6in., that of the real Thistle, as given in the challenge, is 14 1-10ft., bearing out exactly what the FOREST AND STREAM stated last week, that the plans procured by the Boston *Herald* represented a boat of about the same cubic contents, and so sufficient for all purposes of estimating. This accounts for the high freeboard, the great depth and the large area of midship section, which were so generally commented on when the plans first appeared.

In regard to the waterline length, the only vital point in the whole matter, the *Herald* says:

"The official announcement that the estimate plans have been changed, and that she is 90ft. on waterline, will cause a great sensation in prominent yachting circles, especially in New York. The members of the New York Y. C. will undoubtedly be taken by surprise at the announcement being made in these columns prior to their receiving it in official form. The cablegram comes from a trustworthy source, and its accuracy cannot be doubted. The *Herald* congratulates itself on being able to give its readers the information in advance of the letter sent by the Scotch syndicate to the New York Y. C. While some changes have been made in the plans as published, the class to which the Thistle belongs has not been changed by her additional length, and she is what it was stated she would be—'a first-class cutter yacht, built of steel, made from designs of Watson, and built by Messrs. Henderson, of Partick, Scotland.'"

The final conclusion of the *Herald* is that the length is 90ft., but the official challenge to the N. Y. Y. C. brings a fresh disappointment, giving the length as 85ft. only, while Thistle has a clipper stem and the "plans" showed a totally different boat with a plumb stem. A glance at the plans of Vandnara on another page will show the correctness of our surmise that they were the basis for the tracing which the *Herald* procured, while the midship section of the latter was evidently cooked, "that same with intent to deceive."

That the true length of the Thistle is finally known is due in no way to the *Herald*, whose course throughout has only resulted in misleading American yachtsmen.

The fact is, that in its haste to grasp the Thistle, the *Herald* was very badly stung, and this last clumsy attempt to conceal its defeat leaves it worse off than before.

THE CHALLENGE FROM THE CLYDE.

THE designer of the Thistle has kept his secret well, in spite of the many efforts to discover the length. Even now, with the formal challenge in the hands of the New York Y. C., and the conditions of the deed of gift complied with, the waterline length would not be known had not Mr. Watson chosen to disclose it, which he has done in a letter accompanying the challenge. The challenge gives the legal dimensions of the yacht, as required, but leaves the all-important question of the waterline length unanswered. From Mr. Watson's letter, however, it is known to be 85ft., or the same as the Mayflower.

The challenge, which arrived on Monday, as predicted by the FOREST AND STREAM last week, reads as follows:

SECRETARY'S OFFICE,
No. 150 HOPE STREET,
GLASGOW, March 16, 1887.

To John H. Bird, Esq., Secretary New York Y. C., New York:

DEAR SIR—Referring to our correspondence of last autumn, I have now, on behalf of the Royal Clyde Y. C. and in the name of Mr. James Bell, the vice-commodore of said club, to claim the right of sailing a match for the America's Cup with the yacht Thistle against any one yacht or vessel constructed in the United States of America, and I accordingly give you formal notice of challenge, and name the 4th day of October for the commencement of the match.

The Thistle has been constructed on the Clyde. She is cutter-rigged, and her measurement per the inclosed certified official transcript from the Custom House Register, is as follows:

Length, per register..... 98ft. 0in.
Breadth, per register..... 20ft. 3in.
Depth, per register..... 14ft. 1in.

I send also a statement of her dimensions by Mr. G. L. Watson, her designer, giving (although not required by the formalities of the deed of gift) the length on the L.w.l.

I have already sent you evidence of Mr. Bell's authority to represent our club in this challenge, but in order that you may have herewith all the necessary documents, I send certified extracts from the minutes of a committee meeting authorizing the challenge, and a general meeting of the club confirming the same. A list of the documents sent is annexed.

I need hardly state that our club is an organized royal yacht club, holding an Admiralty warrant with all the privileges thereto belonging, and that its annual regatta is held on the Firth of Clyde, an arm of the sea practicable to vessels of any tonnage.

Having complied with the formalities of the deed of gift, it may save time and shorten our correspondence regarding the details of the race to inform you that Mr. Bell is prepared to accept with some slight modifications the arrangements of the Genesta and Galatea matches, as proposed in the letter from the late secretary of your club to Mr. Beavor Webb, dated 10th March, 1885, and I shall now take up *seriatim* these arrangements as printed on pages 9 and 10 in the report of your Committee of Arrangements in relation to the above matches, noting the modifications proposed:

Dates of the Races.—To be 4th, 6th and 8th of October.

Number of Races.—The challenger is prepared to accept the conditions under this heading, but strongly urges that in order to eliminate as far as may be the element of chance, the contest shall be decided by the best of five trials, the additional days to be the 10th and 12th of October.

Courses and Length of Courses.—The courses sailed in the Galatea match will be accepted.

Time of Making Races, Measurement and Time Allowance and Representative of the New York Y. C.—The conditions under these three headings will also be accepted.

Mr. Bell will also accept Mr. George L. Schuyler as the umpire, whose decision shall be final on all questions which may arise on any details in the arrangements for the race requiring adjustment.

I will now state some additional arrangements which are thought necessary. First is a point which the challenger considers most important, viz.: That two patrol steamers (one for each competing yacht) should be employed to keep the course perfectly clear during the race, and so avoid the risk of the race being obstructed by accompanying steamers or cruising yachts. Each of the patrol steamers would be under the control of the competitor it represents and a representative of the opposing yacht on board. I trust that this proposal will meet with your approval.

There is a second addition to the arrangements, which Mr. Bell suggests and hopes will also be accepted. It is simply an extension of your proviso under the heading of "Representative of the New York Y. C.," on page 10 of the printed report before referred to and is as follows:

That in the event of an accident happening to either of the competitors previous to the start, she is to have sufficient time given her to effect repairs. Further, that should a serious accident happen during the race (that race not being the final one), fair and reasonable time shall be given either yacht to effect repairs before she be called to race again—*i. e.*, the final race or races shall not be held to have been lost by default through the injured yacht not being in a position to appear on the agreed on dates.

As Mr. Lloyd Phœnix represented your club at the recent contest the challenger will be glad if Mr. Phœnix is appointed and consents to act in the same capacity on board the Thistle.

May I ask the favor of a cable acknowledgment of this challenge on the day of receipt if possible?

I remain, sir, yours faithfully,
WILLIAM YORK, Secretary Royal Clyde Yacht Club.

Accompanying it is the certificate of the Register of Shipping and Collector of Customs at Glasgow, Mr. James Scott, giving the following details:

Official number, 93,362; name, Thistle; number, date and port of registry, No. 22, 1887, Glasgow; British built, sailing vessel, built at Partick, Glasgow, D. & W. Henderson & Co., Partick, builders. One deck, one mast, cutter rigged, square stern, carvel and clincher built, thistle head, steel framework. From fore part of stem, under bowsprit, to after side of stern post, 98ft.; main breadth to outside of plank, 20 3-10ft.; depth of hold, from tonnage deck to ceiling at amidships, 14 1-10ft. Number of tons, 100.67; cubic meters, 284.90. Owner, James Bell, 64 shares.

Mr. Watson's letter gives the waterline length as 85ft. and says: "As the vessel is not yet afloat it is impossible to give exactly the waterline length. This, however, is her designed length, and when she is afloat and trimming for the racing trim I have no reason to expect that it will be more than an inch or two either way."

The Cup Committee, Messrs. J. D. Smith, Wm. Krebs, G. L. Haight and Vice-Com. Chas. Haight, met on Tuesday and accepted the challenge, the only clause objected to being that in regard to the number of races, three being deemed sufficient. A letter in reply will be sent at once to the Royal Clyde Y. C., but its contents will, of course, be kept secret.

The dimensions of the Thistle are a surprise to all, not only from the length being greater than was generally expected, but from her great beam, far in excess of any cutter for the past 15 years. Her draft is not given, but of course it will be only moderate. She will have a clipper stem, and will undoubtedly be a very handsome as well as a powerful vessel, and one that will be hard to beat. Nothing is yet decided as to the measures to be taken for the defense of the Cup.

VANDUARA.

JUST at this time when the yachting world is all agog over the dimensions of the new Thistle, we should like to treat our readers to the designs of the great unknown. This, of course, is impossible, in view of the extraordinary precautions that have been taken to insure secrecy; but through the courtesy of the Thistle's designer, we are able to give the accompanying plans of a sister vessel that in a day created no less of a sensation than Thistle promises to. While differing in size from the Thistle, the Vanduara possesses some features which just now make her of special interest, one being that she was one of Mr. Watson's most notable boats, the other that she is a fine example of the same steel construction that is employed in the Thistle, and that thus far is little known to American yachtsmen. The year 1889 is a notable one in the evolution of the British racing yacht, as in it was witnessed a decided jump in the matter of ballasting, after a number of short steps toward heavy lead keels. The small craft had already demonstrated the value and practicability of carrying nearly all ballast on the keel, and the tens and fives were all doing it successfully; but in the large craft, as the result of a dozen or more years of trial, Arrow was carrying only 14 tons out of 40 on her keel; Formosa had but the same amount, less than 25 per cent. of the total; Vol-au-Vent and Kriemhilda had each 15 tons out of 54. This year, however, saw two new craft afloat, one, the Samœna, designed by Mr. Richardson and built of wood by Inman & Son, the other, Vanduara, designed by Mr. Watson, and built of steel by the Hendersons, at Partick. Both of these boats were narrower and rather deeper than their predecessors, but further they carried practically all the ballast on the keel; in fact, Vanduara's keel was simply a huge steel trough in which the molten metal was poured. The result was just what might have been expected, the two swept the coast and threw out of the racing all the old fleet from Arrow down, opening the way for still more radical experiments in narrow beam and low ballast that have culminated in a Galatea of six beams and with nearly 80 tons in her steel keel. Vanduara was built for Mr. John Clark, of Paisley, one of the leaders of Scotch yachting, and under his ownership and the handling of Captain Mackie, she made a wonderful record in her first season, winning 14 firsts and 5 other prizes to 31 starts and a total value of £1,000. If she had only the old boats to deal with her great superiority would have been more apparent; but many of her races were sailed against Samœna, and the prizes were shared with her. The history of her first season was lately given in the *Field*, as follows:

"Vanduara, it can at once be said, made a sensation such as no yacht has created before or since. We recollect being at Gravesend with Mr. John Harvey when she arrived from the north. 'She's a sly-looking bit o' goods, isn't she?' remarked that well known yacht designer, and her first exploit was to defeat Formosa and Cuckoo in a fine reaching breeze out and home in the match of the New Thames Y. C. Thus Vanduara's first achievement was to establish a character for speed, although she only beat Formosa by four and a half minutes. But then Formosa had a great reputation for fast reaching, and, to beat her at all was thus a very considerable performance. On the following day the same two met under the flag of the Royal London Y. C., in a still stronger beam wind, which gave another reach out and home. On this occasion Formosa just managed to keep ahead of Vanduara, but she would not have won the prize had not the new vessel been over the line at the start, and, not having returned, been thus disqualified. On the day following, June 5, the wind shifted to N.W., and the Royal Thames match showed us Vanduara in a new light, that of tackling Formosa to windward. There was a fine breeze, and Formosa led down to the Mouse Lightship, but directly sheets were flattened in for a long thrash home, Vanduara began to march out to windward in a very wonderful manner; she did not make a steady gain all through, however, although there was no doubt about her quality, and she arrived home first by five minutes. Vanduara had now done quite enough to make it plain that none of the old cutters had a chance against her, and the public were so impressed with her prowess, and she was so much the talk of the West-end, both for her good looks and grand achievements, that newspapers told off 'special correspondents' to chronicle her deeds for the rest of the summer.

"The Vanduara's next performances were in a light wind down Swin to Harwich, and in the Royal Harwich Y. C. regatta. She was successful on both days, thereby completing her trial and gaining the reputation of a sound all-round performer. The trial was not yet complete, either, as there had been no down-wind trial in a strong wind and sea. However, this they had in the return match from Harwich to Southend. Vanduara, however, was kept in the boiling wake of some big schooners, and as a consequence ran rather wild; she was thus unable to make the speed Formosa did, and even Cuckoo finished in front of her. However, all this was forgotten after her splendid achievements at Dover, in strong winds and head seas and again at Ostend. Her grandest performance was most likely in the match from Ostend to Dover on July 2, when the competitors had a heavy head sea and head wind all through. The chief competitors were the Latona (yawl), Fiona (schooner), and Australia (schooner). It was a dreadfully punishing match for vessel, gear and crew, and Vanduara was not spared—indeed she was sailed with remarkable boldness, and in spite of some mishaps to her headgear, she at the end of the long and trying thrash was nearly three-quarters of an hour ahead of Latona. She eclipsed this performance in the match from Dover to Cowes, sailed against Latona and Egeria, and here finished up the first part of her season's work, having won eleven prizes for thirteen starts. The Vanduara now made her way round to the Clyde, where she encountered Samœna, who already had made a great name for speed.

"The encounters on the Clyde, in Belfast Lough, and in Dublin Bay (and subsequently inside the Isle of Wight) were not of the stirring character they had been in the Straits of Dover and across the German Ocean, and scarcely a single test match was sailed. As we said at the time, there is little doubt that Vanduara had been tried very much higher than Samœna; and, had Vanduara not sailed and won the Ostend match, the matches from Ostend to Dover, and from Dover to Cowes, her reputation would have been an ordinary one. It was these matches—all sailed in quick succession in hard winds—that appealed so to the imagination of the delighted sailor men; and in these Samœna took no part; but Samœna, like Vanduara, is wonderfully steady in a head sea, and would no doubt have given a good account of herself.

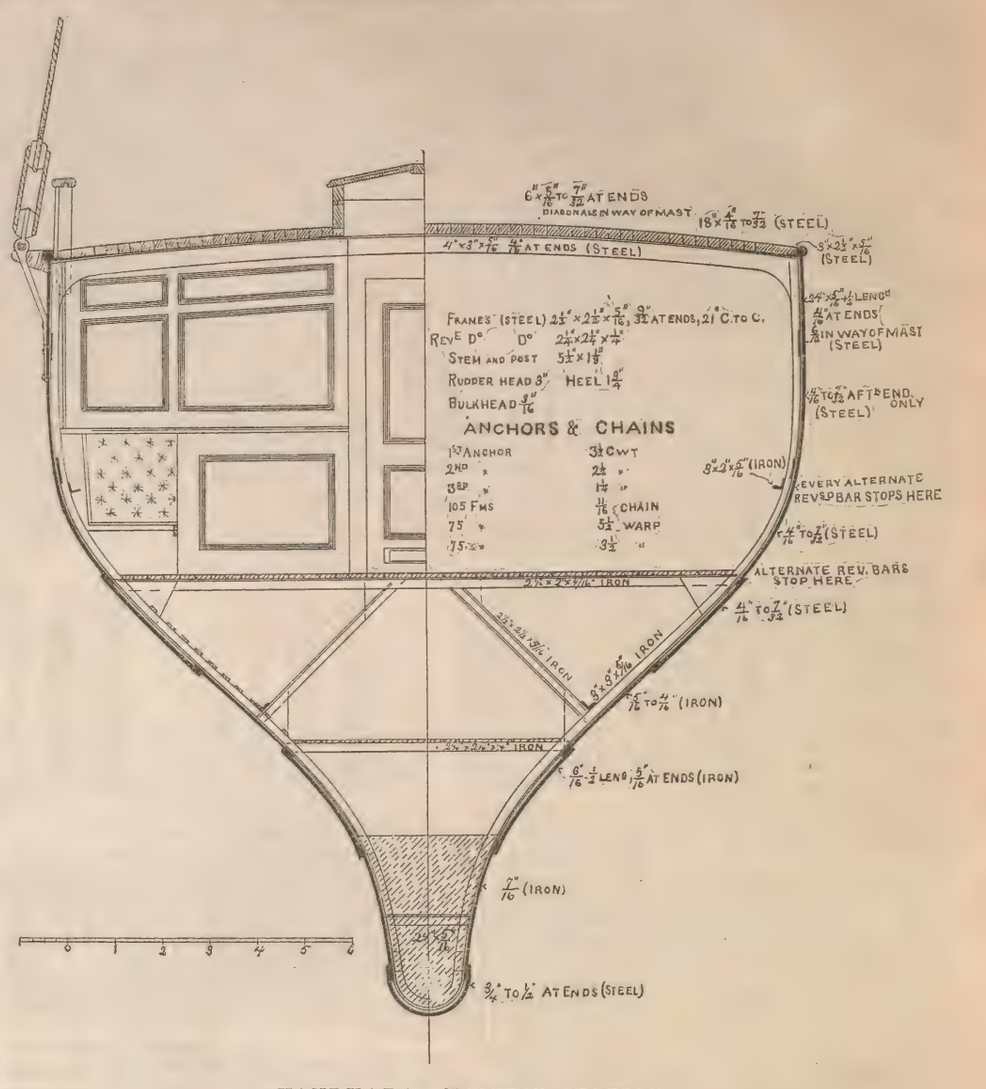
"It should here be said that when Vanduara came south the second time with Samœna they met the old Arrow, and the result of the encounters at the end of the season was summed up pretty much like this: Vanduara could beat anything afloat to windward in any strength of wind and in any amount of sea; she, however, proved inferior to Samœna and Arrow in point of speed; and for ordinary weather, over a course of two-thirds reaching or running, Samœna was the most certain prize winner. Samœna, it is true, seemed scarcely so weatherly as Arrow, but generally proved a little faster off the wind; and she suffered, by comparison, a little in weatherliness because she had not quite the stiffness of Vanduara and Arrow. Vanduara, in fact, showed extraordinary stiffness, and in this respect she was most likely superior to anything hitherto launched. Formosa sailed several matches, in which were Vanduara, Samœna and Arrow, but she did not compare favorably with either; still, there is not much doubt that she could have been brought very near any of her rivals if her weights had been dealt with in the fashionable way."

Vanduara enjoys one curious distinction—she has been written about in more glowing colors than any other yacht, not excepting the two new Boston boats, and pet names without end were coined for her. A very good specimen of this class of writing that tells at the same time of some of her victories, we copy from the London *Daily Telegraph* of July 20, 1880:

"This year attention has been centered upon two remarkable vessels—the Vanduara, built by a Glasgow shipwright, and the Samœna, a Solent-born ship, each of them of the same burden—90 tons—and each cutter-rigged. Built of steel plates and steel frames, she is an experiment in construction which seems, however, already triumphantly justified. The economy of space effected by her materials permits the ballast to be carried very low down and close. Her lines are marvellously fine, her beam small without being too much sacrificed, and her appearance splendid and high bred. The peculiarity of the Vanduara seems to be in the cutting away of her forefoot, all the dead stuff of which is removed, so that she comes round in stays like a thing alive, after the quick and sure fashion of the Jullanar, and eats to windward upon a breeze till her fleetest and most renowned antagonists fall hopelessly to leeward of her. It is true that her want of hold upon the water forward, due to shallow draft under the stem, appears to make her yaw somewhat wildly before the wind, and there is no doubt that she is then oftimes difficult to steer. But, beating or reaching, on or off the wind, this steel-sided waterwitch has proved herself a most extraordinary vessel. She has hoisted her fighting flag on something like sixteen occasions, and twelve or thirteen times has she beaten off all competitors. Blow high, blow low, in soft airs on piping gales; with a heavy sea running or the ocean sleeping like a lake, the wonderful craft of Mr. John Clark has romped away from her rivals, or stolen out of their reach as if hidden sea nymphs towed her through the sleeping seas. Even the beautiful Formosa, of which the Prince of Wales is the owner, a famous and formidable victress in many a tough contest; even the splendid Latona, queen of the yawls, and the crack schooners, all of them in turn have been compelled to strike their colors to this steel ship. She is out and o ut, at present, the most distinguished of the "ladies of the sea," and since her magnificent race down the Channel to the Solent, where she ran clear out of sight of her opponents, there existed nothing of the new season's debutantes which could be spoken of along with her except the Samœna, the pride and champion of the Solent. * * * * *

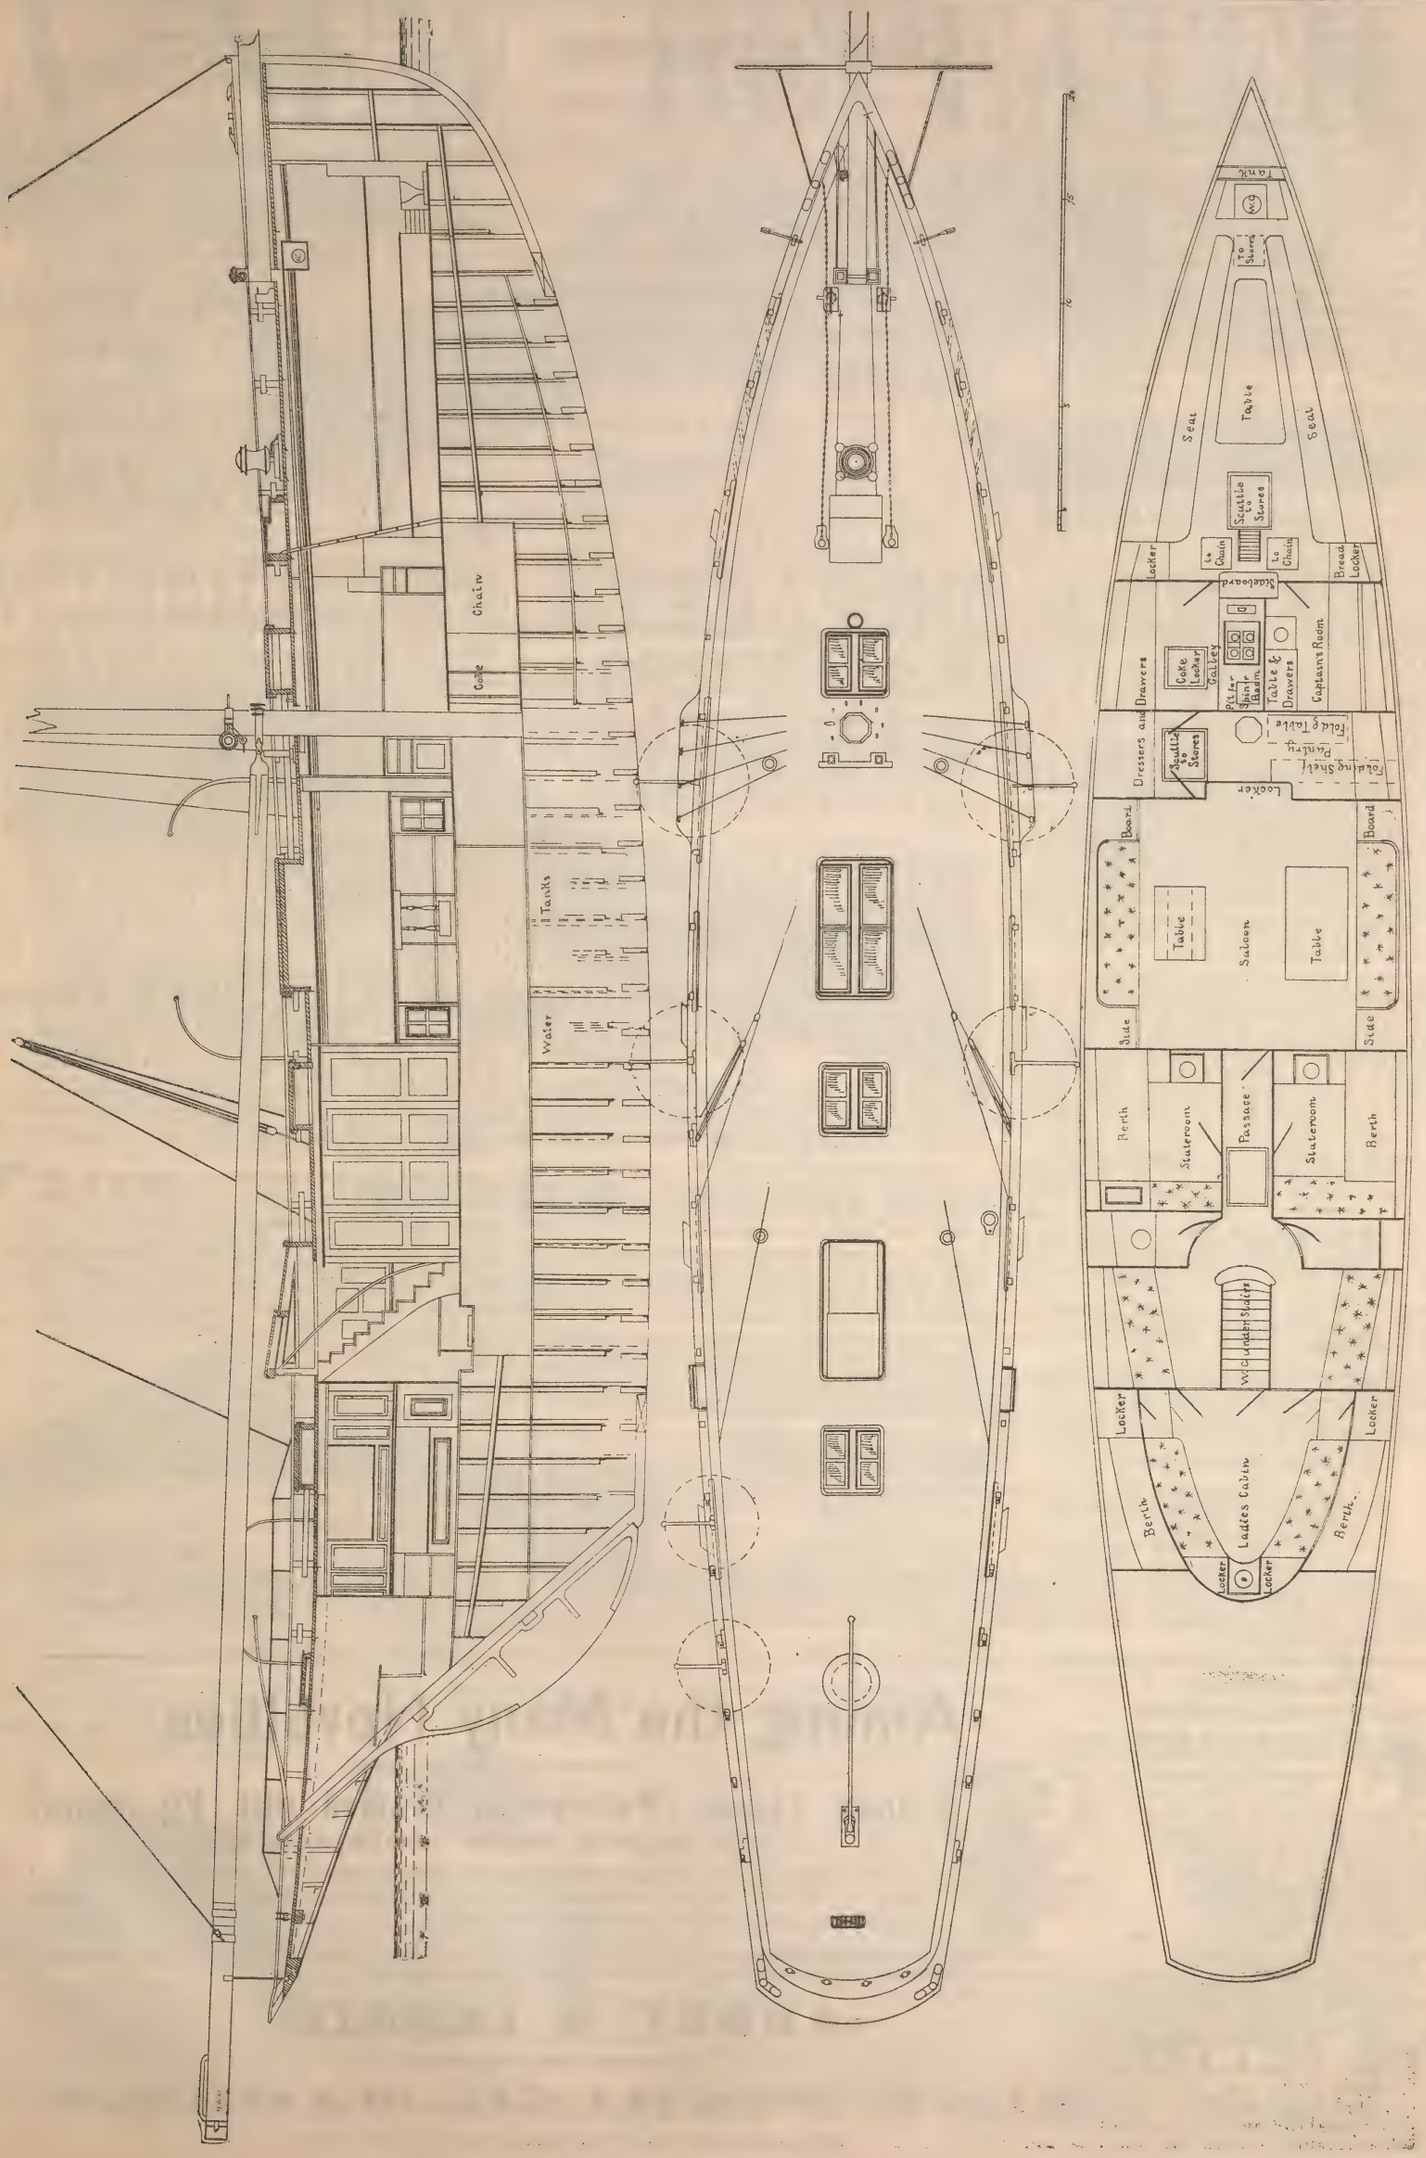
"If we glance back at the last few weeks of yachting, while the pleasure fleets are preparing for the excitement of the 'Wight week,' it will be seen how the records of the season show one long *Io triumphe!* for the matchless Vanduara. In the Royal Harwich Y. C. race the cutter showed herself a perfect witch in light winds, stealing away over glassy seas and before dreamy airs from the lovely Formosa, and even when the laggards came up with the easterly breeze, catching it before they could close, and, with many a fluke and flap of becalmed canvas, gliding into harbor first of such renowned cutters as Formosa, Cuckoo and the good 'forties' Norman, Bloodhound and Coryphée. Going back to Southend the steel-breasted beauty ran wild before the wind, yawing and burying her bows, and finally bursting her weather runner and springing her main boom. The witch was out of temper that day, and never passed the markboat at all. But three days before, down the Swin, she had stretched through the lee of the Opal, Cuckoo and Norman in free channel, shown her smooth stern to the Latona, Miranda and Formosa, and sailed past the Bell buoy a quarter of an hour before the best of her competitors. A week later the Vanduara entered for the Nore to Dover course, along the back of the Goodwins, wedging her way on this occasion, in marvelous style, between the renowned Cuckoo and the wind, and planting herself on Mr. Holms-Kerr's weather bow. There again the steel witch came home first of the cutters, and long ahead even of the Fiona and the Egeria among the schooners. The Samœna at the same date was winning both her maiden races at Kingstown. Once again, on June 26, the Vanduara and the famous and beautiful Formosa met in the Cinque Ports match. The sea was heavy and the wind fresh, and standing out to the Varne, the 'witch' ate to windward right across the stern of the Prince's vessel, rounding the lightship twenty minutes ahead of her, and beating into Dover twelve minutes in advance. On the 28th ultimo the steel boat sailed again from Dover to Boulogne and back in the finest of yachting company, with a steep sea to climb and a tearing southwesterly wind; yet under this ordeal the Vanduara did, as always, superbly, beating the powerful Formosa anew in all the points which a sea boat should make. The yachts that day showed as good a time across the Channel as the mail boats themselves, but the match was saddened by the loss of a good hand overboard from the Gwendoline.

"At the end of June the Vanduara set off once more with the renowned Florinda yawl upon the list of starters, for Ostend, meeting her old antagonist Formosa. These two perfect cutters sailed a neck-and-neck race across the Flemish Banks to the West Hinder for upward of 40 miles in a hot sun and a gentle swell; the Scotch craft drawing clear at last after this wonderful struggle by 10 seconds, when they luffed at the lightship. The 'witch' won by time at last, taking the cutter prize; and with the same goodly company, minus the Florinda, she next sailed the long course round the Wielingen Lightship, with a ground swell dancing the sea-darlings about so constantly that she showed her rounded foot at every roller, like a lady at a damp crossing, dipping her bows under and taking the Dutch green seas two fathoms high upon her jibstay. Again she won the cutter prize, victress in all sorts of weather which the ocean can show, and then followed the return match to Dover. The Latona, the Hypatia, the Australia and the Fiona came home along with her, two schooners and two yawls, and all had reefed bowsprits, save the Vanduara. She put the Latona under her lee at the West Hinder and flew through the green hollow seas made by the weather-going tide as a hare goes through long grass. Between the East Goodwin and the North Sand Head the steel ship had almost as bad a swell as the North Sea could send her, plunging bows under in the brine, until at last from sheer weight of water she parted her bobstay and washed off her lee bulwark. Yet she repaired damages while still under way, weathered the big Latona, which had come quietly through the Gulls, escaping the heavy water, and, turning about like a 10-tonner, reached Dover eight and three-quarter minutes before the Latona, the rest being nowhere.



"On July 8 the Scotch wonder sailed against the Egeria and the Latona, schooner and yawl, each being nearly twice her size, the course being from Dover to Cowes. Once more she soaked to windward in the old magical way, being two miles ahead of the Latona at Dungeness. Eye-witnesses of that splendid run say that the Scotch cutter off Fairlight was seen going to windward in the grandest style possible, cleaving the sea as clean as a knife, dropping her beautiful fine bows upon the face of the billows like a sea-bird's breast, and with no more drag under her lee counter than is left by a mackerel's tail. What racing there was the big schooner and yawl had to themselves, for the "lassie of steel" ran fairly away from both, tripping along all night under Beachy Head, by Eastbourne, Brighton, and the Owers lightship, till on the Sunday morning she tore down for the Cowes mark, with the showers of spray gliating from her lee bow, some eighty minutes ahead of the Egeria and nearly one hundred of the Latona, a magnificent performance, scoring the eleventh victory out of thirteen starts. At Cowes the iron witch refitted, and laid her course for the North to meet her unbeaten rival, the Samœna, at Largs. One or two unsatisfactory matches ensued, in which the Samœna seemed to promise equality with the marvelous Glasgow craft, but this race of Saturday has settled the question, and the Vanduara has to-day no equal among the yachts of the year.

"Such have been the chief sensations and subjects of yachting yarns thus far. Cowes and the Royal Cup may bring new revelations, but hardly anything can reverse the verdict which all these victories and all those various spells of weather pronounce, to the effect that the Vanduara is really a miracle of speed and weatherliness, and that her builder and skipper have proved that steel is good stuff for prize-gaining and pleasure-cruising as well as for our merchant and fighting fleets. It is difficult to understand such unbroken triumphs, for the advantage of a steel surface is not great. A wooden yacht, well-coppered, presents as fine and bright a side to the element as metallic plates, however well-fitted and well-paid with composition, nor are the lines of the Vanduara and her best rivals so very different as to account for all these defeats. The shallow forefoot in beating, and the extra lowering of the weights afforded by the strong and compact material used in building, seem best to explain the advantages of Mr. Clark's flying cutter, which has wrested from the graceful Formosa and her princely owner the honors of the year, and is to-day Queen of the Summer Seas."



In her second year she was sold to Mr. Stewart Clark, brother of Mr. John Clark, and in his hands she did some famous racing, but not so much as in her first season. It was under his ownership that she sailed the famous race on the Mersey on July 7, 1881, in which all others turned back and Vanduara alone went over the bar.

In regard to the name, Vanduara, it is the old Roman name of a settlement on the site where Paisley now stands; and Wendur, the yawl which Mr. Watson designed for Mr. John Clark in 1883, takes her name from the river that flows by the town, now the Cart, but in Cæsar's day the Wendur. Like all of Mr. Watson's boats, Vanduara is noted not merely for speed and seaworthiness, but she is fitted in every way for a comfortable floating home, her accommodations being of the finest. The general arrangement is well shown in the accompanying plans, while the details of construction are fully given. The leading dimensions of Vanduara are:

Length L. W. L.	81ft. 3in.
Beam, extreme	16ft. 2in.
Draft	12ft. 1in.
Displacement, tons	130
Midship section abaft center L. W. L.	3.75ft.
C. B. abaft L. W. L.	1.58ft.
Meta center above C. B.	2.99ft.
Area of immersed surface	1892 sq. ft.
Total area lower sail	1500 sq. ft.
Mast, deck to hounds	48ft. 6in.
Boom	68ft. 3in.
Gaff	43ft. 3in.
Bowsprit outboard	31ft.
Center of mast from fore side of stem	31.9

VANDUARA—MIDSHIP SECTION.

"VANDUARA"—STEEL CUTTER—Designed by G. L. Watson, 1880.

REEFING GEARS FOR CATBOATS.

Editor Forest and Stream:

Now that attention has been called to the method of reefing small boats, will some one explain in detail a handy system of reefing, say a 20ft. cat. If not, will some one answer the following questions:

First—Gaffney and Norwood, of Boston, have a system. Where is it explained? I know it is applied with success on the 18ft. eastern sloop Sassacus, reefing and setting the mainsail in about five seconds.

Second—Thomas Fearon, of Yonkers, has another system. His method of reefing jib was explained in the FOREST AND STREAM about two years ago. Will he kindly explain his patent "reefing boom?"

Third—According to your Greenwich correspondent, R. B. Forbes has a system patented in 1873. As F. G. D. is good at sketching will he be so kind as to illustrate in the columns of the FOREST AND STREAM the system he mentions?

I need not mention the invention of Mr. Griswold, as we have nothing to do but "step up and pay royalty," to have it on our boats.

No one but those who have tried are aware of the trouble in reefing a catboat, when alone. I think Mr. Kunhardt will agree with me in this. What is wanted is a method, simple, handy and capable of being applied without heavy expense, and the trouble of getting a new sail. Now is the time to consider this before the season opens. RAVEN.

MAYFLOWER'S CHALLENGE.—The only answer that Mr. Burgess has yet received from Mr. Chamberlayne is the following by cable: "LONDON, March 24, 1887.—To Burgess, Boston: I will race the Arrow against the Mayflower under conditions which have been fully written out and forwarded to you by mail.—CHAMBERLAYNE." Until the letter arrives nothing further can be determined. It is proposed to rig the Mayflower as a ketch for the ocean voyage, with a large mizzen in addition to the reduced mainsail. The sail plan has been completed by Mr. Burgess, and estimates of the cost have been received, so that the work can go on at once if Mr. Chamberlayne's conditions are acceptable. In regard to Mayflower and the centerboard, the London *Field* of March 26 speaks as follows: "So far as the challenge of the Mayflower goes, Mr. Chamberlayne has cabled a reply that he accepts, subject to certain conditions, which are such that we have no doubt the owner of the Mayflower will accept. The principal difficulty, no doubt, is the centerboard, and as Mr. Chamberlayne enjoins that the match must be sailed inside the Isle of Wight, between the Nab lightship and Hurst Castle, the centerboard of the Mayflower could not very well be fixed down. As an alternative it is proposed that the board shall be stopped so as not to be lifted above the maximum draft of water of the Arrow. As this will only place the Mayflower on terms with the Arrow so far as its capability of working in shoal water goes, it can be taken for granted that no objection will be raised, especially as the Mayflower will still have some advantage by the reduction her immersed surface can be made to undergo when her board is lifted some three or four feet. This is a matter which also may require adjusting. So far as the chances of the Arrow go there is no disguising the fact that she will have to undergo a sort of metamorphosis under water to get on anything like even terms with the formidable Yankee, and as the very considerable alterations which will have to be made are not likely to be put in hand until the conditions are finally agreed to, there is no chance of the races taking place until the end of August. Mr. Chamberlayne, it should be said, has made it a condition that one of the yachts must win two races to decide the ownership of the Cup. The work of altering the old ship will, of course, be carried out in Mr. Chamberlayne's own yard at Southampton by John Moore, and it can be taken for granted that Mr. Chamberlayne will spare no expense in carrying out what his judgment tells him should be done. We believe that the general nature of the alterations has already been thought out, so there will be no delay when the news arrives that the conditions are agreed to."

CAPE ANN Y. C.—The Cape Ann Y. C. held its annual meeting on March 23, and elected the following officers: Frank H. Gaffney, Commodore; H. P. Dennen, Vice-Commodore; Geo. Wheeler, Fleet Captain; F. A. Docherty, Secretary; Frank E. Smothers, Treasurer; Thos. Irving, Measurer. Trustees, Chas. Prindall, James C. Richardson, Geo. H. Procter. The club has secured headquarters at Pavillion Beach, commanding a complete view of the harbor and club course. The membership list is now about 200, and increasing rapidly, 38 new names being presented at last meeting. A large number of new yachts will be enrolled the present season, among the number two handsome cutters now in the hands of Messrs. Higgins & Gifford, the builders of this port.

CLARA.—This famous cutter is offered for sale in another column, as her owner has returned to England. Her record here is well known, she has never been beaten in the two seasons that she has raced, by any boat of her size. Her outfit for racing and cruising is very complete.

HURON.—Messrs. Bloodgood & Kelly's cutter was on the screw dock last week, being coppered. Her cabins have been changed somewhat, and she will go into commission early. Her owners will use her largely for cruising, but she will enter some of the races.

MIRAMICHI Y. C.—J. C. Miller, Com.; J. L. Stewart, Vice-Com.; Chas. Sargeant, Rear-Com.; F. Kennedy, Sec.-Treas.; Thos. Crimmen, Measurer; J. C. Miller, Geo. Watt, P. Wheeler and James Miller, Trustees.

SACHEM.—The report that Sachem was to visit England is contradicted by her owners, but they have offered to let Mr. Burgess take her if she is needed for the defense of the Cup.

MR. WM. R. TRAVERS, owner of the sloop Fanny, died at Bermuda on March 19. Mr. Geo. L. Jordan, a member of the New York Y. C., died on March 20.

Fitzterence O'Donovan Hoole,
With a keg of cold powder did fool;
And up from the alley
Fitzterence did sally,
To return when the weather gets cool.—*Life.*

A VIOLENT COUGH continued through the winter often brings consumption in the spring. Soothe and tone the irritated and weakened lungs with Hale's Honey of Horehound and Tar, and the cough yields and the danger disappears. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. W. W.—Yes, Pike county, Pa., is a famous deer country.

E. M. T., Saco, Maine.—Hallock's "Gazetteer" will give you the desired information.

H. A., Mansfield, O.—Write to Shaeffer of Boston, who makes a specialty of that sort of business.

E. S.—The guns stand very high and are first-class. The penetration will be practically the same.

J. W.—The New York law is in its annual transition stage; no one knows what it will be when the Legislature gets through with it.

M. S., Fort George Island, Fla.—R. G. Salomon, 105 to 113 Sussex avenue, Newark, N. J., is the largest tanner of alligator skins in this country.

J. R. C.—English snipe are found on the Hackensack meadows, at Barnegat, N. J., and on the south shore of Long Island. Probably Barnegat will be the best.

J. L. V.—The trout season in New York will open April 1, except in the Adirondacks, where the season will begin May 1, unless the law is changed before that date.

S. K. B., Washington.—The gun first mentioned is not more liable than others to get shaky. Either one of the makes of the $100 grade will last you a lifetime.

E. L. F., New Mexico.—The pattern and penetration of the 16-bore we consider very good both as a performance by itself and in comparison with what might be expected of other guns.

W. C. K., Columbus, Ala.—A study of Dr. Henshall's "Book of the Black Bass" will give you much help, and it has instructions as to proper bass flies and tackle, and the art of fly-fishing for this species.

J. A. T., Bangor, Me.—The arm is safe. It compared well with others in the trajectory test. The choice between a .38 and .44 caliber depends upon what you want to use it for; the latter is the heavier arm.

J. B., Webster, Mass.—1. Henshall's "Book of the Black Bass" is the best thing in that field. 2. The Massachusetts fish commissioners are E. A. Brackett, Winchendon; E. H. Lathrop, Springfield; F. W. Putnam, Cambridge.

W. R. R., Toronto, Canada.—The deer season in Michigan will open for Lower Peninsula Oct. 1, and for Upper Peninsula Aug. 15; in Minnesota, Dec. 1; in Wisconsin, Oct. 1. The laws you ask for will be given in these columns.

A. M.—You might take off three inches of the muzzle, provided it is not a choke. If the gunmaker who repaired it warranted it, you have only to go back to him and have him repair the damage. There are a number of reliable gunsmiths in this town.

J. C. H.—A and B shoot a match; A breaks the most birds. After the match is over B finds that A is using 1⅛oz. shot heaping measure. Which wins the match? Ans. There is nothing in your statement to show it. You do not give the conditions of the match.

G. C. H., Syracuse, N. Y.—1. Trout law is off for New York on April 1, except in Adirondacks, where it is May 1. 2. Deer hunting, according to present law, Aug. 15 to Nov. 1. 3. There are twenty-six numbers in a volume of FOREST AND STREAM. 4. Seneca's cook-book is in cloth binding.

W. J. P. Stanton, Mich.—Will you please state in your answers to correspondents whether the articles on travels in Boon-Gah-Arrah-biggee are fact or fiction? Is there such a country? If so, where is it? Ans. You are referred to the prefatory note by the editor of Mr. Goater's manuscript. See first installment of the Boon Gah series.

F. L. M., Whitby, Conn.—Please distinguish coot and mudhen? Ans. The terms coot and mudhen are both commonly used in speaking of the American coot (*Fulica americana*). Three species of sea ducks (*Oidemia*) are also called coots along the New England coast. Various species of rail (*Rallidæ*) are called mudhens in certain localities.

BULLET.—1. Rifle barrels are of regular accepted lengths. 2. The company that makes the best repeating rifle will be found advertised in our advertising pages. 3. Probably the most beaver are found in Canada. 4. There are men who live entirely by hunting and fishing, but we would not advise you to adopt that mode of earning a livelihood.

JORBISH, Idaho.—Can you please tell me of any elementary book on the aneroid barometer, how to adjust it to different altitudes, and all information with regard to its uses, and also the altitude scale with which pocket aneroids are provided? Ans. We can supply a work entitled, "The Aneroid Barometer; its Construction and Use." Price, 50 cents.

A. O.—A will have it that sea gulls nest in trees, and that the trees in consequence die. B contends that a sea gull will never nest on any tree. Please to decide the matter. Ans. Sea gulls nest on the ground, with exception of the herring gull, which in Newfoundland nests in pine trees. We do not know why the trees should die in consequence.

E. F. S., Byrdville, Va.—I have two wild geese, one supposed to be a gander and the other a goose. One mated last year with a white gander, and raised hybrid goslings; the other neither mated nor laid. Both are of the same age and much alike. What is the difference in markings and shape of wild goose and gander? How can one be distinguished from the other? Ans. There are no distinctions that will enable you to determine the sexes.

J. T. W.—I have a cocker bitch in whelp, will it interfere with her young by running up and down stairs? She's been accustomed to the stairs from a pup. 2. A cocker bitch, one year old, is getting too fat, what can I do to reduce her flesh. I have a small leather bag like the "Nessmuk" ditty bag, and wish it to shed water; what can I use? Ans. 1. No. 2. Diet, exercise and Epsom salts. 3. There are water-proofing preparations.

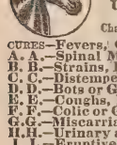
W. A. S., Delaware, Ont.—I omitted the size of the bird, the description of which appears in last issue of your paper. The weight of it is, I should judge, about 12lbs., and it is not much larger than a crow. Several parties, to whom I have shown it and who have shot turkey buzzards on the prairies, say this is not one. Ans. We presume the bird to be a turkey buzzard, but cannot tell with certainty from your description. Better get some naturalist to look at the bird, or if it dies send on the skin for identification.

MAN AND OTHER ANIMALS.

A bill has been introduced into the Texas Legislature to prevent pooling—by railroads. Somebody ought to supplement it with a bill to prevent fooling—by didn't-know-it-was-loaded idiots.

Why is a watch-dog larger at night than he is in the morning? Because he is let out at night and taken in in the morning.—*Texas Siftings.* [This joke was translated from Greek to Latin two thousand years ago.—ED. F. & S.]

Wm. Felisx, while chopping in the woods near North Bradley, on the F. & P. M. railway, captured three cubs, two of which are now in the possession of Wm. Richter, of this city, who will raise them as pets. The dog started a big black bear out of the root of a fallen tree, and it was so close to Felisx that he struck it in the shoulder with his ax, causing a deep wound, from which bruin bled profusely. The bear, however, got away, and although it was traced for two days by the trail of blood, it was not captured. The dog returned to the root, and began to bark again, when Felisx began a search and found the three cubs, which are jet black, with a pure white spot on the breast, something very unusual.—*East Saginaw (Mich.) Herald,*



Formerly the salmon in the spawning season ascended the Fraser River by the million, and they could be scooped out of the water by the barrelful with any kind of vessel large enough. But since the Canadian Pacific trains have begun running regularly along the banks of the Fraser, the fish have begun to desert the stream, and it is feared that in a year or so there will be very few of these fish where in former years they were present in countless numbers. The noise of the engine and the vibration imparted to the water by the trains running along the banks are supposed to have scared them, and therefore caused their departure.—*Toronto Globe.* [Very good; but what about the salmon which have come into the Hudson River since the operation of railroads on either side of the stream?]

The other day as Sam Lusk and another man were driving the Nevada City and Downieville Stage Company's train of pack horses over the trail between Camptonville and Downieville, a big buck came dashing toward them. The snow was so high on both sides of the track that it could not turn aside and thus pass, and it dared not go back because some men were coming just behind it from the opposite direction. Luck's companion grabbed it by a horn as it came toward him full tilt. The horn broke off and the animal struck him a terrible blow with one of its hoofs, cutting the flesh on his right hand to the bone. He grabbed it by the remaining horn before it could back off for another charge. Then ensued a desperate struggle which Lusk ended by coming to his friend's rescue, and with a jackknife cutting the deer's throat.—*Nevada City (Cal.) Chronicle.*

It may not be generally known away from the seaside that a vessel's old sheathing, which has been once covered with yellow metal or copper, at the expiration of a long voyage makes a most beautiful flame of different colors, when burned in an open fire-place or grate. The variegated flame is caused by the sheathing coming in contact with copper nails and other composition with which the sheathing is covered. Years ago this wood was considered worthless and was usually given away to poor people for fuel, but of late years it has been used quite extensively in this city and vicinity, being placed upon other wood or coal, when the flames from the burning of the old sheathing present a beautiful sight, producing different colors, which shoot forth from the copper nail holes. Parties who visited this city and saw the beautiful effects produced by burning this wood, carried some to their homes, and now the demand for old sheathing is greater than the supply. Several gentlemen in this city act as agents for parties in the central part of this State and Rhode Island, and in some instances it has been sent to people residing in New Jersey. Yesterday we saw half a dozen flour barrels finely packed with this wood for parties in Providence.—*New Bedford Standard.*

Sportsmen in this part of Nevada are lamenting the great slaughter of quails made by pot-hunters on the Carson and in other places where the birds sought shelter during the late big storm. Such slaughter is to be deplored, but it may be that we shall have a new stock of quail sent us. A few years ago we had in this city a most remarkable shower of quail. It occurred about 4 o'clock in the evening in the fall of the year. Where the quail came from no one could imagine, as they were of the large mountain variety, and perfect beauties. The fall of birds extended from about Sutton avenue out north of the Union shaft, reaching over three-quarters of a mile of ground. When they fell they seemed to be completely exhausted. People caught them by putting their hats over them, or by simply picking them up. Everybody had quail. About a hundred were caught alive and kept in cages and pens in various parts of the town. A curious thing was that these seemed perfectly tame and at home at once. There were at the time many conflicting opinions about this great flight of quails. The most probable solution of the phenomenon was that the birds had collected at some points in the Sierras for the purpose of migrating to the southward, but had either mistaken their course or had been blown out of it, and so flew on and on until they were obliged to come to the ground through exhaustion. Night coming on soon after the birds fell, hundreds roosted about the town, and next day boys were catching and killing them up to 11 or 12 o'clock. By that time nearly all the bewildered wanderers had scattered away into the hills. There they doubtless remained to breed and stock the country, as it is not known that they ever got together again to try another flight.—*Virginia City (Nev.) Enterprise, March 9.*

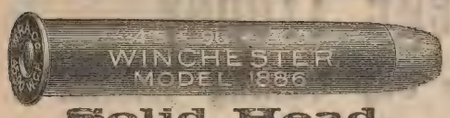
LAVERACK.
With colored illustrations. Price, postpaid, $3.00
For sale by the Forest and Stream Pub. Co.

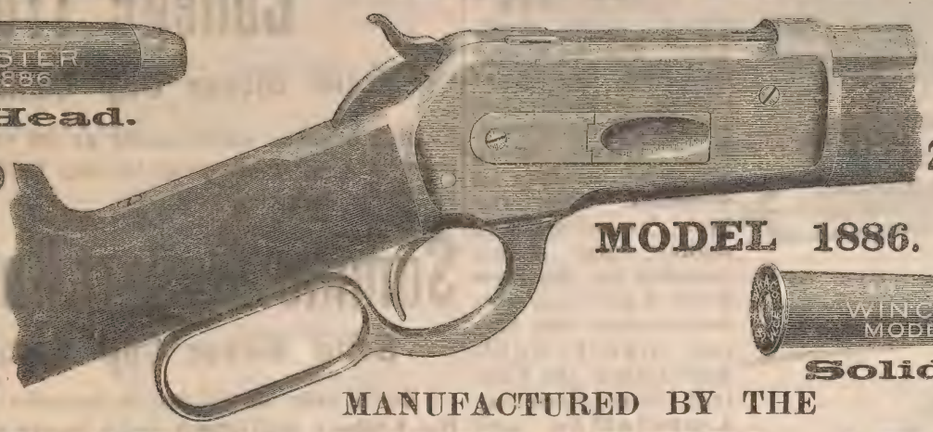
Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.



These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff*, but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.



Also a new style **LANDING NET,** made of *waterproof braided linen line*, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

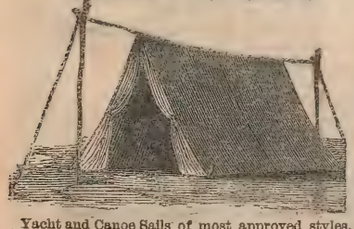
THE NEW L. C. SMITH HAMMERLESS GUN.



This new gun embodies all the essential features of our hammer gun, together with a new oscillating cocking mechanism and automatic and independent safety combined. This gun is not equalled in ease of manipulation, symmetry, durability and shooting qualities by any hammerless gun made.

Of the eleven gentlemen who broke 100 straight inanimate targets for a place in the Chamberlin Cartridge Tournament prizes, five of them used the "L. C. Smith" gun. The following are the gentlemen: D. C. Powers, Cleveland, O.; Andy Meaders, Nashville, Tenn.; H. McMurchy, Syracuse, N. Y.; Fred Erb, Jr., La Fayette, Ind.; J. C. Hendershot, Cleveland, O.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Entries close May 10. For premium list and entry blanks address CHAS. WEIL, Sec'y, Newberry & McMillan Building, Detroit, Mich. mch3

FOR SALE.

Pointer bitch Grace (A.K.R. 1250), Llewellin puppy, (Rock ex La Belle Creole); also Beagles, Collies and Greyhounds.
Box 472, Pittsburgh, Pa.

OLD DON'S BLOOD TO THE FRONT.
Lemon and White Pointer
RICHMOND,
Never beaten in the field by any pointer when in condition. Record: Runner up, and divided third Western Trials, 1885. Divided third, National Trials, 1886. Winner All-Aged Stake, Tennessee Trials, 1887. He is the only pointer since the days of Don and Croxteth, that has defeated setters who were winners of an All-Aged Setter Stake. In order to give pointer breeders an opportunity to breed pointers that will hold their own against any of the prominent setters, he will be allowed to serve 12 bitches of approved pedigree. Stud fee **$25.00.** Addr. H. M. SHORT, Middleton, Tenn. mch24,2t

---

POINTERS.

Pups by Tammany ex Lucia. Also some thoroughly broken pointers. The above stock is noted for its bench show and *excellent* field qualities. For price, etc., address with stamp
CLIFTON KENNELS,
dec30,tf 75 Clifton Place, Jersey City, N. J.

Wire-Haired Fox-Terriers.

Mr. Ronald H. Barlow, who intends to retire from breeding and exhibiting, will dispose of his entire kennel of these terriers, and offers for sale the following well known specimens: New Years Day, Vero Venture (dogs); champion Bundle (in whelp to Vero Venture), Tiny Todger (in whelp to Vero Venture and due in a week), Flossie la Muquet (in season this month), bitches. Also two splendid bitch puppies, by New Years Day ex Tiny Todger, 6 mos. old, which would win in any company in England. Reasonable offers entertained for the entire kennel. Address RONALD H. BARLOW, 237 South Thirteenth street, Philadelphia. 1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 7, 1887.

VOL. XXVIII.—No. 11. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

THE RAILROAD TO COOKE.

THE projectors of the Rocky Fork & Cooke City R. R. propose to begin at once the construction of their road from the Northern Pacific R. R. to the coal mines on Rocky Fork and thence to Cooke. A surveying party, under the direction of G. L. Knowlton, chief engineer of the road, is said to be already in the field establishing a line.

The agents of the company have recently been at St. Paul making arrangements with the Northern Pacific Company for the building of the line, and it seems very probable that as soon as the actual route has been decided on construction will be begun. They have made contracts with the mine owners of Cooke for handling the output of ore from that camp, which contracts are exclusive and tie up all the mines for a period of twenty years.

In view of these facts it would seem clear that the Cinnabar and Clark's Fork Railroad project is dead beyond the possibility of a resurrection.

The officers of the Rocky Fork & Cooke City Railroad are James L. Platt, President; Hamilton Browne, Vice-President; J. B. Hubbell, Secretary; Walter Cooper, Treasurer, and Samuel Ward, Attorney. It may be hoped that the failure of the Cinnabar & Clark's Fork road to get a footing in the Park will discourage any similar attempts in future.

WINTER IN WONDERLAND.

WE print this week the first instalment of the report of our special Commissioner, who made the tour of the Yellowstone Park on snowshoes. The interesting relation of what he did and what he saw will be read with pleasure by that very large portion of the public who have followed the history of the Park, and have noted the many attempts by various individuals and corporations to obtain possession of this reservation which belongs by law to the nation.

The story told by our correspondent is wholly novel. Nothing has ever been written of what goes on in the Yellowstone Park in winter. Few men have visited the points of interest, though many have traveled along the roads, and no one has ever made the complete tour which was accomplished by Mr. Hofer. His narrative needs no introduction. It is a plain tale graphically told, and speaks for itself. In the chapters which are to follow the interest will be fully sustained, and the series may well be ranked as one of the noteworthy accounts of winter exploration.

It is perhaps fitting that, with assurances of distinguished esteem, we proffer to the New York *World* our sympathy for it for the mysterious disappearance of its widely heralded Mid-winter Yellowstone Park Exploring Expedition, which, with Crow scouts, Esquimau dogs, Arctic clothing and bottled ammunition, we are apprehensive has been snowed under. The *World* will hail with a pulse of faint joy the relic of the party which our Commissioner sends us.

SNAP SHOTS.

THE proposition to set apart a district in the Catskill Mountains as a State Park, is eminently wise; and if the reservation be stocked with deer and other game it will materially add to the available hunting area of the Eastern States. The Catskills were once well filled with deer, and the reason that there are none there now is that a former generation of hunters and hounds exterminated the stock. Bears and wildcats have held their own in the rocky fastnesses; there are foxes to call forth the music of prized Catskill Mountain strains of foxhounds; and squirrels and ruffed grouse reward the sportsman; while the trout brooks have been of late years restocked, and in many instances afford fine sport.

The rifle article written by "P." and published in the last issue of the FOREST AND STREAM, was printed the same week in two other journals. A correspondent who happens to subscribe for all three papers, hailed "P.'s" article with joy in the FOREST AND STREAM, and with bare sufferance when he found it in his mail-box the second day; but when it bobbed up serenely the third time, bubbling over with indignation and disgust he sat down and wrote us a moving protest. His feelings may be assuaged by the suggestion that a rifleman would be none the worse from a third reading of the article. Moreover, the average reader of the FOREST AND STREAM probably does not take many other journals relating to kindred topics; the FOREST AND STREAM is his Koran, and he looks upon other papers as Kalif Oman, who burned the Alexandrian Library, regarded the books in it. "If," said he, "these books contain what the Koran contains, they are superfluous. If they contain anything contrary to what the Koran contains, they are mischievous."

With the article on field trial bribery (in our issue of March 24) before him, D. Bryson writes us a windy letter (in the Brysonese dialect) averring that at Grand Junction the other Bryson not only made an attempt to bribe our reporter, Mr. S. T. Hammond, but actually succeeded in his fell design. "The facts in the case are simply this," writes Bryson. The facts then are certainly a sad one. It was very cruel in the other Bryson to lead astray a person of Mr. Hammond's tender age and unsuspicious susceptibility, and both Brysons ought to feel the gnawing of remorse.

There is one point which may not have occurred to Bryson: were his statements to be taken seriously there would at once arise a question of veracity between D. Bryson and S. T. Hammond; and cannot this illiterate Memphis bulldozer muster gumption enough to comprehend what an issue like that would mean for him?

A veracious tale from New Mexico is to the effect that an Albuquerque editor who expected a gang of lynchers to come for him in the night betook himself to the cellar, leaving a pet grizzly bear in his place in bed. The lynchers did not bring any light, but made a plucky attempt to get the bear out and lynch it, but gave up after three of them had lost an eye apiece, two of them had suffered the loss of thumbs chewed off, and the other six were more or less deprived of skin. This prompts us to remark that the FOREST AND STREAM has two grizzlies, guaranteed rough on lynchers, which will be loaned to frontier editors in distress on most reasonable terms. For further particulars apply at this office.

Deputy Fish Commissioner F. R. Shattuck, of Boston, is winning his short-lobster cases without exception. Last Tuesday six of the defendants in the appealed cases plead guilty and paid fines and costs. These are likely to afford such emphatic precedents that the illicit short-lobster trade in Boston will be given up entirely. If Finn, the free lunch saloon man, gets his bill through at Albany, the short lobsters unlawfully exported from Maine will find a market in New York. In any event they will probably be disposed of here, since there is in this city no individual to exercise the watchfulness of the gentleman who has single-handed suppressed the Boston traffic.

The Secretary of the Interior has recently agreed to and signed a new body of rules and regulations for the government of the Yellowstone National Park. These are essentially those recommended by Mr. W. Hallett Phillips, who has twice visited the Park as the special agent of the Department, and are such as we have many times urged on the Department. They will strengthen the hands of Captain Harris, the acting Superintendent of the Park, and will be productive of much good. To the Secretary of the Interior and to Mr. Phillips are due the thanks of all who are interested in the Park.

"Folks down our way want this" and "folks up where I come from ask that," and "my constituents demand an exception here," and "we think we ought to have permission to do so and so," and "you vote for my milldam and I'll take care of your meadow lot"—so it goes at Albany, with thirty-six game bills already put in and several counties yet to be heard from. The patent coffee mill is grinding; what will be the grist only the guides at the crank can begin to know, or what will become of the game.

Lecture bureaus, who are on the lookout for new attractions, will find it to their advantage to make early application to Adjutant-General George M. Harmon, of Connecticut. His new lecture, "What I Know About Impeaching Maine Game Officials," is said to be very moral and instructive. As an impeacher the General is a dismal failure, but there is no reason why he may not shine on the rostrum, particularly if he can be induced to cart around that deer's head as an added attraction.

"The last buffalo" has been killed so often, in so many different ways and by so many different people, that he must now be getting quite accustomed to it. By and by people will begin to weary of reading of him; and already there are indications that the newspaper slayers of "the last buffalo," having killed him once too often, will be obliged to switch off their magazine repeater imaginations to "the last elk," or "the last Florida alligator."

In Ontario deer hounding is largely on the increase, and as the system there practiced is virtually that of the Adirondacks, where the deer are driven into the water and butchered at arm's length, the annual destruction is very great. The Ontario law ought to take cognizance of this and put a stop to it.

There are hunting souvenirs and hunting souvenirs. The author of a Manitoba deer hunt recently described in our columns is now languishing indoors with "a sprained leg, a souvenir of my last hunt," and indoors he is likely to remain until the flowers shall bloom in the spring.

What about that game protector superintendency measure that was to be introduced at Albany this year? Would it not be wiser to appoint such an officer and give the system a further trial than to abolish the protectors altogether, as Mr. Langbein proposes in his bill?

Graves, the assassin of the Maine game wardens at Fletcher Brook, has just been captured at Oakland, California. This is a pretty big country, but it is astonishing how little room there is in it after all when a murderer is looking for a place to hide.

At this writing the open season for trout in New York will begin April 1, save in the Adirondacks, where it will begin May 1; but no one knows what changes may be made by the Legislature before that time.

The March enrollment of AUDUBON SOCIETY members was larger than for any month previous. The membership now exceeds 27,000.

HARMON'S BRAG.

"BY the time I am through with you I will try to show you that my letter to Mr. Huntoon was not brag," wrote Adjutant-General George M. Harmon, of Connecticut, to Commissioner Stilwell, of Maine. It now appears that it was brag, after all, and a very harmless sort of brag at that.

The hearing on the charges drummed up among all ranks of Maine poachers against the Commissioners was held last week. It ended in a complete vindication for the Commissioners on every count. With respect to the charge that Commissioner Stanley had sold some fish eggs belonging to the State, it was shown that the eggs were his; the charge that the Commissioners had used State funds to pay their private debts fell through when it was shown that the payment in question was made by the State Treasurer upon warrant by the Governor and Council, and was to pay the expenses of Mr. Stilwell's defense, when in his official capacity he had been maliciously prosecuted by Harmon. In like manner, one after another, all these trumped up charges were shown to be as empty and harmless as the inflated bladders with which the clowns in a comedy whack each other over the shoulder.

The result was more than a vindication. By drawing public attention anew to the efficiency of the Commission, by laying bare the motives and purposes of the generals and professional deer butchers who have had occasion to resent these officials' performance of duty, and by demonstrating how utterly groundless are the strongest charges which these disgruntled elements can muster, this hearing will strengthen public confidence in the Commission, and forward the cause of game protection in Maine.

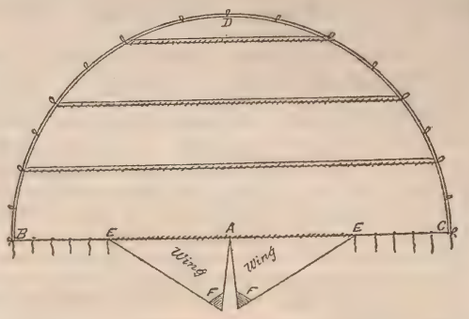
Harmon's letter to warden Huntoon was after all very like blow, brag and bluster.

IN a paper in *Scribner's Magazine* on "American Elephant Myths," Mr. W. B. Scott presents evidence to show that the prehistoric American sportsman counted elephants among the big game that tempted his powers and skill. "The testimony—geological, archæological and traditional—goes to show," concludes Mr. Scott, "that not very many centuries ago elephants were an important element in American life." A cursory glance at the spring-time circus bill-boards will discover ample evidence that the elephant fills a very large and important place in American life even now. Since the elephants that once disputed with the grizzly supremacy in American wilds were huge and savage, the *Scribner's* writer ventures the unsportsmanlike sentiment of "thanking heaven that the whole generation is extinct." What a piquancy and zest a race of American elephants would lend current discussions of explosive bullets and muzzleloading rifles.

The Sportsman Tourist.

WINTER IN WONDERLAND.

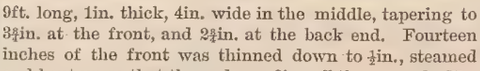
THROUGH THE YELLOWSTONE PARK ON SNOWSHOES.



I.

MAMMOTH HOT SPRINGS, Yellowstone National Park, March 7, 1887.—*Editor Forest and Stream.* Having completed the midwinter snowshoe expedition through the National Park undertaken at the instance of the FOREST AND STREAM, and as a special commissioner of that journal, I submit herewith my report of the trip.

To see the Park in its Arctic attire, one must visit it after the 15th of January; before that date the frost has not had time to do its best work. I desired to make the trip with only one companion, and this only after my friend had requested me to take him. I prefer to make most of my trips alone. A young man, Jack Tansey, said he would go with me. He had had no experience in snowshoeing, but as I intended to travel slowly, I thought he could make the stations and camps without any trouble. He was acquainted with some parts of the Park, and had been over most of the route with me last summer. He proved to be a very agreeable camp companion.



The outfit I thought necessary to take with us included an Indian lodge for shelter while camping out. This was 10ft. in diameter on the ground, made of heavy sheeting, and weighed complete, 7½lbs. A small chopping hatchet, handle and all, 2½lbs. A pocket knife for each of us, two sheath knives and one revolver between us, a small .38-cal. Smith & Wesson—carried for fear of an accident. I could use it to build a fire or kill small game if we ran out provisions. Then there were a small compass, a package of small screws of various sizes under 1½in. to mend broken snowshoes, and two miner's candles each. We took a change of underclothing and socks, which were also to be used for extra clothing in extreme cold weather. Each had a pint cup. I took from here 5lbs. of sugar, 1lb. of best black tea, salt, 1,000 matches, ½lb. extract of beef, 2lbs. condensed soup. Bedding and provisions for the camping out part of our trip I intended to get at the Upper Geyser Basin.

To make my Indian lodge I drew a half circle on a floor 21ft. in diameter, laid down the sheeting on the straight line, cut off at the circle, allowing for hem; lapped on ½in. and cut off, until I had the marked space covered. Then I lapped the long piece on to the shorter pieces and trimmed the edges, allowing for a hem 1in. wide. I cut two triangular pieces, 3ft. wide, 4ft. long, to a point. I had these sewed to the straight side, the wide ends butting at

the middle (*A*). I had pockets sewed on to the outer corners of the wings at *F*. Strings on the straight edge from *E* to *C* and *E* to *B* with loops for lodge stakes on the half circle. The seams were sewed on a machine, double stitched. The pockets on the wings are for the wing poles to keep the wings in place and regulate the draft.

Clothing for a winter's trip through the mountains is one of the most difficult things to decide on, as it is very important that one should have sufficient, and still not be burdened with superfluous or useless garments. I used next to my body a fine undershirt, then an antelope skin—short sleeveless—shirt Indian dressed, a California flannel shirt, a woolen overshirt, vest and buckskin jumper; for my legs a pair of mission drawers, pantaloons and canvas overalls; for my feet fine cotton socks, calf boots and arctic overshoes, with canvas leggings tied on with buckskin strings. I used a common white felt hat, and for cold weather I had a jersey cloth hood and mask to draw down over my face, with two silk handkerchiefs to tie around my neck in windy weather, and smoked spectacles to protect my eyes from snow blindness. I had gloves and leather mittens for my hands, and I used long snowshoes—"skeys" or Norwegian—made of red fir,

9ft. long, 1in. thick, 4in. wide in the middle, tapering to 3¾in. at the front, and 2¾in. at the back end. Fourteen inches of the front was thinned down to ½in., steamed and bent up so that the end was 8in. off the ground. The tops of the shoes are beveled off, to allow the snow to slide off readily. The shoes were saturated with melted beeswax, candles, linseed oil of equal parts, with a little rosin to harden the mixture; this preparation was put on the shoes after first heating them before an open fire. The bottoms were heated enough to scorch them a little. After allowing them to cool, I put a coat of shellac on the tops to keep melted snow from wetting the wood. Measuring from the front end of the shoe back 4ft., I put on a hard wood cross piece or cleat, 4in. long, ⅝in. wide, 1½in. thick, thinned down to ½in. in the middle to allow the foot to fit in well. The projections assist the foot in guiding the shoe. Two inches in front of the cross piece, two pieces of leather 4in. wide and 3in. long were well fastened with screws to the side of the shoe in a groove as deep as the leather was thick, so that nothing should project beyond the side of the shoe. These pieces were laced together to fit the foot. They came over the toe and well back on the instep. The latter must not interfere with the easy movement of the foot while walking. Some prefer an inch strap, tying the foot to the shoe with straps passing back of the foot and over the instep, covering the top of the shoe with tin to prevent the snow's packing under the foot, and using no cross piece. One cannot steer shoes rigged in this way as well as he can those with the cross piece. I covered the top of my shoes (that part under the foot) with part of a rubber bootleg, and found it to work well. To assist one while walking up hill, and steer with while sliding down, a long pole is used. I used a 7ft. pine pole, which I used also to measure the depth of snow, until the snow was too deep for the pole to touch bottom.

On Saturday, Feb. 12, we left Gardiner, Montana, for the Mammoth Hot Springs, four miles within the Park. Our route was up the Gardiner River, which we found open, owing to the great volumes of hot water running into it from the Boiling River at the foot of the old hot spring terraces, four miles above.

The road follows along the river most of the way to the Hot Springs, crossing it twice. Often we could see trout in the clear water. I counted seventeen small ones near one rock, at a point less than 1½m. from Gardiner. I saw no large fish. A little further on we crossed the river to where the road runs under some cliffs. Here I saw a band of six mountain sheep, feeding within ten feet of the road on a hillside and above the roadway. Seeing us, two of them walked up on the hill, a little further to a point where they had a better view of us. After satisfying their curiosity, they went on feeding, for here there was little snow. They showed no fear whatever; some of them only looked up once, but paid no attention to us. Though we passed within 20yds. of them they were as unconcerned as possible, pawing snow and feeding as though there were no such thing as a rifle or hunter in the world. The band consisted of four ewes and two lambs. One of the lambs had patches of hair off from its sides; this I attribute to a parasitical disease similar to the scab of domestic sheep; I have often noticed that mountain sheep are afflicted with it in the spring. I have found old rams dead that had very little hair on them, the skin being hard, dry and cracked. I have often noticed the same trouble with elk, especially bull elk; the first one I ever killed was in a sorry plight, with scarcely a hair on his sides, shoulders, or neck; the skin looked like scales—all cracked and bleeding—he was very poor, and unfit for any use except wolf bait. The

other sheep in this band appeared in fair condition. The band have been in the Gardiner cañon all winter; they are so tame that they will lie down within less than 20yds. of passing teams. An old ram belonging to the band, but not with it when I passed, once thought of disputing the road with the Post Surgeon on his way to Gardiner; the ram finally concluded to let his team go by, so he hopped up on a rock beside the road, went up on the hill a little way and lay down.

I did not see any of the antelope on Mt. Evarts as we were down in the cañon. In the river I observed, besides the fish, several kinds of ducks, the names of which I do know. Water wrens [*Cinclus.*—ED.], queer little birds, were dashing in and out of the water seeking their food; they would sit on a rock, bob up and down a few times, then with a squeak dash into the water and out of sight, popping up in an unexpected place. Snowbirds, camp or moose birds, Clark's crows, and several small birds were also noted on our way up. The snow on the river was about 2ft. deep. As we began to climb the old terraces to the main Hot Springs proper, the snow deepened very fast until in the vicinity of the hotels there was on an average about 4ft. of settled snow, packed quite hard by the wind and very much drifted.

Striking across the flats, we stopped at the Cottage Hotel. Here I learned that the mail carrier had not been heard from for over two weeks, and fears of his having lost his life were expressed. One of the teamsters whose teams are snowed in at the Norris Hotel, Con Sheehan, had come down for the mail and intended to start back in the morning; so I was to have company part way up.

I did not visit the active Hot Springs, as they are for the most part snowed under. Only the hot water is exposed. Soon after the water leaves the springs it cools down and freezes, and the snow falls on the ice, hiding anything worth seeing in the way of frost work. Then, too, the coloring that adds so much to the beauty of the formation and attracts so much attention, is very much dimmed; it is not nearly so brilliant as in summer.

Sunday morning I was up for an early start, but found it snowing hard with a heavy wind from the south and southwest, which I would have to face, and that, too, in an open country. Con had started, but turned back, so we put in Sunday visiting the people around the Springs. One of the men who had packed for the Schwatka party and, later, for Mr. Haynes, told me his experience on the trip. The party were taken to Indian Creek with teams, to a barn, where everything was left. The whole of the next day was spent making less than a mile, where a camp was made. The party rested up here, then started for Norris, distance some 12 or 14 miles; some of the party did not get in until very late. Almost all of their baggage was left at the barn. At Norris Lieut. Schwatka, Mr. Brackett and the guide, Jack Barronett, stopped. The rest of the party went on to the Lower Basin, and most of them to the Upper Basin, returning to Norris the same way they had come. Then all the party went from there over to the Falls, 12 miles. At the Lower Basin, Mr. Haynes, the photographer, left the party, and with three men as packers, visited the Lower and Upper Basins, Grand Cañon and Falls, returning to the Mammoth Hot Spring via Mt. Washburne and Yancey's. In going over Washburne, the party were lost three days and were without blankets or provisions.

I had been told of snow slides and dangerous places in the Gibbon Cañon, until I began to dread that part of my trip, as I have had one snow slide catch me and carry me part way down a mountain, besides having very narrowly escaped three others; still I decided to make the

"grand round," if possible. I intended to go from here to the Norris Basin and Lower and Upper Basin; from there go over on to the Pacific Slope, crossing the Continental Divide to Shoshone Lake; visit that, recross to the Yellowstone Lake, follow down that to the river, then on down stream to the Falls of the Yellowstone, then over Mt. Washburne to the Tower Falls; look up the game, and return to the Hot Springs.

We had enough lunch put up for two days, then on the morning of Feb. 14, with 18lbs. packs each, we started for Norris, 22½miles distant. We were joined by Con and passed the quarters of the soldiers stationed here for the protection of the Park. Their buildings, barracks, storehouse, guard house, stables, hospital and others are built under the principal Hot Springs terraces. We soon came to the dead timber, which extends for miles around the Springs, and which was killed by a fire in October, 1882, started in the Swan Lake Basin.

Within two miles of the Springs we came to the fresh trail of a band of elk. I saw their beds to the left of the road where they had passed the night. I think there must have been twenty in the band. Arriving at Golden Gate, we found that the wind had swept the snow off the road, and even out of the gulch, except where it was piled in immense drifts. The wind sweeps through this pass with frightful force from the open country beyond. The trees exposed to the wind are all leaning from it, and every limb is pointed in the same direction. As we came in sight of the Pass we saw it would be very difficult to get out that way unless we descended into the gulch and then climbed out over the Rustic Falls. This we thought worse than climbing the cliffs to our right, which we did, passing our snowshoes to one another. We had to go up about 75ft. to get out on to a country where we could use our shoes again. In a few minutes we were out in the open country known as the Swan Lake Basin. It was snowing a little, still we could see a few miles. There was very little wind; the day was cold and good for traveling. Going about half a mile I turned to look south toward Electric Peak. All the high ridges exposed to the west wind were blown free from snow, and on them were several bands of elk feeding, I counted up to 120 in all; only four of them were old bulls; they were off to one side. The elk were in small bands of ten and fifteen; it was a beautiful sight. I could not resist the temptation to shout, and I gave one *whoo-pee!* I think every elk heard it and started for higher ground; not knowing what was wrong, they collected on some high points, where they remained so long as in sight. All these elk were within less than four miles of the Mammoth Hot Springs and do not include those on Sepulchre Mountain, Electric Peak or the ridges between them. Cows, calves and spike bulls made up the band. I was within half a mile of the most distant of those I saw until I shouted.

Following the open country south, we soon came to the Gardiner River, which we crossed on a bridge just below where the stream is joined by Panther and Indian Creeks. The streams were open most of the way, and every rock or snag in the stream was capped with a huge ball of snow out of all proportion to the size of the rock or support. Through this section of the country the snow was from 4½ft. to 5ft. deep, and increasing in depth as we went south. Two miles from the bridge we came to Lieut. Schwatka's second camp, a Sibley tent, crushed down by snow, with only the pole and stovepipe standing. Con proposed to dig it out and camp here for the night. It was rather early to camp, only 1 P. M. We had the tent partly uncovered when the mail carrier came along on his way to the Springs. He had been very sick from a wetting he received in the Gibbon River on his way out. He had to cross on a log, at the further end of which there was a large snowdrift, in which he tried to beat a foothold with his snowshoe pole, when suddenly the whole drift gave away, knocking him off the log into the river, where the water was four feet deep. The snow rolled over him, and kept him under water for quite a while. When he finally got out, his matches were wet, so he could not build a fire to dry himself. He was six miles from Norris and twelve miles from the Lower Basin Hotel. He concluded to go on to the Geyser Basin. His clothing soon froze like armor. He was hardly able to move. About half a mile further on, at the Beryl Hot Springs, he warmed up and thawed out his stiffened garments. Then by moving fast he kept warm; went on the next day to the Upper Basin, and there was taken sick from the effects of his wetting and exposure. This accounted for his being out in the Park so much longer than usual. We were glad to learn of his escape, for Pete Nelson is a good, reliable man and a first-class snowshoer.

We soon had the tent cleaned off and propped up with poles, and a fire started. Making some tea, we lunched. While engaged in cutting some wood for the night, we heard a dog bark, and looking up saw Mr. Kelley (the man in charge of the Norris Hotel) coming down on Pete's trail with two small dogs following. Mr. Kelley was out looking for Con who was overdue at Norris. I began to think the woods were full of people. I had not expected to meet any one when I started out. Kelley was glad to find us and a comfortable fire to camp by; if he had not found us here he had intended to go on to the Mammoth Hot Springs. We found in the tent some blankets, sleeping bags and robes left here by the Schwatka party. We made ourselves comfortable and passed a very pleasant night.

In the morning Con noticed a bottle hanging up on a tree, some 12ft. from the level of the snow. Thinking it would be good to carry tea in to drink on the road, he climbed the tree and took it down. Noticing some writing on it he brought it to me, and it was a surprise. Written on the label was a note that the bottle was "placed on the level of the snow. Ther. —51°," signed, "Schwatka, Jan. 7." On Jan. 7 the snow was not deep enough to prevent teams pass-

ing back and forward between the Mammoth Hot Springs and Norris—about 3ft. of snow. The thermometer did register rather low, —31° at the Lower Geyser Basin, and —26° at the Mammoth Hot Springs. I took off the label as a curiosity. I suppose the snow must have been very deep when the bottle was "placed on the level of the snow," and the weather very much colder here than anywhere else in the Park. As there was nothing in the bottle but air I concluded that the whole thing was a misstatement and that the high winds had blown and lodged the bottle in the tree, even with a telephone insulator spiked to the other side of the tree. Strange things happen in the Park.

I mentioned the matter of bedding, which I wished to obtain at the Upper Basin Hotel to use while going from there to the Falls, via Shoshone and Yellowstone Lake. Mr. Kelley, who had charge of some of the stuff left by Lieut. Schwatka, suggested that we take one of the Arctic sleeping bags, which we did, to be left at the Mammoth Hot Springs on our return. This saved the trouble of packing blankets, but I think a pair of blankets each would have answered our purpose better than the bag.

Leaving this camp we started out through Willow Park, taking turns of fifteen minutes each breaking trail, as it is quite hard on the man ahead, when one sinks in the snow from six to ten inches. In this order we came to Crystal Springs; here there was a very dangerous bit of snow on an exposed side of the cañon with no timber to hold it. There was danger of its sliding down at any moment. We passed here safely, however, and soon came out to the Obsidian Cliffs and Beaver Lake. The cliffs were draped with snow, which hung to every projection and point, hiding most of the obsidian. The little of the cliffs that could be seen looked blacker than usual from being brought into contrast with the pure white of the snow.

Beaver Lake was frozen over and covered with about two feet of snow. We crossed it lengthwise, passing near the beaver house, which tourists can see from the road in summer. From indications there is a family of beavers in it now.

We soon came to Roaring Mountain, where the stream rushes from the mountain with a loud noise. There is considerable bare ground on the mountain owing to the heat melting the snow off as fast as it falls; but every detached rock is cold enough to hold snow; on these it accumulates in globe-like masses, looking like white islands scattered over the bare ground.

Twin Lakes were soon passed; these were interesting. We crossed on the snow and ice, and took the short cuts every time. While passing the Roadside Springs, we found more bare ground; at one place the road was bare for a hundred yards, except where there was a small bridge; the snow on this was 4ft. deep; it looked like a white marble tomb. Some of the shapes taken by the snow on the loose rocks were queer. Tam O'Shanter hats, rabbits, bears, and hundreds of forms resembling animals and buildings, forms that only a photographer could illustrate.

At about 11 o'clock we were all startled by a loud rumbling report in the direction of the Falls. We thought at first it was an earthquake, but we felt no tremor or movements of the ground. This was a beautiful clear day, the third clear day since Jan. 11; up to this time it had snowed every day with the two exceptions.

The bright sunshine made it hard snowshoeing for Con and Kelley, their shoes clogging considerably. Jack's and mine ran very smoothly with an application of the candles a few times, rubbed on the bottoms of the shoes. At 3:15 we arrived at the Norris Hotel, where we were taken good care of. Maj. Lyman telephoned over that he had heard loud report in the direction of the Norris Geyser Basin. No one knew about the cause—an additional Park mystery.

Elwood Hofer.

IN THE POCONO MOUNTAINS—II.

BY A COUNTRY PARSON.

THE morning of the second day, as we mounted the buckboard, we fancied that we were to be favored with the presence of a very valuable guide and companion in the person of mine host, whom we shall call Isaac, partly because that is a good, honest Biblical name, and partly because it is his real name.

"And may we make so bold as to inquire of our worthy host," said Dan, as he whistled for his dog and mounted the buckboard, "where is he going to take this good looking party this fine morning? We want to go where the birds are, you know."

"Well," replied Isaac, "I think we'll try the cattle pasture, down on the edge of the Big Swamp. If there are not birds there, I don't know where to look for them."

"That's a good place," said Jerry. "We might get up a bear too; there are bears down that way."

"Bears," queried Sam, rather incredulously." I'm a stranger up in these parts, you know, and it's my first trip in this bush, and I don't want you to try to scare me with bear stories so early in the morning. Are you joking, or what are you giving me, any way?"

"Joking!" said Jerry. "Not a bit of it, my boy. There are plenty of bears down in the Swamp. Last season several were killed there by our friend Isaac, here. They caught them in strong steel traps and then shot them. And this last summer, when I was up here trout fishing, I saw the carcasses of two steers the bears had killed. I venture to say we shall see signs of them in the woods to-day, either their tracks or logs torn apart in search of ants or other indications of their presence."

"There was a Methodist preacher up in these woods a year or two ago," said Isaac," and he was fishing in the Tobehanna, when a bear came poking his nose through the bushes. The preacher jumped into the stream, mounted a big rock and drew his revolver, but didn't fire. He said afterward he was pretty well scared, but that he made up his mind if the bear would leave him alone he would leave the bear alone."

"Sensible man," exclaimed Sam. "That's about what I'd do. But, suppose one would come at you, and you had nothing in your gun but bird shot, what would a fellow do? I'd fire for his eyes, and try to blind the old rascal."

"I reckon," said I, "that's about the best thing one could do—if he couldn't get away. But I'd never attack one unless on the strictly defensive. It's a little too risky. They tell me that a bear can get through these bushes a good deal faster than a man, and the odds are generally in favor of the bear against a gun loaded with shot that will only infuriate but cannot easily be made to kill the beast. However, a man may make a lucky shot even in such a case. I lately read in one of our papers about a man by the name of Rauch, of Bethlehem, Pa., who killed a bear with bird shot while hunting grouse up in these regions. Other hunters had been following the trail of the bear nearly all day with dogs, and she was driven out of the woods at the spot where Rauch was hunting. Being angry after long harrassing by the hunters and dogs, and evidently looking on Rauch as one of its tormentors, the beast at once showed fight on seeing him. Rauch, although having little hope of protection from the brute by the use of his fine shot, nevertheless fired full at the face of the approaching brute, and fortunately succeeded in putting out both her eyes. He then emptied the contents of the other barrel into her head, back of the left ear, and killed her. She was of considerable size, and in fine condition."

"A good bear story, that; and it may be true, too. But it was a rather close call for Rauch," remarked Jerry. "I've got some shells loaded pretty heavily with buckshot that I always carry handy about me for such an occasion."

"And so have I," remarked the writer, "if only I can remember not to forget my presence of mind when the bear comes. This matter of presence of mind is a queer thing. A fellow has plenty of it when he has no call for it, but when he needs it where is it? It reminds me of what Josh Billings says about eloquence. 'I *have* the gift of eloquence,' says he, nervously feeling in his vest pocket as if in search of it, and looking all around the platform, as if he had somewhere dropped it, 'yes, I have the gift of eloquence—but I don't carry it with me.'"

"Well, boys," said our host, alighting from the buckboard, "here is the 'Ben Wood field,' and here we're going to strike in; so I guess you had best dismount."

The "Ben Wood Field" is a mere clearing in a rough and savage looking country, and is no doubt a first-rate place for pheasant shooting when the pheasants are about the premises. But that particular morning they seemed to have taken a very decided dislike to that patch of woods, and were nowhere to be found. We skirmished all round the clearing, put our four dogs into the bush (we had borrowed two of the natives' dogs in addition to Ponto and Jerry's favorite, Sport, the "knock-kneed"), but it was all no good. Not a feather did we see, nor a bear. We had a hard tramp till toward noon, when we came to what the natives call "a chopping," a place where the lumbermen had been getting out hemlock logs, and had left the treetops and branches ("lop and top" as it used to be called in England a hundred years ago) affording a fine shelter for the birds. No sooner had we struck the edge of this "chopping" than we began to have fun. It was full of birds, and we blazed away right and left, getting some, and, of course, missing not a few that were too far away, or too much in a hurry to get behind the bush. Such a half hour as we had there on the southern face of that hillside, the warm sun shining, and the whirr of the pheasants' wing stirring every nerve in a man's body, was enough fun for one day. Still, it is with the undescribable exhilaration of such a bout with the birds in the bush as it is with most kinds of fun—the more you have the more you want. And so we pushed on down through ravines and up steep hillsides, "peeking" about under the dark pines until we reached a good place to camp for dinner. Jerry and I had already unslung our traps and were busy making the fire, when one of the dogs treed a bird a few rods away, giving warning by a sharp bark, which had the effect of keeping the bird on the tree, as well as of bringing Sam and Isaac to the spot. It took them a good while to see the bird. Indeed, Sam couldn't see it at all; so Isaac bagged it.

"Every man to his bird," said Jerry, with a quiet laugh,

as the two came up to our blazing fire where the coffee pot was already hissing among the crackling flames.

"That reminds me of a good story I once heard," said I, as we opened our several packages containing lunch, and poured out our coffee in our tin cups. "Once two gentlemen went hunting for quail. They stopped at a country tavern. The first day they had bad luck, getting only two birds, which they desired the tavern keeper to have prepared for their breakfast. The next morning, before the sat down to their meal, the host came to them, saying that an Irishman had come for breakfast, and if they had no objection a plate would be set for him at their table. Certainly he should join them, said they. So the three sat down. The two quail were placed on the table, nicely stuffed and roasted, and, as these were not enough for the three, a roasted chicked was also set on the dish between the quail. So, one gentleman reached over with his fork and took one quail; the other took the other. The Irishman for a moment, and but for a moment, was taken back, but at once recovered his native presence of mind, grabbed his fork and thrust in into the stuffed fowl, carrying it bodily on his plate, with the remark, 'Ivvery man to his bird, be gorry!'"

"The tinkle of that cow bell off in the bush there," said Sam, "reminds me of something I read the other day about a clerk in a hardware store; and, Jerry, as you are a hardware man, I tell this story for your special benefit."

"Crack ahead with your yarn, and let it be a good one," replied Jerry, taking a sip from his cup, and winking his eye at me, as much as to say, "Now, my boy, *is'nt* this fun!"

"Well," said Sam, "the story is this. A clerk in a hardware store was trying to sell a farmer a cow bell, but the farmer wanted a larger size than was to be found in the shop. In vain did the clerk endeavor to persuade his customer that this bell was quite large enough, in fact, just the thing. It was all no go with the farmer, who at length turned on his heel and was leisurely walking out of the store, when a happy thought occurring to the clerk, he called his vanishing customer back with 'I say, uncle, I think you'd better take that bell. It's really much better than a larger size. One thing about it—it'll save you a good deal of time looking for your cow.' 'How so?' queried the other. 'Why don't you see,' said the wily clerk, 'if you have a large bell on your cow, you can hear it very far, and when you do hear it you'll travel maybe a whole mile before you come up with your cow; whereas, if you use a smaller sized bell, when you hear that you'll know your cow is'nt more'n about a quarter of a mile off at the most, and you won't have to go near so far after her!' The farmer at once bought the bell. Whether he was convinced by that logic, or as is more likely, wished to reward the clerk's cleverness in bringing a customer about, I am unable to say."

"Good story!" was the unanimous verdict. Some one suggested it was much like the boy's composition on pins, in which he said, "Pins have saved a great many people's lives." "How so," asked the teacher, "By not swallowin 'em, sir," was the quick response. "Or it is like a boy's definition of salt," said another. "Salt, said the boy, is that kind of stuff that makes field potatoes taste bad when you don't put any on!"

In such conversation our nooning hour passed away. Such an hour, with two or three genial companions, each of whom can bear a hand at keeping up a spicy conversation, and tell his tale when his turn comes round, is quite as enjoyable as the hunting. A fellow feels good after his dinner; a little tired, to be sure, but not too tired. He has had a good cup of coffee, sipping the last drop in his cup as if it were veritable nectar (as it is); and then comes his cigar or pipe—and a half hour's talk, until some one hops up and says,

"Well, fellows, let's be moving."

We moved around a good deal that afternoon, down in the ravines, up on the sides of the ridges, out on the edge of "The Barrens." At this distance in time I can recall only a general impression of tramping over the soft moss (into which one's foot sinks so noiselessly and so deliciously), skirmishing through the hard wood forests on the ridges, halting now and then to rally our lines or to summon a comrade who had wandered too far off to the right or left of the line, peering under many pine bushes and squinting up many a hemlock tree, and keeping my weather eye ever open and my gun ever ready to throw up into position for a shot.

It was somewhere toward the middle of the afternoon. We had come out on what is called "The Barrens," an open country, covered with sod and a sparse growth of low, bushy pines. We were on the south face of the ridge, and the birds would naturally find a good place there to sun themselves or take an afternoon nap. Here and there were great beds of moss and partridge berry, and often one could walk around among the low-growing pine bushes, noiselessly, as if treading on the most luxurious carpet. 'Twas that day that I stealthily crept up to one of these great bushes only to hear my bird getting on the other side, to my great chagrin. I was wandering about among these thick bushes, peering here and there for a bird, when I noticed an unusually large bush some distance ahead of me, having its branches very thick and growing down low to the ground. I determined to make for that bush and see what I could see, saying to myself as I did so,

"Now, if I was a pheasant and was looking around for an unusually fine bush under which to doze away an hour or so of an afternoon like this, why, that's just the kind of a bush I should select. I'll creep up very cautiously and see whether I can't find somebody at home there."

The ground was covered with soft moss. My footfalls were noiseless. Like an Indian I crept up to the very edge of the bush, stooped down and peeped under the broad, drooping branches, and saw a magnificent cock standing up from a doze, with a "cluck, cluck, cluck," preening his head in the archest way imaginable, his ruff about his neck standing out stiff like a beautiful collar, and colored with all the hues of the rainbow—in all the beauty of his wild nature I saw him, only a few feet distant, a beautiful sight indeed! My finger was on the trigger, and I could have shot him, and intended to do so, too, after I had sufficiently admired him—but I admired him only a fraction of a second too long, and he was off! I can't say that I was sorry. The sight of that cock in all the arch beauty of his aroused wild nature was worth more to me than many birds in my bag would have been.

Not long after this we passed through a patch of hard wood, principally beech. We had got up a flock of birds and had followed them into the woods some distance, but they led us too far and we wheeled around, making a circuit through this young beech forest. Sam and I were close together, when I noticed something falling from a high tree. It was large, and of a fluffy appearance, like a big bunch of cotton, and it came down so very lightly and leisurely that I could not imagine what it was. At all events, I got ready to shoot, and when it lit on a sapling about fifteen feet from the ground I shot it—a great gray squirrel. Now, I had often shot gray squirrels when a boy, but I had never seen one come down from a tree top like that.

"Why, you see," said Sam, "it's plain enough. We came on him kind o' sudden. He was on this tree and he couldn't get any further. He couldn't retreat, and he couldn't advance, and so he had to jump for it. As he was pretty high, he simply spread out his tail and his four legs, and made himself as flat as he could so as to break his fall as much as possible by catching the air as he came down, just like a parasol or umbrella would fall very slowly from a housetop, if spread out. That's what made him fall so slow and look so big."

I will not trouble the reader with an account of all that we experienced before night came. One cannot put on paper any adequate description of the real enjoyment of such a tramp as we had. We got some birds. We had several ineffectual long range snap shots at rabbits in full career across the Barrens. I found a relic in the shape of a portion of a deer's antler, a rare thing to find in the mountains, I am told; and at four o'clock we found ourselves eight miles away from home, tired and nearly "played out." Sam was particularly done up, and as he and I walked along, he was saying that he wouldn't walk another mile for all the pheasants in the mountain, when Wh-wh-i-zzh! up went a flock of eight or ten on the other edge of a clearing, making for a tangle of laurel. I need hardly say that Sam and I both made after them like school boys after a hot breakfast on a holiday, forgetting all about our weariness in the excitement caused by the whirr of those magic wings; but as they went too far into the bush for us, we couldn't get them, and our heavy legs and feet at once came back when this became apparent. The sun was just sinking when Jack came with the buckboard to the appointed place, wrapped us in great heavy overcoats (for the night was coming down sharp and cold), and drove us eight miles to our hotel to a good warm supper, a soft bed and dreamless sleep. H. M. K.

EASTON, PA.

UNOFFICIAL LOG OF THE STELLA.—V.

BEAUFORT, N. C., March 28.—We are lying at the wharf in this quaint old Southern town, where we have been since the 24th, repairing some damages we received on the afternoon of the 23d inst., of which the report sent North is all wrong.

Briefly, we lost our rudder fifteen miles off shore in a strong S.W. blow and heavy sea. We did not work her off under the foresail, nor with the jib; nor would all the devices known to mariners suffice to get her before the wind under any or all of her sails. We rigged a spar-raft with guy-ropes, got steam on her, and tried to steer her with that. It failed us. We had a sea-drag all ready for use, and we got it out ahead to keep us head to. This brought us up in the wind's eye; but in less than five minutes the hawser parted, the drag followed the rudder to the bottom, and we fell off into the trough of the sea. The exceptional seaworthy qualities of the little yacht were all that let us live at this crisis. At last we dropped the light anchor with thirty fathoms of chain, and this brought us head to and held us while we dismantled the mainmast, took the main gaff for an oar stem, tore up the cabin floor for boards to make a rough but strong blade, cut away the rail aft, rigged guys on either side of the clumsy sweep, got three strong men on this unique steering gear, and made ready for a final attempt to get way on her with her obstinate head inshore. It was a partial success, inasmuch as we brought her round, but the best we could get her to do was to get her to run in the trough of the sea; not another point off would she go. The pitching and rolling was fearful; but, as she was heading for the beach, the best we could do was to hang on. In storm and darkness we made the land, ran within half a mile of the beach, let go both anchors and held her up by help of steam.

Luckily the wind went down about midnight, and in the morning it came offshore. We improved our steering oar and stood up the coast for Beaufort, arriving before noon.

There were six souls on board, all of whom have been familiar with deep sea sailing; and each man says it was the closest shave in his experience. Coolness and seamanship in the skipper and crew brought us safely off. Demoralization and fright would have drowned the whole business. ["Nessmuk" reported at the FOREST AND STREAM office yesterday.]

NESSMUK.

Camp-Fire Flickerings.

"That reminds me."

207.

I WAS up-stairs in my room, enjoying the perusal of Long's "American Wildfowl Shooting," when I was interrupted by hearing my friend B.'s voice, saying: "Hullo, Jack, come down-stairs quick; there's an owl sitting on the fence!" I grabbed my gun and started down-stairs, slipping in two cartridges as I went. When I got to the door, sure enough, there was his owlship, sitting placidly on the stone wall, not more than 100yds. distant. Cautiously, very cautiously I approached the gentleman, who paid not the slightest attention to me, because, I suppose, he couldn't see. When I got near to him (I won't say just how near) I stopped, and raising my "trusty double barrel," took careful aim, fired and missed. Oh, the shout of derision that greeted the result of my shot! B. immediately went to work and told everybody he met that "Jack had crawled up on an owl, and when he thought he was near enough raised his gun, stuck the poor bird under the chin and scared it off, and then fired at the place on the stone wall where the owl had been."

I thirsted for revenge, and soon I had it. This is how it came about: I rigged up a diving decoy, in the cove a little distance from the house, one day when B. had gone to the village for the mail, and on his way back he saw this coot out there, which immediately sunk from sight when I pulled the string. Taking advantage of the dive, he rushed to the house, and seizing my little single barrel, together with some cartridges which I had loaded expressly for his benefit, and which had "some" powder and shot in them, he came down to the beach cautiously, and not seeing the coot, waited for it to reappear. Ah, there it is. Now he raises the gun—bang! "Holy smoke! that gun's got somethin' in it!" Didn't get him—one more—bang! "Christopher Jenkins, what ails that gun?" And there sat that coot as if nothing had happened. He decided to make one more trial, and loaded up again. This time the gun spoke like a small cannon, and immediately after the report B.'s voice could be heard quite a distance off anathematizing that kicker. Upon this I jumped up from my hiding place, and then B. saw the joke (?). I put this question mark because he seemed a little doubtful about that particular point. I went and brought in the decoy. It wasn't touched. Either there was something the matter with the gun or B. was a little "off" in his aim. He thinks the former, but I don't.

ODDS AND ENDS.

IN DECIDING whether squirrels hibernate, it seems necessary first to determine what hibernation is—whether it is a lethargic sleep which continues with rare or no interruptions during the entire strip of winter, or only an occasional nap of a few days' duration at its longest. Here in the center of western Vermont we see the red and gray squirrels active and abroad in some of the coldest days when the sun shines—sometimes when it is storming furiously—and then for a day or two perhaps we see none. But we have never thought that for these brief disappearances we might call them hibernating animals, as we do their little cousin, the chipmunk, who, when he retires to winter quarters a good while before there seems any pressing need of it, goes in "for good," and so does the woodchuck; and when they come forth again we are assured that the "heart of winter is broken."

A great midwinter thaw disturbs not their tranquil slumber, though it awakens the coon, who certainly hibernates in the strictest sense of the word, but is fooled out of a part of his comfortable nap by the siren song of the south wind, and wanders forth in quest of something. If food, he never finds it, nor as far as I have been able to determine, does not even seek it. I should imagine reading the record of his journey as he prints it in his course from hollow tree to hollow ledge, to other hollow trees and hollow ledges, that he had been awakened to a sense of loneliness and was seeking old friends in familiar haunts, with whom to talk over last year's cornfield raids and frogging parties in past summer nights—perchance to plan future campaigns. Or is it an inward fire and no outward warmth that has thawed him into this sudden activity? Has he, like many of his biggers and betters, gone a courting in winter nights? Poor old Mr. Coon! How fashionable it is nowadays for others to wear the coat which becomes him so much better than them, and which once robbed of he can never replace—and his life goes with his coat.

If I outlive the last of his race, as I pray I may not, though it now seems probable, he will have one sincere mourner. He is one of the few remaining links that connect us with the old times, when there were trees older than living men, when all the world had not entered for the race to gain the prize of wealth, or place or renown, when it was the sum of all happiness for some of us to "go a-coonin'." It is pleasant to me to see the track of this midnight prowler, this despoiler of cornfields, imprinted in the mud of the lane or along the soft margin of the nook, to know that he survives, though he may not be the fittest, well, when he has gone forever, those who outlive him will know that it is not his quavering note that jars the still air of the early fall evenings and must confess that is only the voice of the owl—if the owl too, has not then gone the inevitable way of all the wild world.

The skunk sleeps not so soundly as the coon. Often in very cold mornings when there is not the faintest promise of thaw in the chill air you may see the diagonal track of his slow midnight gallop in the powdery snow, and he will proclaim as distinctly as with words, more unmistakably than by the imprint of his foot, his presence and recent awakening to some sort of active life, when he has had a slight misunderstanding with the cats in the barn, where you go to fodder. And poor *mephitis* must go too, for his fur under names that he would not recognize as his, is sweet in the nostrils of the fashionable world; and bugs and pestiferous mice shall thrive in his downfall, and unborn generations of mankind shall miss his fragrance.

I have more than once heard the shrike utter notes almost melodious, and quite unlike the harsh voice wherewith he usually announces himself, but it never occurred to me that he was attempting an imitation of some other bird's song. Always when I have heard him engaged in these musical performances, he was perched in some exalted place, and was evidently bent on doing his best. I am sure the custodian of nature, whom America is so fortunate in possessing, has himself noted this, otherwise it would be presumptuous to mention it, for what he has not seen no one can have seen.

The shrike has been maligned, evil has been spoken of him, and he has been called hard names by others than ornithologists. I for one hereby retract all that I have ever said or thought against him, for more than once I have seen him chasing and capturing English sparrows, and doing all he could to make more miserable the lives of those imported pests—those feathered weeds that are overrunning the native birds that blossom into springtime song and beauty. May the tribe of the shrike increase.

A friend has just told me that on the 25th inst. he saw a flock of about fifty wild geese flying north! The poor fellows must be having a hungry and thirsty experience, for where in all these snowy wastes can they find a morsel of food, or where, this side of a possible open polar sea, any body of unfrozen water? In the three or four days which have elapsed since their passage, winter has not loosened its hold on the earth here. What brave adven-

turers, inspired with a faith that shames the doubts of us who think ourselves so much above geese. But the geese are mostly above us—nearer the sun, nearer heaven, nearer the great heart of nature—and perhaps despise us, as they have a right to.

Speaking of the little ground squirrel further back reminds me now to ask how his familiar name should be spelled—chipmuck, chipmunk or chipmonk? To me he was always, and always is, a jolly little Friar Tuck, and so I fancy he was to the grim old monk-hating Puritan father of Yankees, who saw the sociable little recluse stealing his first planting of Indian corn, and then heard him cluck and chip his thanks for the stolen feast, "as would any thieving priest!" quoth Barebones. And I thank Barebones for the touch of imagination that once in his sterile life illumined his soul with a ray of even wintry sunlight. Others may call the little hermit as they will, but for me he shall always be chipmonk. Give me thy blessings, jolly little father, and take thy tithings.

March 29. AWAHSOOSE.

ANOTHER CROW STORY.

IN your issue of March 24 "Watt" relates his experience with a crow; let me tell mine. Two years ago I was located at Peoria, Ill. The office of the company I was with was two miles below the city, on the bank of the Illinois River, and our boat was often called into requisition for short hunting and fishing trips, or for the replenishing of our aquarium. One day at dinner time my clerk, Henry, took the boat and pulled across the river into the woods on the opposite shore, which is easily done most of the time, as the water sets back half a mile to the foot of the bluffs, and is several feet deep throughout the woods. Coming to a knoll which rose above the water, he was attracted by the cawing of a crow in the lower branches of a tree, and landing he advanced, rifle in hand, but noting the apparent tameness of the bird, although apparently full grown, was hardly old enough to eat alone.

Bringing him to the office, the fun commenced. He made his headquarters in the attic, and had more to say than any of us. He grew sociable and wise in a remarkably short time, and developed the thieving propensities for which his tribe is notorious. We had an aquarium about five feet in length in one of the double windows, well stocked with a variety of fish, and we could not account for their rapid disappearance until one morning upon our opening the office door, his crowship was observed perched upon one end of the tank intently gazing into the water; presently he made a rapid dive, holding on with his feet and burying half his body, emerging in an instant with a fish in his beak, which he lost no time in putting where it would do the most good.

Our crow could not hold "a piece of meat in one fist and an apple in the other" as "Watt" declares his did, but he took great delight in swinging himself in a trapeze we rigged up for him, and was never satisfied till he swung so high his head would bump the ceiling, and he was actually becoming bald from this exercise when fate stepped in and sent him to the bourne where all good crows go.

As related, he was excessively noisy, especially when a stranger came into the office. As luck would have it, about that time I chanced to read a ludicrous article in some paper about a doctor who, being awakened every morning by the loud crowing of his neighbor's chanticleer, ended the nuisance by trapping the rooster and extracting his vocal organs, after which he let him loose, but the doctor declared it was so amusing to see him go through the motions of crowing without being able to utter a sound that he got up mornings earlier than ever to enjoy the sight. Here was a hint for me, and I lost no time in acting upon it. With the aid of my right bower, Nat T., we "corralled" our pet, and in five minutes had the satisfaction of seeing him perform a cawing pantomime in first-class style, but open his beak as wide as he could, no sound came forth. The operation scarcely drew a drop of blood, and we congratulated ourselves upon its success, but alas, next morning our crow was cold and stiff. After holding a post mortem and an inquest, we rendered the unanimous verdict that his death was due, not to the effects of our surgery, but to the breaking of his heart through grief at the loss of his voice. H. A. P.

Buffalo, N. Y.

HABITS OF THE STRIPED SQUIRREL.

A FRIEND once told me of a striped squirrel which he had owned and could not make eat anything in the winter. He did not tell me at what time in the spring Chip began to eat, but the fact that he would not eat shows that he did not fast from necessity.

It used to be said by those who had the best opportunity to know, that when the striped squirrel enters its burrow for the night it closes the door by stopping the burrow with dirt three or four feet from the entrance. The statement caused a brother of mine to experiment a little with a squirrel which had constructed a burrow near the old homestead. He took two pails of water and tried to drown out the squirrel, but the burrow would hold very little water and no squirrel came out. Two or three days later he saw the squirrel go in and immediately took some water and tried the experiment again; it took nearly the two pails of water to fill the burrow, but the squirrel had to come out this time.

Scarcely a year passes in which a new burrow is not constructed in October, near my premises, by the striped squirrel, and I have never known them to be used the second season for a winter store-house. My observations thus far seem to indicate that it is the female squirrel that constructs a burrow as above described.

Five years ago last fall a squirrel dug her burrow on the north side of the road near my barn, where the stone wall on the northerly side of the road runs nearly east and west, and is a little higher than the road, so that the ground slants toward the road and also toward the south. The squirrel began in this slant about one foot from the south side of the wall, and I used to look at that little pile of dirt every time I passed that way, but never saw this mouth of the burrow open. One day I saw some damp earth, which had just been shoved out, and waited a few moments to see if the squirrel was still at work, and not discovering any movements I passed on. The squirrel completed her burrow by digging up to the surface about seven feet from the north side of the wall, and here is where the family came out the following season, but the burrow did not appear to have any tenants the second year.

In my young days it was the habit of most of the boys in this neighborhood to go gunning on the old Massachusetts election day (the last day in May), and living near the State line, I usually joined a like party in New Hampshire on their election day (the first Wednesday in June), and among other small game killed were lots of striped squirrels, but I will remember one day (the last Wednesday in May), when only one striped squirrel was taken by the whole party, and I have often wondered if the ground could have been so covered with snow and ice as to have interfered with breeding.

The females usually construct their burrows in the fall, near some stone wall, fence, building or similar cover where there are plenty of acorns and other food, and in the month of March (their breeding time) the males may be seen for a short time in that vicinity, after which they disappear and are not seen again till from the middle of May to the first of June, when, as a neighbor says, "they all come out together, both old and young." The fact that the old squirrel does not appear to be giving milk at this time leads me to think that provisions laid up in the fall are principally for the young, which at this time are about three-fourths grown and are able to take care of themselves.

I think the male squirrels do not lay up any winter stores. Has any one in this latitude ever seen a male striped squirrel, late in October, with his cheeks stuffed full of provisions? They will come and sit upon the wall in sight of my house and eat acorns and go away again without taking a load with them.

There are two striped squirrel burrows near a neighbor's house, one of them within eight feet of his front door, and to-day I called on him and inquired if he had ever seen the squirrels about his premises carrying dirt in their mouths while excavating their burrows. He said he never had, but thought he should have seen them if they pursued that method of getting rid of the dirt.

I have never seen a striped squirrel eat anything in the month of March, and the one I have sent you this day was shot on a wall, near an oak tree, where there were plenty of acorns last fall. You can probably decide the eating question by dissecting the squirrel. POPGUN.

Tyngsborough, Mass., March 28, 1887.

[The stomach was filled with a pulp or paste of partly digested food; it was vegetable matter not identified.]

ENGLISH SPARROW DESTRUCTION.

[Suggestions in regard to the English sparrow, from advance sheets of the report of Dr. C. Hart Merriam, Ornithologist of the U. S. Department of Agriculture.]

THE following recommendations are respectfully submitted to the legislative bodies of the various States and Territories:

First—The immediate repeal of all existing laws which afford protection to the English sparrow.

Second—The enactment of laws legalizing the killing of the English sparrow at all seasons of the year, and the destruction of its nests, eggs and young.

Third—The enactment of laws making it a misdemeanor punishable by a fine or imprisonment or both (a), to intentionally give food or shelter to the English sparrow, except with a view to its ultimate destruction; (b) to introduce or aid in introducing it into new localities; (c) to interfere with persons, means, or appliances engage in or designed for its destruction or the destruction of its nests, eggs or young.

Fourth—The enactment of laws protecting the great northern shrike or butcher bird, the sparrow hawk, and the screech owl, which species feed largely on the English sparrow.

Fifth—The enactment of laws providing for the appointment of at least one person holding civil office, preferably the game constable where such officer exists, in each town or village, who shall serve without additional compensation, and whose duty it shall be to destroy or bring about the destruction of English sparrows in the streets and parks and other places where the use of firearms is not permitted. In the larger towns and cities this office might be well imposed upon the commissioners of public parks.

It is not expedient to offer bounties for the destruction of sparrows. In fact, at the present time, it is desirable and perfectly feasible, to bring about a great reduction in their ranks by concerted action of the people, aided by helpful legislation, without drawing upon the public purse.

RECOMMENDATIONS TO THE PEOPLE.

The English sparrow is a curse of such virulence that it ought to be systematically attacked and destroyed before it becomes necessary to deplete the public treasury for the purpose, as has been done in other countries. By concerted action, and by taking advantage of its gregarious habits, much good may be accomplished with little or no expenditure of money.

The sparrow is a cunning, wary bird, and soon learns to avoid the means devised by man for its destruction. Hence much sagacity must be displayed in the warfare against it. In the winter time if food is placed in some convenient spot at the same hour each day for a week, the sparrows will gather in dense flocks to feed, and large numbers may be killed at one time by firing upon them with small shot. Sometimes they may be successfully netted or trapped, but this requires considerable skill. They may be poisoned by grain soaked in tincture of *nux vomica*, or in Fowler's solution of arsenic, but poisoning is attended with some danger, and should be attempted only by official sparrow killers.

Large numbers may be destroyed, and increase prevented, by the systematic destruction of their nests, eggs and young. By the aid of an iron rod and hook, set in the end of a long pole, most of their nests can be reached and brought down. This method promises most satisfactory results.

They may be easily driven from their roosting places by disturbing them on several successive nights. A very efficacious method is to throw water upon them when at roost. In cities where hose pipe is available, the process is simple and certain. They may be kept out of ornamental vines in the same manner, particularly in the breeding season, when a thorough soaking not only disconcerts the old birds and kills their young, but at the same time does much good by wetting the vines and washing out their filth.

ERRATIC MIGRATIONS.

A VAST deal still remains to be found out and explained about the habits and movements of birds. Though we know that at certain seasons of the year scores of duck or plover haunt the marshes or uplands, that at others the humming birds may be heard buzzing through the shrubs, or the dainty warblers trilling in the woodland, yet a year will come, or a series of years, when certain strangers may appear in one's locality and be the cause of wonderment to many. A few will be of some species, more perhaps of others, but they may come and go in a sufficiently regular manner to encourage the belief that they have made up their minds to be regular seasonal visitors, or, if such be the habit of the species, permanent residents.

After their friends and admirers have flattered themselves that a welcome addition has been made to the band of feathered songsters of that particular locality, they will disappear as suddenly as they came, and perhaps be seen no more for years.

This was brought to my mind while out shooting last October. Seeing three birds alight in a small patch of shore grass, I walked toward them, thinking they were plover and probably of a rare kind. When they flushed, however, I was astonished to hear the unmistakable *purl* made by the wing of the Carolina dove (*Zenaidura carolinensis*). I shot one and wounded a second, which fell in a garden close by, from whence I recovered him the next day.

People long resident here had not seen such a bird about before, and I certainly never thought that the range of migration was so far north as this, on the sea coast at least.

Naturally, this circumstance set me to thinking of something I had noticed before in connection with the Carolina dove's migration. About the year 1870, or possibly late in the '60s, a few doves appeared in the vicinity of Victoria, Vancouver's Island. The next summer they were more numerous, and every succeeding summer their numbers increased, and their migration extended further into the country until the whole district, from Victoria to Saonich, 20 miles, was, every summer, thickly stocked with doves, who nested, reared their broods, went south and returned the next year as if they had adopted the country. When, lo! in about the year 1876 or 1877 they disappeared, and the next year not a dove could be found in all of that part of the island, nor had there been any—unless stragglers—seen up to the time I left there, three years ago.

What, then, caused the migration? and in such a peculiar way, in that at first there were few, then more and more. The country had not been filling with settlers during that period, or one might be led to think that the feeding grounds were enlarged, and the supply of food increasing. Even in that case their sudden desertion remains to be accounted for.

About the same time, or perhaps a little before, in the same district, the little pigmy owl (*Glaucidium gnoma*), was very common.

Every evening they could be heard calling—and a very pleasant sound it is—in the firs near any of the farm yards. Suddenly they became exceedingly scarce, and in their place appeared the mottled owl (*Scops asi*), up to that time a comparatively uncommon bird.

The short-eared owls too (*Brachyotus cassinii*) astonished us all one year by taking possession of the country. They could be seen alighting on the open fields and flying up and down the bushy strips of land else to fences, etc. The next year they came again, but after that none were to be found in that locality. W. B. A.

Fort Simpson, B. C., March 1, 1887.

On the same subject Mr. F. H. Thurston, of Central Lake, Mich., sends us this extract from a letter received by him: "Oconto, Wis. May, 1884, was the date of the first arrival of the Baltimore oriole here at Oconto. When I saw the bird at Appleton I thought probably he was an old resident there, but when on returning home I found him here, I at once concluded that he was new to them as well as to us. I remember very distinctly the first appearance of the bird ('English robin' he was called then), in northern New York, and though it had been something like 40 years since I had heard his voice I recognized it instantly, and, following the sound, was soon rewarded by the sight of a real Baltimore oriole. At the time (May, 1884) I wrote the inclosed letter, I supposed the bird had come here to make a home with us, for I saw many of them at the time and within the next few days, but at the end of the week they had gone and were not to be seen or heard again anywhere during the year. The following spring and each year since they returned, but not until last year, 1886, did they remain for any length of time. They were here then till well into summer, and though I saw none of their nests, I think from the fact that they were here so long they must have hatched and reared at least one brood of young.

W. M. U."

Black and Silver Foxes.—Ottawa, Ont., March 31.—Mr. Frank Mercier, agent for the Alaska Commercial Co., St. Michaels district, Alaska, informs me that all black and silver-gray foxes taken are males, a female black or silver fox is an unknown thing. This is an interesting, and to me, a new fact and bears out my old theory that black foxes are a freak of nature and belong to the red fox family. I once owned for several years a beautiful pet black fox which was taken when young from a litter of red foxes. Mr. Mercier has traveled extensively through Alaska and British Columbia and has bought and handled a large number of black and silver fox skins, so can be considered good authority on this subject. He has made a fine collection of the northern Indian implements and also of mammouth tusks and bones, which are now in the Geological Survey's Museum in this city.—Stanstead.

Eggs of the Great Auk.—Framingham, Mass., April 3.—In supplement to the note of "F." in your issue of March 31 on eggs of the great auk, I send you the following extract from *The Naturalist* for 1880, which I find in my notebook: "Two eggs of the great auk were recently sold at auction in Edinburgh by Lord Lifford. One brought 100 pounds, the other 102 guineas, probably the largest price ever paid for an egg, except for one of the moa at Edinburgh in 1865, which brought 200 pounds."—F. C. Browne.

WEIGHT OF QUAIL.

AUGUSTA, Ga., March 25.—*Editor Forest and Stream:* "Nemo," in your issue of March 17, notices my comment on the differences in quail, and in brackets at the bottom of his note is this: "There is but a single variety of quail in Georgia." This bracketed sentence, I take it, is from the editor of the FOREST AND STREAM, and is intended as a reply to "Nemo" and myself. As far as it applies to this section of Georgia and South Carolina the editor is certainly mistaken, for most assuredly there are two kinds of quail here. As I have stated, the swamp bird is two ounces heavier than the highland bird, and is at least two shades darker in color. Every hunter here knows the difference as soon as he sees the bird and can separate the species immediately. Whether this is brought about by the habits of the bird living in the swamp and canebrakes I am unable to say, but that the "difference" exists cannot be doubted after one has noted the fact. There is as much difference as between the common field sparrow and the English sparrow, the latter being a darker brown and larger. The swamp and highland rabbit bear the same difference. The swamp rabbit is darker and has not the "cotton tail" like the highland rabbit.

Augusta is situated at the foot of the hills, low and flat, with the Savannah River running by her doors, consequently near the city are a great many undrained swamps and canebrakes. These quail have found these brakes good hiding-places, and do their feeding by scratching up the young roots and eating moss and acorns. In a great many places they are surrounded by uncultivated fields subject to overflow, and get nothing from the fields except grass seed. It was in one of these places last January where I killed four quail. When I got home I weighed them, and the scale balanced at 26oz., this was an average of 6½oz. to the bird. No highland quail weigh so much, at least not in this section.

J. M. W.

[There is but one species of quail in Georgia known to naturalists, and that is *Orlyx virginianus*. If, as our correspondent thinks there are two, specimens of the second should be sent to some ornithologist that it may be added to our bird list. If such specimens be sent to this office we will undertake, in the event of there being two species, to have the new one named in honor of our correspondent.]

Editor Forest and Stream:

There is a typographical error in my communication upon the weight of quail, published in your issue of March 17, in the weight of the fourth quail given, which was 6½oz., not 5½oz. as published. This makes the average weight of the four a little more than 5¾oz., or very nearly 6oz., and this, I believe, will be found very nearly the average weight of fully matured Cuban birds. "J. M. W." gives the average weight of Georgia quail as about 5½oz., and I would like to ask him how many specimens, actually weighed, formed the basis of his average, and it might be interesting to other readers as well to hear from correspondents on this subject in Florida, Texas and the New England States. Not guessing, but weighing should be the basis of such communications.

I ought to mention the fact that the four birds that furnished the basis of my average were killed in February, just after the harvest of the millet fields, in which they thrive at their best, although their food is at all times abundant on this island. NEMO.

HABANA, Cuba.

HIBERNATION OF THE HARE.—Toronto, Can., March 26.—*Editor Forest and Stream:* In your issue of Feb. 24 Mr. Geo. E. Walsh, in support of his belief that squirrels hibernate, quotes an article from the pen of Mr. W. F. Kirby, which concludes with this sentence: "Other species of this order hibernate less perfectly, or only occasionally, like the hare, which will lie beneath snow in a small cavity just large enough to receive her body for some weeks unharmed." I should be glad to learn if any reader has observed this habit in either of our common northeastern hares, *Lepus americanus* and *sylvaticus*.—ERNEST E. THOMPSON.

LARGE FLOCKS OF GEESE.—South Berwick, Me., April 4.—The largest flock of wild geese that has been seen for a number of years passed over this place this morning. Their loud and continued honking attracted the attention of many people, who turned out to see the strange and rare sight of hundreds of wild geese flying northward. They were low down in the air and seemed to be very tired. Game in this section has been pretty well thinned out long since, and sportsmen have to tramp far and stay late to get even a shot at the few birds and squirrels that are left.—W.

DOVES IN NEW ENGLAND.—West Medford, Mass., March 28.—I shot to-day in an old cornfield near the house a wild dove (*Zenaidura carolinensis*). As the bird was new to me I plead curiosity for its destruction. Is not it early for them to appear in this locality? And are they a "common summer resident" in New England?—E. B. [The bird is not uncommon in southern New England.]

NESSMUK'S POEMS.

Some of the lines in these poems are worthy of the best poets.—*Staunton (Va.) Spectator.*

Mr. Sears writes genuine poetry. He puts feeling and grace into all his efforts and delights his readers. His versification is smooth; it sings melodiously, and the sentiment is always touching and refreshing.—*Philadelphia Item.*

He heartily sympathizes with his less gifted fellows in toil, and his denunciation of the order of things by which the rich and crafty make themselves richer and the poor poorer has, with much of the rhythm, all of the spirit of Tennyson's most scathing lines. Several of the poems treat of such themes; a visit to South America bore fruit in a number of them, and the civil war inspired a few. Many are pathetic and some humorous. Notable among the latter are "The Banshee of McBride" and "An Arkansas Idyl," in the manner of Bret Harte. But the best, as well as the most characteristic of the poems are the "Forest Runes." The volume is handsomely printed by the house that a few years ago issued the more practical results of Nessmuk's camp life in his little book on "Woodcraft," which may be supposed to tell all about its subject that is worth knowing.—*Syracuse Standard.*

THE TRAVELERS, of Hartford, guarantee to pay you the amount written on your policy, not what your fellow-members choose to pay, NOT EXCEEDING that.—*Adv.*

BEAR STALKING IN CANADA.—I.

CANADA is the land of the sportsman, if one knows where to go. There one finds salmon and trout fishing from June to September, and bear, moose and caribou hunting from September to late in the winter. Fishing and hunting has been written up in the FOREST AND STREAM again and again, but I have not seen a description of bear stalking as practiced by the Indians in Canada in the early fall.

Such a hunt was undertaken by myself and my friend, the Colonel. Our salmon fishing had been a failure last summer, and before we left our river one of our Indians had given my friend a description of his annual September hunt for bears; we determined to try the experiment. Our Indian was an old friend, and had been with us, as canoeman and guide, for a number of years, and we had every confidence in his representations. We agreed to be off the mouth of his river early in September, and there to take on board himself and such Indians as he might select, thence to make our way to the proposed hunting grounds, which were about seventy miles to the northward of the Saguenay or the Port Neuf River, on the north shore of the St. Lawrence. We were to have four Indians and two canoes to carry us.

In many parts of Canada and especially along the rivers, the forests being burned off on the sides of the mountains, the berry bushes spring up in immense numbers and the fruit ripens early in September. The bears are very fond of all kinds of fruit and now congregate in these burned grounds to feed upon the berries. When undisturbed they will remain there as long as the berries remain, feeding in the mornings and the afternoons and retiring into the woods during the middle of the day and at night. The method of hunting them is to go to these burned districts, watch and locate the bear, stalk in upon him and shoot him if you can. Very easy and simple you will say, but wait until you go with me on the trail and let no man undertake it unless he is a good rifle shot and of good lungs and great endurance and is in good training besides.

We were going to the special hunting ground of two of the Indians, who were to be with us and who were strangers to us, but vouched for by our own man Edward. Special hunting grounds, I say, for by the unwritten law of the Indians the wild parts of Canada are divided up between them, so that a family will have a certain tract of land set apart as their own special "terrain" or hunting ground. This right goes from father to son, and so far as the Indians themselves are concerned, is very strictly respected, although of course not recognized by law or by the Canadians. But as their districts are hard to reach and are entirely outside the bounds of civilization, the Indians are generally undisturbed in their possessions. The reader must not suppose that these Indians resemble those of the western territories or of the more northern part of Canada, for this would be a great mistake; many of them are more or less of a mixed race, for they intermarry with the French Canadians; some of pure blood are fine specimens of manhood, all belong to the Roman Catholic church and are, as a general rule, sober and perfectly trustworthy and make the best of guides and servants in the woods. In an experience of years I have found them far superior to the Canadian gaides, although the latter as a class are better canoemen. The Indians speak only French and their native language, and it is rare to find one who can either speak or understand English, it is therefore essential for any one going off into the woods with Indians or with even French Canadians to be able to speak the French or have some one with him who can act as interpreter.

Wednesday morning Sept. 9, found us at Quebec on board the steamer Union, bound for Laduesac, at the mouth of the Saguenay River, whence we were to proceed up the St. Lawrence about seventy miles in a sailing craft to the mouth of the Port Neuf River, up which we were to make way for about sixty miles in canoes to our proposed hunting grounds. The next morning found us embarked on our voyage in a very yacht-like cutter with a fine westerly breeze, bound first for the Esquemin River, where we were to meet our Indians and canoes. When we came off the mouth of the Esquemin, Edouard was soon on board and with him our men—Edouard, his son Joseph, a nephew also named Joseph, all of whom had been with us before; Leon and Charles and a third Joseph Edwards, son-in-law; Leon and Charles were thoroughbred and had consequently showed much more of the real Indian character than the others, and these two were the proprietors of the "terrain" where we were to hunt. About daylight Thursday morning we came to anchor four miles from the mouth of our river, with a low tide and no prospect of getting in until high water; a threatening gale and altogether a dismal prospect. One difficulty on the St. Lawrence is that on both shores the water is shallow, and the tides rise and fall from 15 to 20ft., so that at low tide a sailing boat drawing 5ft. can not approach nearer than half a mile, and can not get into the rivers. The only alternative for us, therefore, was to land in our canoes, which we finally succeeded in doing, with our stores, leaving our trunks on board with instructions to our captain to meet us at the mouth of our river on the first day of October. Then we saw our cutter running away for the Saguenay, and we were cut off from the outside world for a month at least.

Breakfast was now in order. A fire was made, water found, tea made, the cold round of beef opened; and breakfast over, one of the Indians went off inland to look for a cart, and soon we were on our tramp, with all our stores, while the canoes made their way up along the shore. Soon the rain began, and wet and cold, we arrived at our river and found we had to ride about three miles to the lumber mill, where we expected to find shelter for the night. A buckboard was soon found, and we arrived about noon at the mill, where we found a warm welcome from the hospitable superintendent, to whom we had been recommended by friends in Quebec, and a hearty dinner and a warm fire soon restored our equanimity. The storm still continuing, we spent the night with our friend, who was delighted to have our company and to hear what news we were able to impart about matters in the outside world, and it was with some difficulty that he at last permitted us to turn in. This can be easily imagined, when one considers that he is shut up here, with hardly a soul to speak to, from one year's end to the other. Saturday, the 4th, brought us a fine day, and leaving our last letters and loading our canoes, we finally started on our long journey up the river, the whole population of the mill turning out to see us start and giving us a hearty cheer as we paddled off. Four miles of easy work brought us to the first falls, and a portage of about a mile and a half to the river again, above a second fall; and here we camped for the night and over Sunday, for the Indians do not travel on that day, except in cases of absolute necessity. This portage gave us the first hint about our force. We had three canoes and our stores, blankets, tents and clothes, and although these were reduced to the lowest limit consistent with comfort, yet it made a pretty formidable pile. One Indian to each canoe left us but three men for the rest of the luggage, and consequently two trips had to be made on each portage. Three Indians would start off, each with a canoe turned over with the gunwale resting on his shoulders, looking for all the world like a huge turtle, and with such other articles as he could carry besides, and thus loaded make his way up and down places where I could hardly with my rifle and light bag without risking a fall, which might mean a broken limb. After reaching a certain point he would deposit that load and come back on a jog trot for another, and then a fresh start and a second journey, until the evening camp was reached. Then the tent had to be pitched, wood cut, fires made, hemlock boughs cut for the floor of the tent, supper cooked and blankets unpacked. And all this was done without a murmur or a word; and even when loaded down with what seemed a crushing weight, these men would hardly be satisfied if we carried anything, even our rifles.

Our camp was prepared there. Arriving at our camping place, the Indians in charge of the tent had cut two uprights, with forked branches at the top, and driven them into the ground opposite to each other; a ridge pole was then cut, which was inserted in the top of the tent and then laid on the crotched uprights, the tent was then drawn out on each side and tied down to small poles; in the meantime other Indians provided bundles of hemlock boughs, and covered the ground in the tent thickly with them, laid in a particular manner, so that the branches would all be covered by the leaves, and a bolster was made in the same way, at the upper end. The stove was put up and lighted, and then came our part of the work. We each spread out an Indian rubber sheet, then over this one large blanket, this made the bed. Then we laid out our covering blankets and rolled them up toward the top of the tent, ready to be spread out again when we should turn in. In the meantime they served as a seat and also as a pillow for our backs. Then the candle sticks were brought in, pieces of wood about 2ft. long, sharpened at one end, and with a slit in the other end, in which is inserted a piece of birch bark, rounded out at the side, so as just to hold the candles, which can thus be raised or lowered as required. We then make ourselves comfortable and are ready for supper, which Edouard, who is our cook, and a very good one at that, has been preparing this time. In the meantime the Indians have been putting up their own tent, which is open in front, while ours can be entirely closed; and in front of their tent a fire of logs is kept going all night, while the fire in our sheet iron stove must necessarily be allowed to go out and we must depend entirely upon our blankets for warmth, while the logs will burn for a long time, and there is always some one among them who will be on hand to keep their fire going. They are, in fact, warmer than we are, for while our tent keeps us dry, yet it does not keep out the cold, and on several nights when water froze in our tent we suffered a good deal. It was after one of these nights and just here at camp No. 1 that the next morning after breakfast I found the Colonel hard at work with needle and thread on his blankets, and in response to my question as to what he was after, he said he was sewing the bottom parts together so as to make a sleeping bag. This idea, which he had picked up while camping in the West, seemed to me so good, that with the help of his instructions I arranged mine in the same way, and after that found myself entirely comfortable.

I have mentioned the candlesticks, but there are many other things besides which the Indians will make for you, in a moment, out of birch bark. You are thirsty and want a cup, from a birch tree your Indian will, in a moment, cut a slip of bark, fashion it into a cup and bring it to you full of water from the spring or stream. You stop for dinner and want to wash, from the same bark he will make a basin and place it before you filled with water, while you are getting your soap and towel out of your bag. In fact, there is hardly anything he will not manufacture, from a birch canoe down to a birch plate.

Sunday, the 12th, rained hard all day. Such a day in the woods is a severe trial to one's patience. You can not walk outside without india rubber coat and leggings, and your feet will be wet through in a moment; you can stand up, it is true, but for the most part you must worry through the day, lying down, reading, sleeping, smoking and eating. You are warm and comfortable, thanks to your stove, without which you would be miserable indeed; but it is wearisome and one of the discomforts of our life, which cannot be remedied.

On our way we passed an Indian family, moving to their hunting grounds, about thirty miles up this same river, and as Edouard told us that there was a very good chance to find a bear on their territory, we told him to negotiate with them for permission to hunt there for a day or two on our way up. A treaty was made by which they accorded permission to hunt one day; on condition that if we killed anything we were to give them the meat, and if we wanted the skin that we should pay them what they would get for them from the dealers; to this, as we expected to do the same thing with our own Indians, except that we would help the latter to eat any bears we might kill, we gladly assented.

The hunter in a canoe sits down in the middle, with his back resting against the thwart behind him; one Indian kneels down in the extreme forward end, with his legs bent under him, paddle in hand, and the other Indian occupies the same position in the extreme stern; and the direction of the canoe is principally in his hands. Both use the paddle, where the current will allow it, but in the rapids, the Indian in the stern stands up and forces the canoe up the stream by the aid of a pole some fifteen to twenty feet long, while the bow man helps with his

paddle, keeping the canoe headed straight against the current, and when the depth of water will permit holding her there, while the pole man shifts his pole for another shove. It is in these rapids that the skill of the canoe man is most required, but more in descending, for then the force of the current will carry you down with irresistible speed, although even then the skilled canoe men will hold and control their light boat in a wonderful manner impossible in any other kind of craft.

We got off Monday about eight and continued our ascent of the river until noon, when we stopped for an hour for dinner. While waiting here, we put together our fly-rods and took 36 trout, weighing about a quarter of a pound, a welcome addition to our larder. We also saw on the river bank the tracks of a large bear which had come down to the shore and crossed the river. After dinner we continued on until we came to the foot of the third falls, and then went into camp on the portage just above them.

The following day we went into camp at sundown, on the river bank, having arrived at the hunting grounds of the Indians with whom our treaty was made. As we smoke our pipes after supper there is some little excitement manifested as to what the next day may bring forth; bear stories are in order, reminiscences of natural history and hunting adventures are discussed, rifles are carefully examined, and cribbage is not as engrossing as it was last night. My rifle was a .44-caliber Winchester repeater, the Colonel's a Winchester express, and his was altogether the best weapon for heavy game, mine being altogether too light, as I found to my cost, for as the sequel will show, it cost me my first bear. We went to hunt on different sides of the river, the Colonel crossing to the north shore with Leon and Edward's son, Joseph and Charles and my Joseph going with me on the side where our camp stood. Leon and Charles were armed with double-barreled smoothbore guns, purchased from the Hudson's Bay Company, carrying round balls and not to be depended on, except at short range. The stars were shining brightly when we turned in, and at daylight we were delighted to find that the day promised to be all that could be desired, with a light northwest wind, and a perfectly clear blue sky. Breakfast was soon dispatched and then after a hearty hand shake and mutual wishes for success, the Colonel went off in his canoe and I started on my tramp. Charles led the way, myself next, and Joseph bringing up the rear, with my rifle and hunting coat and a bag containing flask, biscuit, chocolate sticks for lunch—a capital thing by the way—and a cardigan jacket. While struggling up the steep hill Charles stopped and showed me where a bear had slept not long before, the grass being still pressed down flat, where he had coiled himself up; this was encouraging. Not far from there he stopped at a large tree, the bark, from about the height of a man's throat down, torn into strips, and the wood gouged out by the bear's strength and the sharpness of his razor-like claws. He had been sharpening them for fun or business, there could be no doubt about that. We pushed on, mounting up and up, sometimes over table land, blueberry bushes in fine fruitage everywhere, until at last we came out on a bare rock on the top of a mountain, a least a thousand feet high, and there the Indians deposited their loads, got out their pipes set themselves down and began to look around, apparently at the view. A magnificent panorama of mountain, valley and river lay stretched out around us for miles. But was this what we had come so far and climbed so high to see—wait. An exclamation from Charles, an outstretched arm, and Joseph's riveted gaze at the opposite mountain—what is it they see? "A bear," exclaims Joseph. I look with all my eyes. I see nothing, but Charles, whose eyesight is something marvellous, has detected a small black spot on the opposite mountain, and Joseph, who is now all excitement, tries to point out the spot to me; I got out my glass, and after some time, I too see the black spot, which otherwise I should have taken for a rock or a burned stump. But is it a bear? Charles saw it at once and it has moved, therefore it was not a stone or a stump, and as I am intently watching it, it disappears behind some bushes. It is now eleven o'clock, and while the Indians have gone to another lookout point on the other side of our mountain, I see another moving object which the glass discloses clearly to be a large bear, with two small ones, walking along the crest of a ridge on the same mountain, evidently a mother and her cubs. A call brings the Indians, and I point to the bears; they see them at once, and Joseph also points out to me another bear, sitting up on his haunches on the top of a large conical rock, and evidently sunning himself after his morning's meal. Here then, in plain light, and not two miles from us, are certainly four, and perhaps five, bears.

Just here came my first mistake, which I should not have made had I not set up my own judgment against that of my reserved and experienced guide. One difficulty was that Charles did not speak a word of French, and Joseph had to act as interpreter between us. I therefore could not get at Charles's ideas, except through Joseph, and he, from having been with me so long, had fallen in the habit of acquiescing in anything I suggested. One must guard against this amiable defect in dealing with the Indians, as a mere suggestion will often be taken as a command, and they will readily yield their own judgment to what they believe to be your wishes.

The bears were there. Why not stalk them? I saw by Charles's manner that he had no idea of moving then; he sat quietly smoking his pipe. Joseph was picking blue berries. I kept my glass on the bears. All at once the one on the rock disappeared. I called Joseph and asked him whether we should not try to stalk them. He talked some time with Charles, and it was evident that a discussion was going on between them. If only I could have understood their language, I should probably have let Charles manage as he pleased; but I did not; and I still let Joseph see that my voice was for action; this brought him over to my side and Charles yielding. He knew that it was about time for the bears to retire to the woods for their siesta, and remain there until the afternoon, and then return to their feeding grounds. He would have waited quietly and watched for their reappearance, and then made his mark. But he yielded to my impatience and inexperience, and being a man of few words, picked up his gun and led the way down the mountain.

Reaching the valley, we had about half a mile to traverse, and here the walking was very bad, with dead trees scattered in every direction, their branches as dry and brittle as glass. The Indians would thread their way over and through these obstructions with wonderful ease; running along the trunks and never losing their balance; but for me the task was much more difficult, and I could not pretend to keep pace with them. However, we reached at last the foot of the opposite mountain. We had been keeping to leeward; the Indians do not seem to fear the eyesight of the bear as much as they do his keenness of hearing and smell; the slightest noise or taint in the wind will be detected by them at an incredible distance, and then you will have your labor for your pains. We had struck the mountain at least half a mile to the southward of a direct approach. The mountain we had to scale was steep and precipitous, and we had at least a thousand feet to climb. Up we went, the Indians apparently as fresh as when we started, but I will confess that I was not in the same condition; the rarity of the air is felt here very perceptibly, and I was obliged to stop half a dozen times to get my wind and allow the palpitation of my heart to subside. It was a terrible climb; but at last we stood upon the ridge. A short halt, and Charles again led on. Joseph here cautioned me to avoid making any noise and to follow in Charles's steps, and this I did to the best of my ability. Charles's progress seemed to me to be absolutely noiseless; mine, although I have had some practice, could not compare with it. He seemed to glide along and through the bushes and over and through dense branches without a sound. Soon we recognized the rock upon which we had seen the bears. Joseph handed me my rifle, with a renewed caution as to my steps. Charles's advance became more cautious, but not a bear was to be seen. We went on and on with the same caution, but it was evident that the bears had vanished, and then for the first time I noticed that the wind had changed since we had started, and that a slight current of air was then blowing from the south. Whether Charles had noticed this before we scaled the mountain, or only afterward, when it was too late, I never found out; but had the bears remained where we had seen them, which was not probable, this change of wind would have sent them off long before our arrival. It was now about an hour and a half since we left our lookout. Our hunt had been unsuccessful, it is true, and from my own fault, but I had gained the experience I stood in need of. We went on about a mile and from there watched another part of the mountain until sundown. Then having seen nothing, we made our way to camp, where I found the Colonel just returned, having had some fearful climbing and tough work, but not having seen anything. That evening, after supper, I gave the Colonel the benefit of my experience and fairly confessed my sin; the only consolation I received was that he had done just what his Indian had told him and that I should have done the same. N. P. R.

THE SPORTING MANIA.

[A paper read before the Sherman Gun Club, of Columbus, Ohio, by Colonel Horace Park.]

MAN by the instincts of his nature is a destructive, warlike being. Civilization and education materially modified nearly all of his aboriginal nature, in fact it is through education alone that civilization is possible; the more educated people become the more civilized, yet behind all this man's nature crops out in some way or other. Field sports with rod and gun are probably nearer man's instincts than any other style of sport. This appears to be easily accounted for from the fact that wherever man is found in his normal condition, as the aborigines of this country or any other, when not actually engaged in war with some neighboring tribe, he devoted his time to the chase. This latter in civilized times we call field sports. So true were the Indians to these instincts that in the effort of the government to civilize them it became necessary to feed them. For their meat, cattle on foot were issued. Common sense evolved by civilization would advise that the cattle be slaughtered and neatly dressed. Not so with the noble red man. He must turn the cattle loose on the prairie, mount his cayuse and hunt them down very much after the style of the buffalo chase, before they became extinct. Often in these mimic chases the cattle were killed many miles from camp. However, this is only part of the chase; the dressing and getting the meat to camp is left to their squaws. The noble red man has some of the notions of modern civilization. He is one of the lords of creation; it is beneath his dignity to skin the game or pack the meat to camp. It is astonishing to see with what complacency and lordly strides he strolls along with nothing but his rifle or bow and arrows, or if mounted he lazily rides his lank cayuse, followed by his little bowleg damsel on foot, staggering along under a hundred pounds of bloody, dirty meat. This is not the case with some modern hunters, if the truth is told, for at times they are so anxious to carry home a load of game that if they stumble on a mossback hunter they are ready to part with the almighty dollar for the privilege of loading themselves down with game, and as sportsmen are known for their veracity they would not be suspected of claiming that they killed all the game. The astonishing part of it is the wonderful amount of game a true modern hunter is willing to carry home, no matter how he procured it.

There are exceptions to all general rules. This sporting mania does nor always begin with childhood. In this case, like the measles, if they don't get it until they are quite old they have it very bad. The first symptom to develop is an inclination to visit the gun and tackle stores, subscribe for some sporting paper, study the advertisements, examine the various lures and devices for the decoying of the finny tribe, as well as the latest improvement in guns; inquire as to the fishing grounds, where to go and the prospect of catching fish and bagging game in unlimited quantities. At the gun stores they hear the stories of the enormous fish and large bags of game, also the great exploits of the experts and knowing ones. By this time they get it very bad, and at once proceed to buy an outfit—not an extravagant one in the start; then, of course, they go a fishing, with various anticipations of success. Then, after a hard day's tramp up and down some stream, with but a shiner or two to show, they attribute their failure to inexperience and lack of education in the art. During the season, by perseverance, better success will be met with. They by this time will conclude that they must have a better outfit in the tackle line. The first outfit will be given to the boy, a new and better rod and reel will be procured, a braided silk line, gut-snooded hook and other paraphernalia in the tackle line. They will not stop here with a little success occasionally; they become apt scholars and soon learn that it is not all of fishing to fish. The fact is, before the season is over they will have procured the most complete outfit, including the best split bamboo rod, Kentucky reel, enameled line, gut leaders and an amply filled fly-book, landing net and a pair of wading breeches; nor is this all; you will also find that in fishing around a hot stove in midwinter that they will equal the oldest veterans in the enormous size of the fish caught, to say nothing of the larger ones that broke the tackle and escaped. The proposition in the start was that man was warlike and destructive by nature. To say, also, that he was a natural liar would probably be going too far, but it is wonderful how soon talent in that direction will develop with the fishing mania.

However, it does almost appear that war is man's normal condition. It is this nature that divides comunities where there are real natural boundaries. Take, for instance, the Columbus and Franklinton boys thirty or forty years ago. Some of the old members of the Sherman Gun Club will doubtless remember the many hard-fought battles between the boys of Franklinton and Columbus, the Scioto River being the natural boundary line. Woe to the Columbus boy caught alone on the other side, or the Franklinton boy on this side. Franklinton was at that time called Sodom—hence the boys were called Sodomites. The Sodomites called the Columbus boys pinchguts. Just ask any of the men of Columbus who were boys in those times; they will tell you they had lots of fun in those fighting times.

Only last week I met an old soldier of my regiment, one I had not seen for years. I asked what he was driving at. He said he was with the engineer corps running the Black Diamond railroad, and that they had just shipped their camp equipage to the other end of the line. "Well," I said, "you have not been camping out this winter?" "Yes," he said, "all winter, and I have not had so much fun since I left the army at the close of the war." It is to be seen that war partakes very much of the nature of the chase, of field sports on a grand scale, otherwise it would be difficult to raise volunteer armies. When you combine patriotic duty with anything that partakes of man's nature you make men effective in war as soldiers. You ask any old soldier who was with General Sherman in the march to the sea, and he will tell you that it was one grand hunting spree, the chase on a grand scale. Field sports combined with patriotism, determined and desperate game, only adds zest to the chase. Compare rabbit hunting in the pasture fields of Ohio with the tiger and lion of the jungles of Africa, or the wild boar of Arkansas. The fact that the game sometimes hunts the hunter does not appear to dampen man's ardor for the chase; in other words, the chase is grander as the hazard is greater. How many men in the Sherman Gun Club will tell that they have suffered more from cold in one day at the Licking reservoir, duck hunting in March, than all the balance of the winter at home, besides paying $10 for the privilege, and call it fun? How many, also, have resolved at such time that they will never go duck hunting again? This is nothing; with the very next favorable report they are again off for the pond. In the scarcity of living game this sporting spirit in man naturally looks for some substitute. Captain A. H. Bogardus was the first to introduce inanimate game as a substitute for living—the glass ball and trap—nearly twenty or more years ago. Since then many new devices have been invented; among others was one called the gyro pigeon. This was a sheet iron device painted white. Hits were counted by the shot marks on the paint when the targets were gathered in. These were no good; something had to be smashed, you had to hear "something drop." Like the small boy when he buys a .22-caliber revolver, the first question he asks is how far it will kill—if it won't kill from fifty to one hundred yards it is no good. So in the case of trap-shooting; if nothing is really killed something must be smashed. Glass balls filled the bill for a long time, but Yankee ingenuity is never at a standstill; other devices were produced, like the clay-pigeon; they more nearly resembled the flight of birds or something that was alive.

As near as I can recollect, about 1867 Josiah Sherman, Charles McLeish, Dr. Shepard, John Gugle, W. B. Hayden, Dr. Flowers, Ed. Savage, John Flowers, George Bellows and a few others first met together near the railroad bridge over Alum creek weekly and participated in the sport of glass-ball shooting. At that time there were but two breechloading shotguns in this county—one owned by W. B. Hayden, a 16-bore, the other by George Bellows, a 10-bore. In speaking of guns and shooting it may be well to say here that the progress and various degrees in a case of the shooting mania would be only a repetition of the other branch of sporting, the fishing mania. It will range from the cheap German breechloader to a $200 fine hammerless with a complete outfit, consisting of corduroy suit and from one to three dogs. Fashion controls almost everything, just as much so in guns as plug hats; hence no matter what kind of a gun a man starts in with the finish will be a fashionable one.

But this is a digression. The origin of the shooting club is under consideration. The meetings at Alum creek, without any special organization, were very pleasant. Our glass balls at that time were very thick and hard; to break from four to six out of ten was considered good. One rather laughable incident occurred at one of these meetings: There were on the ground fifteen or twenty shooters; I think it was in the fall of the year. All hands were standing around with loaded guns waiting for some adjustment of the trap, when a fine large woodcock had the audacity to deliberately fly over the entire party of shooters, not exceeding 30ft. high. Talk about lively shooting! Every gun on the grounds was suddenly emptied at the vanishing woodcock without ever disturbing him in the least; at least he moved on in the even tenor of his way, merely thinking that it was the Fourth of July and that the volley was simply a national salute for his benefit. After being handicapped with thirty charges, representing two and a half pounds of No. 8 shot, Mr. Woodcock was bagged by one of the party following him to the neighborhood of the Watercure. There was no post-mortem held on the woodcock, or it would probably have developed a case similar to the one where a gentleman went frog shooting with a 22-caliber rifle. After hunting some time he discovered a very large frog sitting on a stump in the water. Our hunter at once opened the battle. He shot Flobert's. At every discharge the frog would hitch and jump spasmodically, as though struck by the bullet. Our friend continued to fire at Mr. Frog some fifty or sixty times, when from a shot fired with great deliberation the frog tum-

bled over into the water with a chug. After recovering the frog, upon examination no wound or bullet marks could be found. Here was a mystery. It was discovered, as the frog was held by the hind legs with head down, something was dropping from his mouth. Inspection developed the fact that in the frog's stomach there were fifty or sixty Flobert bullets. It appears that when our Nimrod would shoot near the frog, the frog, taking the ball for a fly, took it in. The spasmodic motion at each discharge of the gun was simply the act of catching flies. The bullets were too much for the frog; they overloaded his stomach and tumbled him off the stump, and our hunter got a frog. The only reason there was no post mortem held on the woodcock was that it might develop some unpleasant facts, for every one of the fifteen men that shot of course declared that he hit him; not only this, but it would have been no credit to the man that finally bagged him had his body been found stuffed with two and a half pounds of shot. The incident produced quite a good deal of merriment. In fact, these meetings were all attended with much genuine sport. There are doubts whether the subsequent meetings under perfect organization are attended with as much genuine sport.

As a result of these meetings the Columbia Shooting Club was organized and successfully run for a number of years under the leadership of Dr. William Shepard as president, and C. H. Damsel as secretary. At first the meetings were very largely attended by many of the best citizens as lookers on; often as many as two or three hundred spectators were in attendance. Glass-ball shooting, as conducted, was lively, and the contest often quite exciting. About the time that glass-ball shooting was at the highest pitch, the Ligowsky clay-pigeon was introduced. The pigeon was thick and very hard to break when fairly hit; the trap worked badly and the sport appeared to lose life and activity. From the introduction of the clay-pigeon the date of the gradual decline of interest in the club shoots commenced. The flight of the clay device more nearly resembled the flight of living birds, but the uncertainty of breaking when hit, together with the indifferent working of the traps, was the trouble. However, the decline and lack of interest is not all to be attributed to the introduction of the new target, but to the fact that most all organizations of a similar nature appear to have spasmodic periods of ups and downs. The introduction of the new target in its yet imperfect form occurred about the time of one of the natural ebbs of the organization, and did much to hasten the decline. About two or three years ago the club was again reorganized under very favorable auspices and has flourished ever since. The Ligowsky clay-pigeon trap has been much improved, others have been introduced, the American clay bird and the blue rock, also quite a number of others, all of which are good and successful targets. The prosperity of the club has been wonderful, in fact, it carries on the rolls the largest membership of any shooting club in the State.

In conclusion, I am proud to say that one of the grandest acts of the club was the tribute of honor paid to one of the originators of the club, who has sometime since gone to the happy hunting ground. It certainly was a befitting tribute to the memory of our deceased noble comrade, Josiah Sherman, that the club was named in his honor the Sherman Gun Club.

THE MAINE COMMISSIONER CHARGES.

Specially Reported for Forest and Stream.

THE die is cast. The hearing of the charges against the Maine fish and game commissioners is over, and from all that can be learned a greater farce was never foisted upon the attention of the Governor of a State, The enemies of Messrs. Stilwell and Stanley gathered in a body at the State House at Augusta, March 29. There was a large delegation from North Franklin present, and even the merchants of Boston and Portland were represented, as well as a delegate or two from New Haven. Mr. Harmon's friends were present, but from the beginning of the hearing before the Governor and Council it was evident that the case of the complainants rested on Mr. Harmon and his grievances. The opening was made by Lawyer Spear, aided by Lawyer Timberlake. He labored hard to make out a case, but it was evident, after he had tried over an hour and a half, that he felt that he had no case. He brought great stress on the annual reports of the commissioners, and endeavored to make out, by reading detached paragraphs, that those gentlemen were usurping authority and trying to stimulate wrongful legislation. In his opening, Lawyer Spear proposed that in years past—way back in the seventies—this thing or that thing had been done. But here Mr. Vose, of the law firm of Barker, Vose & Barker, objected, and desired to know just how far back this hearing was to extend; since these commissioners had several times been reappointed, once each within a year or two, and that if the eminent counsel on the other side proposed to try Stilwell and Stanley of goneby days, then the defense were prepared to show that they were not the same officers in the eye of the law as when first appointed. If the hearing was to go back to Adam, then the counsel for the defense would like to know it. He would ask His Excellency and the members of the Council to decide how far back such a hearing could go. Mr. Vose thought it should not go back of a reappointment, certainly not back of the statute of limitations. Here was a point for which evidently the accusation was not prepared. The Governor and Council withdrew for deliberation and came in with the decision that they could not hear charges back of the statute of limitation—six years. This disarmed the accusation of a great proportion of its charges, but the grievances of Gen. Harmon were left, and it was attempted to make all possible capital out of this part of the case. Gen. Harmon was sworn and put upon the stand. He testified in the direct examination to the killing of the deer on that Sunday morning, precisely as has so many times been gone over in the papers. In the cross-examination he admitted the packing up of the deer and taking it out of the State—a direct violation of the non-transportation law. He also admitted all the features of the case out of which so much discussion has grown. His counsel attempted to put in articles from the FOREST AND STREAM and other papers, and before it could be stopped the first account of the killing of the deer ever published in that paper was read. But His Excellency decided that the case was not to be tried on the merits of newspaper statements or reports.

A Mr. Hewey, from Rangeley, with his son, were put upon the stand to testify to the wrongful shipment of trout eggs to New York. Mr. Hewey had been employed by Commissioner Stanley to take charge of the hatching house at Rangeley Lake. But before the trial was over it was shown conclusively that the State did not own the hatching house nor the trout eggs which it was expected to show that Mr. Stanley had unlawfully sold out of the State. It came out that the landlocked salmon eggs which did belong to the State had been more liberally distributed in the Rangeley Lake than in any other waters; in fact, that a very large proportion of all the eggs of that description ever hatched by the State had been turned loose in those waters. Hence the charge that the Commissioners had failed to properly restock the great Rangeley waters fell to the ground.

The charge of an attempt to suborn a witness by Mr. Stanley was the gravest one of the whole list, and yet it proved to be the most harmless in point of fact. The letter which Mr. Stanley wrote to his cousin, Mr. Page, was produced, and the force of it appeared in the closing arguments of Mr. Barker.

The opening for the defense was made by the Hon. G. D. Bisbee, of Buckfield, the same gentleman who defended Mr. Stilwell in the celebrated trial at Bangor, where Mr. Harmon succeeded in getting a verdict of $1.25 worth of grievance. By the way, the charge of Judge Peters, the Chief Justice of Maine, to that jury is a document worthy of publication in the FOREST AND STREAM as a part of the history of fish and game protection in this country. Mr. Bisbee's argument, as will appear from the abstract below, laid out the case in its full light. It showed the animus of the prosecution against those faithful officers, the Fish and Game Commissioners. Jack Darling was there in the council chamber. Mr. Bisbee dared them to put him on the stand. Darling spoke up and asked them to put him on the stand, but they did not do it.

We give the gist of the arguments from the official stenographer's reports specially transcribed for the FOREST AND STREAM. Mr. Bisbee said:

It is our conviction that, as the testimony now stands, the complainant has not made out a case, and if we were in a court of law we should move for a non-suit. But when we consider the importance of this matter to the commissioners on fish and game, and to the great interests which they have been selected to guard, we feel that perhaps we should fail in our duty did we neglect to make an explanation of some of the matters which have been introduced. The State of Maine to-day occupies a prominent position in this country as a summer resort. It may not be egotism in me, a native born citizen of the Commonwealth, to say that there is no State in this whole country which surpasses this in the excellence of its sea coast, its mountains, its great ponds and lakes, and its inland fisheries, and from my knowledge of the history of the law and the fish and game interests of the State I feel that in this movement there is something beyond the mere removal from office of these two gentlemen. We feel that there is an animus in this proceeding. We understand that certain wealthy gentlemen from abroad have been in the habit of violating our fish and game law, and I might properly term them poachers, though I do not wish to use that term in any offensive sense. But it is very natural that they should desire to carry away with them a trophy, and they do not allow a fine of $40 to interfere with the killing of a deer at the first opportunity. Take this very association of gentlemen who occupy Lake Point Cottage, representing, as I understand, more than half a million of dollars, and I don't know but that I slander them when I place it below five or six millions. Now what is the mere pittance of $40 to one of those gentlemen who wants to carry home a deer? It is this interest that is behind this prosecution. They are afraid of the commissioners, who are bent upon a rigid enforcement of the law, and their desire is to get rid of them, and so I say that the great interests of fish and game would suffer far beyond the results of the immediate present.

The case we are called upon to meet is a most novel one. We find charges preferred against our fish commissioners by one George M. Harmon of New Haven, Conn. We find that these commissioners have occupied their respective positions twelve or fourteen years, and the citizens of Maine are so well satisfied with the manner in which the duties of those gentlemen has been performed that no resident of the State comes forward to prefer a charge. A man comes from abroad and asks you to dismiss these faithful officers and turn them out in disgrace. Without any desire to abuse Mr. Harmon in any manner, I wish to review briefly his case before we are called upon to put in any testimony. The statute prohibits the killing, hunting or destroying of any deer between the first days of January and October under a penalty of $40. Mr. Harmon attempts to justify his conscience and square his testimony by the oath he has taken by the fact that he did not kill a deer. But I submit to you gentlemen that the hunting of deer is prohibited, and further, when he got into that boat on that Sabbath morning, as he says at the instance of the man Thresher, to go in pursuit of that animal, whether he was not hunting a deer. It is too late for him to raise that question, for it has been before the court and we shall show you what the law is as laid down by the Chief Justice. Harmon took his guide and went out on to that lake, and he says he had his thoughts about him. He undertakes to make his guide the scapegoat by saying he did not want to go, but finally went at the urgent solicitation of that gentleman. He says they started in company with some eight or ten other boats from the Mountain View House, and, in substance, that the powerful arms of Thresher shot his boat ahead and that he arrived at the deer first, and, in substance, he undertakes to make you believe, gentlemen, that without a moment's warning Thresher took his oar and struck that deer over the head before he knew what was going on. Now, I do not think he means to tell a lie, because if he did he would tell one that would be believed; but I think he got mixed up and excited about it and didn't know exactly what he was telling. It is unreasonable to suppose that, in that wild race of the eight or ten boats that participated, this boat going at a speed from the powerful stroke of George Thresher, which outstripped all the rest, the oarsman could suddenly stop, raise his oar and strike so quickly over the head the swiftly swimming deer that the man managing the boat didn't know what was going on. Yet that is the way Mr. Harmon would have you understand it occurred. If he went out there to take that deer alive why didn't he throw the anchor rope over his head and take him without injury? He didn't do that. It seems that something else was operating in their minds. Thresher dealt the animal such a blow that Harmon, as he says, was satisfied that it was disabled and would probably die; and what did this gentle, kind-hearted Harmon do but advise Thresher to cut its throat, and it was done. It has been said that a guilty conscience needs no accuser. What did Harmon do? The instant the throat of that deer was cut he turned round and saw the steamer, and it occurred to him that the killing of a Maine deer on Sunday was a thing for which Connecticut money could atone, and so he held up his hand and the boat stopped. He gave to the captain $40, and told him to go up to the house of Huntoon, who he thought was a warden, and tell him, "Here's $40 to pay for killing a deer out in Rangeley Lake." And he wanted the captain to impress upon the warden the idea that that was going to settle this matter against him and Mr. Thresher. Now, that is not the way we do business down here in Maine. It is true that Harmon had such an influence over that justice that he did do business that way, as is evidenced by the record which is in substance that Harmon plead guilty, and being satisfied that he had paid over $40 to Huntoon, he discharged him. What business had he to do that? He should have adjudged him guilty and sentenced him to a payment of the fine and costs. Did Harmon pay $40 and costs? Not at all; and we shall show you by an inspection of the record that there was in fact no judgment.

Now, gentlemen, up to this time Harmon had never seen Mr. Stilwell and I do not think he had ever seen Mr. Stanley. That is the state of affairs as we find them up to that time. Now what further? Either Harmon or this steamboat captain attempted to perpetrate a fraud on the warden, for they paid him only $20, and the law is that $20 shall go to the State and $20 to the complainant. Whether they were going to cheat Huntoon or the State I do not know; but all the money that went into the hands of the warden when they attempted to settle up was $20. Now they have put on the stand here the old gentleman Hewey who has testified that he with Stephen Lowell, in the employ of Harmon, dressed the deer and put it in Harmon's ice house, and that they afterward boxed it up and put it with Harmon's baggage. It appears from the testimony of Harmon himself that it was carried out of the State, a part being left in Boston and the remainder carried to New Haven. Now they say that they supposed they had a right to carry this deer away because they had paid a penalty for its destruction. But the statutes provide a penalty of $40 for transporting deer from place to place in close time; that was another violation of law by Mr. Harmon. In addition to these offenses of killing and transporting a deer in close time he had violated the statute which prohibits the hunting or killing of game on the Sabbath. Now the fact of these violations of the law was communicated to the commissioners, and it was also represented to them that a fine of only $40 had been paid. No costs had been paid in the case which an attempt was made to settle, and Mr. Stilwell felt, as his letter states [B.], that while Harmon was a total stranger to him, yet if he, a rich and influential man, had voluntarily and deliberately broken the laws of the State and had so easily put his hand into his pocket, taken out $40, sent $20 of it to the warden and left the other in the hands of the messenger, that the penalty in that case as paid was not adequate punishment, and that such a way of doing business in Maine ought not to be tolerated. You can readily see that it was an improper enforcement of the law.

We do not issue licenses to kill our deer. We say: "You shall not kill them during certain seasons of the year, and if you do it you shall be liable to a penalty. If you transport deer you shall be liable to a penalty for that." Then there is another section that has never been construed by the court, which provides that if one kills any game on Sunday he shall be liable for the same penalty that he would be for killing at any other time. Mr. Stilwell examined the law, and looking at it carefully, came to the conclusion that Harmon was guilty of three offenses under the game laws. In the meantime Harmon had heard of the intention to prosecute him and he wrote the warden. Just think of it, gentlemen, a man in Connecticut—I don't care whether he had been Adjutant-General of that State or what other position he held—writing down here to a man appointed by the Governor and Council to guard the fish and game of the State of Maine, and threatening him as we shall show by the letter which we shall put into the case, telling him that he had consulted his counsel and saying in substance, "If you dare to lay hands on me again I will take care of you." This Mr. Harmon in that same letter dared to write a warden of this State that if they proceeded against him he would find means to get even with Stilwell through the next Legislature. Now I want you to examine the letter [A.] carefully and see whether Stilwell is persecuting Harmon or Harmon is following Stilwell. I tell you, gentlemen, the audacity of that man Harmon was never equalled in this State—threatening the men appointed to enforce our fish and game laws that if they did their duty he would come in here through his acquaintances and his money and break these men down and get even with them through the next Legislature. And that is how this case comes here.

Now Huntoon took that letter and sent it to Stilwell with his indorsement on it and asking what he should do. Stilwell wrote back the letters you have read, and I submit to you whether they show malice. He goes on deliberately and says he is not acquainted with Harmon, but that he has no doubt that gentleman was as much interested to have the law enforced as any man, and, in substance, however rich he might be, he should be made to pay the penalties to which he had become liable just as much as the humblest citizen of the State. And Mr. Stillwell therein pointed out to Huntoon just what he understood the law to be; that Harmon was guilty of three offenses, one for hunting deer in close time, one for transporting deer from place to place and another for killing a deer on Sunday. And then he suggests in that letter to Huntoon that if Harmon submits himself to prosecution and pays the penalty for killing the deer on Sunday that perhaps they had better let up on the one for transportation. And still they call that malicious and go on to charge that the Commissioners are partial and malicious in the enforcement of the laws. He had parted with $40 for the destruction of the deer, was discharged by the magistrate on the charge of killing a deer on Sunday and never was arrested for transporting the animal, and as he now admits, did not know until recently that a warrant was ever issued against him for the last offense. So it seems to me this disposes of the charge of malice in connection with these prosecutions of Harmon. The evidence all goes to show that Mr. Stilwell in these prosecutions acted for the best interests of the State, and in accordance with the law as he understood it.

And here the matter would have ended but for the malice of Harmon. He turns round and sues both Stilwell and Huntoon for $1,000 for malicious prosecution, the Chief Justice of the State presiding at the trial in Penobscot county. Harmon set out in his writ great injury to his feelings and character, but the result was a verdict of one dollar, which entitled him to twenty-five cents costs. We believed that verdict wrong, and you will see by the charge of the judge which we shall put into the case, that it was wrong. We believed that we could get it set aside, but so far as dollars and cents were concerned thought it better to pay the $1.25, which Mr. Stilwell did. Now, here again the matter would have stopped, but Harmon was not satisfied. He was the persecutor and not Stilwell. You will find in one of the depositions here as good evidence of this that he stated to Huntoon that he had no hard feelings against him and did not wish to do anything to his injury, but he was going to punish "that old cuss Stilwell." He wanted to get at him some way. He did get at "that old cuss Stilwell" down in Penobscot county and obtained a verdict for the munificent sum of one dollar, which carried for him twenty-five cents cost.

Then what did this gentleman, so anxious to comply with the law, do? He sued those gentlemen to recover back that $40, $20 of which had already been paid into the State treasury. Now, if he was so willing to abide by our law as he would have you believe, why did he bring back that suit to get back that penalty? He sued those gentlemen among a people who, it is said, are terribly incensed against these wardens, and as the record shows, there was a verdict in favor of Stilwell, but against Huntoon, owing to some infirmity in the original prosecution. Now, gentlemen, in my opinion that disposes of this part of the case.

But the grand farce was apparent to those who attended the hearing when the Hon. Lewis Barker began the closing argument for the defense. He showed them, by the constitution of the State, that Mr. Harmon had brought his charges to the wrong tribunal: that to remove such officer impeachment was necessary, and that impeachment could come only from the Legislature. But he suggested that they should go on and try out the case there for the sake of seeing what the complaint amounted to. He then proceeded to handle the case as it so richly deserved. He said:

I make the point that your Excellency has no authority even to initiate the movement here asked for. This is not the department of the government in our State to do what is asked here in the form in which you are asked to do it. The constitution has wisely provided how a man shall be removed from a civil office. It provides that: "Every person holding any civil office in this State may be removed by impeachment for misdemeanor in office; and every person holding any office may be removed by the Governor, with the advice of the Council, on the address of both branches of the legislature. But before such address shall pass either House the causes of removal shall be stated and entered on the journal of the House in which it originated, and a copy thereof served on the person in office, that he may be admitted to a hearing in his defense." The Senate shall have power to try all impeachments, etc." The charge here is in the nature of an impeachment, but instead of by the House of Representatives, to be tried by the Senate, to be followed by a call upon your Excellency to exercise your power as Governor, we find one George M. Harmon, a gentleman from Connecticut, coming in here as the impeacher and filing his charges, assuming the authority of the House of Representatives of Maine. This gentleman from Connecticut comes here and asks you to usurp the powers of the House and Senate and remove arbitrarily, if you can get the consent of your advisers, these commissioners from office. I say you haven't the power to do that thing. The power of removal is with the Governor and Council, not upon charges for misdemeanor in office, that is by impeachment, but by virtue of the power of appointment which is given to the Executive. In the formation of our government, both state and national, in contemplation of the change of the administrations and parties, the power of removal through the power of appointment is given to the Executive. Removal follows as a consequence of the appointment and as an incident to it. And, as our court say: "This should obviously be so, else the Governor might create vacancies he could never fill; because, the Council not consenting to his nomination, the offices would remain vacant. Hence, removals have been by confirmed nominations. The removal is in consequence of the appointment of an officer; it never precedes it." Now, I grant that if the question here were the appointment of say John Brown, of Rangeley, as a fish commissioner, in place of Mr. Stilwell, your Excellency would have the power to make the nomination and get the consent of the Council thereto; and in consequence of that Mr. Stilwell would be removed. But that is not what is asked for here, and we are not trying that case to-night. They ask for this arbitrary removal. Whether they took advice of counsel in this State or another I do not know. I only know we find a gentleman from another State asking the Executive Department of Maine to usurp an authority that the constitution never intended it should enjoy.

* * * As my brother Bisbee said, no citizen of the six or seven hundred thousand people of this State comes here and makes these charges. Nobody in the State of Maine has filed charges. These gentlemen, Mr. Stilwell and Mr. Stanley, have been at the head of this commission ever since we started this vast enterprise. Our forests of ten millions of acres had comparatively no game within them, and our large rivers and inland waters no fish. I was in the Legislature when this movement was inaugurated to restock our forests and streams, and I remember the sneers with which E. M. Stilwell and H. O. Stanley were met in their attempts to do what? Why, to restock the waters of Maine with fish, and bring back the game that had disappeared from our forests. These two gentlemen stood in advance of almost every other man upon this matter and they were pointed at with derision, and as crazy men who did not know what they were talking about, and niggardly appropriations were made from year to year for this vast interest. But these gentlemen have stood by the work until now, and I need not repeat to you the great change that has been wrought within the last fifteen years. To-day our forests are alive with game and our waters with fish, and the State of Maine owes that to these Fish and Game Commissioners, E. M. Stilwell and H. O. Stanley.

* * * The second charge reads: "2. That Commissioner Stilwell has caused said George M. Harmon to be maliciously prosecuted, when he knew said Harmon was not guilty of the offense charged, thereby causing him great inconvenience, expense and discomfort."

How does this question present itself to you to-day? George M. Harmon of Connecticut, by his own concession, occupies what position? This impeacher, this imported House of Representatives to frame articles of impeachment against these men, how does he stand here? On a day in June, 1884, he hunted a deer; he killed a deer, or caused it to be killed, by his own voice ordering it to be done. His man Thresher having first struck a blow, was of course responsible for that; but when he had done that the next act was by the order of Harmon himself—"cut his throat." The order was carried out, and he packed the deer and carried him out of the State. This is not denied, and it was on Sunday. This innocent man accused of an offense of which he was not guilty! There were three distinct offenses. The Chief Justice said there were two distinct offenses; they would not allow us to read it, as the best lawyers in the State will also say, two offenses beyond a doubt and one about which there may be a question.

The hunting and killing and exportation were two distinct offenses; two men, each guilty of the hunting and killing, and each liable to the same penalty for that, and Harmon, guilty of the transportation and liable to a penalty for that. Whether or not he would be liable under the Sunday clause of the fish and game law there may be some ground for doubt, although here in New England, thank God, we haven't quite outgrown the idea that it is an offense to violate the Sabbath. But there was a violation of the Sunday law under another clause, and there were three distinct offenses. And yet he says that he is not guilty, and Mr. Stilwell caused him to be prosecuted for an offense of which he was not guilty! This man not guilty, with the blood of the deer upon his hands, going and hunting up a citizen of Maine, desiring to commit a fraud upon justice and the administration of law by a collusive prosecution! There are lawyers in this board of advisers who know that it has always been held that a prosecution by one's own procurement in that way is a fraud upon the law and will not stand, and the court, the Chief Justice, so ruled to the jury; that if by his procurement that was done, it was no such prosecution and no such judgment as the law in its purity and the purity of its execution will recognize anywhere. This man goes and solicits a man to accuse him and to defeat the ends of the law. Liable for a fine of $40 and costs, he uses his money for a partial payment. But he does not even pay for one offense. He pays his money into the hands of a man whom he says he thought was a warden. The man was not, and he did not sign the warrant as a warden. He knew himself that he was not a warden. The statute gives fish and game wardens exclusive authority to institute prosecutions for fourteen days after the commission of offenses. If an offense is committed and no warden prosecutes within that time, then and not until then somebody else may step in and institute a prosecution. So in this case the party making the complaint was not a warden and the fourteen days had not gone by, yet the next morning at 4 o'clock, the day after the offense, they go through this farce of a compliance with the law. A nice hour to hold a court for the convenience of a foreign gentleman not guilty! He procures a citizen contrary to and in violation of law, to institute a prosecution in his own behalf, for his own purposes and for his benefit, a prosecution that he could not inaugurate himself; and they go at 4 o'clock in the morning and wake up counsel and a justice, and up there on the Rangeley shores, in the chamber of a man's house, with a court in shirt-flaps, as it has appeared from testimony heretofore, they held the proceedings. And here he says he is not guilty! This innocent man falsely accused! Up there accusing himself and pleading guilty, and shelling out his $40 to this barefoot fellow and paying it to the wrong man, then! He pays it to the man whom he solicited to get up these proceedings, instead of paying it to the justice as he ought to have done, and getting the judgment and sentence he ought to have had. He got no adjudication. I ask the lawyers of this council to look at that record and they will find that there has been no adjudication, no sentence imposed, and no compliance with a sentence. I say there was a prosecution without legal foundation, without legal force, and one that would not be sustained for a moment in any court in the State, and it was so ruled in the trial at Bangor.

Now a second prosecution was afterward instituted, maliciously this man would have you believe, for an offense of which he was innocent! He does not claim this here upon the ground that he had once paid, but he says he was innocent of the charge. He had plead guilty to the charge and brought himself out, as he thought, and because a second prosecution was brought by Mr. Huntoon, upon advice of counsel, he calls it malicious. One of the civil officers of Maine has been malicious in instituting a prosecution, therefore the Governor and Council must remove him. That is it. Where comes in the malice? Mr. Stilwell advised Mr Huntoon to get counsel, and the lawyers of this board know what protection that is to a man instituting any prosecution. No man can know that his prosecution is well founded until he goes and takes counsel. If he is advised by counsel it is his protection, and he cannot be held for malice if he acted in good faith. The man goes to the same justice who issued the preceding warrant for advice, and he gets it. He also gets the warrant and notifies the accuser, who, by a convenient arrangement, appears, and a second farce is enacted. He goes before the justice and claims that he has been before convicted of that offense, and the justice rules that the former record shall be a bar to the complaint. The man didn't pay then. Now, for that he says Mr. Stilwell had malice toward him. They never had seen nor met each other up to that time. Mr. Stilwell merely desired to execute the law, and what malicious motive could he have to punish this gentleman further? Not the slightest in the world. Where begins the malice? On July 19 George M. Harmon says in a threatening letter to Huntoon: "So far as Stilwell is concerned, I will find means to deal with him through the next Legislature of Maine." Where is the threat? Where is the malice? Who is the malicious man who is actuated by an unworthy motive? Is it Stilwell that is hunting or being hunted? Is it Harmon that is being hunted or is he the hunter? "I will chase him to the Legislature." Then he hadn't these eminent counsel perhaps to advise him, and he thought the Legislature the proper place to go for impeachment. The same threat was made as to Huntoon. He would follow him. On Aug. 20, 1884, this innocent man, without malice and innocent of any crime, writes over his own signature to Mr. Stilwell, a Fish Commissioner of Maine: "By the time I am through with you I will try to show you that my threat to Huntoon was not brag." He had threatened to Huntoon that he would pursue "that old cuss Stilwell;" he had threatened that he would chase him to the next Legislature and give him enough of it. He now writes to Stilwell himself what I have just read. And this is a part of the carrying out of that threat, Mr. Governor. He stands here to-night with the same motive, the motive which has prompted him in every step he has taken in this matter, prompted him in the suit at Bangor, prompted him in the suit at Farmington, and prompts him here to-night in a proceeding unheard of in the history of our State. This innocent man followed as a criminal, as he would have you understand, pursued by officers of the law unjustly and in malice, goes over to Bangor and puts his character and reputation in issue on a technicality, and a jury find a verdict practically against him with the value of his reputation assessed at *one dollar and twenty-five cents!* This eminent gentleman, who is so liberal that he wants to pay Thresher's fine and wants to get Huntoon's money for the sake of getting at Stillwell, next sues Huntoon for the money he had paid him, half of which had already been paid into the State treasury. That suit was at Farmington, and the verdict was in favor of Stilwell. This man has pursued Mr. Stilwell in every form of attack which his malice could devise. He has pursued him in the courts and through the press, and now come these articles of impeachment, and he undertakes to make the Executive of Maine believe that he is this injured man when his very threats which I have read show the true animus of these proceedings. And here is Mr. Stilwell's letter that he complains of. Let us find this malice here. He directs Mr. Huntoon to go to Philips and get a warrant out against Harmon for killing a deer on Sunday. * * * Mr. Stilwell felt that he had the authority of the State behind him, and Huntoon, after taking counsel, inaugurated the prosecution, unsurpassed by any that has ever been instituted in this State; two suits, an impeachment, newspaper attacks, and I do not know what else. It is unparalleled in the history of malicious proceedings in all the States of the Union.

August 1 Mr. Stilwell wrote to Mr. Huntoon: "If Harmon pays his fine for killing a deer on Sunday, you may as well let the penalty for transportation go." How much malice was there in that when the men had been guilty of three offenses? For one offense the State had got $20, and by means of a mock prosecution the transgressor had been let out of paying the costs. And to this Mr. Stilwell said, no, I cannot afford to discriminate in favor of this man. I shall not be justified by the people if I do it. I want him to come up and pay what he ought to pay and do as he would make one of our citizens do. If he does that you may as well let the other transportation go. "Our duty is to enforce the law. We do not know friends or enemies in the matter. We simply seek to do our duty as faithful officers of the State of Maine in the execution of her laws. Mr. Huntoon, do your duty there, and we will stand behind you, and we want no friendships or enemies in the matter." Is there malice in that, or is the malice entirely on the other side?

Now these charges mean more than the striking down of these two men; they mean a blow at this vast interest of fish and game which has grown up year by year under the fostering care of these two men, and I ask that you see that the public interests of Maine do not suffer in this direction, and that there shall be no uncertain sound go out from this department, but that your verdict shall show that the State of Maine knows its faithful and trusted officers who have served it all these years, not for their miserable pittance of pay, but from a devotion to the cause, from an interest in the subject such as no other men in Maine have manifested. Be cautious that no uncertain sound goes out from here to encourage such attacks as these from the poachers in the State who are in sympathy with this persecution of our Fish and Game Commissioners, who stand, at home and abroad, as the representatives of not only our fish and game interests, but the fish and game interests of every State in the Union, and cited by them as authority in all matters relating thereto; that no sympathy be extended to those who are in open defiance of the law and are undertaking to break up the entire department of fish and game in our State. It won't do to cater to that class. I ask you in the name of my native State to stand by its interests better than that, and that by an immediate dismissal of these whole proceedings there may no uncertain sound go out from this Executive Department as to the way in which our public officers are to be treated in the performance of their duty. While you offer rewards for the apprehension of Graves and McFarland, who shot down our wardens in the forest, I entreat you to give no encouragement to any attempted assassination of the character of our State Commissioners while standing so fearlessly at their post of duty in the vigorous enforcement of the people's law.

THE LETTERS IN THE CASE.

[A.]

NEW HAVEN, Conn., July 19, 1884.

George Huntoon, Esq.:

DEAR SIR—I am informed through Mr. Tuttle that you intend to prosecute me for taking a deer out of the State or for transporting one. I have no doubt in my own mind that I was entirely free from all liability under any statute of the charge. I have delayed writing you until I could submit the case to my attorney, Judge L. P. Denning, of this city. In accordance with his instructions I beg to inform you that I am fully prepared to meet any suit which you may choose to bring, and that I will demonstrate to any court, and so fully that there will be no question about it, that if a deer was transported from place to place at that time I was last at Rangeley Lake, it was under your supervision and your suggestion. I shall not pay one dollar more than I have already paid in this case except on the decree of the highest court of resort. I shall also hold you responsible for any deviation from the letter of the law yourself. So far as Mr. Stilwell is concerned, I will find means to deal with him through the next Legislature. I have treated the people of Maine fairly and honorably, and having made a mistake, settled for it like a man, and I certainly do not appreciate the treatment I am now receiving. I expect to be at Philips on Saturday, the 26th. Respectfully yours, GEORGE M. HARMON.

[B.]

STATE OF MAINE.
COMMISSIONERS OF FISHERIES AND GAME,
BANGOR, Aug. 1, 1884.

DEAR MR. HUNTOON—If Harmon pays his fine for killing the deer on Sunday you may as well let the penalty for transporting go. Our duty is to enforce the law. We do not know friends or enemies in the matter. Mr. Harmon is as deeply interested in having the law enforced as we are. As I have never seen the gentleman and do not know him by sight, and I presume the same is the case with Mr. Stanley, we certainly cannot be accused of any personal feeling in enforcing the law in this instance. If Mr. Harmon does not pay his penalty for killing the deer on Sunday, then have him bound over for killing on Sunday and also for transporting. Yours truly, E. M. STILWELL.

[C.]

LAKE POINT COTTAGE, Aug. 20, 1884.

E. M. Stilwell:

DEAR SIR—On Monday evening (the 18th) I answered to a writ brought by your order through George D. Huntoon. The suit was dismissed as being malicious and frivolous. The expense to which I have been subjected through your action amounts to about $50, and unless you at once reimburse me for the amount I shall bring an action against you not only to recover the above amount, but also to recover damages from the scandal which your ill-advised suit has caused, and by the time I am through with you I will try to show you that my letter to Mr. Huntoon was not brag. An early reply will much oblige, yours respectfully,

GEORGE M. HARMON, Greenvale, Me.

In the speeches Messrs. Silsbee and Barker answered fully all of the charges. When Mr. Barker concluded it was far into the evening, but Judge Wing was to make the closing argument. He labored hard to show that Messrs. Stilwell and Stanley should be removed, but for so eminent a jurist it was a hard case to argue. The hearing was prolonged till nearly 10 P. M., and the next morning closed.

The Council has taken no action, for the Governor has not submitted anything to them. It is evident that the proposition in Mr. Barker's argument has fallen with due weight. It is also suggested the defense all the time had that point in view—that the removal could be made only through impeachment before the Legislature, but they allowed the complaint to go on. A private letter from the Secretary of State says that when asked if he was going to remove the Commissioners the Governor answered most emphatically "No! There is no occasion." The Governor evidently sees the whole case in the light of a sublime farce. I would not do Mr. Harmon the slighest injury or injustice, and all I have ever written concerning the case has been out of pure love for the cause of fish and game protection. Mr. Harmon I have never met, but I must say that it looks to me as though he had utterly failed in the State of Maine to bring two honest and eminent men into disgrace for trying to do their duty. SPECIAL.

DROWNING DEER.—Bismarck, Dakota.—At this place and in fact all along the river for fifty miles, the spring flood has been playing havoc with the deer and other game. Timber and brush line the bank of the Missouri, the bluff is about a mile back from the river. When the river breaks the ice forms gorges at different points, and this throws the immense body of water and ice out over the lowland and it flows out by the bluff first, thus cutting off all escape for the deer. One gentleman told me that he stood in his doorway, eight miles above this place, and with a field glass counted at one time thirty-three deer surrounded by floating ice 2ft. thick, water 10ft. deep; a few hours after the poor little fellows were seen to plunge into the ice and water to meet the same fate as hundreds of others all along the river. The morning the ice broke two deer were seen passing down the river on a big cake of ice, there was also a bear and a man as well. The man was crying and pleading most pitifully for help, but no help could be given. It was nearly night. I have not heard of his fate. The water on the bottoms at Bismarck was from 10ft. to 20ft. deep. Down in the timber three or five miles lived parties who did not get out in time; when rescued, two days afterward, they were on a high piece of ground, but the water was up to their feet, and in another hour three men and a woman would have perished. I have been told that the few deer that did escape are being killed along the bluff. One man killed seven in one coulie; another three. We will attend to their cases.—W. H. WILLIAMSON.

THE NEW YORK GAME LAW.

ALBANY, April 4.—During the past week a very interesting hearing took place before the Assembly Committee on Game Laws. Game Protector Mathew Kennedy, of Hudson, made a long plea in favor of Mr. Hogeboom's Hudson River shad bill, prohibiting fishing on Sundays, between March 15 and June 15. The committee reported the bill favorably. The committee also reported favorably Mr. Collins's bill (No. 1,068), prohibiting net fishing for salmon in the waters of the State between March 1 and Aug. 15, with special reference to the upper Hudson. This was ordered to a third reading. Mr. Brundage's bill (No. 1,219) was also reported by the committee and ordered to a third reading. It prohibits fishing during certain seasons of the year in Steuben county.

Ex-Speaker Erwin's bill (No. 454) amending the song bird act of 1886, was also considered in the Assembly committee. The committee reported a bill of a similar nature which was substituted for the Erwin bill. When the bill came before the Assembly Mr. Erwin said in substance "up in our country, in the northern part of the State, we think that it is all right to go gunning for crows, hawks, owls and blackbirds. This bill, substituted for my original bill, amends the song-bird prohibitory law of last year so that the shooting of these birds may be allowed. I ask that it may be ordered to a third reading." In accordance with this request the bill was advanced to a third reading.

The committee also reported Mr. Fort's bill amending the general game act of 1879 so that Sec. 24 shall read as follows:

"Any person having in his or her possession on the shores of any lake or on the banks of or upon any waters inhabited by salmon, salmon trout, lake trout, black or Oswego bass, or muscalonge during the close season, without the permission of the commissioners of fisheries, any snares, nets, set lines, stake poles or other devices, used in unlawfully taking such fish, shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of $25; but nothing herein contained shall apply to that portion of the Hudson River south of the dam at Troy, or to Lake Ontario.

The committee also reported Senator Fagan's bill to protect the planting of oysters in the towns of Jamaica and Hempstead. When it came into the Assembly it was substituted for a similar bill already in that body. The final bill reported by the committee was the Hogeboom bill (No. 1,261) providing that no person shall take any shad from the waters of the Hudson River by means of any seine, net or any other device whatever from sunset on Saturday to sunrise on the following Monday between the 15th day of March and the 15th day of June in each year, and any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor and in addition thereto shall be liable to a penalty of $50 for each offense.

While the Assembly Committee has been thus active during the past week the Senate Game Law Committee has only reported for printing Senator Daly's bill (No. 565), and also to the Senate, Senator Wemple's very important bill (No. 269) establishing a fish hatchery in the Adirondacks.

The Assembly Ways and Means Committee has done a much more generous thing than was expected of it. It has reported favorably Mr. Winne's bill (No. 1,225) relating to Catskill State Park. Mr. Winne, and several other parties from that region, presented such convincing arguments to the committee that there was no other way to do than to make a favorable report. The bill provides that the Forest Commission is hereby authorized and directed to set apart such quantity of land belonging to the State in the Catskill region, now constituting a part of the Forest Preserve, for the purpose of a park or parks, not to exceed three in number, of such size as they may deem proper. Said Forest Commission may establish all proper rules for the protection of said parks and the game therein. Said commissioners are authorized to purchase and turn out in such parks such deer or other game as they may think proper. No game shall be killed or pursued, trapped, or in any way destroyed within the limits of said parks for a period of three years. The sum of $500 is hereby appropriated to be paid by the Comptroller, at such time and such amount as the Commissioners may desire for the purposes of this act, and the Commission is authorized to receive private subscriptions for such purposes.

The Fish Commissioners have forwarded protests to the Governor and members of the Senate against the passage of the Finn bill repealing the lobster protective law. This law prohibits the catching of lobsters of less than 10½in. in length, and thus contributes something toward preventing the extinction of this shellfish in New York waters. The Senate has passed Senator Comstock's bill providing for fishways in the State dam at Troy.

This week it is expected that Mr. Langbein will insist upon the Assembly Committee substituting his proposed code for the one that has been already offered by him and is now before the Committee. This, of course, antagonizes in many respects the code that has been prepared by Mr. Hadley, the chairman of the Committee. It is pretty safe to say that neither of these codes will be passed entire. Indeed, the chances seem to be that no code at all will be passed.

ALBANY.

The following bills have been introduced at Albany amending the game and fish laws:

1. A general bill, "codification," by Mr. Hadley.
2. A general bill, "codification," by Mr. Langbein—the Roosevelt bill.
3. By Mr. Brundage, relative to fish in Steuben county.
4. By Mr. Reeves, to make quail, grouse, hare and squirrel season on Long Island Nov. 1 to Jan. 1; woodcock, July 1 to 31 and Nov. 1 to Jan. 1; shore birds and wildfowl, July 15 to May 1.
5. By Mr. Coggeshall, to forbid taking trout or land-locked salmon under 6in.
6. By Mr. Hoysradt, making weekly close time for shad, sunset on Saturday to sunrise on Monday, between March 15 and June 15.
7. By Mr. Finn, to repeal the law which forbids capture of lobsters less than 10½in. long.
8. By Mr. Pierce, to make quail and rabbit season on Long Island Nov. 15 to Dec. 31.
9. By Mr. Moore, to correct certain stupid verbal blunders in the song bird act of 1886.
10. By Mr. Reeves, to appropriate $2,500 for purchase of small steamer to patrol New York to enforce law against dumping garbage injurious to oyster beds.
11. By Mr. Fitch, making appropriation for Cold Spring Harbor fish hatchery.
12. By Mr. Reeves, making wild duck, goose and brant season Sept. 1 to May 1.
13. By Mr. Sweet, permitting net and fyke fishing for eels, suckers and bullheads in certain parts of Cayuga Lake.
14. By Mr. Giese, forbidding capture of black bass in Lake Erie and Niagara River above the Falls between Jan. 1 and July 1. This bill comes from the Audubon Club of Buffalo.
15. By Mr. Frost, making quail season Nov. 1 to Jan. 1 and hare season Nov. 1 to Jan. 1.
16. By Mr. Foot, forbidding possession of snares, nets, set poles, etc., on waters or shores of waters inhabited by salmon, salmon trout, lake trout, bass, muscalonge, in close season.
17. By Mr. McMillan in Senate and Mr. Sheehan in Assembly, exempting from provisions of Sec. 2, Chap. 437, 1886, salmon trout and landlocked salmon caught in Lakes Michigan, Superior, Huron, St. Clair and adjacent waters.
18. By Mr. Winne to transfer the game protectors to the control of Forestry Commissioners.
19. By Mr. Comstock to appropriate $1,800 for fishway in the State dam at Troy. This comes from the Fish Commission.
20. By Mr. Fagan, amending oyster planting laws for Jamaica and Hempstead.
21. By Mr. Collins, making open season for salmon March 1 to Aug. 15, and forbidding capture, save with line or rod held in hand.
22. By Mr. Comstock, adding set lines to list of devices forbidden by chap. 242, laws of 1886.
23. By Mr. White, forbidding killing of wild ducks between Jan. 1 and Sept. 1.
24. By Mr. Vedder, similar to Mr. Frost's (No. 15).
25. By Mr. Reeves, to permit sailing for wildfowl in Gardiner's and Peconic bays.
26. By Mr. Coggeshall, making season for woodcock, ruffed grouse and squirrels Sept. 1 to Dec. 1; providing that in action for having snared birds the shot marks must show that wound was attended with bleeding, and making "proof of ecchymosis showing the marks of ne's" *prima facie* evidence; also excepting English sparrow, crow, blackbird, butcher bird, owls and hawks (other than night hawks) from protection; making wildfowl season Sept. 1 to April 1 throughout the State.
27. By Mr. Thompson, relating to fishing in certain parts of Lake Erie.
28. By Mr. Davies, naming a special commission to act with the Commissioners of Fisheries to prepare a game bill.
29. By Mr. Buckley, to forbid use of nets in certain waters of Lake Ontario.
30. By Mr. Cornwall, limiting mesh of net to be used for minnow fishing in Keuka Lake; and permitting fishing through the ice in Seneca and Canandaigua lakes.
31. By Mr. Hamilton, amending the prescribed posting of game preserves, and the law relative to trespass thereon.
32. By Mr. Reeves, amending the law relative to game preserves and trespass.
33. By Mr. Curtis, allowing the catching of bass in Black Lake, St. Lawrence county, at same times as in the St. Lawrence River.
34. By Mr. Leete, to forbid April and May fishing in Oneida Lake.
35. The new Langbein bill, which is a modification of that gentleman's former bill (No. —), prescribes the following open seasons: Deer, Aug. 15 to Nov. 1; bounding, Sept. 1 to Oct. 5; wild duck and goose, Sept. 1 to March 1; ruffed grouse, pinnated grouse, spruce grouse, quail, robin, meadow lark, rabbit, black squirrel, gray squirrel, Nov. 1 to Jan. 1 (except that ruffed grouse season in Forest Preserve opens Sept. 1); woodcock, July 1 to 31 and Oct. 1 to Jan. 1; bay snipe, July 1 to Jan. 1 (English or jack snipe at all times). Salmon, trout, landlocked salmon, April 1 to Sept. 1 (in Essex, Sullivan, Ulster, Delaware, Franklin, Herkimer, Washington, Fulton, Hamilton, Lewis, Saratoga, St. Lawrence, Warren and Washington counties, May 1 to Sept. 15); lake trout, salmon trout, April 1 to Oct. 1; muscalonge, Oswego bass, black bass, pike, perch, wall-eyed pike, fresh water striped bass, June 15 to Jan. 1 (in counties bordering on New Jersey and Pennsylvania, and in Suffolk, Queens and Westchester counties, May 20 to Jan. 1). Forbids taking certain song and insectivorous birds (not including nine-tenths of the birds that ought to be protected).

Ruffed and pinnated grouse, quail, rabbit, squirrel, may be had in possession Jan. 1 to Feb. 15; fresh venison, Nov. 1 to March 1, "western snipe, salmon trout or lake trout, Virginia chub [black bass], pike perch or wall-eyed pike" the year around, if they be proved to have been killed in open season, or "in Erie county or outside of this State."

36. By Mr. Erwin, amending the song bird law.

NUMBER 9 AS A TALE VARNISHER.

ABOUT a year ago Culver and I noticed that an old fisherman and hunter used the number 9 rather too frequently. He had just killed 9 geese, or had shot 9 black ducks at one shot, or had got a striped bass weighing 9 pounds, etc., etc. Our attention once having been attracted to the matter, we found that the fishermen and hunters who congregate at my office evenings had had remarkable luck at getting 9's of about everything, and lots of fun we've had out of it. Some time ago we took a walk up the Hackensack, and asked an old chap if a certain likely-looking spot was a good one for snipe. "Oh! yes;" said he, "I got 9 there one day last week." Half a mile further on we asked a fisherman how many weakfish he had. He said that he only had between two and three then, but the day before he had caught 9 big ones. Crossing a railway bridge on our way home we stopped to ask a boatman if there were any ducks around, and he said that right over at the mouth of that little creek a fellow from New York had got 9 before breakfast, a short time previously. In almost every number of FOREST AND STREAM some one relates his experience with 9's. A writer recently shot an eagle measuring 9 feet from tip to tip. Another caught 9 big trout out of a hole in the ice, using a leaf for bait. Another says that to his knowledge one man has killed 9 bears in one grove of trees in one season. Another says that 9 bears are the greatest number ever killed before his dogs on one hunt; 9 grizzlies were recently seen near a ranch; 9 elk, this last autumn, were seen near another ranch where they have run scarce of late years; 9 dogs were seen together chasing sheep not long ago—and so on without ceasing.

The other evening we had just been talking about the qualities of the number for a varnish, and in less than four minutes one of the party soberly told about standing on the end of a log and getting 9 trout out from under the root of an old tree. He jumped like a toad when our thoughts occurred to him. Shortly afterward, when the ferocious nature of the snapping turtle was being discussed, a demure little chap, who always tells the truth, said that one of them dragged off 9 wood ducks that he had left by a stream while he ate his lunch.

Remember the number and listen and you'll have lots of fun, boys!

MARK WEST.

SPRING SHOOTING.—Sauk Center, Minn.—I rejoice to hear the good news of the abatement of the spring shooting nuisance, and I hope the day is not far distant when we can get some of the old time sport of having plenty of ducks and geese to bang away at in the fall of the year. Everybody ought to know that spring shooting drives our game away and also keeps it away. Fourteen years ago a great many geese, ducks, etc., stayed here and reared their young, but now it is different; they go further north and we only see them for a short time in the fall on their journey southward. Our shooting is not one-quarter so good now as it was years gone by, and I am satisfied it results from spring shooting. It used to be a very frequent occurrence to run across an old goose with a "whole swarm of goslings," and the writer recalls several such sights on a single trip over the prairies, and once, in particular, picking up three goslings which ran across the road ahead of the team. In those days it was an easy task to bag five or ten geese in a day's shoot, but now it takes five or ten days to get the one goose, and then sometimes "the goose" turns out to be the hunter only.—DELL.

MISSISSIPPI WOODCOCK NESTING.

COMO, Miss., March 28.—On March 22, my setter pointed a woodcock, which flushed wild and settled 15 or 20ft. ahead of her. The bird acted as if it were wounded, and the dog gave chase, whereupon it again rose and flew a little further than on its first flight. The dog continued to chase, and at each rise the bird increased the length of its flights until it was lost to the dog in a creek bottom. Knowing that many birds adopt this or a similar ruse to divert attention from their nests, and having three weeks prior to this found woodcock nests, I did not fire at the bird, but maintained the position I occupied when it rose for its first flight until my dog returned, when I cast about to discover the nest. In the immediate vicinity where the dog pointed I discovered four young woodcocks that were well feathered and apparently about one-fourth grown. The little fellows lay with necks extended, as flat and rigid as if a part of the earth, but with eyes wide open and evidently watchful. I admired the spectacle for a moment, and then, desiring to obtain a better view, reached down to take one in my hand, when the four, in a twinkling of an eye, sprang in air and flew to a safe distance in the briers that surrounded them. I think these the first birds of the season, and I account for their early hatching on the ground of our unusually mild winter and early spring. Usually we have quite severe weather during the winter months, but we have had no severe weather and scarcely a freeze since the first week in January. This is the first year woodcock have ever been known to nest in this locality. Until the past three years it was an unusual thing to see one of these birds, and even now they are rare birds that a hunter seldom bags. This is quail country *par excellence*, and it is no uncommon thing for a sportsman to find twenty coveys in a day's hunt. Snipe have been fairly plentiful here for a month past. These also are rare birds with us. Our country is a very open one and affords fine shooting.

EIGHTY-SEVEN.

THE PARK AS A GAME PRESERVE.

NEW YORK, March 30.—*Editor Forest and Stream:* Your paper's earnest and untiring defense of the Yellowstone Park has always greatly appealed to me. I have twice been through the Park and have found it a singularly attractive region, for its wonderful scenery and marvelous wonders, and also because it is the very best retreat of those noble wild animals that once were so abundant everywhere in the great West.

Last summer, traveling from Cheyenne, across country to the Yellowstone Park, I had a good opportunity to see how rapidly the game is being exterminated in Wyoming and the adjacent Territories. Elk, deer and antelope are being killed off fast, and the buffalo is a thing of the past, and yet, but four short years before, buffalo could be seen for miles along the route we traveled. Now even the bleached skeletons are not easy to find.

For several days' journey at a time, though the country we passed through was thinly settled, no antelope were seen by any of us—there were three in the party, and some one was hunting all the time. They had simply been killed off. Although we traveled over eight hundred miles, in but one spot that we passed were antelope plentiful. In 1882 I passed over several hundred miles of this route and game was abundant almost everywhere.

Here in the Park we have a great area of public land set aside for the people. Without the wild life that is a part of it, it will lose half of its interest. Why not, now that it is not too late, have proper means taken to protect this game that it may be a delight to future generations and an ornament to the Park?

R. H. LAWRENCE.

NATIONAL ASSOCIATION.—Captain H. C. West, of St. Louis, its secretary, has issued a circular, calling the annual convention of the National Association for the Protection of Game, Birds and Fish:

"Office of the National Association for the Protection of Game, Birds and Fish, Chicago, April 2, 1887.—The next and third annual convention of the National Association for the Protection of Game, Birds and Fish will be held at the Palmer House, Chicago, where the meeting will be called to order at 10 A. M., Wednesday, June 22. The secretary takes pleasure in saying that the report he will be able to make will show how much good has resulted from the work of the Association since its first convention was held in St. Louis in 1885. The attention of the Legislatures of every State in the Union has been s riously drawn to the necessity of preservation, and in several States laws of the utmost value have been passed on the subject and are now in operation. More good work has been done in the last eighteen months toward retaining or regaining our head of game and stock of fish than has resulted from the whole of the previous desultory or sporadic attempts in that direction in America. Much, however, remains to be done, one of the most important points that press for immediate attention being the necessity of increasing the membership. Every addition to the list brings new members again in its train, and the Association requires recruits both to promulgate its objects more and more through the country, and also to assist it toward financial prosperity. It is hoped and believed that nearly every State and Territory in the Union will be represented at the coming convention, but it is earnestly hoped that before it is in session the Association will have been joined by many new members. Clubs proposing to join should at once forward their address and membership dues to the undersigned.—H. C. WEST, Sec'y, P. O. 699, St. Louis, Mo."

PUGNACITY AND PRODUCTIVENESS.—Fredericksball, Va. We have a great abundance of partridges left over from last season, and even if there is no increase, the shooting will be good next fall. I have frequently heard the most experienced partridge hunter I ever knew say "that when a great many old birds were left there would be but little increase, due to their very pugnacious habits at the breeding season.—X.

RICHIBUCTO.—Mr. E. E. Phair, of the new hotel, "The Beaches," at Richibucto, on the Gulf of St. Lawrence, New Brunswick, advises us that there is to be had there a variety of wildfowl, shore bird and grouse shooting with some.

ROCKLAND, Me., March 28.—The fox and rabbit hunters predict a good partridge season judging from the birds left over.—I. W.

A PENNSYLVANIA UNION.—Pittsburgh, Pa., April 2.—*Editor Forest and Stream:* At a meeting of the representatives of the different hunting, fishing and camping clubs, in the immediate vicinity of this city, held for the purpose of organizing a united club, it was resolved to issue the following circular: This club is formed for the purpose of securing the preservation and increase of fish in the waters of Western Pennsylvania, and the enforcement of laws regarding the same; for the protection and enforcement of the lately amended game laws; for obtaining uniform and cheap transportation to the various fishing and hunting localities of the United States and Canada; to secure better accommodations from the various transportation companies; to obtain more information as to the status of the hunting and fishing of the different sporting sections of America; and finally, to become personally acquainted with the brother members of the different clubs, and by occasionally meeting together in a social way gain knowledge through the mutual exchange of information derived from personal experience. It has been decided that all clubs having a membership of ten or less are entitled to two representatives, and an additional representative for every ten members, or a majority fraction thereof, over that number.—W. G. SCHIRMER, President; W. W. MCNEIL, Secretary.

HOW SHALL HE CIRCUMVENT THEM?—*Editor Forest and Stream:* Near this city is a lake formed by a cut off of the Mississippi River, and subject to the rise and fall of the same; its width is ¾ of a mile. This lake is a feeding place for considerable numbers of mallard and teal. My object in writing this is to ask suggestions from some of your correspondents as to the best methods (practica') of shooting these ducks. The banks of the lake are mostly clear, and the ducks are generally bedded in the middle of the lake, far out of reach of gun shot. Decoys and blinds made of brush stuck in the ground are ineffective. A blind built in the water would not do on account of the frequent change of the water level—a rise or fall of 3ft. in 24 hours is not infrequent. Some of the local gunners think of getting a punt gun; this I object to strongly, and will, I think, successfully oppose. I am opposed to spring shooting and pot-hunting. Any suggestions which will fit the case as stated will be gratefully received.—D. M. P.

BERLIN ROD AND GUN CLUB.—Berlin, N. J.—The officers are as follows: Pres., Chas. I. Wooster; Vice Pres., Howard Ireland; Secy., Howard T. Wright; Treas., Lincoln Doughty; Directors, Wm. H. Norcross, Louis Kammer and John B. Wright; Capt., John B. Wright.

OTTAWA, Ont., March 30.—Wild goose shooting has been in active operation for some weeks along the north coasts of Nova Scotia. Here the waters of the lakes and rivers are still icebound, with four feet of snow over the surrounding country.—STANSTEAD.

NEW YORK FOREST PRESERVE.—The forest preserve covers the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan.

MINNESOTA GAME LAWS.

AN Act for the better preservation of game. Be it enacted by the Legislature of the State of Minnesota:

SECTION 1. No persons shall kill, or pursue with intent to kill, any woodcock, saving only during the month of July after the third day of said month, and during the months of August, September and October; nor any prairie hen or chicken, nor any white-breasted or sharp-tailed grouse, or prairie chicken, save only during the month of August after the fourteenth (14th) day of said month, and during the month of September; nor any quail or partridge, save only during the months of September, October and November; nor any ruffed grouse or pheasant, save only during the months of September, October and November; nor any wild duck of any variety, or wild goose or brant of any variety, or aquatic fowl whatever, save only during the month of September, after the 15th day of said month, and during the months of October, November and December in each year. Whoever kills any woodcock between the first day of November and the fourth day of July following; or kills any prairie hen or chicken, or white-breasted or sharp-tailed grouse, between the first day of October and the fifteenth day of August following; or kills any quail or partridge, or ruffed grouse or pheasant, between the first day of December and the first day of September following; or kills any wild duck of any variety, or wild goose, or brant of any variety, or aquatic fowl whatever, between the first day of January and the 15th day of September in any year, forfeits not less than ten dollars ($10.00) nor more than fifty dollars ($50.00) for each bird so killed. Whoever has in his possession any such bird (except alive) during the said time the killing whereof is prohibited, shall be deemed to have killed the same, contrary to law, and shall be liable to the penalty aforesaid, unless he proves in defense one of the following facts: That he had no notice or knowledge that the same was in his possession; or that the same was killed during the time it was lawful to kill the same; or that the same was not killed in this State.

SEC. 2. No person shall kill or take, by any means, contrivance or device whatever, or pursue with intent to kill, or take or worry, or hunt with hounds or dogs, any elk, moose, deer, buck, doe or fawn, save during the month of November in any year; and whoever hunts or kills or destroys any of such animals between the first day of December and the first day of November forfeits not less than twenty-five dollars ($25.00) nor more than seventy-five ($75.00) for each animal so killed or destroyed; and whoever has in his possession the carcass or hide of any such animal, or any part thereof, between the first day of January and the first day of November of any year, shall be deemed to have hunted and killed the same, contrary to law, and shall be liable to the penalty aforesaid, unless he proves in defense one of the following facts: That he had no notice or knowledge that the same was in his possession; or that the animal was killed during the said time it was lawful to kill the same; or that the same was not killed within this State.

SEC. 3. No person, persons, or corporations, shall at any time or in any manner, export, or cause to be exported or carried out of the limits of the State of Minnesota, any of the birds or animals mentioned in this act; and any person, persons or corporation who shall export or cause to be exported, or carry out or cause to be carried out of the limit of this State, any of the birds or animals mentioned in this act, shall forfeit the sum of not less than five dollars ($5) nor more than seventy-five dollars ($75) for each bird or animal so exported or caused to be exported, or carried out or caused to be carried out of the State of Minnesota. And the provisions of this section shall apply to every corporation, railroad company or express company carrying on business within the State, and to any and every employee of such corporation, railroad company or express company.

SEC. 4. No person shall at any time catch or kill any of the birds aforesaid, or any of the animals aforesaid, in any other manner than shooting them with a gun held by the person discharging the same. And no person shall at any time set, lay or prepare any trap, snare, net or other contrivance or device whatever with intent to kill or catch any of the birds aforesaid or any of the animals aforesaid. And no person or persons shall, between the time of sunset and sunrise, hunt, pursue or kill, on any of the lakes, rivers or waters in this State, any aquatic fowl whatever; and no person or persons shall at any time in hunting any aquatic fowl make use of any artificial light, decoy, battery or any deception whatever whereby any such wild fowl shall be attracted or deceived. And no one shall use any part of any public highway or any bridge thereon as a duck pass or for such duck pass shooting. And whoever shall offend against any of the provisions of this section shall forfeit not less than twenty-five dollars ($25) nor more than seventy-five dollars ($75) for each and every offense.

SEC. 5. No person shall at any time enter into any growing or standing grain or any enclosed land not his own, with sporting implements about his person; nor permit his dog or dogs to enter into any such growing or standing grain or into such enclosed land, without permission of the owner or occupant thereof, and no person shall at any time hunt or shoot upon any lands of another which are uncultivated or unenclosed after being notified not to hunt or shoot thereon; and any person who shall enter into such growing or standing (grain) or into such enclosed land of another with gun, dogs or any sporting implement upon his person without the permission of the owner or occupier of such grain or enclosed land, with intent to kill, hunt or pursue any animal or game bird, and any person who shall, without the right so to do, hunt or shoot upon any uncultivated or unenclosed land of another after being notified not to hunt or shoot thereon, shall forfeit the sum of not less than twenty dollars ($20) nor more than fifty dollars ($50) for each and every such offense, to be recovered by action before any justice of the peace of the county where the offense is committed or of the county where the defendant may reside, to be brought by and in the name of the owner or occupant of such land; but nothing in this section contained shall be so construed as to limit or in any way to affect the remedy of the owner or occupier of any such grain or enclosed land or unenclosed land, or of the person injured, at common law for trespass.

SEC. 6. The governor shall appoint a game warden for the State of Minnesota, to hold his office for four (4) years unless sooner removed, and such game warden may appoint in writing one or more deputies, and require suitable bonds for the faithful performance of their duties. And it shall be the duty of the said game warden and his deputies to faithfully enforce all the laws of this State relative to the preservation of game. And each of said officers shall have the same authority to require and in the execution of his office as sheriffs and their deputies have. Such State warden, or any of his deputies, may institute proceedings by civil action, in the name of said State warden as plaintiff, or of the State of Minnesota as plaintiff, and the name of the accused as defendant, to recover all the penalties for the unlawful hunting and killing of any of said game birds or animals, and for the violation of any of the provisions of this act, except those provided for in section five (5); and the whole of the penalties so recovered shall go to such warden, to pay himself and his deputies for their time, labor and expenses. Such prosecution may be commenced and heard before any justice of the peace or district court of any county in which said bird or animal after being killed is carried, or of the county in which the defendant may reside. And in case any offense committed under this act shall not be prosecuted by said State warden or his deputies within twenty (20) days after the commission thereof, then any person may institute and prosecute such action therefor in his own name in any of such courts; and in that case the party so prosecuting may be entitled to all penalties recovered; and in all actions therefor, if the plaintiff prevails, he shall be entitled to and recover costs. And justices of the peace shall have jurisdiction to hear, try and determine all cases arising under this act, except when the damages claimed exceed one hundred dollars ($100).

SEC. 7. That section one (1) and section two (2), and section five (5), and section seven (7), and section eleven (11) of chapter twenty (20) of the General Statutes of the State of Minnesota, being of an act for the preservation of game, and all acts amendatory thereof be, and the same are, hereby repealed; and all acts and parts of acts inconsistent with this act are hereby repealed.

SEC. 8. This act shall take effect and be in force from and after its passage.

Approved March 8, 1887.

ANALYSIS OF THE TRAJECTORY TEST.

Editor Forest and Stream:

I have read with much interest and perplexity the article running through two late issues of your paper over the signature of Major H. W. Merrill and purporting to be an analysis of the FOREST AND STREAM'S trajectory tests.

It seems to me the Major has permitted himself to overshoot the center of merit. Some captious critic, it seems, rudely assailed his idol and of course he fights without being particular as to the means he avails himself of in defense. Therefore his article partakes of the nature of a labor of love in eulogizing a style of arm whose obituary was written years ago. He says that the test referred to was for the purpose of deriving instruction from flat trajectories in connection with great accuracy along the range. What instruction has the memorializer of the muzzleloader deduced and imparted therefrom? With much labor he has endeavored to demonstrate that the Merrill rifle (muzzleloader) weighing 11½lbs., exploding a large charge of powder and driving a light bullet of medium caliber, was the only arm fired in the test whose projectile would shave a squirrel's head on the range along the line of sight from 1 to 100yds. Now, this is valuable in the study of projectiles to a hunter who must guess at distance, but it is not a discovery of power inherent in one style of arm. If it is, then the squirrels may increase and multiply with impunity before I will load myself with such cumbersome ordnance for such light sport.

When I read your correspondent's carefully tabulated record of the trajectory tests, examined his formulas and studied his comparisons of the competing arms, it was with more than passing interest, but it was an interest centering upon only one of the many elements that enter into the essentials of a sporting arm, with its relative merits, namely, flatness of the bullet's line of flight. Regulate this factor with the killing power of a projectile and you advance rifle shooting in a hunting arm when you combine these principles assimilated with accuracy and steadiness in a weapon capable of rapidity and facility of manipulation, light of weight and using ammunition protected from moisture. Your test did not embrace these points (beyond the lessons to be drawn) which your correspondent admits, yet he takes occasion to make it a text to preach the superiority of old systems in hunting squirrel heads. Again, if the Merrill rifle is invincible in shaving squirrel heads, which one among the lot fired is to be selected to shave Old Ephraim of the Rocky Mountains? If my examination of the tables is correct there were a few weapons with a trajectory flat enough to include the grizzly's head along the range. Will Major Merrill advise the use of the arm he says beat all others for this sport or in the extremity of danger? Suppose a hunter, armed with the Merrill, to be inaccurate in aim, which system would the unfortunate man believe to be the exponent of advanced rifle shooting?

I am at a loss to discover upon what hypothesis the designer of the Phillips-Merrill rifle discovers in your trajectory tests what he terms in the third paragraph of his opening article a "complete vindication of his advocacy of the accuracy and power of the muzzleloader as a hunting weapon." Many riflemen have long believed that flatness of trajectory is a result of high velocity produced in a gun barrel by a heavy charge of explosive material propelling a light weight projectile; while accuracy, steadiness and power are obtained in all rifles by adjustment of relative proportions in weight, form, size, material, rotation and direction and finished, treated with delicacy and precision of construction. Probably the majority of riflemen will not deny the possibilities of accuracy and steadiness of a muzzleloader at the target, nor deny similar qualities in the breechloader. Why should they, while both arms attain the same end through the utilization of mechanical agencies? But the desideratum is economy and facility of means to produce a result which involves power. I do not believe that accuracy and power in the full meaning and intention of the combined terms as applicable at the target involve the many conditions these terms cover in hunting game, and the disparity is illustrated in the inability to find stationary game and a steady aim in riflemen; hence accuracy and power upon game involve facility and rapidity of application. Did the Merrill arm discover any new principle of accuracy and power in a hunting weapon, or did it simply intensify a familiar element entering into the essentials and common to all rifles? Yet Major Merrill in closing paragraph says he believes the majority of your readers must appreciate his effort to advance the cause of truth and rifle shooting. Beyond the line of truth exhibited in the fractional depression of his trajectory in degree, and including his prejudice, did his arm materially advance the cause of rifle shooting according to the ethics of science as applied to ballistics? I believe not. Again, did not his pique over a criticism cause him to overlook the true lesson taught by your tests and lead him into opening the old threadbare controversy over the different styles of arms in a vain grasp at a shadow instead of the substance?

Adverting to the claim to advancement in the domain of rifle shooting as illustrated in the so-called vindication, compare the muzzleloader arm of twenty years ago with that arm to-day, and then contrast the breechloader weapon of twenty-five years ago with the same rifle as now produced. A glance will show the evolution of both systems toward perfection and the degree achieved by each. I have never seen a muzzleloader comparing favorably with the modern Maynard, Ballard or the magazine rifle, in accuracy and range (eliminating power, in the concrete, as an unknown quantity in muzzleloaders) but would greatly exceed either in cost. With due courtesy toward your correspondent, I am obliged to believe his letter to be misleading and imperfect in the analysis of the subject taken under consideration.

Now will not Major Merrill who, as he says, writes "*pro bono publico* in the advancement of rifle shooting as applicable to hunting arms," forbear umbrage at differences of opinion in his theory or practice, and apply his experience and knowledge of projectiles to the perfecting or a system of rifling and a charge of cartridge proportional in powder, lead and caliber, that shall produce a flat trajectory and great killing power for the different ranges and uses in an arm combining lightness, facility and rapidity of manipulation, which I believe broadly covers not only advancement in rifle shooting, but embodies the principles that should govern lessons given in all rifle tests for the sportsman? Further, cannot the FOREST AND STREAM arrange for tests that will develop a substitute for the rifle powder now in use? CIVILIAN.

TARPON AT CHARLOTTE HARBOR.

SECOND PAPER.*

MR. S. C. CLARKE speaks *ex cathedra* as to the tarpon: "Imagine a herring-shaped fish, 5 or 6ft. long, with brilliant silvery scales the size of a half dollar, in schools of a dozen or twenty, leaping from the blue surface of the summer sea. This is all that the angler usually sees of the tarpon. Sometimes one of these glittering monsters takes the hook. What follows? The line runs out at great speed until it has all left the reel, when it parts at its weakest point, and the fish goes off, leaping seaward. When hooked on a hand line similar results follow. No man is strong enough to hold a large tarpon unless he is provided with a drag or buoy, in the shape of an empty keg attached to the line, which may retard or even stop the fish after a while.

"I have heard of one instance of this fish being killed on a hand line. As usual the line was snatched from the hands of the fisherman in the first rush, and the tarpon went leaping down the river; but the heavy leaden sinker struck it on the head and stunned it, so that it was picked up by means of a boat. One was killed a few years ago in the Indian River, as I am credibly informed, with rod and reel, by an angler from Philadelphia, after a contest of some hours. The fish was over 6ft. long, and weighed more than 100lbs.—certainly one of the greatest angling feats on record."

Again: "A cuttyhunk linen line, 15-thread, 300ft. long, will hold and kill most of the fish encountered on this (Florida) coast. Of course, a tarpon 6ft. long will get away with the tackle."

Thus Mr. Clarke. These authoritative statements would make the angler abandon the attempt to take a tarpon in advance. My own experience and observation the present spring and last year's show that any fair angler, who is observant and really cool, can kill some tarpon, and those of the largest size, although the greater number of those hooked will probably escape him. The fish is a tremendous fighter, but he fights fairly; there are no nods or jerks, nor boring into the bottom, nor hunting cover of rocks or snags.

And how tastes differ! Mr. Clarke, in the same article above quoted, decides that the three best fishes for the table found in America are the pompano, the salmon and the whitefish of the lakes. I have enjoyed pompano on both the east and west coasts of Florida, salmon taken from Scottish river, and whitefish on the shores of the Great Lakes. Every fish was living when prepared for the broiler. But I have also had Spanish mackerel broiled upon the deck of the vessel as they were taken from the water, and have had shad on the Ocklawaha steamboats, barbarously fried and desecrated with tomatoes, and enjoyed them in perfection planked at the Buena Vista, at Gloucester City, New Jersey. I would admit the pompano to the supreme trio and next to it the Spanish mackerel, but queen of all is the Delaware planked shad with her roe. *Ubi alosa ibi patria.*

But this digression is foreign to my purpose and can be brushed aside with the comment, "There's no accounting for tastes." *De gustibus. Chacun a son goût.* There is no doubt a Choctaw proverb to the same effect.

Last March (1886) I went to Punta Rassa and spent a few days fishing, in the manner and with the results already detailed in FOREST AND STREAM. I was not prepared for tarpon, but accidentally hooked one, which promptly ejected my bait. I stated my wise conclusions, from this brief experience, that this fish could not be taken from a stationary object, like the shore, or an anchored boat; but, after observing Mr. W. H. Wood's management of a fish of 130lbs., at the mouth of the Caloosahatchie River, I find my judgment a little too hasty. He killed the fish in less than an hour—beautifully—without raising the anchor of his boat. My other *dictum*—that the "spring of the rod" cuts no figure—he confirms in conversation. All that is required is plenty of line, and the rod always at right angles to the rush of the fish. But, as Mr. Wood says, one must be always prepared for accidents. "After taking more than one tarpon, one gets a great respect for the fish!"

In March of last year, after a careful examination of both the Indian River region and the southwest coast, I was sure that the best place for an angler, with limited time, is San Carlos Bay, at the southern end of Charlotte Harbor. There is certainty of fish, and, if not too early in March, assurance of tarpon—the king of all of them. Mosquitoes are not there, and midges and flies are very scarce. Not so on the Indian River. The scenery is perfect, with strange and picturesque forms of southern vegetation—

White sheets of water and clear sky.

And then the climate. The sweetest days on earth are the Indian summers of the Middle States, when

"Under the yaller pines I house,
When sunshine makes 'em all sweet-scented.
And hear, among their furry boughs,
The baskin' wes' wind purr contented.
While way o'erhead, as sweet 'n' low
As distant bells that ring for meetin',
The wedged wil' geese their bugles blow,
Further and further south retreatin'.

But we have but few Indian summer days in the North, and we do have three dreadful months, February, March and April. There are lucid intervals in February and

*For first paper, "Florida Coast Fishing," see Vol. XXVII., p. 448.

April, but none—not one—in March. Here Charlotte Harbor steps in and furnishes a refuge and asylum for us hyperboreans. The March days there are soft, sweet and caressing—just cool enough to temper the fierce rays of the sun, but not chilly at all. Summer clothing by day, and open windows and a sheet for covering at night are comfortable.

The railroad runs to Trabue—alias Punta Gorda—and the fifty miles ride by steamer over the lovely harbor southward to St. James, the new paper city on San Carlos Bay, is very charming. The boat brings the traveler to his hotel at dinner time, and he can, as I and my companions did, spend his first afternoon in becoming acquainted with the surroundings and arranging for his boat and boatman.

I arrived at the new "enterprise" of St. James City March 2, and found San Carlos Bay much changed by its establishment since last spring. Then there were on the bay but the two houses, which still constitute the village of Punta Rassa. St. James has a picturesque, very comfortable and very well kept hotel, and a number of neat cottages and stores. The management of the hotel is in the hands of gentlemen who make every effort to accommodate and please its guests. A mistake has been made in putting the building too far away from the wharf—nearly half a mile. It is true that a carriage is free to the guests, and a tramway is promised for next season, but the belated fisherman at night and the energetic one who wishes to be off betimes in the morning, will anathematize the founder of St. James as he trudges along the palmetto avenue which leads to the bay. John Smith and his two sons Johnny and Frank, with Sam Ellis, were still the prominent boatmen, but I noticed that the prices for their services (including a good sailboat) had advanced from the $2.50 of last year to $4 per diem. These wages are reasonable, but who can say what next year's will be?

At Punta Rassa, Mrs. Zipprer has the same picturesque and comfortable house as of old. For one who wants the best fishing, and all day for it, with fair accommodations at the small expense of $1.50 per day (the weekly terms I do not recollect), her house is the place. Mrs. Shultz has enlarged the other house of Punta Rassa since last spring. Her terms are somewhat higher—$2 I think. I have not lodged there, but the house is well spoken of as comfortable and well kept. Since last season Mr. Shultz has built a cattle wharf and appurtenances, so the honors are easy between the two boarding houses on that drawback for lady guests of tender sensibilities.

At the San Carlos, as the hotel on Pine Island is called, were enough guests—ladies as well as gentlemen—to tax its capacity. The men were evidently none of them consumptives, seeking refuge from the chilly winds of their Northern homes, but vigorous and stalwart. To quote Mrs. Hemans's elaborately answered string of conundrums:

"What sought they thus afar?
Bright jewels of the mine?"

Some had their wives and daughters for company, but the men had but one object—tarpon. Every one talked of that fish—hoped, longed, expected to, or feared he wouldn't capture it. Mr. Lorillard's yacht, the Reva, when I reached St. James, March 2, lay in front of the wharf, and had been in and near San Carlos Bay a couple of months, its occupants pursuing tarpon. The yacht had a record of two, increased before I left to four or five of the fish. Mr. W. H. Wood was at Mrs. Zipprer's at Punta Rassa, with a record of nine taken during six weeks. He added two before he went North—the last one in my presence. The ladies would go over to Sanibel Wharf in the afternoons to catch sheepshead, but the gentlemen were bold tarpon slayers—at least on the hotel verandas, evenings. Great numbers of fish of all kinds were daily brought to the wharf. Their proud captors would have them transported to the hotel, in the hall they would be inspected and proudly talked over, then carried straight through, presumably to the kitchen, but really to the compost heap back of the stable. The hotel could not make use of them, and the sandy soil needed them, surely. The nucleus of the heap was a devilfish said to weigh a ton, and a sawfish of half that weight. There, as refuse—Fulton Market, attend!—were sheepshead, sea trout, snappers, groupers, channel bass—a list to make a New York housekeeper weep with regret. No pompano; no Spanish mackerel—they were honored with a place at table.

My companion after hearing the tarpon talk announced his intention of not molesting that fish. I had allotted one week to Charlotte Harbor, or rather to the southern end of the harbor, which is called San Carlos Bay. I wanted to take one tarpon, and therefore set apart the last two days of my stay for that purpose, in order to give some time to the less exacting species of fish, and at the same time fix with certainty on the place to find the great desideratum. Four days we spent delightfully in sailing about the bays, lagoons and passes and taking channel bass (very few), groupers and spotted trout. The first afternoon I took my companion to the wharf at Sanibel to exhibit the sheepshead. Two hours satisfied him with that fish. I repeated my attempt of last year to take four at once, but failed again. I do not see that the new hotel at St. James, with its afternoon parties at Sanibel, has affected the abundance of these fish materially, since I landed in the short time we fished two sheepshead at a time ten times, and the same inquisitive swarm as of last year followed the captured fish to the surface of the water.

My friend, the Captain, by invitation, visited Mr. Wood Saturday, and under his guidance went off the mouth of the Caloosahatchie, opposite the first creek east of Cape Blanco, and there hooked, and after a contest of an hour and a half (concluded after dark) killed his tarpon, weight 118lbs., just the weight of the captor. Monday afternoon I anchored on the same ground and saw Mr. Wood skillfully take and save his handsome fish of 130lbs. without taking up anchor, "one of the greatest angling feats on record," as Mr. Clarke (or any one else) might say. This was the only fish taken that day, although I saw six others take the baits among the different boats and exhibit their magnificent shining proportions above the surface of the sea in the light of the declining sun.

Tuesday was the last day, and to be convenient to the grounds, I stopped over night at Punta Rassa, at Mrs. Zipprer's, arranging for Sam Ellis, my boatman, to come to Cape Blanco with lunch as soon as he could, Tuesday. The Captain having taken his fish, with the generosity which infiltrates every fibre of his body, took me down in a small boat to our fishing ground, and although he was little more familiar with the spot than I, anchored the boat in the best place, in spite of my foolish protests. Mr. Wood soon joined us, and another gentleman from St. James, who had also stopped over night at Punta Rassa, completed the line. At 9 o'clock Mr. Wood had an enormous fish displaying his argentine magnificence only to disgorge the bait and escape after a leap or two. Then Mr. T. had a wonderful commotion about the boat, a very considerable silver bar turning and twisting with great rapidity here and there, and apparently rising from the water in two or three places at once. Mr. T.'s anchor was duly weighed and a very lively contest of 20 minutes or so ensued—the fish was not very large—which ended by angler and boatman attempting to take the fish at the shore; a quick stroke with the gaff, and a severed line floating in the air. Sadly the fisherman returned to his anchorage.

Then came my turn. The Captain and I were both fishing, when, without warning, two beautiful fish arose on either side of the boat at the same moment, high in air, and frantically twisting, with mouths wide extending, and then falling with a simultaneous mighty crash, throwing the spray high in air. One line came back limp to the reel, the other ran out with a whirr, and its course was marked by the frantic leaps of the monster, who seemed to be pervading the scenery. The stern line was untied from the pole which held the boat steady, the anchor was lifted, the Captain took his seat in the stern with an oar, I moved forward to the bow and away we went merrily toward deep water. I looked at my watch and found the hour to be 11:25. The details of the contest need not be given. There was a succession of rapid leaps high in the air, then a long steady pull, most of the time with the fish near the surface, pulling the boat steadily; occasionally—say ten times in all—a rolling plunge for air, like the roll of a porpoise, and, just before he was gaffed, five magnificent concluding leaps, which finished the performance. Nineteen leaps in all were made clear of the water, and the time occupied in capture was an hour and five minutes. Length of fish, 6ft. 1in.; weight, 110lbs. It was a most thrilling experience. At times, when the huge glittering fish shot into the air close to the boat, quivering and twisting in every muscle, and fell with a mighty crash back into the sea, the effect was almost terrifying. At the conclusion of the contest, after two gaffs and an iron hook had performed their office, and the dying fish lay in the bottom of our small boat—nearly filling it, it seemed—my sailboat appeared, and we returned to Punta Rassa. Like Francesca—

"We fished no more that day."

The next morning we were homeward bound, having gone through a week's entertainment at San Carlos Bay, where all the pieces on the programme were carefully and in their proper order performed to our satisfaction, and leaving the principal performer to be—as Johnny Smith said—"pizened" and sent on to us. F. S. J. C.

THE COMING TOURNAMENT.

PRIZES are coming in to the committee, and there is every prospect of a full prize list and a successful tournament. We will publish the list in full as soon as the classes are made up and the prizes divided among them. The new departure made this year of holding the tournament in May instead of October seems to be popular, and the experiment will decide the question as to the time at which the meetings will be held in the future. At present writing we cannot say how many classes there will be, but hope that there will be two salmon contests, one for amateurs only; this, however, will depend upon the number of prizes.

We shall watch with interest the proposition to make it a social club, with rooms, a library, and all the necessary adjuncts of such an organization. To accomplish this there must be a great increase of the roll of membership or the annual dues must be made larger. The Fly-Fishers' Club, of London, has about two hundred and seventy members, and the dues are fifty dollars for city and five dollars for country members, the latter being defined as those who have no fixed occupation in London and do not live within ten miles of St. Paul's. This club is purely a social one and holds no competitions, although in their report for 1886 we see among the list of expenditures a "Donation towards expenses of fly-casting tournament at Twickenham." We see by the treasurer's account that the club has a balance of $580 to its credit as it enters upon the third year of its existence.

We know of no good reason why such an institution as the Fly-Fishers' Club should not thrive in New York, but to make it a success the gentlemen proposing it must work diligently, as Mr. Marston and his confrères in London have done. Once squarely on its feet it will stand alone, but must be vigorously "boosted" at first. Perhaps a call for a meeting after the tournament might be made and the question considered at that time, when a goodly number of anglers are in town and then have the matter fully discussed.

Massachusetts Trout.—Taunton, Mass., April 2.—Yesterday, in spite of the snow, several local fishermen started out early to try their hand at trout fishing in a snow storm. Five fish were the largest string heard from and those were small. Fowl are very thick in the ponds; as the train passed Prospect Pond yesterday morning I counted thirty (in two flocks) from the window; I called them whistlers. To-night we have snow up to my knees. The horse cars stopped running in the afternoon. If it is pleasant I shall spend Fast Day at the Cape. At Falmouth we have some fine fishing. There are several fine streams running through the cranberry bogs and old fields and finally emptying into Vineyard Sound. When the herring are running some very large trout are caught. They are called "salters," being fresh run from the salt water, and make lively sport when held with a 4oz. or 5oz. rod.—Cohannet.

A Steamer on Great South Bay.—To accommodate anglers and others Mr. A. H. Angell will put a steamer on the Great South Bay of Long Island this season. It will run from Patchogue and other points on the main island to Watch Hill, Water Island and Cedar Grove. The steamer Morris Gross has been chartered for this service; she is 85ft. long, 22ft. beam, and will accommodate 200 passengers.

New York Trout Season.—Albany, March 31.—*Editor Forest and Stream:* Having received innumerable inquiries of late in regard to the open season for trout I desire to briefly summarize the law and ask as a favor to the parties desiring the information, as well as to myself, that you give publicity to the same through the columns of your valuable journal. The present Legislature has, as yet, made no change in the present trout laws. Under the present law speckled trout, brook trout, brown trout, California trout, salmon trout and landlocked salmon may be taken in the waters of this State, exclusive of the Forest Preserve, from April 1 to Sept. 1. Within the Forest Preserve (as established by Chap. 283, laws of 1885) which includes the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Saratoga, St. Lawrence, Warren, Washington, Greene, Ulster and Sullivan, the open season for the above named fish is from May 1 to Sept. 15, except that salmon trout and landlocked salmon may be taken up to Oct. 1. The transportation of trout to market from the counties constituting the Forest Preserve is prohibited unless the owner of the fish accompanies the same.—Floyd J. Hadley, Chairman Assembly Committee of Game Laws.

Trouting on Long Island.—The opening day was cold and cheerless, and Saturday brought a heavy snow storm, yet, in spite of the weather, some fair fishing was done. On Friday, the opening day, there were some fifty anglers on the Nissequogue, the largest trout stream on the north side, and some of them were rewarded by good-sized fish, the largest one taken being about two pounds. On the south side the fishing on the opening day was hardly up to the average at this season, but on Monday, the 4th, the weather was spring-like and the surface of the waters showed rising trout in abundance and the fishing was good. Several New York anglers brought home full creels on Monday, and had better sport than those who went down on Friday. As a rule the trout of Long Island are in good condition in early March and the trout fishing is practically over in June, because the fish do not rise well late in the season.

Black Bass in Maine.—According to a recent enactment black bass may now legally be caught in any of the waters of Maine which have been stocked with them for five years. There are several lakes which will be open for bass fishing under this law.

Trouble Ahead for Them.—Michigan.—It looks now as if the fish hogs and deer butchers would meet with trouble since the passage of the law authorizing the appointment of a game warden.—Central.

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

BRITISH SALMONIDÆ.

FROM a very interesting account of the Salmonidæ of Great Britain, in the Journal of the National Fishculture Association, by Dr. Francis Day, the very best authority on this family in England, we make the following extracts, omitting the more technical portions and such parts as relate to species other than trouts. We especially commend to American fishculturists a careful perusal of the opening paragraph, which relates to the varieties of trouts. The fishculturist who is not also an ichthyologist is not always clear on the subject of species, and in what respect they may differ from varieties, and this is not to be wondered at, because the defining lines are not well marked by the ichthyologists themselves, and what one of the latter may often consider to be well enough defined to have a specific rank, is by another considered to be a mere variety. The tendency at present is rather to reduce the number of species than to multiply them, and in America several nominal species which were considered valid some years ago, have been by the later authorities conceded to be only varieties. This is especially the case with a trout of Lake Superior and other lakes known as the siscowet, also with the landlocked salmon, the sea trout of New Brunswick and Canadian waters, and the three species of brook trout described by De Kay, which are now reduced to one. Dr. Day says:

To the fishculturist who especially turns his attention to rearing Salmonidæ, to the proprietor who takes an active interest in the sporting fishes which frequent his stream, and to the river conservator whose duties are connected with the preservation of salmon and trout, it is a matter of great moment to be able to be certain among these forms as to "what is a species." No greater injury has occurred to these various parties than the sub-divisions of our trout, which has been done by ascribing specific rank to varieties and local races. For this course has not been a harmless one, because it has misled riparian proprietors and others, who possibly have neither had the opportunity or, probably, inclination to study these so-called species in our museums; or were they to have done so, perhaps among the numerous specimens presented on the shelves, they might well have found themseves confused, at least, unless they had previously an intimate scientific knowledge of the finny tribe. Or supposing such persons to have accepted the statements made on authority, that all these reputed forms are distinct species; they must have found such theories, when accepted and carried into practice, to be a great cause of unnecessary outlay of money, as well as a source of annoyance—not only to themselves, but to fishculturists from whom they obtain their eggs or young fish for replenishing their waters, or augmenting the size of their local breeds. The riparian proprietor sends for—let us say—*Salmo ferox*, to improve the strain of his local race by crossing, and after a year or so he feels confident that the imported forms are only brook trout. Naturally indignant, he may come to the erroneous conclusion that the purveyor had imposed upon him, and it will not be until he understands this is merely a simple variety attaining a large size, due to certain local circumstances, that he will comprehend how his money has been thrown away. He had far better have looked to the food and condition of the water on his estate before attempting to improve the indigenous breed. If, however, food is abundant, and sufficient mouths do not exist to consume it, then the importation of larger forms, obtained by pedigree breeding, would very probably add size and sporting character to his local race, and lastly, if we really possess numerous species of trout in our fresh waters, and these species interbreed one with another, the results will be hybrids, and these generally tend toward sterility; but, if instead of being species they are merely local races, then the intercrossing will produce mongrels, which are usually prolific.

The following is a very condensed, and consequently imperfect, summary of the natural history of these fishes as observed in the British Isles. Many questions have been

entirely omitted, and some only just touched upon, in order to economize space. * * * *

(1) *Salmo.*—Maxillary long; dentition strong and complete. Scales small. Anal rays in moderate numbers (14 or less). Pyloric appendages numerous.

(2) *Thymallus.*—Maxillary short; small teeth in the jaws, vomer, and on the palatine bones. Anterior dorsal fin, many rayed. Scales of moderate size. Pyloric appendage numerous.

(3) *Coregonus.*—Maxillary short; teeth, if present, minute. Anterior dorsal fin with few rays. Scales of moderate size. Pyloric appendages numerous.

(4) *Osmerus.*—Maxillary long; dentition complete, with fang-like teeth on the vomer and tongue. Scales of medium size. Pyloric appendages few.

(5) *Argentina.*—Maxillary short; teeth absent from jaws. Anterior dorsal fin with few rays. Scales rather large. Pyloric appendages few or in moderate numbers.

(1) *Genus Salmo.*—The indigenous species belonging to this genus has been divided into (1) *Salmones*, or true salmons, wherein the body and the head of the vomer are toothed at some period of their lives, as in salmon and trout, and (2) the *Salvelini*, or chars wherein the vomerine teeth are restricted to the head of that bone.

Prior to enumerating the individuals forming this genus, a few remarks are necessary respecting the external and internal character, and likewise some of the physiological functions of these fishes. For on what I believe to be very insufficient grounds, several of our local races have been regarded as species, and when it has been pointed out that among the trout marine forms may be observed passing gradually into those of the fresh water, the answer (instead of explanation) which has been advanced has been that these progressive differences are not modifications induced by an altered condition of life, but must be the result of hybridization; a conclusion I am unable to adopt.

The number of vertebræ present in the spinal column of these fishes is not invariably identical in every individual belonging to the same species, and this inconstancy of number may be consequent upon accident or caused by disease. Sometimes one large bone fills up the space which is normally occupied by two, or the bodies of several may coalesce into one. Or even two or three small vertebræ may exist where only one is generally present. The unstable differences, therefore, in the number of these bones can scarcely be accepted as sufficient grounds on which to constitute species.

Although the form of the preopercle has also been considered to afford a good criterion by which to assist in recognizing species, such will not always be found so in practice, as it varies with age, irrespective of the development of its lower limb being more pronounced in some specimens than it is in all, or on one side of the head than it is on the other. The same general reasons militate against selecting the conformation of the opercle or subopercle as specific characters; still, the form of the hind edge of these bones often (not always) assists in discriminating between salmon and trout. In the salmon the posterior conjoined edges of these two bones have a rounded outline continued to the upper edge of the gill cover; the longest diameter drawn in a line from the most projecting portion of these bones to the snout passes through the eye, whereas, in a trout, it will pass below it.

As to the form of the caudal, or tail fin, which has been said never to be rounded at its posterior extremity in some forms of trout, this conclusion has been drawn from insufficient investigation, as it is always rounded in old examples, although such occurs more rapidly in some localities than it does in others. Fin rays, if removed, can be reproduced, provided they are not extracted, quite to their bases, while scales lost by injuries can be replaced. Colors are varied; marine forms, or salmon in the highest perfection, are silvery, with or without black spots or stars; brought up in fresh waters, without going to the sea, these spots increase, while in all forms in the young stage, finger marks or par-bands are seen on the sides, usually more numerous in the anadromous than in the more strictly non-migratory fresh water forms. But these finger marks are not restricted to the young of the Salmonidæ, being likewise seen in some of the horse mackerels (*Caranx*), flying fishes (*Exocœtus*), gar fishes (*Belone*), etc.

The teeth in all these forms of salmon and trout (not char)* at an early age are present in a double row along the body of the vomer; there is likewise a single row across the hind edge of the head of that bone. But as the fish becomes older, first the tooth-bearing ridge narrows, so that the teeth have to adapt themselves to a single row, and lastly fall out, commencing from behind in all, while in every form they are deciduous. The teeth in the jaws of fresh-water trout are comparatively stronger than such as are present in marine forms. Those on the tongue are in two rows, from five to six on either side of that organ. They are the largest in the mouth, and curved backward to prevent the escape of prey after it has once been seized; they also are deciduous.

* * * * *

The hybridization of these fishes has been largely carried on by Sir James Maitland at Howietown, giving rise to most interesting results. Salmon have been crossed with trout, and American char with trout or with British char, while the offspring have been more or less fertile. Also, should an anadromous species be crossed by a non-migratory form, the young do not lose their tendency to migrate seaward when the breeding season is approaching. So far as Howietown experiments have gone, hybrids, if crossed with one of the pure species, do not take on the colors of the original parents. * * * * *

The following British forms have, for the reasons given, been described by different authors as distinct species, and which, for convenience sake, are here located in four classes, all of which run into one another:

A. Anadromous sea trout, colors in all, silvery with black spots.

a. Trutta salmonata, the scurf or bull-trout, Willoughby; *S. trutta* (Linn.), Turton; salmon trout, Richardson. It has also erroneously been termed *S. criox*, Gmel. Linn. A northern form, but not absent from the south. It has been said to possess from 49 to 63 cæcal appendages.

b. Whiting, whiting, herling, phinoc, sprod, white salmon, of Pennant, or *S. albus*, *S. phinoc* of Turton, said to be the grilse stage of *S. trutta* by most ichthyologists; *S. brachypoma*, Günther. A northern form, with a short head and short preopercular lower limb; cæcal appendages, 40 to 61.

c. Sewin, blue poll, truff, peal, whitefish, gray salmon, or *S. griseus*, Willoughby; *S. cambricus*, Donovan; *S. criox* (Gmel. Linn), Turton; a nearly southern race, although not absent from the north. Lower limb of preoperculum generally well developed. Cæcal appendages, 39 to 41.

B. Loch trout, possibly a landlocked anadromous form; colors, silvery during the smolt age, subsequently golden and spotted.

d. Lochleven trout, *S. levenensis*, Walker; or *S. cæcifer*, Parnell. Normally of a silver color with dark fins between its fourth and fifth seasons, subsequently nearly resembling brook trout, into which form it may degenerate. A somewhat delicately shaped but rapidly growing race, with rather weak maxillæ. (The statements that the maxillary bone never reaches to behind the eye, that there is no knob at the end of the lower jaw in adult males, and that the tail fin is never rounded, are merely errors of description, and not in accordance with what exists in nature.) Cæcal appendages, 49 to 90.

C. Estuary trout; colors more or less golden and generally densely spotted.

d. Orkney salmon, of Lowe; *S. orcadensis*, Günther. Cæcal appendages, 50.

f. Salmo estuarius, Knox; or *S. gallivensis*, Günther. Cæcal appendages, 44.

D. Lake, river and brook trout; colors more purplish golden than in estuary forms; red spots well marked and black spots intense.

g. Brook trout, *Salmo fario*, Linn.; *Trutta fluviatilis*, Willoughby; *S. ausonii* and *S. gaimardi*, Cuv. and Val. Dorsal, ventral and anal fins, with a black, white-edged front surface, more developed in southern races, but often very distinct in northern ones. Cæcal appendages, 33 to 47.

h. Great lake trout, *Salmo ferox*, Jardine and Selby. Large and dark examples. *S. nigripinnis*, Günther. Cæcal appendages, 33 to 49.

i. Cornwall trout. *Salmo cornubiensis*, Artedi.

j. The gillaroo of various authors. *Salmo stomachicus*, Günther. Middle coat of stomach thickened. Cæcal appendages, 44.

In all the foregoing forms the length of the head is comparatively larger in males than in females, and in coarse more so than in well bred varieties. Without detailing all the various reasons which have been given why these races have been considered species, it will perhaps be more satisfactory to trace out the main causes that have led to such subdivisions, premising that the varying number of the vertebræ, the difference in the form of the preopercle, the form of the caudal fin, the vomerine teeth and the inconstant number of pyloric cæca have already been alluded to.

If we commence with colors, we find that the adult salmon and sea trout, when in their best condition, have a beautiful silver sheen, which is more or less rapidly lost when absent from the sea. This may in fact be taken as the normal color of the *Salmones* when in their highest condition. Should salmon be reared in fresh water and the smolts debarred from going to sea, the upper two-thirds of the body and the dorsal fin become densely covered with black spots, while sometimes a white edging shows itself to the front margin of the dorsal and anal fins. Thus a fresh-water residence increases the amount of color and the silvery sheen is less highly developed. Sea trout, at the breeding time, have orange on the upper and lower edges of the tail fin and the margin of the adipose dorsal, similar to what is usually present in non-migratory fresh-water forms, while a purplish edging shows itself to many of the black spots on the body.

The next form I will advert to is the Lochleven trout, wherein there is normally a smolt stage in which the fish, subsequent to its parr condition, and for the first three or four seasons of its life, is somewhat silvery, but without any orange edging to the adipose dorsal fin, usually present in all young trout, and all the spots are black. If the eggs, however, are sent to other and distant localities, as Guildford, or even to Gloucestershire, the young do not assume the colors seen in Lochleven, but more or less take on that of the indigenous brook trout of the locality where they are hatched. But this is not a deteriorating race, because when, owing to certain circumstances which it is unnecessary to detail, one of these fishes in Gloucestershire obtained a large amount of food, consequent on the removal of others from the pond, it grew more rapidly than its former fellows, and even had the Lochleven colors denied to the rest. Also, deteriorated examples assume the brook trout livery, apparently owing to want of sufficient food. Lastly, a Lochleven trout having been crossed at Howietown by a salmon parr, the offspring possessed the orange-tipped adipose dorsal fin which is seen in the young of the sea and brook trout; and may be asked from whence had such been obtained, unless the Lochleven possessed the blood of one of these races? In colors, then, we have a distinct chain connecting the sea trout with the Lochleven, and so on into the brook forms. Next, as to the dentition; in Lochlevens, similarly to the marine races, we find it usual for the vomerine teeth in matured specimens to be more or less in a single row, but having examined a number of these fish at Howietown I find that in some cases a portion of a double row still exists, similar to undoubted burn trout which I took in Loch Ame and elsewhere. Every variation in the position of these teeth is to be seen in examples of different ages up to old trout, wherein only one or two or even less remain on the head of the vomer.

As to the *Salmo ferox*, very fine examples up to about 20lbs. in weight have been received from Australasia, raised from the eggs of the brook trout, taken in Hampshire and Buckinghamshire, so it cannot be a distinct species.

Why the gillaroo should be deemed a species, and specimens of other forms of trout not so—in which the coats of the stomach are similarly indurated—one fails to comprehend. Anyhow, if these forms are removed to other localities where the conditions are altered, possibly because they have not so many water snails or other shells to live upon, they lose this induration of the stomach.

Probably as complete a series as can be wished for of trout passing from the sewin or sea and estuary form to the brook trout, are those in the British Museum, where they are believed to show hybridity between these two forms in an unbroken series. At the present time eggs of the sea trout are incubating at Howietown, and ere long it will be conclusively proved if this fish is not a very plastic form, taking on different colors, and varying as to its dentition and proportions, consequent on whether it leads a marine or fresh water life. In some lakes, as Loch Crasspuil, in Sutherlandshire, we find a silvery race of trout, and silvery forms which are generally sterile, most likely merely for the season, are frequently obtained in large pieces of fresh water.

In the British Isles the breeding time of the trout is subject to variation, but mainly occurs from October to February. The eggs and modes of their deposition are very similar to those of the salmon.

Irrespective of the local races, misnamed species, above alluded to, there are many other varieties of color among these fishes, for which the reader must be referred to treatises on the subject. Two forms of trout introduced from the continent of America, and which are now being acclimatized in Great Britain, remain to be recorded.*

SUB-GENUS SALVELINI, OR CHARS.

These species are subgenerically separated from the *Salmones*, or restricted sub-genus of *Salmo*, owing to their vomerine teeth being confined to the head of that bone, and which teeth are persistent through life. The British species, *Salmo alpinus*, whose varieties have been separated into species, freely interbreeds with the American char, *S. fontinalis*, and a beautiful fertile race of these fishes exists at Howietown. Char require cool water, and prefer that where the depth is considerable. They suffer very much from changes of temperature.

The char, *Salmo alpinus*, Linn. B, X—XI; D, 12—14; P, 12—14; V, 9—10; A, 11—13; C, 19—21; L l, 125—145; Vert., 59—63; Cæc. pyl., 28—62. The form and proportions of the body and fins of this fish vary as much as in the trout (in accordance with local surroundings and sexual differences), the size of the teeth, the colors of the body, also the number of cæcal appendages and of those of the vertebræ, have all been considered as reasons for assuming specific differences—reasons, however, that are rejected by the majority of ichthyologists of the present day as well as by fishculturists. These so-called species will now be given as has been done with the races of trout. But there is no need of subdividing them into classes, as was necessary with the varieties or breeds of *S. trutta*, but it is very necessary to remember Widegrem's observation that char may be divided into two races; large forms being found in large lakes, and smaller ones in pieces of water of less size.

a. Gilt, or gelt char, *Umbla minor* (Gesner), Willoughby; *S. salvelinus* (Linn.), Yarrell; Alpine char, Couch.

b. Torgoch, Willoughby, *Salmo salvelinus* (Linn.) Donovan, *S. umbla*, Jenyns; *S. cambricus* and *S. perisii*, Günther, from Wales. Vert. 61; cæc. pyl. 36.

c. Char of Windermere, Willoughby; case char, Pennant; *Salmo alpinus* (Linn.) Donovan; *S. umbla*, Jenyns; *S. willoughbii*, Günther, Vert. 59-62; cæc. pyl. 28-44.

d. Salmo killinensis, Günther, from Invernesshire. Vert. 52; cæc. pyl. 44-52.

e. Salmo grayii, Günther, from Lough Melvin; Vert. 60; cæc. pyl. 37.

f. Salmo colii, Günther, from Lough Eske and Lough Dan. Vert. 63; cæc. pylori, 12.

In all the abdomen, more especially in the males, becomes of an orange color during the breeding season, which occurs at about the same time as the trout; the eggs of the two species are very similar, but those of the char are much the smaller.

American char (*Salmo fontinalis*) Mitchell, B, X,—XI; D, 12—13; P, 12—13; V, 8—9; A, 10—11; C, 19; L l, 122—140; cæc. pyl., 34; Vert., 59—62. This fish, which has been introduced from the United States and flourishes in some waters, has not succeeded in others. Its home is distributed "between latitudes 32½deg. and 55deg. in the lakes and streams of the Atlantic watershed, near the sources of a few rivers flowing into the Mississippi and the Gulf of Mexico and in some of the affluents of Hudson's Bay. Its range is limited by the western foothills of the Alleghanies and nowhere extends more than 300 miles from the coast, except about the Great Lakes, in the northern tributaries of which trout abound. At the south they inhabit the headwaters of the Chattahoochee, in the southern spur of the Georgia Alleghanies and the tributaries of the Catawba in North Carolina. They also occur in the great islands of the Gulf of St. Lawrence" (Brown Goode). These fish are observed in some localities to migrate to the sea. One of 9½lbs. in weight was captured in a pond in Cornwall in April, 1886. It had been placed there nine years previously.*

* It must be remembered that the *Salmo fontinalis* is a char, and that the brown trout and rainbow trout are of the "true" trouts.—ED. F. AND S.

* *Salmo irideus*, Gibbons, the rainbow trout, and having many synonyms, was introduced by Sir James Maitland at Howietown, April 30, 1885, and there the fish is thriving. They have likewise been obtained by the Fishculture Association. It is a very pretty species, with an iridescent carmine band along the sides, and is found throughout California, certainly as far south as San Luis Rey River. Professor Brown-Goode has seen a few from salt water weighing from 3lbs. to 5lbs. each, and 6lbs. is stated to be the weight to which it attains. "For a trout it is a fish of little 'gameness' or activity, but has been rather extensively introduced into the waters of the eastern United States." The formula of its fins' rays much resembles our trout, but its scales are smaller, there being about 140 rows along the lateral line. I must likewise allude to the black spotted trout, *Salmo purpuratus*, also with an extensive synonymy, as some were reared from the eggs brought over by Mr. Wilmot to the Fisheries Exhibition of 1883, and some of them were introduced into the Thames in 1886. They have been erroneously recorded as "landlocked salmon."

* The American lake trout of North America, *Salmo namaycush*, Pennant, is another form of char which is being introduced by means of its eggs from America. Dr. Günther still terms it a trout, locating it under the restricted sub-genus, *Salmones*, although it has been abundantly proved to be a char, and so similar to *S. fontinalis*, except in size, that Brown-Goode observed, "its nearest relative is the brook trout of the Eastern States, *S. fontinalis*," and from which he subsequently suggests it may have been developed.

THE GRAMPUS AND HER WORK.—The United States Fish Commission schooner Grampus has completed her winter's work of collecting cod eggs for the hatchery at Wood's Holl, and has sailed on a cruise of scientific research and observation in the waters between Cape Hatteras and Cape Cod. The chief object of this cruise is to study the migrations and habits of the mackerel. Careful and extensive notes on the temperature, winds, weather and presence of mackerel food will be made, in order that data may be obtained whereby we can know how the movements of mackerel are influenced by these conditions. The appearance of mackerel at the surface, the period when they begin to spawn, the rate at which they move northward, and their abundance, will be studied; while, by using gillnets and toll-bait, an attempt will be made to define the northern and eastern limits of their migration in the early part of the season. The appearance off the coast and the migrations of menhaden, bluefish and other plagic species will be noted also, as opportunity offers; and it is hoped that the knowledge gained may be valuable in settling the many vexed questions concerning these species which have never yet reached a satisfactory conclusion. The Grampus will be under the command of Dr. D. Edwin Collins, brother of Capt. J. W. Collins, of the Fish Commission, who is at Washington this spring.

SHAD FOR MAINE.—In response to a request of Fish Commissioner Stilwell, Prof. Baird will send 1,000,000 shad fry to the Kennebec River, and also promises some large carp for the fountain at the Capitol next summer. Application has also been made for 1,000,000 shad fry for the Penobscot River at Bangor.

FIXTURES.

DOG SHOWS.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4827.**

THE PROVIDENCE DOG SHOW.

THE inaugural dog show of the Rhode Island Kennel Club was held at Providence, R. I., last week. The show was a decided success so far as the quality of the dogs was concerned, quite a number of really first class animals being shown for the first time in this country. Such animals as the mastiffs Minting and Lady Dorothy, the greyhounds Balkis and Lancashire Witch, the beagle Fitzhugh Lee, the fox-terrier Lucifer in Præsenti, and the bulldog Tom Ball are good enough to make a reputation for any show, to say nothing of the many other well-known excellent specimens present. The management of the show was first-class. The building in which it was held is well adapted for the purpose except that it is not well lighted. The judging began in good season on Tuesday and was finished the same day with the exception of some of the Irish setter classes and the specials. The judging of the special for the best dog owned by a lady caused quite a ripple of excitement as there were several competitors, and a large crowd gathered round the judging ring and the proceedings were watched with breathless interest. The judge, Mr. Mason, proved equal to the occasion and covered himself with glory. With stately grace and a wise look he passed from one fair contestant to another and completely won their hearts with timely remarks complimentary to their pets, and learned essays showing up their best points; then, with consummate diplomatic wit, he cut the Gordian knot by handing the blue ribbon to the only dog in the ring handled by a man. As will be seen by reading our comments on the dogs the judging in nearly all of the classes was very satisfactory. The weather during the show was raw and cold, and on the last day the snow fell unceasingly. This cut down the attendance and we fear that the club did not receive enough to meet the expenses, but the club has come to stay and its members are not easily disheartened and will try it again next year. The list of judges is as follows: English setters and pointers, Dr. Wm. Jarvis, Claremont, N. H. Irish and black and tan setters, Dr. H. C. Glover, New York. Collies, beagles, foxhounds and dachshunde, Dr. J. W. Downey, New Market, Md. All other classes, Mr. Chas. H. Mason, New York.

MASTIFFS—(MR. MASON).

Ilford Caution was alone in the champion class. In the open dog class Mr. Moore showed his recent importation, Minting, the best one we have seen. In Mr. Wynn's criticism of Minting, published in FOREST AND STREAM two weeks ago, he says, "his crooked forelegs will always be against him." Now we have long had unbounded confidence in Mr. Wynn as an authority on mastiffs, and the greatest respect for his opinion upon any point regarding them, and we took it for granted that Minting's forelegs were far from perfect, but we were agreeably disappointed upon examining him to find him fairly good in forelegs, not quite straight it is true, but not nearly so bad as we had supposed. As Minting is not yet two years old, and was considerably younger when Mr. Wynn wrote the above, we presume that he has improved in this respect. This slight defect and a trifle of slackness behind the shoulders is about all the fault that we can find with him. He has a wonderful head and is of good size; we shall look to see him win other prizes. Wacouta Nap, first at Buffalo and second at Newark, was second. Leo and Prince, both hc., are too faulty in head to win in good company. Mr. Moore also won in the bitch class with Lady Dorothy, eleven months old. We only caught a glimpse of her, as she was taken home before we had a chance to examine her; she is a grand looking animal. Hilda V. came second, with Wacouta Rose vhc. Belle, hc., is of good size, but is too long in head and light in bone. There were no puppies entered.

ST. BERNARDS—(MR. MASON).

Otho was the only entry in the champion rough-coated class. In the open dog class first went to Eiger, the winner at Buffalo. Hadjar, winner of second, is a nicely-made dog of small size, with a fair head and a nice coat. He has a bad tail. Prince, vhc., was shown too fat; his expression is not good, and he is too short in back and does not move well behind. We liked Hector II., hc., better for the three letters; he has a fair body and is of fair size; he is long in face and snipy. Beda, the winner at Newark, won in the bitch class, with the first and second winners at Buffalo as second and vhc. Recluse, hc., is faulty in head. The only puppy entered was absent. There were no entries in the champion smooth-coated classes. Hector had it all his own way in the open dog class, with Montrose, the winner in the puppy class at Buffalo, second. Rigi and Lodi were vhc., with Wotan hc. All are well-known. Lodi was not in good condition. Only two bitches were shown. Queen of Sheba, placed first, was the winner at Buffalo. Kader, second, is bad at both ends. No puppies were entered. The only Newfoundland entered was absent.

GREYHOUNDS—(MR. MASON).

Memnon had a walk over in the champion class; he shows his age, although he was looking fairly well. In the open dog class Balkis was placed first; he is a large dog, not so taking at first glance as after an examination, when his many excellent points show him to be a greyhound and a very good one with few faults. Prince, winner of second, is very good in front and was well shown; he is light in loin and quarter. Royce, vhc., is a big dog, not quite clear in head and with too much lumber; he has good loin and quarter. Lancashire Witch, winner in the bitch class, is a first-class specimen; she has a very good head, capital loin, quarters, legs and feet; she has a racing appearance with no lumber. She is not of a taking color and her neck is not properly arched and she is not quite so well sprung in ribs as we like; she is full of quality and it will take a wonder to beat her.

DEERHOUNDS—(MR. MASON).

All the deerhounds are well known with the exception of Dr. Clyde, winner of second. He is of good size and color and has a fair amount of bone; he is a trifle coarse in head, not quite deep enough in chest and is not good in quarters; he was not in good condition, being thin in flesh and soft in coat.

ULMERS—(MR. MASON).

There were three entries in this class, all good ones. The same dogs were at Buffalo where Cæsar was placed first with Don Cæsar and Juno equal second. Here the same judge placed the two dogs equal first and gave Juno only vhc.

POINTERS—(DR. JARVIS).

Nick of Naso was alone in the champion class for large dogs. There were no entries in the bitch class. In the open dog class first went to Captain Fred, looking fairly well. William Tell, vhc., also looking well, we thought better for the place, while Jimmie, placed second, was worth about vhc. Dick, hc., has a fair head and a deep chest, but it is too wide. He has a short neck and is a bit straight behind. In the bitch class there was not much to choose between Rosaline, first, and Nell, placed second. Neither are first class. Nell is well known. Rosaline is coarse in head and tail, round in body and wide in front. There were no entries in the champion small classes. The open dog class was a bad lot. The winner, Don Quixote, is flat in skull, short in back, straight behind and out at elbows. He has not improved since last year. Coronet, winner of second, was not much better. His muzzle is too short, as is his neck. He is much too wide in front and is badly out at elbows. He is good in loin, quarters, legs and feet. Colonel Pete, vhc., has a fair head and good legs. He is slack behind the shoulders, a trifle shallow, and has flat feet. Vanderbilt, c., was about as good as any in the class. He is a fair dog, with rather a weak head and badly-carried ears. He has good legs and fair body. In the bitch class first went to Queen Bess, described in our report of the Newark show. Daisy A., placed second, is quite a fair-looking bitch, not very good in head and loin and a trifle light in bone. She is fair in body and has good legs and feet. Cloves, hc., was entitled to another letter. She has a fair head disfigured with bad eyes, good body and shoulders, with capital legs and feet. In the dog puppy class Glen Graphic, the winner, is a promising puppy. His head is of fair shape, he is a trifle overshot and his ears are a bit high. He is rather shallow and leggy, but will probably improve in these respects with age. Pommery Sec, placed second, appears to enjoy the shows and has taken on flesh, thereby improving his appearance. Belle of Maine, winner in the bitch class, is litter sister to Glen Graphic. She is also promising. Her ears are a trifle high. She has a coarse tail and is not quite straight in her forelegs. Juno, winner of second, is a pretty bitch, rather weak in head and light in eyes. She has good loins and quarters.

ENGLISH SETTERS—(DR. JARVIS).

Foreman again won in the champion dog class over Plantagenet. Rockingham was absent. There were no entries in the bitch class. In the open dog class Royal Albert was properly placed at the head of affairs with his brother Royal Prince II. next. This reverses the decision at Newark. Rollo, fourth at Newark, received the reserve card, with Pride of Dixie, third at Newark, next. This also reverses the positions of these two at Newark. Mack B. II., hc., is a big dog with a fair head and good legs and feet. He is not good in shoulders, back and quarters, and is not flat enough in coat. Premier, also hc., is about as good as any in the class except the first winner. He is plain in head, lacking in quality, but is well made and quite a fair dog. Draco, unnoticed, is also a fair dog and worth the three letters, although not in good coat. Fairy King, looking fairly well, was worth a card. In the bitch class Cora of Wetheral scored her third win and is now in the champion class. Daisy Foreman, fourth at Newark, was placed second. Maud, reserve, we did not like; she has a very prettily marked head, good forelegs and feet. She is not good in shoulders, is flat in loin and straight behind. Fortuna, vhc., is the better bitch. She has a fair head, good shoulders, chest, loin and quarters. She does not stand quite straight in front and is a bit open in feet. The winning dog and bitch puppies are quite promising; the bitch is the better in head, neck and quarters, both have good legs and feet.

BLACK AND TAN SETTERS—(DR. GLOVER).

Nora was alone in the champion class. In the open dog class the winners at Boston and New York last year were respectively first and second. The former, Tom II., was the better in head and tan and carriage of tail. King Philip, reserve, is fairly well formed, with a fair head; he is light in muzzle and has a bad coat. Slocum, vhc., deserved his card. Jack, hc., was second at Boston last year; he has gone over in forelegs. The bitch class was poor, and the judge could not find one good enough for first, and second was given to Rose, third at Newark. Flirt, vhc., is light in tan and wrong in forelegs. Jessie, hc., was about the best in the class, but she was in bad coat. The two puppies are rather promising.

IRISH SETTERS—(DR. GLOVER).

Dr. Glover handled the Irish setters very well indeed. Nearly all that received notice are well known. Chief again beat Blarney in the champion dog class. There were no entries in the bitch class. Tim had an easy win over Bruce, second. Tim also won the special for the best Irish setter in the show, beating Chief. The latter has the best of it in chest and coat and has a trifle the most bone, while Tim has a more typical and better head and is much better behind and in feet. Dash, reserve, was shown too fat. Milo, vhc., is a very fair dog with a heavy head; he has plenty of bone and good legs and feet. Yoube was first in the bitch class, with Daphne second; the latter was vhc. at Boston last year. Her plain head will always keep her back in good company. Ready, reserve, might have exchanged places with Jessie, vhc., notwithstanding her lack of condition. Queen Mab, hc., is a fairly well made bitch, too light in color. The puppies were all of one litter and much too young for the bench.

SPANIELS—(MR. MASON).

Only one Irish water spaniel was shown, a moderate specimen short of coat. In the champion class for field spaniels Compton Bandit was alone. In the open class, Miss Newton Obo was placed over Rob. She is not good in head, but better than the dog, and is shorter on the leg and has a better coat. In the champion class for cocker dogs, Compton Brahmin was disqualified for overweight; Mr. Rendle protested the decision, but his protest was not sustained. He then took exception to the scales used by the judge, but the committee found them to be correct. In the bitch class Shina had a walkover. In the open dog class for blacks Brant won over Adonis; the latter we failed to find in his stall. In the bitch class first went to Miss Obo II., with Juno W. second. Both were at Newark. Cloe W., vhc., is rather a fair bitch with a poor head. In the open dog class other than black, Zeppo, not a first-class specimen, was the only one shown. In the bitch class first was awarded to Dottie Stubbs, a liver and white, weak in head and rather leggy. The only other entry was overweight. In the puppy class first was withheld and second given to a very moderate specimen. There were four Clumbers shown. Drake and Johnny were placed first and second, reversing the decision at Newark. Romp and Jockey, both hc., are faulty in head and short in body and too heavily marked.

COLLIES—(DR. DOWNEY).

After looking over the collies at Newark the collection here did not impress us very favorably, but an examination showed a fairly good class. Royboy again won in the champion dog and Lady of the Lake in the bitch class. In the open dog class Glengarry was first and Strephon second. Both were vhc. at Newark. Karo, third in the puppy class at Newark, was vhc. Dublin Scot was absent. In the bitch class, Lady Ellis, second at Newark, was placed first over Luella, the Buffalo winner. It is a close thing between these two. Lady is the better in ear and Luella beats her behind and in legs. Clifton Maid and Daisy Dean both vhc., were also at Newark. Only two puppies were shown, a dog and a bitch, both promising.

BEAGLES—(DR. DOWNEY).

All of the beagles, with two exceptions, were owned by Mr. Wakefield. Little Duke, grown very throaty, was placed over Bush, looking better than we have seen him for some time. In the open dog class first went to Fitzhugh Lee, a capital dog with grand chest, quarters, legs and feet, he is light in muzze, about his only fault. Second went to Racer, Jr., looking well. My Boy, vhc., is well made with a nice body but too short in head. Leader, hc., was looking fairly well. In the bitch class Twinkle, placed first, was in good form. Silver, second, has grown throaty and shows age. In the under 12in. class Belle, awarded first, is a fair-bodied little bitch with good ears and a fair coat. She is apple-headed and out at elbows. The only other entry is not a beagle. Spot, just a fair dog with a poor coat, was the only puppy shown.

FOXHOUNDS—(DR. DOWNY).

Only three were shown in this class. Zip, winner of first, is a fair dog with a good head. Wade Hampton, second, is of harrier type, as is Zeb Vance. There were no basset hounds entered and but one dachshund, Judy, well known.

FOX-TERRIERS—(MR. MASON).

The quality of the fox-terriers was very good indeed. Belgrave Primrose had a walkover in the champion dog class. In the bitch class Richmond Olive won over Safety. The open dog class brought out a red hot one in the Blemton Kennels' Lucifer. He is a trifle light in eye and is a bit off in muzzle, but otherwise a terrier. The judge evidently thought him a good one as he gave him the special over his old favorite Richmond Olive. Raby Mixer made a good second; with Raby Jack vhc. In the bitch class first went to Gretchen with a bad round head, but otherwise fair. Richmond Dazzle and Marguerite were given equal second. Dazzle is a very nice little bitch with lots of character and much better than either of the others. She was not in good condition and had a blotch on her neck; this probably put her back. Marguerite was the next best in the class, but her jaw was swelled, evidently from a fight, and this undoubtedly settled her hash. There was one entry in the class for wire-hairs. Bristles, third at Newark. First in dog puppies went to Mephisto, the winner at Buffalo and second to Shameless Mixture, winner of third at Newark. The winners in the bitch class also won in the aged class.

BULL-TERRIERS—(MR. MASON).

Count and Victoria had no competition in the champion classes. In the open dog class Jubilee, a recent importation, won over Young Count, winner of second at Newark. The winner is not first-class in head, but otherwise good. He was entered in the class under 25lbs., but as his owner had not seen him a mistake was made in his weight, and he was transferred to the heavy class. Dr. Cryer, in behalf of Mr. Dole, protested the award upon the ground that he was not entered in time, but the protest was not sustained, as the entry was properly made. In the bitch class first went to Maggie May, and second to Queen Bess, both winners at Newark. In the dog class under 25lbs., Silver, the winner at Newark, was alone. The bitch class was a poor one; Nanon, the winner, was the best. Her head is bad and she had just had her dew claws cut, and did not move well behind in consequence. Little Rhody, second, was in good condition, but she is very short in head and full in eye. The winning puppies were all winners in the open classes.

BLACK AND TAN TERRIERS—(MR. MASON).

Beppo, winner of second at Buffalo, was alone in this class, the only other entry being disqualified for overweight.

IRISH AND ROUGH-HAIRED AND OTHER TERRIERS—(MR. MASON).

There were only two entries in this class; Greymount, winner of second at Newark, was placed over Nancy, just a fair bitch shown much too fat; she is too long in body and slack in back. No Dandies or Bedlington's were entered. Countess, winner of second at Newark, was the only Skye shown, Lady Kate being absent. The winning Yorkshire dog was the best of a poor lot; he is not up to the mark in color and was short of coat. Charlie, winner of second, is short of coat and light in color. The prizes in the bitch class were withheld. A couple of just fair white English terriers were shown, the winner has a fair head, the other is too wide in skull. There were no entries in the class for toys.

BULLDOGS—(MR. MASON).

Robinson Crusoe and Britomartis had each a walkover in their respective champion classes. The open dog class introduced to us the celebrated Tom Ball, recently imported, well known in England for his owner's challenge to Rustic King. He is a grand dog with a capital head that is disfigured with bad ears, he appears to be a trifle tied in shoulders and his hocks are not quite near enough together. He is a large dog and a very good one. The judge did not think him quite good enough to beat Britomartis for the special prize. Second went to Hillside and vhc. to King Cole, Jr., a very good looking dog that we did not examine closely. Josephine was alone in the bitch class.

PUGS—(MR. MASON).

All of the winning pugs were well known. The best puppy is just a fair one.

KING CHARLES SPANIELS—(MR. MASON).

Three King Charles spaniels were shown; all of them have been frequently described. There were also three in the Blenheim class. Exter Earl, the winner, is better in skull, ears and markings than the others.

ITALIAN GREYHOUNDS—(MR. MASON).

Minnie, the winner at Hartford last year, was the only entry in this class. She is too large, but was looking better than when we saw her last.

POODLES—(MR. MASON).

Only one poodle was shown; a moderate specimen.

MISCELLANEOUS—(MR. MASON).

Sir Lucifer, looking well, was alone in this class.

Following are the additional awards:

In champion pointers over 55lbs. C. J. Peshall's Nick of Naso won. In open English setter dogs Blackstone Kennels' Royal Albert was first, and Royal Prince II. was second.

IRISH SETTERS.—OPEN—*Dogs:* 1st, Max Wenzel's Tim; 2d, I. H. Roberts's Bruce. Reserve, T. Wilson's Dash. Very high com., E. Aldrich's Milo. High com., J. Grosvenor's Banker, J. M. Jacock's Blarney. *Bitches:* 1st and reserve, Max Wenzel's Yoube and Ready; 2d, J. H. Ide's Daphne. Very high com., I. H. Roberts's Jessie. High com., C. E. Mathews's Queen Mab. Com., C. A. Van Wie's Juniata. PUPPIES—*Dogs:* 1st and 2d, G. F. Pinkham's Sandstone and Slickstone. *Bitches:* G. F. Pinkham's Dorcas's Baby and Flora's Pet.

In bull-terrier puppies H. D. and J. R. Steers's Queen Bess was 2d, and H. W. Lacy's Nanon was very high com. In champion bulldogs J. E. Thayer's Robinson Crusoe won.

SPECIAL PRIZES.

Best kennel of mastiffs, E. H. Moore; rough-coated St. Bernards, Hospice Kennels; deerhounds, J. E. Thayer; beagles, A. H. Wakefield; English setters, Locust Grove Kennels; pointers, Clifton Kennels; Irish setters, Max Wenzel; spaniels, J. P. Willey; fox-terriers, Hillside Kennels; pugs, Chequasset Kennels; collies, Hempstead Farm Co.; bull-terriers, F. F. Dole; smooth-coated St. Bernards, Hospice Kennels. Best cocker spaniel, J. P. Willey's Miss Obo II.; smooth-coated St. Bernard, Hospice Kennels' Hector; bulldog, J. E. Thayer's Britomartis; fox-terrier, Blemton Kennels' Lucifer; pug, City View Kennels' Bradford Ruby; collie, Hempstead Farm Co.'s Lady Ellis; pointer, Naso Kennels' Nick of Naso; beagle dog in open class, A. H. Wakefield's Fitzhugh Lee; bitch, A. H. Wakefield's Twinkle; greyhound, H. W. Huntington's Lancashire Witch; beagle, A. H. Wakefield's Fitzhugh Lee; black and tan dog in open class, F. M. Harris's Tom II.; bitch, W. E. Rothermel's Rose; dog puppy, S. O. Meader's King Philip; English setter puppy, S. Scranton's Tassa; Irish setter, Max Wenzel's Tim; field or cocker spaniel, J. P. Willey's Miss Obo II.; bull-terrier, F. F. Dole's Maggie May; Great Dane, divided, Osceola Kennels' Don Cæsar and Wolverine Kennel Club's Cæsar; English setter stud dog with two of his get, Blackstone Kennels' Foreman with Daisy Foreman and Fortuna. Best get of Foreman, G. W. Neil's Daisy Foreman. Best dog owned by a lady, Miss Ida F. Warren's Doctor Clyde.

A DOG SNATCHER GETS HIS DESERTS.—Baltimore, Md., March 30.—*Editor Forest and Stream:* I have noticed of late several complaints of the dog-fiend, therefore send you this to show how we deal with dog-thieves in the Monumental City. Wm. H. Marshall, a dog catcher, was convicted a couple of days ago in the Criminal Court of the larceny of a dog valued at $200, from J. H. Cottman. Marshall was sent to jail for three months. His offense was this: Mr. Cottman's little girl started to take the dog out into the alley in the rear of the house; when she opened the gate, holding the dog by the collar, she saw dog catcher Marshall, and in her confusion let the dog go. The dog playfully bounded down the alley and Marshall caught him and, and putting him in his wagon, drove off to the pound. Baltimore may be made a way station by the B. & O. deal, but for sending dog thieves to its city boarding-house it takes the lead.—A DOG OWNER.

THE BOSTON DOG SHOW.

[Special to Forest and Stream.]

BOSTON, April 5.—The dog show now being held at Boston is the best ever held outside of New York. A large number of first class animals are on exhibition. The judging has progressed fairly well. The showing of pointers is very good indeed. The judging for the special was watched with much interest. The attendance is very good; there was rain in the morning, but cleared in the afternoon. The judging to-day resulted in placing the following

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* E. H. Moore's Ilford Caution. *Bitch:* No entries.—OPEN—*Dogs:* 1st and 2d, E. H. Moore's Minting and Orion; 3d, F. D. Pierce's Monarch. Very high com., W. B. Milner's Lord Raglan. High com., Wacouta Kennels' Wacouta Nap. Com., F. R. Crowninshield's Boss. *Bitches:* 1st, J. L. Wincell's Lady Gladys; 2d, 3d and very high com., E. H. Jenning's Dot. High com. and com., Forest City Kennels' Dianah and Princess.

THE BENCH SHOWS.

HARTFORD.

The premium list is out. The prizes are in most classes champion cups, with $10 and $5 for open classes, puppies getting 60 and 40 per cent. of entrance. The kennel prize for pugs will be $15. In addition to classes in the list there will be classes for Italian greyhounds and Chesapeake Bay dogs.

PHILADELPHIA.

The judges appointed for the Philadelphia Kennel Club's bench show, so far as known, are:

Thos. H. Terry, collies.
Percy C. Ohl, English setters.
S. D. Bergen, Gordon setters.
R. H. Barlow, deerhounds, greyhounds, bulldogs, pugs, and all terrier classes except fox-terriers.
W. H. Ashburner, beagles.
J. R. Hofficker, foxhounds.
W. Montgomery, St. Bernards and Newfoundlands.
E. S. Porter, spaniels. W. H. CHILD, Sec'y.

NEW YORK.

NEW YORK, April 4, 1887.—In addition to the special prizes already announced the American Spaniel Club offers $10 cash for the best Clumber spaniel. A member of the A. K. C. offers $25 cash for the best kennel of St. Bernards, rough or smooth-coated, to consist of not less than four. The usual arrangements have been made with all express and railway companies, with the exception of the Fall River Line, whose manager, in reply to our circular letter, wittily says he will readily comply with our request providing owners of dogs will guarantee silence on the part of the latter while in transit on the company's boats. This being almost a matter of impossibility, we conclude that negotiations with the Fall River Line have failed. Great enthusiasm is already manifested among exhibitors, and it is confidently expected the number and quality of entries will exceed that of any previous show.—JAMES MORTIMER, Supt.

DETROIT.

The Michigan Kennel Club have just completed arrangements with the following express companies to return all dogs free that have paid full rates to their show: United States, American, Pacific and Canadian; and the usual arrangement with railroads to carry dogs free when accompanied by the owner or caretaker. The delay in getting the above until to-day (April 2), premium list will be mailed April 6. Having received many letters from Dakota, Colorado, Minnesota, Mississippi, Tennessee and Canada, asking whether dogs that have been recently hunted, and are out of coat, will be debarred on that account, we wish to say to these that true merit will win. No dog will be penalized for coat worn off by honest hard work in the field, our object being the elevation and improvement of all dogs, more especially the dog intended for field work. All dogs will be judged wholly on their merit, regardless of owners, honesty and justice being the motto of the MICHIGAN KENNEL CLUB.

THE COMPTON BRAHMIN ENTRY.—The only particulars we have are those given by our reporter in his comment, from which it appears that the owner of Brahmin misstated the dog's weight and procured his entry in a wrong class at the Providence show. This may have been due to sheer stupidity, or it may have been a deliberate design to deceive the show committee, the exhibitors and the judge; and as such it would be a gross instance of fraud, with which the A.K.C. should promptly deal. It would not do to permit such sharp practices to go unpunished. If it was simple stupidity and lack of knowledge how to use a scale, Brahmin's owner should take a course of primary instruction in weights and measures, and practice on the 5-cent weighing machines in the depots and hotels.

THE FLORAS.—New York, April 4, 1887.—The St. Bernard "Flora II.," shown at Newark, and receiving third prize, should have been entered as "Flora I." She is not my bitch Flora II., sister to Guide. I do not know whether the mistake was made by the New Jersey Kennel Club, or by the owner's agent who sent the entry, but I own Flora II., sister to Guide; and Mr. Stevens's bitch is Flora I. —W. W. TUCKER.

CANINE SURGERY.

Editor Forest and Stream:

Dr. Van Schaick's report of two laparotomies for the relief of intestinal obstruction in FOREST AND STREAM for March 31 would do credit to many a surgeon of renown, and while such scientific painstaking is praiseworthy it is nevertheless probable that the dogs were rendered more uncomfortable than necessary by the cautious after treatment.

Canines and domestic fowls are exceptionally free from danger of peritonitis after abdominal operations or injuries and consequently the care which would have to be exercised in doing this sort of work safely in the human species, might lead to trouble with a restless animal which does not reason. (It goes against the grain to qualify a dog in this way.)

As a rule it would not be necessary to fasten a dog's legs, because when an intelligent dog tries to remove the dressing or the sutures with his feet or with his teeth a word or two from his master is sufficient. He takes in the situation at a glance and does not disturb the wound afterward.

Then again, it is not necessary to cover the wound with a dressing. I have opened the abdominal cavity in dogs a good many times for various purposes and have removed a number of tumors from other parts of the body, and have found that the wounds would unite regularly by primary union if antiseptic precautions were observed during the operation, and if after suturing, a thin layer of iodoform were sprinkled over the wound.

ROBERT T. MORRIS, M.D.

NEW YORK CITY, April 1.

COLLIES AT NEWARK.—Babylon, L. I., March 31.—*Editor Forest and Stream:* My attention has been called to your comments on collies at the late Newark show, as published under the signature of Chas. H. Mason. Presuming that you are truthful in your statement that you are "unhampered by personal animosities and have no judges to kill," your readers may question the propriety of publishing Mr. Mason's ill-natured remarks. It is not my intention to criticise his motives, these are too transparently apparent; but where he is incorrect and positively untruthful I am bound to put myself right before the dog-loving portion of your readers. It is the latest kind of intelligence to me that I was selected to co-operate with Mr. Apgar by the tossing of a copper, and I leave it to that gentleman whether he did or did not earnestly request me to join him in the judges' ring, and this was the first intimation I received of the matter. I was afterward strongly urged to accept the onerous position by Mr. Geo. A. Smith, secretary of the Collie Club, Mr. Mitchell Harrison, of the Chestnut Hill Kennels, and Mr. Jenkins Van Schaick, all of whom will bear me out that I very reluctantly consented to act, being utterly opposed to dual judging and strongly believing that a man should stand or fall solely on his own responsibility. Mr. Mason goes on to say: "The judges had not proceeded far with the open bitch class before it was apparent to the onlookers that there would be a hitch in the proceedings. This proved to be the case. Mr. Mortimer wished to give first prize to Lady Ellis," etc. This I stigmatize as a wilful and malicious falsehood. No doubt existed in my mind as to where the first prize should legitimately go; I simply called Mr. Apgar's attention to the merits of Lady Ellis, and we were both cordially agreed that she was a worthy second in this very strong class. Mr. Apgar and myself agreed on all points with the exception of the relative merits of Nullamore and Glengarry, here in the most amicable manner we "agreed to disagree," and under the circumstances requested the committee to call in a third party. I am quite sure Mr. Apgar will willingly confirm these statements, and therefore rest my case in the hands of a discerning public, who will readily discriminate between honest criticism and the vindictive vaporings of an unbalanced intellect.—JAS. MORTIMER.

THE BUFFALO SHOW.—Hornellsville, April 2.—*Editor Forest and Stream:* As I was employed by the Buffalo Kennel Club No. 1, I am in a position to know that the statement made by Mr. Chas. B. Cook, Secretary of Buffalo Kennel Club No. 2, is very far from the truth, which can be easily proven. After it was decided that I was to be superintendent I advised Mr. Chadeayne to form a club and ask for admission to the American Kennel Club. I am a member, two members live in Philadelphia, two in New York, and one at Bergen Point, N. J. I do not know just how many members do live in Buffalo, but this I do know, that many good solid business men belong to it, and it is backed by one of the strongest societies in the city. Mr. Chadeayne sent a copy of the constitution and list of officers to Mr. C. J. Peshall, at Jersey City, Jan. 25; as Mr. Peshall resided in New York the letter did not reach him until February. I am certain there was no other kennel club at that time in Buffalo, because Mr. Chas. B. Cook told me so himself at Rochester. He called to see me at Washington Rink, Feb. 7, and asked me "Who was to give the show in Buffalo?" I replied that the Buffalo Kennel Club had given Mr. Chadeayne and myself full control. He said "there was no kennel club in Buffalo." I told him he was surely mistaken, that a copy of constitution and list of officers had been sent to Mr. Peshall, asking that we be proposed to the A. K. C.; he did not know there was an American Kennel Club, so I gave him the secretary's address. He insisted that there was no kennel club in Buffalo. I said there was, and when they found they could not pump me his friend wanted to bet me $500 that he had a better Skye terrier than the one I gave first prize (*en passant* his wonderful dog was not shown at Buffalo).—J. MASTIFF CHALLENGE CUP.—The American Mastiff Club, 9 West 35th Street, New York, April 1, 1887.—*Editor Forest and Stream:* The American Mastiff Club offers for the best American-bred mastiff, dog or bitch, in all classes, the club's $150 challenge cup. The competition will be at the Westminster Kennel Club show to be held at the Madison Square Garden, New York city, May 3, 4, 5, and 6, 1887, and is open to all American-bred mastiffs entered at that bench show. A copy of the rules for competition will be sent upon request, together with a blank form to be returned, filled in, to the Secretary of the American Mastiff Club, 9 West 35th Street, New York city. The entries close on Monday, April 18, 1887.

CURRENT NOTES.—Mr. Wm. Graham, of Belfast, Ireland, will send to Mr. W. W. Tucker, to enter at New York show and to sell, his St. Bernard dog Vesp II. (K.C.S.B. 12,875), which won first and cup at Hertford, best puppy, 1883; first, Strabane, 1885; second, Strabane, 1886; vhc. St. Bernard Club show, October, 1883, in an enormous class. He is by Rollo out of Vesper.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Matchboy. By Dr. H. G. Preston, Brooklyn, N. Y., for liver and white pointer dog, whelped Sept. 1, 1886, by Match II. (A.K.R. 3841) out of Dora (Joe—imported bitch).

Coronet. By Dr. H. G. Preston, Brooklyn, N. Y., for lemon and white pointer dog, whelped Jan. 13, 1887, by Match II. (A.K.R. 3841) out of Lilly (Sensation—Gipsy).

Royal Prince III. By Manitoba Kennels, Winnipeg, Man., for blue belton setter dog, whelped Jan. 6, 1887, by Royal Prince II. (Sir Alister—Novelty) out of Manitoba Belle (Pride of Dundee—Jeanette.

Rictie. By W. H. Moseley, New Haven, Conn., for solid black cocker spaniel bitch, whelped Sept. 26, 1886, by Benham's Jet (Young Obo, A.K.R. 1481—Darkie II.) out of Zona (A.K.R. 2501).

BRED.

RANGE AND GALLERY.

HIGH GALLERY SCORES.—At the Mammoth Range, of Boston, the monthly matches came to a close Thursday last. The shooting has been of a high order and several of the competitors have made a fine record in the series of matches just closed. The April matches are substantially the same as those preceding them, three prizes in each match, of silverware, gold and silver badges and cash. Appended are the winning scores in the March competition:

Decimal Off-Hand Match, Possible 100.

J Bird	94	92	90	90	90	89	89	89	89	89—901
W S Henry	92	89	89	88	88	87	87	86	86	86—878
A B Loring	88	87	87	86	86	86	86	85	85	85—861

Decimal Rest Match.

W Wiggin	100	99	98	98	98	98	98	98	97	97—981
B W White	98	97	97	97	96	96	96	96	94	94—961
C H Eastman	98	98	96	96	96	95	96	95	95	95—958

Special Decimal Rest Match.

C H Eastman	100	100	99	99	99	99	99	99	98	98—991
W Wilder	100	99	98	98	98	98	98	97	97	97—980
J Felix	98	97	97	97	96	95	95	95	95	95—961

Military Match.

H O Arnold	48	48	48	47	47	47	47	47	47	47—473
N Winchester	48	48	48	48	47	47	47	46	46	46—469

HAVERHILL RIFLE CLUB.—Badge match, March 26.

W Worthen	7	5	8	6	9	5	8	7	9	7—71
J F Brown	6	6	7	9	6	6	7	5	8	10—70
A Edgerly	6	8	8	7	6	10	8	3	4	9—70
S Johnson	6	10	6	6	7	6	6	6	7	9—69
J Busfield	5	8	9	7	6	8	7	5	5	6—66
F Merrill	7	7	4	6	4	8	6	4	6	7—59

Record match:

J F Brown	9	10	7	8	8	7	8	9	5	9—81
S Johnson	10	6	9	8	7	7	10	10	7	6—89
W Worthen	7	9	8	8	9	9	6	6	7	6—75
J Busfield	9	9	7	6	7	7	8	7	7	6—75
F Merrill	6	5	5	7	5	7	9	8	10	7—76
A Edgerly	6	5	8	6	6	9	9	8	6	7—68

It was one of the worst days to shoot the club ever had, wind a gale and very unsteady. Saturday ended the three months prize match that has been running since Jan. 1. The match proved to be very interesting and close. A new match will be started April 2 to run three months. Prize winners:

H Tuck	86	83	82	—251	A Edgerly	78	79	85—242
S Johnson	82	85	82	—249	J Busfield	89	79	81—240
J F Brown	80	79	81-3*—245					

All 20lyds. off-hand, standard target.
* Three points allowance.

BOSTON, March 30.—The attendance of riflemen at the range at Walnut Hill to-day was not large. Only a few scores were completed, and the shooters who have been accustomed to visit the range state that the wind was the worst they ever experienced. Appended are the records:

Decimal Off-hand Match.

J R Missam	7	5	6	10	10	9	9	10	10	10—86
N F Grains	6	10	10	10	8	8	8	9	9	2—89

R Dadman	7	5	3	6	6	9	10	10	6	9—71

Rest Match.

S Winchester	9	10	9	7	10	10	10	10	10	9—94
J R Mudd	9	10	9	7	10	10	10	10	9	9—93

NEWARK GALLERYMEN.—The first match between the Rutgers and Our Own Rifle clubs was shot on Tuesday night, March 29, at Huegel's range, and resulted as follows: Rutgers team—F. Snyder 103, M. J. McArdle 84, J. Farrel 89, H. Allen 93, G. Missel 95, J. Hillenbran 99, E. McCraith 96, I. M. Frost 88, Wm. Clark 100; total, 960. Our Own team—G. Dietzel 98, J. A. Freinschner 95, W. Drexler 95, E. Bertram 86, J. Smith 85, Fridenheit 90, J. Weeks 102; J. Gill 93, W. Wieder 98, Ferdinand Freinschner 90, total 962. The weekly shoot of the Our Own Club, for the diamond badge, was held Thursday evening March 31, with the following result: Snellen's team—Gill 97, Weeks 109, Dietzel 103, O. A. Kiefer 89, J. Limberger 89, Wieder 89, Kroeplin 83, Condit 99, Jamenoes 50, Willms 71, Snellen 114, total 990. Fred Freinschner's team—Friedenheit 92, Smith 101, Bertram 104, F. A. Freinschner 101, Brothington 87, J. M. Kiefer 96, Klein 99, Drexler 94, Bander 77, Ochsner 106, F. Freinschner 110, total 1067.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y. city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

BROOKLYN, March 30.—The Glenmore Rod and Gun Club faced the high wind at Dexter's Park to-day to shoot for the diamond badge of the club. Peter Sutter was the lucky man, killing 6 birds out of 7 from the 27yd. mark. W. Von Drecier, the winner last month, wins the leather badge for this with the lowest score of 2 killed out of 7 shot at. A sweepstake with five entries was then shot off at three birds each. H. Knickman took first and G. Forbell second money. The following is the score of shoot. Sutter, Walsh, Selover, 27yds., rest 24. Referee and scorer, C. Dellar.

P Sutter	1111011—6	G Selover	0111100—4
H Knickman	1111010—5	H Bass	0101110—4
J Magee	0111011—5	H Adams	0110010—3
J Walsh	0111101—5	W Von Drecier	0010001—2

GRAHAM VS. BREWER.

THE J. C. H. G. Club grounds saw a big crowd to witness the match between these crack shots on the 31st ult. The clubhouse was filled to overflowing and the seats and the platform were packed long before the large delegation of sportsmen and sporting men from Philadelphia, with Brewer, arrived shortly before 1 P. M. The Quaker boys came fully armed with entusiasm and greenbacks. Brewer's good shooting at Pastime Park with Miss Oakley, when he killed 44 birds out of 50, gave them great confidence, and they felt sure of his beating the English champion. Their bets were promptly taken on the start and considerable money was put up. Both men shot in good form, the English man cool at all times, while Brewer, who had been sick, evidently weakened after the first 50 birds, and made some bad misses. They were as a general thing a good lot of birds and everything was conducted in a fair and straightforward manner. The first 25 birds favored Graham, after that Brewer had much the harder birds, notably toward the last. Brewer led 2 birds on the first 50, but he missed his 54, 55, 64, 69, 71. Graham missed his 57 and 60, only making it a tie on the 71st bird. Graham then killed 30 straight, winning the match by 2 birds. Brewer used his second barrel 36 times, 11 of which were not necessary to score. Graham used his second barrel 30 times, only three of which were absolutely unnecessary. Upon the whole it was very even shooting and each shooter has his champion yet. We still think with an even run of birds that Brewer is as good as Graham. There is talk of another match after the return match at Point Breeze, Philadelphia, on the 7th inst., which will be on the same conditions as this match. The third match to be one barrel at 40yds. rise; that will try the guns at least if not the men. Graham has heretofore refused to shoot only at his own game, Hurlingham rules, and will go nowhere else to shoot except right around here. We heard him make the offer to one of Budd's friends to shoot another match with Budd here East on the same terms as last match with him at Erb's, when they tied, and said he would give Budd $100 for his expenses, but refused positively to go West. Why should he not accommodate Budd's friends and go there, as Budd came here? and why will he not shoot an American with American rules? No; he claims to be champion of all England and boasts that he has been here two years and has yet to meet his match, but allows that Brewer is the best shot he has contested with. Let him shoot our rules and he will be accommodated we think, on short notice. The American shooters, it strikes us, are rather weak in this respect.

Hurlingham rules allow the gun just below the armpit and at the shoulder the moment of call pull and then the gun is trained on the trap sprung. How would that look in the field? Holding your gun to the shoulder while your dog was on the point and before the bird was flushed? and the second barrel at the poor bird on the ground, no matter where your first went. Does that train a man for field work? No. Let a man stand at the score, easy and natural, gun below elbow or armpit, as he would naturally carry it in the field and not throw it to his shoulder in shooting position until the bird was on the wing. That practice will make shooters for field or brake. The other is simply a sportingman's—a gambler's—opportunity.

Previous to big match the following sweeps were engaged in:

Jones	1 1 1 1—4	Van Brockle	1 1 1½ 0—2½
H White	1 1 0 1—3	Lamberson	1 1 1 1—4
Lever	1 1 1 0—3	Quinlan	1 1 0 1½—2½
Siegler	1 1 0 1—3		

Divided.

Same conditions:

Jones	1 0 1 1½—2½	Class	1 1 1 0—3
H White	½ 0 1 1—2½	Leddy	0 0 0 0—0
Lever	1 1½ 1—3½	Stice	½ 1 1 1—3½
Siegler	1 0 1 1—3	George	1 1½ 1 1—3½
Van Brockle	½ ½ 1 1—3	Quinlan	0 1 0 w
Lamberson	½ 0 1 1—2½		

Divided.

5 birds, Long Island rules:

Stice	11111—5	George	20111—4
Graham	11112—5	Hughes	12120—4
Quinlan	20022—3	Lever	11111—5
Class	20122—4	White	21221—5
Jones	12121—5	Siegler	11112—5

On ties, miss and out: Stice, Jones and Lever divided first, Class, George and Hughes divided second, Quinlan third.

After the big match the following sweep was had. Hurlingham rules:

Stice	22111—5	Quinlan	01112—3
Brewer	12101—4	Williams	01111—4
Class	22112—5	Manitz	00211—3
Graham	21011—4	Jones	21121—5
Lindsay	01111—4	Vogel	20211—4
Kling	12120—4	Cooper	12200—3
George	12211—5	Cannon	01112—4
Hughes	12111—5	Force	11112—5
Lever	01001—2	Collins	11102—4

Stice, George and Jones divided first money on second tie of 7, Brewer and Williams divided second, Quinlan, Manitz and Cooper divided third.

Match between Wm. Graham, of England, and John L. Brewer, of Hammonton, N. J., 100 birds each, $250 aside, Hurlingham rules, 30yds. rise, both barrels. F. Quinlan referee:

Brewer... 1122112c2211101—13	Graham...2111101211101112—16
1221212121211120—14	0101112111112c11—13

2221212221 —10—87	2121112221120 — 9—89

c Dead out of bounds.

Graham killed his birds much the cleanest, generally dropping them dead near the trap. He often got in his second barrel very quickly, even while the bird was falling from the first. We have given both shooters credit for unnecessary use of barrels shot at birds on the ground. We hope to see a one-barrel match between them, when the result may be different. JACONSTAFF.

WORCESTER, Mass., March 31.—The first of a series of prize shoots were begun at the Coal Brook Mine range of the Sportsmen's Club. The wind was very strong and made shooting difficult. The birds were mostly thrown from the Ligowsky traps. The special prize was for a purse of $25. Each man shot in three events with a possible 30. All who broke 18 or more to be received in the first class and to shoot a string of 7 clay-pigeons for a dinner; all less to be in the second class. The results were as follows:

First Class.

	Pigeons.	Bats.	Blue Rocks.	Total.
Davis	8	5	10	23
Perry	9	8	6	23
Smith	7	6	9	22
Gilman	8	5	8	21
Tougas	8	5	8	21
Swan	8	5	7	20
Houghton	8	4	7	19
Dean	6	5	7	18

Second Class.

Fisher	7	5	5	17
Holden	8	4	4	16
Webber	4	3	8	15
Howe	7	3	5	15
Rugg	4	5	5	14
Rise	4	5	5	14
Hudson	6	0	6	12
Garland	5	1	6	12
Russell	4	3	5	12
McAleer	3	4	4	11
Henry	3	1	7	11

After the shooting for class position, the shooting for the prizes resulted as follows: First Class—E. T. Smith, $7.50; J. B. Tougas, W. S. Perry and E. F. Swan $3. Second Class—C. B. Holden, G. J. Rugg and B. Garland, $5; Russell, $3; H. W. Webber, $2. The other events of the day were as follows: Six clay-pigeons, 18 entries; 6 bats, 17 entries; 10 clay-pigeons, 19 entries; 10 blue rocks, 19 entries; 7 blue rocks, 15 entries, and 7 blue rocks, 12 entries.

CHATHAM CENTER, N. Y., March 29.—Chatham Center Gun Club, 15 Peoria blackbirds, 21yds. rise, New Long Island rules:

M Powell	111111001111011—12	F Fowler	111000111100110—10
J Goodrich	100110111011100—9	B Lamouree	000011000100011— 5
A Chichester	100010110001030— 5	E More	000110101110010— 7

C Minisee	110011001001001— 7	J Lanneu	100100110000010— 5

TORONTO, March 26.—The fourth shoot for the cup presented at McDowall's tournament in December by the Canada Blackbird Company, of Niagara, Ont., took place at J. Oulcott's, Eglington, this afternoon. J. Wayper, of Hespeler, and J. Griffith, of Hamilton, made very fine shooting and tied at 18 out of 20, but Wayper won in the shoot off. This being the third time he has won, the cup now becomes the Hespeler man's own property. W. Stroud, of Hamilton, won the trophy once.

BROOKLYN, April 2.—The annual shoot of the Union Gun Club, of New Lots and South Woodhaven, was held this afternoon at Torborg's Union Grounds, corner of Liberty and Cypress avenues, in the Twenty-sith Ward. On account of the stormy weather the marksmen, of which there were twenty-one, did not begin until a late hour, and it was nearly dark when the last shooter had aimed his gun at the last of twenty glass balls. William J. Ryder won the first of the prizes, of which there were thirty-five. The score was as follows:

W J Ryder	1101111111001111111—17
H Torborg	0000001111111100000— 9
J G Torborg	1111000000000000000— 4

Referee, Judge Rausch; Scorer, W. J. Stoothoff.

TORONTO, April 2.—The first team shoot at clay-pigeons for Mr. McDowall's diamond medals took place at J. Oulcott's, Eglinton, this afternoon. Eight teams entered, representing four of the five city clubs. The West Toronto Junction Gun Club, although the youngest of the five, put the strongest team in the field, and Mr. Dan Blea, the captain, had the pleasure of seeing his men capture the medals with the best score for a team ever made in Toronto. Nearly two hundred spectators were present, and considerable interest was shown all through the match, especially towards the close, when the different teams went to score for the deciding round. The medals have to be won twice by the same team, and the competition will take place the first Saturday in each month. Following are the scores:

West Toronto Junction.		West End Club.	
W Wakefield	20	P Wakefield	18
W Clarke	15	E Dollery	16
D Blea	14	E W Clark	16
D Hinton	14	W Wilson	13
A H Royce	14—77	J Bailly	12—75
The Owls, No. 1.		The Owls, No. 2.	
J Carruthers	17	J Colborne	19
J R Humphrey	15	J Unwin	14
H K Humphrey	14	C Rogers	14
J Townson	14	J R Wells	11
J Douglas	12—72	W Smith	11—69
Toronto G. C. No. 1.		Toronto G. C. No. 2.	
W Felstead	17	R J Kidd	16
A Ellis	16	G Pearsall	14
A Molloy	16	W George	12
D Black	14	J Jefferson	12
W Bugg	6—69	F LeRoy	11—65
Toronto G. C. No. 3.		The Owls No. 3.	
E Reed	14	C Ayre	14
J Bayles	11	C Lockhart	8
J Ayre	8	The members of the Owl's third team failed to show up in time. J. Crothers was referee.	
H Newman	8		
F Shaver	0—41		

BOSTON GUN CLUB.—Old Boreas reigned with full power last Wednesday, March 30, during the shoot of the Boston Gun Club at Wellington. Notwithstanding the difficulty of the shooting, the clay-pigeons with their solid clay tongues went elegantly, and a large number were trapped in the 5-trap sweeps. Below will be found the summary of the events shot during the day: Seven clay-pigeons, 18yds. rise from 5 traps—S. Edwards first, D. Ross and F. Ames second, T Stanton third. Seven straightaway Peorias—H. W. Eager first, H. H. Francis and Ross second, D. Kirkwood third. Seven clay-pigeons—Ross first, B. Gerry second, Stanton third. Seven Peorias—Ross first, E. W. Law, Edwards and Francis second, Stanton and J. Snow third. Ten clay-pigeons—Edwards first, Ross and Stanton second, Francis third, Eager and Law fourth. Ten Peorias—Kirkwood first, Law, Ross and Snow second, Gerry third, C. Bailey fourth. Five Macomber metal targets—Edwards first, Kirkwood second, Ross and Law third, Eager fourth. Five traps, 5 pair clay-pigeons—Law first, Francis and Kirkwood second, Eager third. Seven Peorias—Francis and Law first, Gerry and Stanton second. Eager and Kirkwood third. Seven clay-pigeons, 5 traps—Francis and Ross first, Gerry second, Law and Kirkwood third. Four pair Peorias—Francis first, Eager and Law second, Ross third. Seven Macomber metal targets—Francis first, Law and Ross second, Stanton third. Five clay-pigeons, 5 traps—Eager first, Ross second, Law third. Seven Peorias Ross first, Stanton and Kirkwood second, G. Mann third. Seven clay-pigeons—Law first, Eager and Stanton second. Mann third. Five Peorias—Ross and Law first, Stanton and Kirkwood second, Eager third. Seven Peorias—Edwards and Leroy first, Ross second, Stanton third. The A B C match, at 10 clay-pigeons, 10 Peorias and 4 Macomber metal targets, was taken by Kirkwood first, Ross and Edwards second, Gerry, Francis, Stanton, Law and Snow third, Eager fourth, Ames fifth and Bailey sixth. Quite a few miss-and-out matches were shot at Peorias and clay-pigeons, Eager, Ross, Stanton and Francis taking the greatest number.—K.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

JULY.

18-31. W. C. A. Meet, Ballast Island.

AUGUST.

1-12. Northern Division, Stony Lake.
12-26. A. C. A. Meet, Lake Champlain.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

THE CHOICE OF A CANOE.—The day of the catalogue canoeist, who bought the boat with the prettiest picture and most glowing testimonials and fancied he was at once fitted to win all the prizes, has gone by; and the man who would win now must know exactly what qualities he needs in his boat. The fact that Mr. A. has a certain model or that Mr. X. won so many races in another model, does not concern him at all; he wants to win in certain races in a certain class, and to use his boat on certain waters, and to be successful he must select a model with certain qualities. To help him to that general understanding of the subject which will enable him to do this is the aim of "Canoe Handling," and certainly no better guide could be found than Mr. Vaux, whose canoeing began with the first models introduced into this country, who has ever since managed to have a boat that was very near the best and whose victory in the great International race was the leading event of last season in canoeing. The author of "Canoe Handling" can boast of a longer experience as a successful racer and cruiser than any other American canoeist, and the results are all clearly given in his most valuable book.

A MEET ON THE DELAWARE RIVER.

THE members of the Quaker City C. C. being desirous of keeping up with the times and of doing all in their power for the promotion of canoeing, have been considering the practicability of holding a canoe meet on the Delaware River, and for the further consideration of the plan, held a special on March 16, at which a committee, consisting of Messrs. Munchen, Jackson and Barten, were appointed to select a suitable camp site for the purpose. On March 27 the committee, with this object in view, visited Burlington Island and concluded arrangements with the proprietor, Mr. Wm. Haley, for the use of the upper end of the island. The spot chosen by the committee is a grassy cove surrounded by a cluster of trees and entirely clear from underbrush, from which a fine pebbly beach slopes gently down to the water's edge. Looking up stream from here the river widens out considerably, thus giving a triangular course in full view. The date of the meet will be from May 28 to 31, thus insuring, it is hoped, the presence of all canoeists on the Delaware otherwise unable to attend. The secretary has corresponded with the Trenton, Keystone and Gloucester clubs, and the hearty co-operation of the above named clubs is assured.

The Q. C. C. C. invite all unattached canoeists and all gentlemen, yachtsmen or otherwise, who are interested in boating, to be present and help to make this the first meet on the Delaware a success. Transportation from Philadelphia, if desired, can be had by means of the steamers Edwin Forrest and Florence, which leave Race street wharf, or steamers Columbia or Twilight from foot of Chestnut street; from Trenton by the Edwin Forrest. All of these boats stop at Bristol, Pa., and Burlington, N. J. Burlington Island lies a little above both these places, and is about twenty miles from Philadelphia and fifteen miles from Trenton. Provision is being made for furnishing meals at a reasonable rate to those unlucky mortals not up in the culinary art. The scheme of a canoe meet was started a year since, but owing to the difficulty of obtaining a suitable camp site was abandoned. Now that obstacle has been overcome, the committee feel assured that, aided by their brother canoeists, the first canoe meet on the Delaware will be made a grand success.

Further information on this subject will be cheerfully furnished by J. A. BARTEN.

138 NORTH SIXTH STREET, Philadelphia.

THE A. C. A. REGATTA PROGRAMME.

Editor Forest and Stream:

In answer to Mr. Gibson's last letter I beg to reply as follows: First, we are agreed that the single blade is getting into disuse in A. C. A. races, and Mr. Gibson is endeavoring—by a method which I do not think will accomplish it—to retain it in the races; while I am not very particular whether it stays or not; that is, "if a fellow finds that the double blade suits him better than the single, be his canoe open or decked, then I say let him use whichever paddle answers his purpose best."

One might argue on Mr. Gibson's basis that because leeboards were the legitimate articles for an open canoe, that a fellow must not put in a centerboard—even if he does find it faster, handier and lighter—just because it did not use to be there or because it was not the natural article for the aforesaid open craft when the canoeists from away back used to sail. Oh, no! let us keep abreast of the times, and if a canoeist finds by experience that the double paddle suits his paddling craft best let him use it, don't tell him he must go back and use what his grandfather used; probably the said grandfather did not have handsome silk flags, $200 silver mugs, etc., to hustle around for.

Now, while I willingly grant the open canoe his double paddle (if he wants it), I object to being compelled to paddle my sailing or general purpose canoe against my neighbor's light paddling craft; but still, this is what we have been forced to do every year so far.

Mr. Gibson says we are not rivals; but I nearly broke the hinge in my back at the last A. C. A. trying to rival my brother in his open canoe (of the same model as my own) in the Class IV. race. I bear him no ill-will, but still I want to see him placed where he won't make me work so hard again for such a poor place.

I would like to hear from others on this question. Should not we have a race for sailing canoes, *i. e.*, decked and fitted with centerboard and sails; of course, the Regatta Committee will decide this, but there is nothing to hinder us from offering them a suggestion or two.

Second, as to the limited sail without a cruising load question. So the 75 limit was originated to let the "cruising men" have a race, eh? Well, I'm glad some one knows what it was originated for, but it makes me smile when I think of a cruising man trying to win it. Now I would like Mr. Gibson to point out just one man (who carries only one rig for all uses) who won a good place in the 75ft. limit race at the 1886 meet—I won't say first place, but just a good place. And yet this was the race that was given especially for the cruising one-rig man, and he has about as much chance of winning it as he has of being the next occupant of the White House.

If this race was given to the one-rig cruising man he doesn't seem to get much consolation out of it and I would suggest to the regatta committee that they try something else; they couldn't give him a much worse show than he now has for first place, and they might possibly hit on something that would give him a chance for at least one race and partially close the mouths of those men who say—and not without cause—that the A.C.A meet is degenerating into a gathering of racers, among whom a cruising man has not a ghost of a chance. The carrying of a cruising load might do something toward this and I believe the regatta committee's suggestion to make the crew sit inside the combings would be worthy of a faithful trial, as it gives the craft with great initial stability a chance against her racing sister who has to depend entirely upon the position of her crew to hold her up.

Third, as to the Pecowsic question. Now, this is rather a delicate question, talking against another member's canoe, for I do not consider Mr. Barney at fault in building the Pecowsic. The A. C. A. laid down certain rules and regulations with regard to the size of canoes and the manner of sailing them in their races, and Mr. Barney complied with every rule and regulation and got there every time that he did not have a mishap. The rules and regulations are to blame, not Mr. Barney, and I think if they were such that a roomy, steady and safe canoe had a better show than a narrow, shallow and cranky craft, if this were the case I think Mr. Barney would be among the first to show the same zeal, skill and foresight in building and sailing a canoe of this type as he did when he built Pecowsic.

Now to return to Mr. Gibson's letter: Yes, I still insist on calling Pecowsic a narrow, shallow craft, and I do not forget that she measures 16×28½, and not 29in. We may as well stick to the exact measurements when we are arguing on size. I have the design of her published in the FOREST AND STREAM before me, and to say that I am surprised is the mildest way of putting it that a gentleman of Mr. Gibson's knowledge of designs and canoes should attempt to defend Pecowsic and imply that she is wide, or at least not "narrow," from being called small.

Any one who has seen Pecowsic will know how nice and roomy or wide she is; but for those who have not I will give a few of her features just from the FOREST AND STREAM design: Her greatest beam is 28¾in., and that is right up at the gunwale; from there she gradually curves down to the keel. On the waterline I do not think she can be over 26in. wide—a nice width for a sailing canoe. No wonder Mr. Clapham and others poke fun at us. This width, remember, is only amidships, for from there she quickly curves in fore and aft, forming a very sharp, wedge-shaped bow and stern. I think I am quite within the mark when I say that Pecowsic was narrower than any 26in. canoe at the '86 meet—not at her widest part, but on her waterline measurements, to be taken fore and aft as well as amidships. We take the narrowest 26in. canoe at the meet and make it draw 5in. of water, and make Pecowsic draw 5in., and the 26in. craft will displace more water than she, *i. e.*, is a larger canoe. Well! 26in. may not be narrow, but if it isn't I'll have to hunt up another definition for the word. Yes, I would like to see bigger canoes than this style of craft, and I have disavowed the 36in. boats, but it seems to me there is quite a difference between a 26in. craft and the one I advocate, *i. e.*, from 30 to 31½in. beam. I trust the regatta committee will thoughtfully consider the rising canoe types, and if need be legislate to save at least one race out of twenty for the cruising canoe.

TORONTO, March 24. WILL G. MCKENDRICK.

THE RADIX CENTERBOARD.—The general favor which this folding board has met with in the past three seasons has encouraged the makers to further efforts for its improvement. They have lately not only increased the number of sizes but have removed the objection made to the first board (that the back was too thick, causing a drag) by reducing this thickness materially until a thin edge is reached on the after side. Three sizes are now made, 30x15in., 36x18in., and 37x24in., one of the latter being now on exhibition at the office of the FOREST AND STREAM. The small size is suitable for an ordinary canoe, the medium for racing canoes of 15x30 and upward, and the largest for rowboats and skiffs. The compact form in which it houses and the general excellence of the mechanism will recommend the board to all who examine it, which good opinion is apt to be strengthened the more the board is tried.

THEATRICAL ENTERTAINMENT.—"Rebecca and Rowena," a burlesque tragedy in five acts, will be given on the evening of April 16, at the Harvard Rooms (Columbia Institute), Sixth avenue and Forty-second street, for the benefit of the New York and Knickerbocker Canoe Clubs. Tickets ($1.00 each) can be procured of C. J. Stevens, 7 Bowling Green, and E. C. Griffin, 54 Duane street. It is hoped that canoeists from towns and cities in the vicinity will find time to attend, as an entertaining and enjoyable evening can be promised them. It is taken for granted that every canoeist in New York, Brooklyn and Staten Island, together with sisters, cousins and aunts, will be present.

THE FALLS OF THE JUNIATA.—*Editor Forest and Stream:* In reply to "Enquirer," I state that a few rods below Poor Man's Spring, on the Juniata River, Pa., a ledge of rocks extends entirely across the stream. In the center is a narrow channel with a sudden fall of three or four feet, which very few persons would care about going over in a boat. Half a mile below is a similar place. These are both known as "The Falls" by everybody in the locality, and they certainly merit that title.—W. M. GRAYDON.

A. C. A. MEMBERSHIP.—Trenton, N. J., April 2.—The following named gentlemen have applied for membership in the A. C. A.: George E. Buckhout, Poughkeepsie, N. Y.; P. Gibert Thebaud, New York City.—WM. M. CARTER, Sec. A. C. A.

A SEASONABLE WARNING.

SPRING has come, the birds carol in the woods, the violet timidly lifts its fragrant head neath the shelter of the hedges, etc.—and the sturdy Swede or Norwegian arms himself with a big butcher knife and starts vigorously to work on every bit of bright wood about the yachts that are about to fit out. Watch him, how he goes from end to end of a smooth and shapely spar and leaves a surface such as a subsoil plow would make, or how deftly he converts a round moulding into an irregular polygon, or a sharply defined bevel into a shapeless monstrosity. Fatal as he is to spars, rail and rough work, it is nothing to the havoc he works on mahogany. Fresh from the grindstone, his knife descends on moulding, panel and ceiling, leaving scores and marks that can never be erased.

It would pay many owners to take their skippers and crew through some good joiner shop just about this time, and show them how men that are trained to it treat good wood. The experienced joiner or cabinetmaker takes only the finest set and keenest plane to the expensive wood intrusted to him; his principal tool in finishing is the scraper, a piece of thin steel, 3 or 4in. square, and kept at perfect cutting edge. This he handles with the greatest care and skill, scraping with the blade at a certain angle, and watching the direction or the grain that the wood does not tear up. This is the way that a yacht's joiner work is made, a costly job at best; but after one season's use it is more than likely to fall under the relentless knife, wielded with vigor and will, but with no discretion. The aim of the cabinetmaker and finisher is to obtain a smooth surface on the wood, and then to fill the grain thoroughly as a basis for the varnish, and when this is once done the less the surface is disturbed the better. When revarnishing is necessary, the surface should be rubbed down until it is smooth, but it should never be disturbed to any depth, or the wood must again be finished and the grain partly filled. The coats of varnish should be thin and evenly laid, each being thoroughly dry before another is put on, for one coat will never dry after another is laid over it. The same applies as well to paint on hull and in the cabins; if properly done in the first place there is no necessity for the burning and scraping that is so common. The aim of the painter or varnisher is first to fill the grain; once this is done the surface coats are laid thinly and smoothly on, and if this part is well done the paint should not blister. If the surface is injured, or dulled by wear, it should be ground down by pumice stone, sandpaper, or the artificial sandstone made expressly for this purpose, until the superfluous portion is removed and a thin, hard skin left on the wood. This is the best possible surface for the new paint or varnish, and very little will be required, but, if this skin be roughly removed and the bare wood exposed, the smoothing and filling processes must be gone through with anew. The ever-ready paintpot is responsible for much of the rough work seen about yachts. On the least provocation out it comes and another coat is slapped on, until the paint is so thick that it must blister. Often a rag with a little oil and color will cover a scratch or freshen up a dull spot as well as a full coat of paint, while being laid thinly it will last for an indefinite time.

LAKE ONTARIO.

THE Toronto Y. C., which is a flourishing and thoroughly live organization, with a membership of about 280 and a fleet of 38 yachts, will make a bold bid this season for the championship honors which have so long been held by our local club. With this view Mr. Wm. Angus, one of the T. Y. C.'s members, has secured the big sloop Atalanta, and Mr. Dugold McMurchy, of the same club, has purchased the 5-ton cutter Cypress, a famous little Liverpool clipper, which was considered very fast until she met the all-conquering Doris. This craft has been shipped on a steamship and will arrive in ample time for the racing season. Her dimensions are said to be as follows: Length over all, 38ft.; l.w.l., 33ft.; beam, 6ft.; draft of water, 5ft. The Cypress appears to me to be rather short to meet successfully the best of the existing centerboarders and the sloop-cutter which is being built at Boston for Mr. Ames, of Oswego, as they are very nearly up to the limit of their class in point of size. She will, however, add much interest to the series of races in the L. Y. R. A. round. Our friends of the T. Y. C. have also two excellent craft in the sloop Cygnet and the cutter Verve, (which latter has changed hands and is to have a new suit from Lapthorne's famous loft), both of which will be formidable should a new classification as proposed be adopted. They would fall into the class below 50ft., corrected length, which would be a "hot" one, as it would include the White Wings of Trenton, Dauntless of this city (which will probably race again this season), Gen. Garfield of Kingston, Ethel of Oswego, Endie of Cobourg, Whistlewing, Brunette and others of Hamilton, and some additional yachts from Charlotte and other parts. This would form the best racing class in the association. On the whole, then, the T. Y. C. have shown an excellent spirit and a most commendable liberality in their desire to reach the highest honors in the L. Y. R. A., but they will find formidable rivals in the various classes. In the first class the Norah of this city, which will be a much improved yacht, is likely to beat the Atalanta when the weather is moderate, and the new Oriole will carry the colors of the R. C. Y. C. most gallantly in high winds and steep seas. Should a class for 50ft. corrected length and under be made, the Cygnet and Verve will find the White Wings and Dauntless very hard boats to beat, while in the existing second class are the Iolanthe, Laura of Kingston, and Mr. Ames's new one—not to speak of the Katie Gray, Laura of Oswego and Gracie, competitors, which will put her to her best paces to keep near them.

Yachting is taking a stronger hold than ever in the lower lakes and an exciting season's racing may be looked forward to on Lake Ontario. PORT TACK.

BELLEVILLE, March 13, 1887.

NEW YORK AND THE NEW YORK Y. C.

THERE is, perhaps, nothing more characteristic of the energy, ingenuity and enterprise of the American people than the position in the arts of shipbuilding and navigation which the young nation took at its birth, and which it held for nearly a century. Though weakened by a long and severe struggle against an adversary that was deemed invincible, no sooner was peace proclaimed than the work of building a national navy and merchant fleet and of improving in all ways the construction of vessels, was prosecuted with a vigor that soon left far astern the results which England and France had attained after centuries of experiment. Not content with merely bettering the vessels of the time, American shipwrights and engineers pushed far afield, and soon produced the river steamer, the ocean steamer, the fastest clippers, the most powerful war vessels, the fastest and staunchest fishermen and pilot boats, and the speediest yachts.

While the construction of vessels large and small was carried on along the entire coast of New England and the Middle States, the central point, from the earliest days, was New York city and the adjoining shores of Brooklyn and Jersey City, the birthplace and early home of American shipbuilding. It was on the Hudson River that the first successful steamer was launched and tried; the East River front was the birthplace of the first war vessels of their day, the largest and fastest packets and clipper ships, of the beginning of the immense fleet of steam tugs and ferryboats now in use in every harbor of the world, and of the Hudson River and Sound steamers, the largest and finest of their class. In the shipyards of New York were built the earliest vessels of the young pleasure fleet; to the New York builders came the various powers of Europe for war vessels and men to build them, and there, too, was built the "cheese-box on a scow," the Monitor of glorious memory.

What would be left if the names of the New York built vessels were crossed from the history of naval design in America? The steamers Clermont, Savannah, Arctic, Baltic, Pacific, Great Republic, Mary Powell, Massachusetts and St. John; the war vessels President, Ohio, Brooklyn, Harriet Lane, General Admiral; the ironclads and iron vessels Re d'Italia, Re Don Luigi de Portugallo, Dunderberg and Monitor; the packet ships and clippers Guy Mannering, Ocean Monarch, Great Western, Young America, and Invincible; the pilot boats Moses Grinnell and Mary Taylor; and the yachts America, Una, Juha, Maria, Sappho. These are but a few in each class, the best known of many hundred vessels that carried the fame of New York and her mechanics over the world. The Clyde, the Thames and the Mersey have older records; can they show any more honorable, or covering a larger field of original invention?

The men who built these vessels have nearly all passed away, but their names remain, Fulton, Henry Eckford, the Stevens brothers, George and Henry Steers, Christian Bergh, the Browns, Westervelts, Mackays, down to Ericson. All the East River front was once covered with shipyards, near by were the famous shops, so closely allied to them, the Novelty Iron Works, the Quintard, the Morgan, the Allaire, Delamater's and Fletcher's. Not only was New York preëminent in great matters, but her Whitehall boats were a distinct class, famous throughout the country; and the construction of racing shell and fine pleasure boats was long a monopoly in the hands of such New York builders as Montagne, Darling, Mackay, Elliott and Reahr.

It was but natural that New York should feel severely the depression that has affected all maritime interests in this country since the war; but now there seems good reason for the belief that a new era is about to open, when American commerce may at last find some suitable care at the hands of our legislators; and when the American flag will again be seen on the seas.

Where is New York in this revival, is she ready to take again such a place at the head as her glorious past entitles her to? Alas! her glory has departed, her place is gone, and worse still, she seems content to rest without an effort to regain it. New York once built war vessels for the world; could any one imagine such an absurdity as the smallest foreign power coming there for a gunboat or torpedo boat to-day? Henry Eckford once went to Turkey to build war ships and organize a navy yard; to-day, when the re-organization of the navy of the United States is in progress, what part in the great work is the metropolis of the country taking? Once New York sent her home-built ships to every port in the world; to-day her building is confined to a few scows whose chief use is to add to the obstruction and pollution of her noble harbor, which has practically become a sewer for the gigantic oil corporations. Boat building, too, has shared the fate of its kindred trades, and shell boat building is almost extinct, while there are establishments far back in the woods and in distant parts of the West that surpass both in quality and quantity, the trade of New York. The iron shipbuilding industry has of late years grown to large proportions throughout the country, but as far as New York's part in it is concerned she might as well be a thousand miles inland.

These are matters which are of interest to every American who feels a proper pride in the great achievements of the past; and still more to every citizen of New York, who must gain or suffer by her prosperity or decline. From her site she is preëminently a commercial center, a great seaport or nothing; and her position in this respect is of vital importance to every citizen.

Yachting is very properly considered the pulse of maritime prosperity, for where a nation is devoted to water sports and finds pleasure and recreation on the water it is certain to be strong, hardy, enterprising and self-reliant, as the old Norsemen and the Anglo-Saxon race in later times. If, however, New York be judged by its yachting, there is little to relieve the dismal prospect outlined above. For many years her supremacy has been unquestioned; yachting has flourished in other places, but none have disputed the position of New York. The last few years, however, have seen a great revival in yachting, much has been done but far more remains to be done; the work is not finished as some would have us believe, but is just begun. Where, then, is New York's place—what position does she hold to-day where once she was first? When the challenge for the America's Cup arrived two years since New York was secure in the belief that her yachts were invincible, and she looked with contempt on the rumor that a sister city proposed to offer assistance in defending the trophy held so long by her. To the oft repeated taunt that Boston was content with her second rate boats she added fresh ones about brick sloops and bean-pans.

Where do the two cities stand to-day? Boston has behind her two seasons of unbroken triumphs that have won a world wide reputation for her yachts, her constructors and her yachtsmen. New York has saved the cup through nothing that she has done herself, but through what Boston has, unasked, given of its own free will, done for her; and now, with a third challenger at her doors, she must look to Boston for a third time for her salvation.

What has the past two seasons shown for the two cities? In 1885 Boston built Puritan, a modern boat with modern ideas, and defeated the British challenger; New York built Priscilla and was defeated. Boston adopted the lead keel and cutter rig and won; New York held to her dead idols, rejected the keel and tried the sloop rig, and lost. In 1886 Boston won again with a newer and larger edition of Puritan, while New York scored a lamentable failure in Atlantic. Boston added Sachem to its fine schooner fleet, while New York points with pride to Speranza, built one year, only to be entirely rebuilt the next, and to Coronet; and this year proposes to regain her laurels by revamping the almost forgotten Palmer. Last year Boston yachting ended with a big boom for Thetis, while in the same class New York had only the remodeled Gracie to point to; this year Boston comes out in second class with a steel racer of the latest build, New York adds to the same class the poor old "Pokey," a relic that for her own credit she had far better have left in unbroken seclusion. This season Boston sends abroad to seek for fresh laurels a thorough going racer of modern build; New York sends as its representatives a yacht that has been aptly described as just fast enough not to win prizes, and another whose chief claims to distinction rest on her size and the elegance of her interior fittings; and now that one has won goes into immoderate self gratulation over the wonderful result.

In steam the same parallel exists. The year that Bristol sent out Stiletto New York built the Eureka, that after two seasons has not yet made a trial trip; and the advent of the Henrietta from Bristol last season was followed in New York by the Puzzle. Further in the same direction New York can point to the Meteor, whose engines never turned over, and which never left her moorings under steam until she had been engined anew in the East.

Nor is this all. While New York boasts of a fleet of pilot boats whose chief recommendation is that they can lie to and roll, Boston has the Hesper, a boat whose qualities to windward would put to shame anything that New York could put against her; while in the fishing fleet Boston has already many fast vessels built by competent men, and is even now adding another from the drawing-board of Puritan's designer. Boston has had for some time two schools of naval design, open all winter and well attended, where instruction is given by competent teachers. New York has various institutions where one may study anything, from theology to burglary, from law to pocket picking; but there is not an institution in the city that will teach a boy how to calculate the displacement of a vessel.

What, then, has Boston done in two years? She has built Puritan, Mayflower, Sachem and Titania. Her yachtsmen have worked together for Boston, and she has twice defended the Cup successfully. What has New York done? She has built Priscilla and Atlantic and rebuilt Gracie and Palmer, and is refitting Pocahontas. True, Cinderella has proved a success for New York as far as all American boats are concerned, and this year New York will have Shamrock. The course of Boston shows a thorough comprehension of the necessities of the case and the adoption of the latest and best means to meet them. Alert, wideawake and energetic, she has pushed to the front a man of ability, and has trusted him, with the best results. Free and unfettered in his actions, but aided by the counsel and cooperation of liberal and experienced yachtsmen, Mr. Burgess has fully justified the trust placed in him, and the result has been of incalculable benefit to Eastern yachting.

New York, on the contrary, has held with a firm grip to the old boats and traditions; secure in a blind confidence, she has neglected to make preparation in time; and when fully awakened to the necessity of some action she has gone on as nearly as possible in the same old routine, adhering to the old ideas and theories, learning nothing until it is too late. Two years since the evidence in favor of lead keels was all in, and to intelligent and unprejudiced yachtsmen it was conclusive in their favor. Notwithstanding this the owners of Priscilla declined to take advantage of this feature, while in the model of Atlantic, submitted at the same time, inside ballast only was proposed. The advocates of the latter model were then, as in the past, firmly opposed to outside ballast, and had the boat been built then she would have had all inside. In Boston Mr. Burgess was fully awake to the advantages of low ballast and by its means he beat New York that year, which fact so influenced the friends of the Atlantic that they followed his example. Familiar only with one class of model the attempt to build a heavy displacement craft with lead keel was as signal a failure in their hands as Puritan was a success.

Since then Boston had added both Mayflower and Sachem to her fleet, incontestible evidences of progress; while New York has been content with such work as the alteration of a few old and obsolete vessels. What has Gracie done in return for the money lavished on her last season? What is Palmer likely to do by virtue of an English counter and a new figurehead? What hope is there for Pocahontas in the fight with Bedouin, to say nothing of Shamrock and Titania? and yet it is by such work that New York is trying to regain the place she has lost. Boston to-day has a fine fleet of schooners—Fortuna, Gitana, Mohican, America, Sachem. We count the first and last, with Titania, as Boston boats, for the law "To him that hath shall be given," holds in yachting as in all else, and Titania, though owned in New York, will, if successful, be as much a triumph for Boston as Fortuna, built in New York but owned in Boston. What can New York boast in the schooner class? Montauk, Grayling (for certain racing work), for the rest a lot of old traps of the "Toboggan" order of architecture, with reputations once made on their speed down hill, but as incapable of going to windward with Sachem as the toboggan is of drawing itself up hill by its own cord. These are the boats that New York pins its faith to for what they may once have done, and these are the boats which are puffed and written up until a stranger would imagine that New York had a schooner fleet.

Two American schooners are now attracting much attention in Europe from the fact that they have just sailed a hard and stormy race across, for which we give them and their owners and skippers the credit due to a plucky and sportsmanlike race; but the entire efforts of the press of New York have been for some weeks devoted to the task of advancing New York yachting by glorifying these boats as the best we have. Praise without stint has been showered upon the Coronet, and she has received the popular indorsement as the latest and best that New York can produce. Of course, there are many yachtsmen who know just what the boat is, and who feel as we do in regard to the misrepresentation that has preceded her abroad; but not one has raised his voice in protest against the false and absurd statements made in her behalf or the harm and injustice to the yachting interests of their city.

This boat has been put boldly forward as the latest embodiment of modern ideas in yacht designing, as the result of over twenty years of trial and experiment since her rival, the Dauntless, was built; what is there in support of this claim? There is no apparent reason why just as good a model could not and would not have been whittled in 1865 as in 1885, and the changes and improvements made since that date are conspicuous in her only by their absence. The fact that she is a large vessel makes the deception easier, but compare her for a moment with a Fortuna or a Sachem of the same size and the fraud is apparent. What is there in appearance of hull, in rig, in underwater body, in ballasting or in construction that would place her beside either; while from a cruising standard it is only necessary to see her beside Intrepid to decide her place in the yachtsman's scale of beauty. It is true, we believe, that her main stairway is of marble, the decorations are modern and costly, there is plenty of stained glass, carved wood and brasswork; but strip her of these and her gold stripe and who will say whether she is a yacht or a coaster. The most foolish part of the whole business is that the deception is all in vain. Whatever their ideas as to beam may be, British yachtsmen certainly know a cruising yacht and are not in the least likely to be deceived by the stuff published in New York. But one result can follow. The only ones who are deceived are the friends of this class of vessel, and the day of their awakening is deferred still longer.

What has been the influence of the New York Y. C. on home yachting, has it, the first club in the country, led the way to anything higher or better, has it done anything for yacht designing, has it raised in the slightest degree the standard of seamanship or of yacht construction? These questions are very easily and briefly answered. The position which the club holds is an exceptional one; the oldest and strongest club in America, with a reputation to sustain, with a glorious past, and with a charge intrusted to it that any club might be proud of, what unlimited possibilities for the advancement of yachting has it not had, what has it done to realize them? Living in the past and satisfied with the record of what has been done, it has been content to drift on lazily and quietly, firm only in resisting all innovation and change.

New York has made some advance in the last few years, but for how much of it is the New York Y. C. responsible? That there is to-day a higher standard of seamanship, healthier ideas as to model, a more liberal spirit of research and investigation, and a better system of construction, is due solely to the small and much abused band of "cutter cranks," so called "Anglomaniacs," who by hard and persistent labor have paved the way for and made possible the construction of such a craft as Puritan, and that the ideas first put forward by them and now generally received, were not accepted long ago is due in a great part to the organized opposition of the New York Y. C.

What has been its course with regard to the America's Cup, intrusted to it for the promotion of international competition; has it regarded this trust as the highest honor that a club could hold, or has it carried it as a burden imposed by necessity? The races of the last two years have been sailed on fair and sportsmanlike terms, but the history of the Cup races will show that, starting with a position that was one-sided and unfair in the extreme, the club has been driven by public opinion to one concession after another, giving up the privilege of sailing the fleet against one yacht, then conceding a series of races instead of one, then selecting the defenders in advance, and finally matching boat against boat. None of these have been made willingly in the past, but each has been forced from the club by degrees. It must be said that the gentlemen who have been intrusted with the management of the races of '85-'86 and the present year have acted fairly and liberally throughout, but we are considering now the general feeling of the club, and while there are many members who look at the Cup in the proper light, there is a part of the club which looks grudgingly on every dollar expended in its defense, whose voice is heard after every contest, as in the complaint over the entertainment given to Genesta's owner in '85, and in the same complaint over the expenses of last year's races, and which was visible again in the curt and brief resolution over the first intimation of a challenge for this year.

So much was said last year about the expense of defending the Cup, the estimates running up in the tens of thousands, that it was worth while to look at New York's part of the work. Boston built the yacht and paid all the expenses of sailing her in the races. New York furnished the judges' tug for six days and an extra tug for three or four days, including the lunches on board. Besides there was cabling and correspondence, printing of rules, etc., and some incidental expenses. We do not include the club steamer and its expenses, as that is not properly chargeable to the defense of the Cup, but is of the nature of a private entertainment of the club for its members. There was also a cup presented to the owner of the Mayflower. It is evident that the bulk of the expense devolved on the owner of the boat and should be credited to Boston rather than New York, and the same is true of the previous year, except that then two officers of the club also built and raced a yacht in the trial races. In two years then it appears that the bulk of the work and also the expenses have been borne by Boston; now what is the programme for this year?

If Boston has to be relied upon again to defend the Cup, as now seems likely, why not express the Cup to the Eastern Y. C. at Marblehead, and rid the New York Y. C. of even the small amount of trouble and expense that now is imposed on it by the defense One other course is open to it, and one only—to build at once a yacht to meet the Thistle. It will not do to depend for a third time on salvation from without; to say nothing of the discredit of New York being entirely dependent on another city to do the work that belongs to it alone, the risk is too great. Mayflower has other engagements, her owner may not care to race her again for the Cup, or any one of half dozen contingencies may arise. New York has the skill, she has the yards for building, she has the money in abundance, as has often been proved. All that is needed is to awaken to the requirements of the present time, to realize that this is a world of movement, that everything is in constant motion, that nothing stands still; that what does not move forward must inevitably move backward. Boston moves; she has moved a long way ahead of New York of late. The Clyde moves, and Mr. Watson is coming here with a boat built, not under old English rules, like her predecessors, but for the rules under which she is to race for the Cup. Even the Yacht Racing Association of Great Britain moves and tosses overboard its time-honored formulas, and yet New York and the New York Y. C. sit still. While Boston has Mayflower and Sachem, while the Clyde has Thistle ready to send across, while yachtsmen the world over are casting aside old ideas and studying all that is new, is this a time for New York to go on quietly talking of Una, Julia and the sloop Arrow, or even of Mischief, and to delude herself with the idea that she can still lead the yachting world with Pocahontas and Palmer?

What is to be done? Everything. First to get rid of the old ideas as to rule of thumb—the general admission that there is such a thing as naval architecture would be a decided step in advance. Perhaps the greatest stumbling block in the way of progress has been the distinction over the so-called "practical man" that has long maintained in New York. According to this distinction the man who can whittle a model and has one or two lucky hits to point to, is all right; the man who, in addition, has knowledge or "book-larnin'" enough to know that model represents a certain amount of water displaced, and to calculate it, is all wrong; a dangerous and mischievous fellow that one would do well to avoid.

There was a time, perhaps, when there was some ground for the distinction between the speculative and unstable theorist and the man who put his common sense into his work, but it must not be forgotten that he put in also all the extra learning he could get, often very little. It is to the practical men of the past, the real practical men, that American shipbuilding is indebted for much that is useful; but while these men possessed often but a very limited education it was not because they despised or underrated knowledge, but because the means at hand were so limited. They learned where they could and by hard work laid up in time a most valuable stock of knowledge; but, in default of the school of science or even the public school system of to-day, the road was a hard one and there was no time for anything but the most essential facts. With the materials at their disposal they did wonders, but it is only fair to suppose that with such facilities at hand as are offered to-day they would have risen far above the ranks in which the "practical man" is now found.

In the records of mechanical work many instances may be found of great ends accomplished by sheer skill with entirely inadequate means, work done only by weeks of hard labor, but that would now be disposed of by the aid of steam in a day. All can admire the skill that is displayed in such work, but there is no one who would go back to such methods and give up the aid of the steam engine. The great tools with which all men work are the hard facts of science, and the man who rejects one of these is as far behind the times as he who prefers the sawpit and whipsaw of the past to a modern bandsaw. Mr. Burgess is a practical man, an educated and intelligent worker, an experienced yachtsman, a man of progress and ideas; Mr. Watson is a practical man, trained to every detail of the shipwright's calling and with a broad and liberal education; will any one say that they are not to-day the equals of any in the business; but they are not the kind of "practical men" that New York has chosen for guides.

Everywhere throughout the yachting world is visible bustle and activity, everywhere but in New York. Boston is busy fitting out Mayflower for a voyage to England and it is not unlikely that one or two of her schooners may accompany her; on the Clyde the ways are laid for the launch of the Thistle; Wendur is preparing for an unusually importa nt season; at Southampton Irex will soon be afloat and ready for the race for the two New York cups; about the coast the coming jubilee races have awakened the whole British fleet. What is New York doing? Oh, she has written to Boston to borrow Mayflower and she has sent Dauntless and Coronet to represent her abroad.

To speak thus is by no means a pleasant task; it will make us few friends now, and it is certain to gain us some enemies, for we have told some pretty hard truths, but the need for some warning is imperative if New York is not to lose her place forever. Eastern yachtsmen know full well the truth of what we have said; foreign yachtsmen know it, and it is time that those whom it most concerns should awaken to it. We could easily fill our columns with far more interesting reading; we might wave the starry banner over the great national triumph, the victory of the Coronet over the Dauntless, or tell how Thistle is sure to be beaten next summer and the Cup still retained in New York, but there are plenty to do such work and few enough who dare to speak out in season. Twice New York has been saved through no work of her own; the third occasion has now arisen. Will she trust blindly to the chances of help from without, or will she go in boldly on her own responsibility, and do what is easily within her power, make a good fight for the Cup with a home built boat and lose it fairly if she is not capable of holding it unaided. Such a defeat would be less galling than to be indebted to a third Colonial power that a few years since she openly derided and ridiculed. The opportunity is before her for immediate action; if she neglects it the blame must rest squarely on the club which will have proved itself unworthy of the great charge intrusted to it.

CORONET AND DAUNTLESS.—The two checks for $10,000 each, deposited with the treasurer of the New York Y. C., have been delivered to Mr. Bush, and he has sent $500 of the amount to the Beecher Memorial Fund. Coronet sailed from Queenstown on March 31 in a light breeze, afterward increasing to a gale, with a very heavy sea. The gale continued next day, and at 6 P. M. the yacht was hove to, lying to for 10 hours. At 10 A. M. on April 1 the gale decreased, and the yacht continued on her way, arriving at Cowes all right. Several seamen were hurt and nearly washed overboard. Dauntless remained at Queenstown, Captain Samuels and five of her crew taking passage for home on the Adriatic. The report is current that he left the yacht after a quarrel with Mr. Colt over the navigation of the yacht, ascribing the loss of the race to the owner's interference, but the report lacks confirmation. It was understood that Captain Samuels only engaged to take the yacht across, and was not to stay by her, so there is nothing strange in his coming home as soon as the race is over.

BUILDING NOTES.—At the Atlantic works Mr. Forbes's steamer is partly plated up and the deck beams are in place.... E. L. Williams will have his yacht Prince Karl out of the shop this week and will begin a cutter 27ft. over all, 23ft. l.w.l., 8ft. beam at deck, 7ft. at l.w.l. and 4ft. 6in. draft, with two tons of iron on keel, for several yachtsmen of Rochester, N. Y.... Lawley & Son are putting 3,600lbs. of lead on the keel of the sloop Dream, and are replacing the mast and topmast of the Echo. They have Mr. Saltonstall's cathoat in frame, and her keel of 1,600lbs. past.... At Bath, Maine, C. B. Harrington is at work on a schooner for Mr. Henry Stanfield, of New York, former owner of the Periwinkle, and a sloop for E. B. Mullet, jr., of Freeport, Me.... Shamrock. Mr. Mumm has the decks nearly laid and the hull joinered, and it is expected to launch the latter part of this month.

MAYFLOWER'S PASSAGE.—Mr. Chamberlayne's reply to Mr. Burgess's challenge has not been received yet, but all the arrangements are completed for sending Mayflower across, and the work of rigging her can be commenced at any time. The proposed ketch rig will have a main boom of 54ft., a mizzenmast well forward of the position in a yawl, and a shorter bowsprit. It is also possible that her bowsprit may be fitted to house, with steel bitts. It is reported that Mr. Arthur H. Clark, an old Boston yachtsman now resident in London, who sailed the sloop Alice across in 1866, will take Mayflower across, and that Capt. Crocker will sail her in England, while Capt. Stone will command Mr. Alanson Tucker's schooner, Clytie; but these rumors have not yet been verified.

THE YOSEMITE — VANDERBILT COLLISION.—This long contested case has lately been decided by the Court of Appeals against the Yosemite, on the ground that while she displayed the proper lights for ocean navigation she did not carry the two white range lights that vessels navigating rivers must carry.

IN COMMISSION EARLY.—The little cutter Saracen, Mr. W. P. Towle, is in commission at Boston.... The catboat Cruiser was the first out in New York, having been about the Bay and the Sound between Staten Island and Larchmont for five or six weeks.

BEDOUIN AND TITANIA.—The report which has been generally published of a proposed match between Bedouin and Titania for a silver pint pot filled with gold dollars is contradicted by the owner of the cutter.

THISTLE.

IN addition to the dimensions made known last week the *Field* of March 26 publishes the following particulars:

"The most prominent fact obtained is the absence of a centerboard, which appliance it was believed would be essential to a successful contest with the American cutters, with whom the centerboard has been a necessary adjunct. The cutter building at Glasgow is strictly a keel boat, and does not display any considerable variation from the design Mr. Watson would have adopted in building a first-class cutter for British waters under the recently-altered rule of measurement of the Yacht Racing Association. The Thistle will of course have some more beam for length than the British type of cutter has had, and less depth of body. With forefoot cut away, as in Mr. Watson's yachts Vanduara, Marjorie and Wendur, the bow of Thistle will neither show so fine nor so long as in these vessels; but, with considerable camber in the keel, the cutter will show easy lines fore and aft, and, with a very long counter, will lose her round side in finely-turned quarters. The bow shows no flare out, as might have been anticipated from Mr. Watson's earlier yachts. Indeed, the cutter, above water, will be a very handsome vessel, having some tendencies toward the model in fashion a dozen years since, when outside ballasting had not been adopted to its fullest extent, and hulls had not been narrowed and broadsides flattened as in recent years. Taunt and weighty spars will more certainly indicate speed than the look of the hull to those accustomed to the later models of the British type. The Thistle is altogether built of steel, the Seimens-Martin brand being used. The plating below is 3/8in. thick, and the upper plates are 5-16in. in thickness. The hull is strengthened with steel stringers, diagonals, keelsons, etc., and perforated bracket plates are introduced in the wake of the rigging. Steel plating underlies the covering boards, and the foredeck is strengthened with steel plating to prevent the 'panting' of the bow in a seaway. The cutter's hull is, in fact, as strong as steel can make it. Partial bulkheads support the cabin floor, and forward there is a collision bulkhead in case of accident. The covering boards and deck fittings are of teak, while the cabins are to be fitted up with American walnut, and are to be upholstered in cretonne; yellow pine decks complete the woodwork of the yacht. The bowsprit gammon-iron, of steel, is amidship, and the bowsprit, like the mast, boom and topmast, is of Oregon pine. The spars are taunt and heavy, and the topmast, unlike that of the Mayflower, is very long. The canvas is being made by Ratsey & Lapthorn, of Cowes, and of course will be fitted and stretched on the Clyde before Thistle sails for New York. The cutter is to be sailed across the Atlantic under her racing mast, but with trysail and large mizzen. The cutter is to be fitted with Cantelo capstan, modified by the designer to fit the foredeck of the Thistle, and is being made by Messrs. T. Reed & Son, Paisley.

"Although the cutter's hull is about finished, no date has been fixed for launching, over which event there is of course a good deal of expectation and curiosity excited. The hull is at present completely hid under a shed, and no visitors are admitted unless immediately interested in the cutter.

"It is intended to paint the Thistle black, with copper-colored bottom, but the hot American sun may call for some modification of the black color. John Barr, of Sourock, whose successful sailing of the 40-ton cutter Lily qualified him for a reputation in the English Channel, will sail the Thistle across the Atlantic, and take charge of her in the American matches. John Barr's success in sailing the 20-ton Clara, built by Fife, in American waters during the last two seasons so far has given him experience of the American style of yacht sailing, as well as some knowledge of American weather and waters. He will have a Clyde crew with him, and will, it is expected, sail the cutter at her best. At any rate, the conviction in Clyde is that a better man could not be obtained."

Though ten days have elapsed since the arrival of the challenge in behalf of the Thistle, nothing has yet been done toward utilizing the limited time at the disposal of the defender. The date set in the challenge for the first race is just six months from last Monday, giving the defender one week more notice than the deed of gift called for. Of course a good deal has already been said about the ease of building a boat in New York that will defeat the Thistle to a certainty, but all that has been done is to write as follows to General Paine for the loan of the Mayflower.

NEW YORK, March 29, 1887.

General Charles J. Paine, Boston, Mass.:

DEAR SIR—Having been officially informed that you desire the dimensions of the Thistle, I avail myself of the earliest opportunity to submit the same. They are as follows:

Length from fore part of stem, under the bowsprit to the after side of the head of the sternpost	93ft.
Length of waterline	83ft.
Main breadth to outside of sloop (?)	20.3ft.
Depth of hold from tonnage deck to ceiling at midship section	14.1ft.

Which is a transcript of the register from the English Custom House.

The committee to arrange detail of races is the same as that of last year.

May I personally ask you whether, if the races for the America's Cup take place early in October, the Mayflower is likely to be in America; and also whether, if here, she will be a competitor in the trial races to select a vessel to defend the cup?

Wishing you great success in all the undertakings of the Mayflower, which both she and you so richly deserve, I am yours truly,

JAMES D. SMITH.

General Paine's reply is as follows:

No. 22 CONGRESS STREET
BOSTON, Mass, March 30, 1887.

Dear Commodore Smith:

I have yours of yesterday, and am much obliged for the information you give me.

As to the Mayflower, she must go to England, unless unreasonable conditions are made about Arrow's cup.

In the letter to Mr. Chamberlayne, (Arrow's owner), Mr. Burgess said that we wished the races to be early in August, so as to give the Mayflower time to be at home for the autumn contest here, but Mr. Chamberlayne's letter, probably now on the way, is in response to a cablegram, which did not refer to time.

I need not assure you that if the Mayflower was at home that she would, if I owned her, be in some way made available for "cup" purposes if wanted. With many thanks for your kind wishes. I am very truly yours,

CHARLES J. PAINE.

If New York is to take the only honorable course open to her, to stand or fall squarely on her own responsibility and without outside assistance, which latter, as the above letters show, is extremely precarious, then every day lost is so much thrown away from chances that at best are very doubtful. In spite of bluster and incomplete vessel yachtsmen realize that Mr. Watson's boat with Captain Barr in her is a most formidable antagonist, and she has much in her favor in that she is almost ready for a trial trip, while if a boat be built to beat her, a thousand and one preliminaries are to be settled, and at best a month must elapse before the work of construction is begun. Of course in great emergencies special exertions are often successfully made to meet them, as in Eckford's great feat in the war of 1812, when he built a fleet on Lake Erie in sixty days, or fifty years later, when Captain Ends performed a no less wonderful feat in constructing a fleet of gunboats for the Western rivers. These facts are good to refer to, and read well in history, but they do not alter the other indisputable fact, that six months is a very short time in which to design, build and lick into racing shape a yacht that will have a fair prospect of winning.

The time for talking has passed, if the coming fortnight does not see one substantial step taken toward building a yacht of 85ft. waterline, then New York must accept for an indefinite time a subordinate place in the yachting world of America, at which Boston will be the head; and further, she must depend almost entirely on Boston as to whether she is able to retain the Cup.

If has been suggested that if a boat be built it shall be of such a size as to completely overpower the Thistle, in fact to outbuild her, but the unfairness of such a course is apparent, and now such a victory would generally be considered a hollow one. After the New York Y. C. declined to notice the request of the Royal Clyde Y. C., that it should select the length of the yacht it would prefer to race, the matter or size was open to the challengers, and they have chosen that of the largest and best American craft, making no attempt to outbuild them. Thistle might well have been 90 or 95ft. long, in which case it would have been necessary to have built for the same size, whether or no it was desirable; but, now that her designer has not availed himself of any such advantage, the only course, in fairness, is to build to the same length as Mayflower, Priscilla, Atlantic and Thistle.

Contrary to the expectations of many, in which we shared, Mr. Watson has built a boat of considerable beam, and thus departure from the long trodden path has naturally excited some comment here. Of course there are many who are ready to proclaim it a conversion to American ideas, and to dub the new boat a keel sloop, which pleases them and hurts nobody. It is evident however, that the Scotch are taking an eminently practical course to capture the Cup, and are not going to let any matter of sentiment stand in the way of success. It would have been gratifying to all friends of the cutter to see the experiment in which Genesta and Galatea failed tried again in other hands and in the weather which October racing is likely to find, but the races are to be sailed under certain conditions in certain waters, and under certain fixed rules, and Mr. Watson has evidently studied all these and endeavored to make the most of them, for which no one can blame him. No doubt he, with the west, would have preferred to win with a Marjorie or a Vanduara rather than with a wider boat, but he is keen enough to realize that the conditions of the past two seasons do not favor such a craft, and he has sacrificed sentiment to hard sense. It has been repeatedly claimed that the New York rule favored the narrow cutter, and on the other hand the friends of the cutter have claimed that the tax on sail was merely nominal, and that the wide boat did not pay fully for her large area. Mr. Watson is evidently of this latter opinion, and as practically length is taxed and sail is not, he has built a wider and consequently shorter boat, with bigger wings, to fit the rule, she will race under. To say that this special instrument for a peculiar purpose is a proof that British yachtsmen have abandoned their national type and adopted American ideas is utterly absurd until we see what the next two or three years will bring forth. Whether or no Thistle wins here will have little influence on building for use in British waters, and while the experiment will throw some valuable light on the question of beam, it is far more likely that it will lead the American yachtsman to build a still narrower boat than the British yachtsman to build a wider one, or even as wide as Thistle. The FOREST AND STREAM has pointed out for some time the wide and hitherto unexplored field between the narrow cutter and the latest American boats, between 5½ or 6 beams and 3½ beams, in the hope that Americans would be the first to take advantage of the opportunities it promised; but it looks now as if Mr. Watson had headed them off, and that if the happy medium should perchance lie between the extremes hitherto adhered to by the two nations, he is about to reap the benefits.

THE SECOND CRUISE OF THE PILGRIM.

PART IV.

WE spent several days ashore, then hauled the Pilgrim alongside a wharf to clean and paint ship. She had been coated with pot lead, which had been smeared above the waterline, and much of it below had been washed off by the rough waters we had met upon the voyage. It was very difficult to scrub and wash off, and I was so disgusted with its greasy nastiness that I resolved thereafter to use only copper paint. It is astonishing how soon a boat's bottom will roughen. The last year's paint had received a coat without much previous smoothing down, and the bottom was cracked, caked, blistered and peeled to such a state that it must have impeded our speed in a marked degree. We set to work with scrapers and sandpaper and made the planking, keel, deadwood and iron smooth as possible, that is, of the feel of printed wall paper, and then put on the pretty colored copper bronze and saw it dry before the tide came up to it. The manufacturers direct its application just before putting the craft into the water, but I am sure it is better to let it harden a little in the air beforehand, as we have tried it both ways several times.

The black topwork was smoothed and given a thin coat, the boat was cleaned and covered again with gold paint and shellac, the oak rail was sandpapered and oiled, and lastly, the house was painted, and gauged and dotted with oil and turpentine, after much expense of elbow grease. Then the letters of her name were scoured and shellaced, the triced up ropes laid down, the fenders taken in, the masthead tackle that had heeled her against the wharf was let go, and the incoming tide took the Pilgrim to its bosom like a bride and floated her off to her mooring. She was as pretty as a picture and ready for the pretty girls who were soon to test her hospitality upon sundry excursions in the bay. Visits were made with friends and relations to many places of interest, and two weeks were consumed before much beyond the usual yachting experience in sheltered waters occurred, but then we had a trip that is worthy of record. Jack had gone back to school, Charlie and I were officers and crew. The former had been an apt learner from his captain, and I felt that I could depend upon him for a nimble and systematic worker. Three ladies and one gentleman with wraps, parasols, bundles and baskets, were set on board one morning at 9 o'clock, and we got under way for a day's sail and picnic down the western bay. It was a fine sunny day, with plenty of breeze from the northwest, and the passengers of the Boston and Bangor steamer and the friends ashore gave us many good-bye salutes as we filled away. We ran rapidly over toward Turtle Head, then back to the main shore, and flown past Northport, Duck Trap and Lincolnville, with the intention of calling at Camden and spreading the tablecloth upon an opposite point. The wind kept hauling more and more southward, and, when we got around Great Spruce Head, it came out directly ahead, the sea began to make, and we began to tack ship. It does not take long to kick up a sea anywhere in Penobscot Bay, and soon we were pitching the nose pole under and throwing spray over the delighted passengers. One of them in particular had asked me during a sail in a light breeze the previous year to "put the rail under," and had expressly stipulated as a condition of her going, that I must do it this cruise for her especial benefit. I kept all sail on in the sharp puffs from the mountains that whispered caution, and did get the rail under slightly, but the lady in question was not easily satisfied, and kept saying, "Do it some more, Doctor, do it some more." It soon became evident the sea breeze was making us hungry, time was passing in the struggle to windward, and we should not reach Camden till so late in the afternoon that we could not get home by daylight, and I eased off sheets and abandoned my original intentions with a prospect of a better place for anchorage. I looked up the islands upon the chart and headed around Isaign Island for Job's Island in order to enter Gilkey's Harbor from the southwest.

In looking out the islands, I perceived a peculiar similarity of names not noticed probably by modern mariners. Southwest of Islesboro will be seen Lime, next to it Lesell's, and then Saddle Islands. The French named many of the islands along the Maine coast, and corrupted and uncorrupted Francais is recognized by the scholar in the mouths of the ignorant and upon the charts of the scientific. For example, Grand Menan, Mt. Desert, Isle au Haut, etc., the latter often pronounced Mt. Dessert and Isle of Holt. I think Lesell's is corrupted La Selle, only French for the saddle, and the other island has been called Saddle by some one who translated the name of the original and applied it to the wrong piece of land. These islands appear as one in entering the eastern bay from the southward, and I can imagine two mariners discussing the question of identity and deciding that one island was the Saddle and the other La Selle, as the course of their vessels opened clear water between the two, and they thus made geography.

This was new water to me, and I took as much pleasure as my guests in opening out the pretty shores of the several islands that form Gilkey's safe haven. We dropped an anchor near the shore of Spruce Island, in sight of the lighthouse, and tied up the sails loosely, set the ladies ashore, made a pot of coffee, put some of our comestibles and the contributions of the ladies in the boat and abandoned ship for awhile for the sandy beaches and forest crowned hills of the island. What we did ashore is done many times a year everywhere. We enjoyed a feast of good things, made merry over little speeches, played with the sand and pebbles, strolled through the woods, and dug a chew of gum all round. The latter had to be done, for much as Puritanical pride may be humbled by the confession, it is a fact that a large proportion of Yankee girls—and men, too—like to chew gum. When we returned to the landing, Charles was missing. Suddenly a deep and natural caw—caw—caw, attracted our attention to a tall spruce that leaned over the shore, and there was my seaman, with legs and arms spread out like a bird about to fly, coolly smoking a cigar. His appearance was so comical that it made us roar. Then he climbed down and we went aboard the cutter and got underway. The wind had hauled back to the nor'-nor'west and was dead ahead for Belfast, and we had a lively run along the Isleboro shore till we opened out Belfast Bay. Then it was more than lively. The wind was puffy and strong, the tide ebb, the sea heavy, and the Pilgrim plunged her bow under and had her lee rail buried very often.

When we had arrived abreast of Turtle Head matters looked serious. It was nearly sunset; the sky to windward had streaks of lead color in dark gray clouds that portended mischief; the wind and sea had become very heavy; the cutter was plunging and working to windward, but nearly every sea swept over the bow, rolled along the lee rail and buried it a foot, often coming up to the top of the house and upon the cockpit seat; the ladies were huddled in the cockpit and companionway considerably frightened, though the one who wished the rail put under preserved her *sang froid*, and in answer to my inquiry if she was satisfied the rail had been under enough, said: "If it is necessary to put it under a few times more in order to get home, I have no particular objections; but you need not do it any more just for my personal pleasure, as I am abundantly satisfied." The trouble was I could not help putting it under now, and taking in the prospect of reefing with a precious load and two green hands in that troublesome sea, which made it impossible for me to leave the helm, the increasing gale, the approach of night, the long beat to windward before a lee shore could be reached, the prospect of sea, tide and leeway sending us into the long lee bight upon the left side of Penobscot River; the probability of a dark, wild night out, with everybody wet, cold and hungry, and the possibility that accident or exposure might hurt those dear to us, all these passed before my mind rapidly in my anxiety to do the best thing for comfort and safety. Mr. Knowlton was for keeping on toward Searsport, already a point in the weather bow, and said he could get a carriage there and take the ladies home.

While discussing the possibility of reaching six miles to windward in such a sea and blow and tide, with staysail and reefed mainsail, and Charles was tying up the staysail, a sea knocked the bow around three points, a strong blast of vindictive wind struck the mainsail, bending the boom upward like a fishpole, a sea swept along the lee side, and the cutter careened till a bucket of water poured into the cockpit. The gravity of this event may be understood by remembering there was 5,000lbs. of keel and low-stowed lead; the cockpit was only 4ft. wide, and its staving was 6in. high with a 9in. seat upon it. It was a foretaste of what the night promised, and I knew we were in for a life and death struggle if we remained in that storm swept bay that night in late September. I had made a mistake in standing across the bay. I should have hugged the left shore of the bay, where one inlet would have given us a little shelter, or we might have worked in smoother water into Belfast. It was too late now. The shore was se en miles away and no easier reached than Searsport, and, if we had reached it, I doubt if our anchors would have held, as the night turned out its wrath upon everything afloat. What to do? Reef, get out a drogue, or run to leeward for a harbor? Reefing might be done, but then the long night of exposure and danger. A drogue would break the sea, but we should drift either upon a lee shore or out to sea. A haven to leeward could be found before dark at Castine and Sabbath Day Harbor. The latter was too far. The outer buoy must be sighted before dark to run into Castine safely. The bucket of water decided the matter. I drew the helm toward me and slacked off the main sheet, which was taut as steel. The jib sent her around rapidly and she sprang from sea to sea, rolling, roaring, hissing, cutting, sheering, diving, soaring and darting hither and thither, every motion full of grace and ease, but ever fiercely vexed as if a great task was before her. The ladies recovered their gayety and poked their heads out to look at the wild scene and the wave-lashed rocks of Turtle Head as we flew past.

A wave lifted the craft around and threw her quartering to the sea; the wind filled the mainsail with a savage blast, the cutter careened to the top of the house, the water poured into the cockpit, and the main boom dipped half its length beneath the waves. The pressure of wind was so great that it shot the craft round an arc and up into the wind in a moment, though I helped the latter part of the movement by shoving the helm hard down. The change came so unexpectedly, so mysteriously, so furiously, that I was alarmed. I never saw a boat cut such a caper; it seemed as if Boreas had come out of his northern cave, picked up Pilgrim by the truck and twirled her around by the mast. I was carrying too much sail even for running, eager to make the buoy inside Dyce's Head before dark, as the sun had set in gloom. Something had to be done quickly. I ordered the peak of the mainsail dropped and the end of the gaff fastened to the mast, and kept off again. This did not diminish her speed much, but she went along much easier and steered better. White caps and tumbling seas were all around us; the flags and sundry running gear were trailing in the water; the staysails lay in a bunch like clothes for the laundryman's basket, and were hauled inside to be dried readily; the boat crept up to the stern and shot by on a comber till the painter checked and jerked her back; the cutter rolled and sped onward before the gale; the ladies recognized the easier movements and absence of shower baths and looked pleased and smiling. Frank stood upon the house, holding by a back stay, taking in the scene and wishing for an artist who could paint such a picture; Charlie sat by the mast awaiting orders, and I watched and steered with all my might until my good right arm was strained and painful. (Four months have passed since then and it has not ceased to feel rheumatic twinges and aching pangs in damp or stormy weather.) It was a race against time and we won it. We sighted the outer buoy just at dark, swept in past Nautilus Island and the beacon upon the river into quiet water, and succeeded in getting hold of a mooring and lowered sail by the lights of the stars and fishermen's nuts. Then, thankful and tired, we began the pleasant task of cooking supper, and the ladies and Charlie soon had a spread that all will long remember and Lucullus would have enjoyed, and he prepared for it by cutter sailing in a northwester. Frank and the ladies went ashore to the Castine House, and the crew remained by the ship. The gale was strong all night and, shod creaked as we were by the high hills upon which Castine is built, the wind played a mournful tune in the cordage all night.

The passengers spent the forenoon riding around the town and visiting places of interest. Castine is located upon the side of a very high ridge, which is surmounted by the well preserved earthworks of the old English fort. There is a magnificent view from the parapet of upper Penobscot Bay and some reaches of the Penobscot and Bagaduce rivers. The ridge terminates in Dyce's Head, which is crowned by Castine Light and quite a number of very pretty summer villas. Nautilus Island lies upon the southern side of the harbor and has a fine house, boat house, steam launch and some boats, as accessories for the pleasure of Mr. Williams, of New York. The ridge runs up along the right bank of the river and is finally lost in the fertile farms of Penobscot township. A long, heavy, rusty cannon lies upon the esplanade toward the town where French and English and Americans and English fought for possession. The location of this fort is most advantageous for defense and offense. If modern astillery were properly mounted in it, it would command the eastern bay and defend the eastern approach to Penobscot Bay.

Castine is devoted to commerce. It has no manufactures and is only connected with the outside world by puny steamers and packets. It has a fine hotel and all the facilities for summer pleasure seekers, who are beginning to appreciate it and to come in greater numbers every year. Impressed by the early bed time of its inhabitants and the great quietness of the settlement after 9 P. M., I asked a citizen what supported the place. He answered promptly, "Fishing, pensions, normal schools and summer visitors." We made sail at 11 A. M., when the tide served, and had a pleasant run back to Belfast, with three lower sails set, and all hands were glad that the excursion had been increased a day by the tempestuous weather. CAREWELL.

A SAILING DORY.—Perhaps some of our readers who have used similar boats can answer the questions in the following letter: *Editor Forest and Stream:* I have been much edified by the recent letters from Mr. Clapham and "C. W. L." on "Canoes vs. Sailboat." I wish to get up a small boat mainly for fishing in the waters of Peconic, Southold and Gardiner's bays, L. I. First of all I seek safety, then comfort, speed last. My main idea is that if I venture in my little craft down to the sea bass banks, off the "green hill" on Gardiner's Island, and a blow should happen to come up, I will stand some chance for my life while running for a harbor. It would be desirable, too, if the sail could be arranged to ship to pass under a couple of bridges, for then I could and anchorage in the creek which makes up into the farm to which I move in Apr.1, but this is not absolutely necessary if it would be unhandy. I have in view a dory, 11ft. 4in. over all, 54in. beam and about 20in. deep. How would it do to take that dory, deck it over fore and aft, about 3ft. each way, run a 4in. deck around the sides with a 2in. coaming, like the "ducker" illustrated by "C. W. L.," put in a centerboard—one of Atwood's galvanized, say—then step a mast, portable, if convenient, carrying a leg of mutton sail, after the style of those used by the New Haven's sharpies? The dory is V-sterned, and I should imagine would be a pretty safe craft, there would be space for lockers fore and aft, and the boat would be provided with rowing gear, of course. Is there any objection to such a boat, and can it be improved upon without much expense? Would ballast be required? Crew, man and two boys, say 300lbs., with tackle, etc. Will the "boat sharps" kindly give me their ideas, by which, no doubt, many besides myself will be benefited. —ALBATROSS.

THE RECORD OF THE WITCH.—The full record of the prizes won by the little cutter Witch, illustrated in the FOREST AND STREAM of March 17, is as follows. Last season she carried nearly 1,000lbs. more ballast, making the increased draft over the drawing: Races, 1884—3 championship, B. Y. C., 2 firsts; 1 sail off, B. Y. C., first; 1 Hull, open, H. Y. C.; 1 B. Y. C., open, second, total, 6 starts—3 firsts and 1 second. 1885—3 championship, B. Y. C., 2 firsts (ruled out for fouling Per); 3 championship, C. Y. C., 2 firsts; 1 Lynn, open, L. Y. C.; 1 Hull, open, H. Y. C., third; 1 match race, first; 1 fall match, B. Y. C.; 1 Salem match, S. B. Y. C., second; total, 11 starts—5 firsts, 1 second, 1 third. 1886—3 championship, B. Y. C., 3 firsts, 3 championship, C. Y. C., 3 firsts; 2 championship, S. B. Y. C., 2 firsts; 1 Hull, open, H. Y. C.; 1 Beverly, open, B. Y. C., first; 1 ladies' race, C. Y. C., first; 1 fall match, C. Y. C., first; total, 12 starts—9 first prizes.

SUMMARY.	1884.	1885.	1886.	Total.
Starts	6	11	12	29
First prizes	3	5	9	17
Second prizes	1	1	0	2
Third prizes	0	1	0	1

RAJAH.—Mr. Jas. Beecher has sold his cutter Rajah to Mr. H. W. Eaton, of Larchmont, owner of the yawl Aneto.

YACHTING AT DETROIT.

Editor Forest and Stream:

The following dimensions of the cutter Nona, Michigan Y. C., may possibly interest some of your readers, as she has held the championship of the club in the fourth class since she was launched, some three years ago:

Length over all	24ft.
Length, waterline	20ft.
Beam extreme	6ft. 2in.
Draft extreme	4ft. 4in.
Iron keel outside	1.25 tons.
Iron inside	1.25 tons.
Total ballast	2.50 tons.
Mainsail, luff	20ft.
Mainsail, foot	28ft.
Mainsail, head	19ft.
Staysail, luff	23ft.
Staysail, leech	30ft.
Staysail, foot	16ft.
Jib, luff	28ft.
Jib, leech	21ft.
Jib, foot	16ft.
Topsail pole	24ft.
Topsail club (foot)	24ft.
Balloon jib	36x36x26ft.

I have compared her rig to the cutters east and with the craft in "Small Yachts," and find that her rig is enormous for her size, still she is not oversparred and carries her sail as long as the yachts in the second and third class. With this rig I knock around alone all over Detroit River and Lake St. Clair, about 17×30 miles, and find her as comfortable and safe as could be desired.

The design has just been completed for a compromise racing sloop 40ft. over all, 34ft. 9in. l.w.l., 13ft. beam and 5ft. draft, with counterboard and 4 ton lead keel. The Detroit Dry Dock Company are building her, which insures the finest class of workmanship. She will sail in the second class I. L. Y. A.

The keel sloop Jennie J., now holding the I. L. Y. A. championship in the third class, will have more head sail and her friends thinks she will be "more invincible" than ever this year.

Petrel, 37ft., owned by Mr. Markhausen and others, has been sold to some young Corinthians who show their enterprise by going to work this early to fit her out.

Ramona, schooner, 40ft. l.w.l., designed by C. F. Hodges, will have new foretopmast and probably a lug foresail. She is 40ft. l.w.l., 13ft. beam, and 5ft. draft with some 5 tons in an iron keel outside. She is a clean cut, handsome and speedy craft, and although the work of an amateur, her design would reflect credit on many so-called professionals. Schooner Crusader has been sold, her former owners forming part of the syndicate who are building the above-mentioned compromise sloop. She is to be named City of the Straits, and is to be a representative Detroit yacht in the I. L. Y. A. races, and is to be owned by an organization called the City of the Straits Yacht Racing Association.

There has never been so much interest in yachting on the lakes as at present, due greatly to the series of sweepstakes races of last fall on Lake Erie, in which the sloop Fanchon, of Toledo, carried off all the honors. Detroit is going to have something to say in the matter this season, and has built three yachts for the purpose of getting one fast enough to sweep the inland seas. Two are very shoal skimming dishes, and one a deep, large displacement craft.

WAVE FORM.

A NEW CUP DEFENDER.

AS we go to press the news comes to us that General Paine has closed the contract with Messrs. Pusey & Jones, of Wilmington, Delaware, for a steel yacht 88ft. l.w.l., and of the same general proportions as Mayflower, but with a clipper stem. The new boat, of course designed by Mr. Burgess, will be delivered by July 1.

PRISCILLA.—At her builder's yard, Wilmington, Del., further alterations are being made in Priscilla, her after sail being increased by a longer boom and more hoist, the mast being lengthened 3ft. at the heel. An iron keel 16in. deep will also be added, but no lead will be run in it, the only object being to move the center of lateral resistance aft sufficiently to allow the increased after sail. Captain George Cooley will command her again this season.

DORCHESTER Y. C.—Officers: Henry W. Savage, Com.; W. D. Hodgkins, Vice-Com.; W. B. McLellan, Secy.; S. G. King, Treas.; Hartford Davenport, Measurer; W. L. Dearborn, Assistant Measurer; W. H. L. Smith, Coolidge Barnard and C. H. Nute, Directors; L. M. Clark, H. S. Carruth, Frank Gray, H. B. Callender and E. H. Tarbell, Regatta Committee.

ATLANTIC.—Mr. Edward C. Homans, the purchaser of Atlantic, has been elected a member of the New York Y. C. He will give the boat another trial this season after making some changes under the direction of Mr. Philip Ellsworth, the modeler of the yacht, and he hopes to have her in condition for the trial races.

THE SAIL AREA OF YACHTS.—A very large proportion of the many questions that come to us each week relate to the amount and disposition of sail that a yacht can carry. The question is a difficult one to answer even when one is familiar with the boat, but it is impossible to do so with any degree of certainty when only the most meager particulars of the boat and her use are indicated. The idea seems to prevail with many that there exists some rule or formula by which, if the length be given, the sail area may be accurately computed, but, on the contrary, the calculations used are only of value to one who is thoroughly familiar with the boat, her ballast, intended use, and other considerations which govern the selection of a sail plan. The calculations themselves are of a very simple nature and easily applied by any one to whom the principles are known. In small yachts these principles are laid down in a plain and simple manner, the calculations being given in detail, and we recommend to those desirous of improving their boats a careful study of these elementary principles. With these once understood the yachtsman has in his own hands the means of judging the value of any alterations in his craft, a far more reliable guide than any set of figures furnished by some one to whom the boat and her individual characteristics are unknown. Figures alone are but a poor guide in such matters, but in the hands of a man who understands his boat they may prove a most useful aid, and thanks to "Small Yachts," their practical application may easily be acquired.

TORONTO SKIFF SAILING CLUB.—Along the bay front of Toronto are a number of long, narrow, two-story houses, each being divided into compartments about 10×20ft. square, the lower floors opening on a platform at the water level, being used for boats, while the floor above was used by the lessee of the compartments as a store-room or living room in summer, many of them being handsomely fitted up. The Toronto Skiff Sailing Club has, since its organization, occupied eight of these lower compartments, with one large room above in the outer end of Hicks's boat house. On the night of March 26 a fire was discovered in the building, and in spite of the efforts of the firemen the building was badly damaged and much property destroyed. The club boats and furniture are partly insured. The loss on the building is given at $3,500. The club will occupy the same quarters as soon as they can be repaired.

A YACHT CLUB ON STATEN ISLAND.—The Staten Island Athletic Club, at a meeting on April 4, organized a yachting department with the following officers: Commodore, Eberhard Faber, sloop Grace Darling; Vice-Commodore, R. K. McMurray, sloop Æolus; Rear-Commodore, Alfred Bierck, cutter Estella; Secretary, W. F. Dissosway; Treasurer, A. L. Faris; Measurer, R. Stucker; Fleet Surgeon, Anson L. Carroll. The new boat house is now under way and will soon be completed. The entrance for shellboats will be on the east side, leaving a lee to the westward for small boats to anchor, and landing stages and other facilities will be provided. Being near to the city the location is an excellent one; while the other departments of the club, rowing, ball, tennis, archery and athletic sports, with a fine club house and grounds, offer great attractions.

CRUISING.—Talisman, steam yacht, Mr. J. F. Slater, left Morehead City, N. C., on March 30, for Norfolk, arriving on April 1 with the loss of her screw by striking a log in Currituck Sound. She went on the drydock for repairs....Awixa, sloop, Mr. T. B. Asten, was at St. Augustine on March 31, from Indian River for New York....Tarpon, sharpie, sailed on March 29 from Jacksonville for New York....Stella, steam yacht, Mr. W. W. Kenyon, lost her rudder between New River Bar and Bogue Inlet on March 23, coming into Beaufort by aid of her canvas; she repaired at Norfolk, leaving there for New York on April 4....Lurline, steam yacht, Mr. J. M. Waterbury, is cruising about Ossabaw and Jekyl Islands.

RESTLESS.—The steam yacht building at Houston & Woodbridge's yard, Marcus Hook, below Chester, Pa., for Col. Wm. M. Singerly of the Philadelphia *Record* is nearly ready for launching. She is 120ft. over all, 100ft. l.w.l., 16ft. beam and 7ft. draft, with a compound engine 13 and 24x16in., and a tubular boiler 8ft. long. She also carries a 6 H. P. engine for electric lighting. The deck house contains the dining room and pantry, the wheel being on top of the house. The owner's quarters are abaft the engines, and the crew are forward. The interior decorations are very elaborate. The yacht will be schooner rigged with pole masts.

SPRINGS FOR RAISING A CENTERBOARD.—*Editor Forest and Stream:* Can you give me any idea for springs to relieve the weight of an iron centerboard. I have a sailing skiff in Toronto with a 65lbs. board and it is quite an item to hoist when single-handed. Mr. Dixon Kemp, in his book "Yacht and Boat Sailing," mentions some springs for the Pollywog, p. 240, but I do not see how they could be applied to a skiff. Any information *re* springs, where they are to be bought and how they are to be fixed I shall be very glad to have.—ICHI BAN.

THE SOUTH BOSTON MUSQUITO FLEET.—As usual the first race of the season will be that of the Musquito fleet of South Boston, on Fast Day, starting at 11 A. M. off City Point. The entries are for boats under 15ft., divided into two classes.

CHANGES OF OWNERSHIP.—Gevalia, schooner, has been sold to Mr. H. W. Coates, of New York....Oneida, steam yacht, formerly Utowana, has been sold by Mr. Thayer to a New York yachtsman. ...Outing, keel sloop, of the Hull Y. C., has been purchased by Mr. F. B. Eyre, of the Corinthian Y. C., of New York. ....Romance, schooner, has been sold to Col. G. S. Howard, Atlantic Y. C.

"THE VEST POCKET NAVIGATOR FOR YACHTSMEN."—We have received a copy of the last edition of this useful little work, issued by Capt. Howard Patterson, of the New York Navigation School.

BOSTON'S SCHOOLS OF DESIGNING.—The annual exhibition of the John Hawes school of designing will be held on April 11 and 12, at the Bird school house, South Boston.

ISIS.—This cutter, designed by Com. Canfield, S. C. Y. C., and built by Poillons in 1884, has been purchased by Messrs. Edwin A. and Robert L. Stevens of Hoboken.

PERSONAL.—Lieutenant and Mrs. Henn arrived in New York on Tuesday, and work will be commenced on Galatea as soon as her crew arrive.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. L. P.—We can supply the number giving drawings of sneak-box.

A. M.—The best dog training book is Hammond's "Training vs. Breaking," price $1, supplied by us. We have no book on bird trapping, and you have no use for such a book in New Jersey.

H. K. C., Clyde, N. Y.—My brother in Michigan has a badger with two young ones about two weeks old that he would like to seal. Do you know of any one who would like them? Ans. We know of no one, unless some of the zoological gardens would take them.

W. O. W., Charlottesville, Va.—In pigeon shooting at single birds here to-day two birds were by mistake liberated at once. The shooter fired at one bird and missed, then fired at the other, which afforded a better shot, and killed. How does it count? Ans. A miss.

OFF-HAND.—What positions of the body are allowable in off-hand rifle shooting? Ans. In this country the position must be a standing one. No artificial rest for the rifle is allowable. The arms should be held free from the body, but some shooters adopt the hip rest, *i. e.*, the elbow is rested against the side of the hip.

MAN AND OTHER ANIMALS.

During the flood at Bismarck, Dak., the other day, a big cake of ice went down the roaring Missouri, and on the ice was a big black bear.

The beaver is said to be returning to the Southern States. The whites haven't got the time and the darkies are too lazy to hunt them.—*Montgomery (Ala.) Advertiser.*

A party of twelve Fredericksburg hunters, with thirty-five dogs, recently spent several days fox hunting in King George county, Va., and captured eighteen foxes.

Marco Stanwick, a Turk, living at 35 Mott street, was led into the Harlem Court yesterday. Following him was a huge bear, led by a light chain. He had been arrested for leading the beast through the street. The bear stood before the bar on his hind legs, and his master put him through a series of tricks to show Justice Patterson that the animal was perfectly docile. Both prisoners were discharged—*New York Times.*

The farmers in Woodbury, Long Island, are up in arms against the Rockaway Hunt Club. The club have had several fox hunts recently, and have galloped with the hounds across the newly-sown fields of grain and other crops, doing, so it is alleged, much injury to them, as well as the fences. Last year the hunters promised to pay for the damage then done, but they have failed to do so. During the last fox hunt, when the hunters attempted to cross the farm of Elbert Seaman, at Oceanville, the latter, with some of his help, confronted them, armed with pitchforks, and refused to allow them to cross. Other farmers also refused the hunters permission to ride over their farms. Suits are about to be begun by the farmers to recover damages for injuries already sustained.—*New York Times*, April 2.

The Fluttering Fly.

PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it."

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

WM. W. SILVEY,
135 South Eighth street, Philadelphia, Pa.

THE WHITE MOUNTAIN KENNELS,

LITTLETON, N. H.,
Have for sale a few fine bred bull-terrier, fox-terrier and beagle dogs and pups. jan13,tf

MAPLE KENNELS AND POULTRY YARDS, Patterson, N. Y. (on Harlem R. R.), breeds thoroughbred fowls and pointer dogs from prize winning registered stock. Wyandottes and Plymouth Rocks a specialty. Ten grand yards containing all my prize winners of last season. Eggs $2 per 13 or $5 per 39, properly packed in baskets. A fair hatch guaranteed. Large circular containing matings, winnings, etc., sent free on application. (Mention this paper.)

FOR SALE.—THE LANDSEER KENNEL offers choice bred Scotch Deerhound and English greyhound puppies, bred only from stock of well-known field qualities. These are the aristocrats of all dogs. DR. VAN HUMMELL, Denver, Colo.

Rory O'More Kennels.

No finer Red Irish stock living, noted for pure breeding, bench show and field quality, endurance and intelligence. Brood bitches and pups for sale. W. N. CALLENDER, Albany, N. Y.

FOR SALE VERY LOW.—TWO IRISH SETters, broken. Also fine English setters, pointers and cocker brood bitches. OAKDALE KENNELS, Westbrook, Conn. mch3,6t

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sep22,tf

Red Cocker Spaniels.

My business requiring my entire attention this year, I have decided to offer my celebrated kennel of cockers for sale. Kennel includes three red dogs, Rory, Royal and Robin; black dog Woodstock; black bitch Woodstock Nora, Ada, in whelp to Obo, Jr., chestnut and tan bitch Devon Beauty. Both Nora and Ada have thrown red pups. Also a fine pair of St. Bernard bitches, 8 mos. old. Send for prices. ANDREW LAIDLAW, Woodstock, Ontario, Can. mch31,2t

FOR SALE.—ENGLISH MASTIFFS. WRITE for pedigree and price. C. C. RICHARDSON, Box 139, Westfield, Mass. mch31,2t

The Field Sportsman's Picture Co.,

PALMYRA, N. Y.,
Are now prepared to furnish copies of the photographs taken by Mr. Walker at the Eastern Field Trials. Lists and prices on application.

The Kennel.

The Philadelphia Kennel Club's

FIFTH BENCH SHOW of DOGS
WILL BE HELD AT THE
ELITE RINK,
Twenty-third and Chestnut Sts., Philadelphia,
April 19, 20, 21, 22, 1887.
For premium lists, entry blanks, etc., apply to the Secretary, N. E. Cor. 13th and Market sts.
ENTRIES CLOSE APRIL 9.

Westminster Kennel Club's

ELEVENTH ANNUAL BENCH SHOW
OF
DOGS,
Madison Square Garden,
NEW YORK,
MAY 3, 4, 5 AND 6.

ENTRIES CLOSE APRIL 18, 1887.

Apply for Premium Lists and Entry Forms to

JAMES MORTIMER, Superintendent,
mch31,3t 44 Broadway, Room 16, N. Y.

HARTFORD KENNEL CLUB.

SECOND ANNUAL
Bench Show of Dogs,
APRIL 26, 27, 28 and 29, 1887.
UNION ARMORY
HARTFORD, CONN.
ENTRIES CLOSE APRIL 15.
For Premium Lists and Entry Blanks address
A. G. COLLINS, Sec'y, Box 20, Hartford, Conn.

MICHIGAN KENNEL CLUB.

INAUGURAL BENCH SHOW
OF
DOGS,
May 24, 25, 26, 27.
LIGHT INFANTRY ARMORY,
DETROIT, MICH.

Entries close May 10. For premium list and entry blanks address CHAS. WEIL, Sec'y, Newberry & McMillan Building, Detroit, Mich.
GEO. H. HILL, Maderia, O., Superintendent.
mch24,9t

FOR SALE.

Pointer bitch Grace (A.K.R. 1250), Llewellin puppy, (Rock ex La Belle Creole); also Beagles, Collies and Greyhounds.
Box 472, Pittsburgh, Pa.

OLD DON'S BLOOD TO THE FRONT.
Lemon and White Pointer
RICHMOND,
Never beaten in the field by any pointer when in condition. Record: Runner up, and divided third Western Trials, 1885. Divided third, National Trials, 1886. Winner All-Aged Stake, Tennessee Trials, 1887. He is the only pointer since the days of Don and Croxteth, that has defeated setters who were winners of an All-Aged Setter Stake. In order to give pointer breeders an opportunity to breed pointers that will hold their own against any of the prominent setters, he will be allowed to serve 12 bitches of approved pedigree. Stud fee $25.00. Addr, H. M. SHORT, Middleton, Tenn. mch24,3t

POINTERS.

Pups by Tammany ex Lucia. Also some thoroughly broken pointers. The above stock is noted for its bench show and *excellent* field qualities. For price, etc., address with stamp
CLIFTON KENNELS,
dec30,tf 75 Clifton Place, Jersey City, N. J.

St. Bernard Pups.

For Sale—Grand pups by Merchant Prince and other noted dogs, rough and smooth-coated; also English pug pups from best strains. Prices always moderate. Address with stamp ESSEX KENNELS, Andover, Mass. dec9,tf

FOR SALE.—BEAGLE HOUND BITCH GYPsy Maid, by Bannnerman out of Gypsy Queen; Also a pair of her pups, by Little Ned, litter brother to Little Duke. FRANK W. ROCHEFORT, Rockland, Mass. ap7,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 14, 1887.

VOL. XXVIII.—No. 12. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

WINTER IN THE YELLOWSTONE.

WE print this week the second instalment of the report of our Yellowstone Park Midwinter Explorer, which will be found not less interesting than the portion which has appeared before. The story of this trip has already excited a widespread interest, and the thorough appreciation by the press and the public of our success in bringing to light the mysteries of the Yellowstone Park in winter is most gratifying. In our issue of to-day the wonderful effect of the frost work is described, and the scenes of which our correspondent tells us read more like a fairy tale than the commonplace occurrences of every day life. Each one who reads Mr. Hofer's pen pictures of these marvellous effects of winter's work will envy him his opportunities for beholding these beauties. Since the ice has once been broken and our correspondent has had the pluck and daring to penetrate the Park, no doubt others will follow in his footsteps later.

Much speculation has been indulged in with regard to the mysterious occurrences for which the Yellowstone Park is so famous, several of which are referred to by Mr. Hofer. For example, a correspondent who has devoted a great deal of anxious thought to the subject of the bottle in the tree, advances the ingenious theory that at the time it was put in position twelve feet above the level of the snow, the whole party was elevated to that extent. This might account for the inscription on the label, and if the hypothesis be correct it opens up a series of interesting questions as to the possibilities of "Fine Old McBrayer." If this fluid possess such lifting power as suggested, it will naturally attract the attention of aeronauts, those who go up in the air in balloons.

We continue to hear favorable accounts from the Yellowstone Park of the game which has wintered there. Jack Baronett, the scout, was sent last month by Captain Harris over to Specimen Ridge to look for bison. He found a herd there, of which he counted eighty, all of the herd not being in sight.

NAMES.

A CORRESPONDENT sends us a list of thirty-six names, in different localities applied to a single bird, the golden-winged woodpecker—which "is nothing more nor less than the high-hole," as was oracularly declared the other day by a well-known woodcraftsman, who happened to be in the office when the list came in. The catalogue may appear extraordinary, but there probably are other birds whose names are just as numerous and as varied.

Mr. Edward Jack, of New Brunswick, recently expressed his surprise at the queer specimens of fish which he found masquerading under the name of trout in Georgia. In Canada the fish would pass for a sucker, but never for a trout, for Canadians think they know what a trout is; yet some of our finical correspondents who stickle for absolutely correct nomenclature, refuse to give this fish its accepted name of brook trout, but call it a charr.

The game laws ought to be drawn with careful regard to the nomenclature of the species they are intended to protect; but some of the statutes are woefully deficient in this respect. In the Langbein bill, now before the New York Legislature, a bill which has been through the hands of one of the Fish Commissioners and is understood to be largely his personal work, there is allusion to one fish which in the section defining the open seasons is referred to by its commonly accepted name, black bass, and in another section, granting permission to sell, is dubbed "Virginia Chub." This may be a case of stupid carelessness, or it may be a case of something else.

LUMBERMEN AND GAME.

THE winter of 1886–7 has been a most favorable season for the wealthy Maine lumbermen who prefer to violate the laws of the land and to feed their crews on game unlawfully killed rather than to put their hands into their pockets and as honest men buy provisions for the camps. Deep snow fell early; an ice crust was formed by the last of December, and the conditions for easy crust-hunting have been maintained ever since then. Proprietors of the lumber camps openly refuse to buy pork at $25 per barrel when they can get moose, caribou and deer meat for the killing; and this winter their hirelings have made the most of the game supply. The men composing the camps are in many instances Bluenoses of a brutal, ignorant class, who cut under native wages, smuggle many of their supplies, and have no scruples about cutting a moose's throat in the snow crust.

Taken altogether, the lumbermen probably kill more Maine game than is destroyed by all other means. The midsummer evidences of the slaughter are to be found about the camp sites—hides and bones of moose, deer and caribou. There is no secret about this winter game destruction. A detective could readily secure ample evidence to convict. It is to be hoped that some one may be found who has knowledge of the facts and is not scared by the lumbermen's threats to kill informers, to communicate the facts to the authorities. One or two of the scrimping proprietors ought to be made examples of. Instruction judiciously imparted should teach them that the cheapest way to feed their men is, after all, to buy pork.

OUR DECORATION DAY TROPHY.

AS HAS been announced in our Trap columns, we will give a FOREST AND STREAM DECORATION DAY TROPHY, to be competed for on Monday, May 30, by teams of three members of any organized clubs. The trophy is a cup of solid silver, specially manufactured for us at a cost of $100, by the Whiting Manufacturing Co., of Union Square, New York. It is a piece of work that we are sure will be appreciated by the club which shall be so fortunate as to win it.

The conditions of the match are explained elsewhere. Club secretaries are invited to communicate with us respecting entries, which are now in order.

We indulge the hope that this friendly contest for the FOREST AND STREAM TROPHY may be one of the pleasurable features of the May anniversary.

THE FOREST AND STREAM'S grizzly bears on exhibition at Central Park are daily delighting thousands of visitors, some of whom have spent time and money out West trying to catch a glimpse of just such game without a cage around it.

SNAP SHOTS.

AMONG the curiosities of game bills this year is one in the New York Legislature relating to salmon. Unless a man reads the newspapers pretty carefully or studies the FOREST AND STREAM, he would not dream that New York was specially concerned with the protection of a fish which has been from time immemorial a stranger to its waters. The new legislation is very necessary, however, to provide for the Hudson River salmon put in by the United States Fish Commission. If the law is made and enforced, the salmon, it is hoped, may prove a substantial addition to the river resources of the State, just as the moose put out in the North Woods would have been an addition to the forest resources if the law to protect them had protected. It is not so hard to secure these new species as it is to keep them after we once have them, and to guard them from immediate extermination at the hands of cupidity. If there were no statute to protect the Hudson salmon, the New York fishermen would serve them in just the way the Connecticut fishermen served the salmon of that river.

The National Rifle Association programme for the Creedmoor meeting, which will begin Sept. 12, will consist of sixteen regular matches. The cash prizes sum up $1,374 against the $1,605 of last year, while the trophies are valued at $725, the Tiffany cup adding $75 to the total of last year. Among the general provisions adopted is one requiring ammunition for military rifles to be brought on to the ground ready for use. In all of the matches which have heretofore allowed State model rifles, any rifle will be allowed which has been issued by any State to its National Guard. The division matches for New York militia become under the new order brigade matches. Otherwise there are no important changes from last year's programme. We will print the full programme in an early issue.

A medical alarmist has delivered himself of the dictum that people who eat game that has been killed by shooting endanger their lives if the meat has been kept for a week or ten days. He has discovered the familiar fact that arsenic is employed in the manufacture of shot; when the shot remains in the flesh of the game it undergoes an oxidization, and there you have two of the deadliest poisons known—arsenic and oxide of lead. Unless there is some mistake about the doctor's alarming theory, several tens of thousands of people who are alive to-day ought to have died ten or twenty years ago.

Fly-casting competitions give promise of growing popularity. Albany has a new association, and there is one in Toledo, O., and another in Oakland, Cal. The National Rod and Reel Association's May tournament is already exciting much interest. It would be well if other competitions could be modeled upon that of Central Park. If the conditions and rules were the same in all cases, opportunity would be given to compare the record made. Still further interest would attach to the performances of American and English tournament casters if in certain classes identical rules governed.

If Sir John Lubbock ever perfects his system of teaching dogs to talk, some interesting language will be heard from the over-weight bench show spaniels which their mug-hunting owners deliberately starve in order to reduce their weight; and as it will be a long time yet before dogs will talk intelligently, the Society for the Prevention of Cruelty to Animals may in the interim profitably give its attention to the bench shows.

Abolition of summer woodcock shooting was one of the steps contemplated by certain citizens of New Jersey at the last session of the Legislature; but the movement failed. The season proposed for all species of game was from Oct. 15 to Dec. 15. Instead of securing anything of this kind, members of the game societies had their hands full to prevent the passage of laws materially reducing the present close season.

The Ontario law remains unchanged. A vigorous attempt was made to rescind the clause forbidding spring shooting, but the Legislature refused to act on it. Public opinion is making in favor of the present law.

No progress has been made in game law legislation at Albany.

WINTER IN WONDERLAND.

THROUGH THE YELLOWSTONE PARK ON SNOWSHOES.

II.

ON February 16 I visited Norris Geyser Basin. A heavy fog hung over the country, with a light snow. As I approached the Basin, I was startled by the resemblances to men and animals the ice-laden trees showed, as, standing sentinel duty on each side of the road, they appeared to be watching our approach. Everything was loaded down with the steam frozen as it had drifted from the geysers. There were fantastic forms of men and women looking into the pools. Up the road were seen hogs, rabbits, mules, elephants, leopards, tigers, cats and dogs; animals of all kinds and shapes, creatures that outside of the Park nothing but a disordered mind could conjure up. All were in white, but often with dark eyes, ears and mouth, or limbs or faces, where the deep green of the pines showed through the white ice. Now and then a bough free from frost projected through the ice to form the plume of a soldier or the ears of a mule or rabbit. Again there appeared the form of a woman holding a child, bending over it as if to protect it from the wintry blasts. Others there were with groups of children gathered about them, all in white, as though just escaping from their burning homes; and it wanted but the red glow of a sunset to make the illusion complete; the steam looked like smoke, while the confused sounds of the geysers resembled the burning and crackling of flames and the crash of falling buildings. I was alone with all this mysterious, ghostly band, and I confess to a strange sensation amid these weird surroundings as I descended into the basin through the fog. On every side could be heard the rush and roar of hot water and steam. Even under foot was heard the hissing of escaping steam and gases, and the bubbling and sputtering of waters through the sand and decomposed formations. Mud pots were puffing and splashing their inky contents, or whirling and dashing their turbid waters against the banks of the caldrons, all invisible until one was within five or ten feet of the brink of the pool and geysers.

I soon noticed an increase in the activity of most of the geysers through the Basin. I timed the Five Minute, or Constant Geyser, the eruptions occurring every twelve to fifteen seconds. It threw its clear waters from 15 to 20ft. high. There would be several thuds, agitating the waters considerably, then a burst of steam and gases which threw the waters to their fullest height.

Wandering around among the pools in the mystery of the fog, alone in the world—like one at sea on a raft without a sail in sight—I could not see the ghostly goblin band over the hill I had left behind, but I could feel their presence; and now and again I would suddenly come in sight of more of them as I approached the timber either on my right or left. I found ice and snow everywhere in the valley. I could travel on my snowshoes on snow and ice 3ft. deep, by the side of streams of hot water, while snow was falling on me, and white rabbits were mysteriously disappearing from sight among the snow-laden trees on my left. Flies were seen on the surface of the stream, and where the water was collected in shallow pools a water insect like a worm could be seen on the bottom moving sluggishly about. Most of the colors of the rainbow lined the bottom of the stream, though the shades were pale. I followed down the stream of the waters running from Constant, Black Growler, Ink Geyser, and the pools in the northern part of the Basin, until it was joined by the waters from the Monarch, New Crater, Vixen, Spiteful, Coral and the other beautiful pools, springs and geysers in the main basin. This stream I then followed up until I had visited every point of interest. I was often cautioned by signs "not to drive over the formation." Once seeing a queer ice mound I could just make out a sign, and breaking away some of the ice I was notified "to extinguish my fires." Well, hardly, on this cold day, if you please. The snow, which was from 4 to 5ft. deep, was seamed everywhere by little streams of hot water, all leading to some hot spring or geyser; the snow and ice extended up close to the hot water, sometimes within 1 or 2in. I could step across most of the streams without getting off my snowshoes.

As I approached Coral Spring I was almost tempted to shoot at a large polar bear; he was ten feet up a dead tree, near the spring; he had climbed up the tree and was looking back at the hot water as if afraid of it; I could have believed him to be alive as I first saw him through the fog and falling snow. He was only ice, however, and had grown right there where he was, as the frozen steam had added to his bulk. He was at least ten feet long; and as he grasped the tree with all his legs, one foreleg thrown over a dead limb, he was a perfect picture of a great white bear. If carved from a block of ice by an artist he could not have looked more natural. All the trees in and near the basin are small second growth pines, the fires having killed off all the large timber. These trees are just large enough to form ice figures of proportions to make their resemblance to human beings and animals perfect.

Following up the waters from the new Crater Geyser, I soon came to the geyser and saw it in eruption. There has been some increase in the size of the Crater since I saw it last summer. Leaving this I followed the high ground to the Emerald, a beautiful pool, whose bright green shone more brilliant by being brought into strong contrast with the white of the surrounding snow. Further on I came to the Schaum Kessel, the only object Mr. Arnold Hague, of the Geological Survey, personally named. It is a very interesting mud geyser. The bottom and sides of the basin are lined with a pearly formation, and when dry the points show a bluish-white tinge, looking very pretty against the dark background of the basin. When in action this geyser is as attractive as any I have seen; it throws jets of lead blue colored waters up through a whirling, dashing, waving mass seven feet in diameter. Its action is different from those of the other geysers; they all differ very much when closely noticed Some Park visitors say: "Well, I have seen one; I've seen all." This is a great mistake. I know of no two alike, either in action or formation. In mound, terrace, or cone, all are different, and one who is so well acquainted with their formation as is Mr. Hague can tell from a specimen which one of the principal geysers it came from.

From this point I went up on a very perfect cone of ice, 6ft. high by 10ft. in diameter, formed by the frozen spray and steam from the "safety valve," which was blowing off as though on its efforts depend the integrity of the whole crust of the basin. Sliding off the cone I visited the Black Growler. Here, too, I think there is some increase in the action. Following the hillside a little way from the Growler, one leg, snowshoe and all, suddenly dropped down with the snow, throwing me on my side. For an instant I thought I was over a hot hole, but could not remember any in the immediate vicinity; and soon righting myself I looked into the hole and saw logs there. I think the warm ground had melted the snow away, the logs supporting the crust until I had stepped on it. My foot and snowshoe passed between two logs. There was not the least danger, but it taught me to be a little more cautious unless I was sure the ground under me was safe.

Further east I came to another steam escape, somewhat sheltered from the wind. Near this was an ice-covered tree, which had taken the form of a woman, her garments covered with the most delicate frost work lace, fringes and tassels, more delicate than the finest silk, and that a breath of wind would disturb and break; a gossamer-like bridal veil of frost hung over all, looped and gathered into folds. It was the most delicate frost work I have yet seen. With one beam of sunlight all would have disappeared. The whole fabric was so fine that parts were continually breaking off and falling on the snow below, making a train for the dress.

I had now been in the Basin several hours, had seen boiling water and solid ice within less than a foot of each other, and little mounds of green and blue tinted ice, where the spray from the small geyser jets fell; and I had stepped across running streams of hot water, with my snowshoes elevated above the stream by two or three feet of snow and ice. In summer no such extremes meet; nothing so beautiful and delicate as the frostwork is then to be seen. Before I left the Basin the fog lifted; the wind began to blow, swaying the trees about, rattling their icy garments; the ghosts and goblins were going through a weird dance, bowing and swaying to each other, accompanied by the mournful music of the wind as it sighed and moaned through the pines.

The clouds lifting showed Mt. Holmes in the northwest. This beautiful peak with its snow-capped summit rose from the dark masses of green timber. In places the trees were so laden with snow as to give the whole forest a white appearance; the last snow had covered every limb and bough, and one could call it a forest of silver trees. In a few places the wind had blown the snow off, revealing a dark green and giving to the landscape the appearance of shadows of passing clouds.

Returning to the hotel, I learned the history of the Schwatka Exploring Expedition, the true cause of its failure and the extent of its explorations. There is much humbug about the whole thing. As well talk of "exploring" Central Park, New York, as the National Park. The National Park is a well-known country; everything worth seeing is mapped out and described in reports and geological surveys, guide books and newspaper letters. The extent of the Schwatka "explorations" consisted in following a first-class wagon road, 30ft. wide, cut through the forest, and planted with telephone poles every 200 feet. The party, after being helped almost half way with teams, consumed three days in going to the Norris Hotel from the Mammoth Hot Springs. The "explorers" had no packs to carry, having several men as assistants. The trip was very poorly managed; enough baggage was taken for twenty men. Not only were the men burdened with packs, but there were a "master of transportation" and guides, who would carry no baggage. On a trip of this kind every man ought to carry his proportion. As, when starting out, they had more baggage than they could get through with, the surplus was left in a log barn on Willow Creek, and in a tent, three-quarters of a mile this side, where they made their last camp. Mr. Ross, the snowshoer, was the first into Norris, Coho and Schwatka coming in last. Mr. F. Jay Haynes, the photographer, packed his portion of the baggage.

After resting, most of the explorers started for the Lower Basin, leaving Mr. Brackett, an old gentleman of 76, at the hotel. The Lieutenant got as far as the Dude's Head, a peculiar stump beside the road, not quite four miles from the hotel. There is here an abnormal growth on a tree about 4ft. high, the road builders having cut the tree off at this swelling and leaving the stump as a landmark. Here it is said he had a hemorrhage of the lungs, and with the assistance of Baronnett, the Government scout, he returned to the hotel and his base of supplies until the party returned from the Basins, when he mustered sufficient vitality to go to the Falls. Mr. Brackett, with his burden of 76 years, also made this trip, some twelve and a half miles.

That part of the expedition that made the trip to the Basins returned to Norris on about Jan. 12. At the Lower Geyser Basin Mr. Haynes dropped the explorers. Selecting two men and sending for Ed Wilson, with these three he visited the Geyser Basins, returning by the way he had come, and reaching Norris on Jan. 19, during a very severe wind storm, which blew and broke down hundreds of trees along the roads in the Park. The storm disabled the telephone wire from the Mammoth Hot Springs to the Lower Basin, where it is down in over fifty places, and rendered it useless for the winter.

From the Norris Basin Mr. Haynes visited the Falls and Grand Cañon, going out over Mt. Washburn, on which he and his party were lost for three days. They were lost before reaching the top of the Pass on the east trail. They had no bedding, no ax, and little provisions, but fortunately enough were provided with matches, and as they were on a well timbered country they did not suffer for the want of a fire. Their exploits have been described in several papers, in some greatly exaggerated. One writer for a Montana paper, not knowing the geography of the country, has them at noon on the summit, later lost, then looking into Tower Creek Cañon, then back on the south side of the mountain, then well down in the Yellowstone Cañon—jumping them about by prodigious leaps of from ten to twelve miles at a bound, before finally rescuing them. The fact is, that they were lost before they began the ascent of the mountain; wandering around on the south side they finally made their way around the mountain on the east, between it and the Yellowstone Cañon. They crossed a spur that is the highest point in the cañon, and here they passed over one very dangerous place, where they were likely to start a snow-slide which would have swept them to certain death. While crossing this place not a word was spoken, for each one realized the danger. I am quite familiar with all the trails over and around the mountains, and I know that even in summer there is much danger in riding around this point. Tourists never travel this trail, but take one further to the west known as the East, or Cañon Trail.

After rounding this point they were soon on the waters of Antelope Creek, and in an open country. Striking across the country they soon descended to Tower Creek. The party were too much exhausted to photograph this beautiful fall, or a band of elk which they saw. Pushing on, they arrived at Yancey's Station about 2 P. M., on the third day from the Falls. Resting here a day, they then went in to the Mammoth Hot Springs, glad to get safely out of the Park. Lieut. Schwatka and friends had returned to the Mammoth Hot Springs by the way they came, before Mr. Haynes had got down from the geysers.

I saw a clipping from the New York *World* telling of the wonderful things the expedition was going to do in the Park. The most wonderful of all was that they were going to take with them some fifty Crow scouts. It would take more than the whole United States Army to drive a Crow Indian through the Park in winter. They know nothing about the geyser country. They are afraid of it. It is "bad medicine" for the superstitious Indians. To ask one to go in there would be to get an answer to the effect that a white man was "heap a dam fool, heap crazy."

Going over the hotel on my return from the Basin, I saw the cracked walls and chimneys broken by the shaking up the building had received by an earthquake shock in November. It had shaken dishes off the shelves and broken many of them. Throughout this region the snow was about seven feet deep; one bank in front of the hotel reached up to the second story. White rabbits were very thick about here. Wolverine and lynx tracks were seen every few rods; one can follow with his eyes the attempts of the lynx to catch a rabbit for his dinner. They never make many jumps, only about three; if they miss a rabbit then they give it up and try another. These rabbits can make as long a jump as a lynx, and can outrun a lynx on the snow. When a rabbit hides in the snow he is unsafe. I noticed places where a lynx had been diving for a rabbit; into his hole he would go, the rabbit getting away from it and making for another place to hide, only to have the lynx down on him again; and so it went on until the rabbit was overtaken by the lynx. A little

blood stain showed where the hunt had ended. A lynx sinks but little in the snow, its very large feet prevent its light body from sinking much more than a rabbit.

Soon after 3 A. M. on the 17th, we started for the Lower Basin. It was quite dark and snowing a little when we set out. We passed through the basin I had visited the day before, coming out through the fog and steam on the other side. We could see a little better, as it was getting daylight. In due time we came to the Dude's Head, the top of which was below the level of the snow, only a little mound of white showing where it was. With some difficulty I could run my snowshoe pole to the ground, and I found that through this stretch of timber the snow was from six to seven feet deep. We sank from four to six inches deep in the snow while on the shoes, without them we would go down to our knees.

When we came out in sight of the Gibbon Meadow, we were favored with a lifting of the clouds, giving us a view of the meadow and surrounding country. We could look down the Gibbon Cañon a short distance and see great clouds of steam rising from the Monument Geysers, the Artist Paint Pots and geysers on the head of Geyser Creek, and on our right Sylvan Spring. A dark snow cloud hid Mt. Holmes and all the peaks in the Madison Range. We ran down to the meadow in a few seconds, a delightful slide after the steady tramping in the snow through the timber. Shortly after descending the hill, a severe snow storm struck us, followed by a strong wind, which drove the snow against us in horizontal lines; but as it came from our right it was not so difficult to travel in, though had it been driving in our faces it would have been hard work making headway.

The Gibbon River was open and free from ice; all the open creeks that flow into it were steaming. Drifted snow curled over its banks and hid them, the river coming through a white field. Long bright green grasses and water plants grow on the bottom, waving with the current.

Through this part of the Park I expected to see moose, for there are a few in here and to the north nearer Mt. Holmes. I expected to find them feeding on the grasses in the water, or at least to discover some signs of them; but we saw nothing that I was sure of, for the fast falling snow hid whatever tracks there might have been. I noticed several flocks of ducks on the river, most of them woodducks, with a few mallards and a black duck with white cheeks and white tipped wings.

We soon entered the cañon which I had been dreading, for I was fearful of snowslides and the dangerous places I had been told of. I was tempted to go around to avoid the bad part; but we concluded that we could slip through and by taking due note of the dangerous places shoot across them. We soon came to the Hot Springs on the left of the old road. Here a log had been thrown across the stream, as there was no bridge on the new road. We were obliged to cross on this log, the one that had caused Pete Nelson, the mail carrier, so much trouble. Taking both snowshoe poles, I balanced myself with one, breaking the snow and ice off with the other. The log sagged so that the water ran almost over it, making it slippery; and it required caution to cross without a wetting. Although encumbered with packs and long snowshoes, we managed to pass over in safety. In this cañon I noticed the effects of the storm of Jan. 19; many trees had been blown down, some were broken off 20ft. up and had brought down in their fall telephone wires and poles. The wide wagon road was piled up with snow fully 12ft. deep, drifted in long ridges, the tops of which we were obliged to follow as if traveling on the comb of a house. At the Beryl Spring we paused a few minutes to see the effect of the cold. All the trees were covered with ice, in interesting and strange shapes. We then crossed two bridges over gulches, the snow being piled above the railing. Through here there was some 7ft. of snow, on the meadow above from 4 to 7ft.

Constantly looking for danger we recrossed the river on a bridge, and soon after I noticed the trail of two small snowslides, and walking back saw the trail of another above the bridge. That was the only dangerous ground I saw. To be sure, the sides of the cañons are very steep and the snow deep, but fortunately the cañon is well-timbered and holds the snow in place. I really think there is no danger here at all. Climbing a long hill we soon came to the Gibbon Falls, to see which we must descend into the cañon again; this was so difficult in the deep snow, to say nothing of the trouble we would have in getting back, that we concluded to go on.

The storm was over and the sun out, with now and then passing clouds. When we came to the Cañon Creek hill, we had a view of half a mile, descending some 400ft. While resting here and lunching, I looked for fish, as this is the first stream in which one can find trout after leaving the Mammoth Hot Springs. I saw but a single fish and that but a small one. Having rested an hour we pushed on our way, and before sunset came to the Teton Hill, from which, on a clear day, one can see the top of the Grand Teton. We could discern steam rising from the Great Fountain, Fountain, and Excelsior Geysers. The whole of the Lower Basin was before us; flowing to our right was the Fire Hole River; further north the Cañon of the Madison, 1,700ft. deep. The whole river was open, with ducks and brant on the surface, and now and then a gull.

Running down the hill we crossed an exposed space where the snow was only 4ft. deep. Just before entering the Lower Basin we crossed immense drifts, and making our way over Nez Percé Creek, came to the hotel, reaching there a little after 6 P. M. Elwood Hofer.

NORWAY NOTES.

A SCRAMBLE of about an hour over the turf and up the rocks, slippery with moisture, brought us to the Torghaetten Tunnel. There is a theory that the ceaseless beating of the sea ages ago had worn a passage through the rocky island, and that as the fragments of rock loosened and fell from above they piled and filled up below. This may or may not be so, but there is the hole in the rock 400ft. above the sea. I trembled at the thought of what a condition of soreness those 400ft. must be in after so many generations of climbing.

The mate, who is acting as our guide, cautions us against the overhanging mass of granite, as huge pieces are continually rattling down. The hole is taciturn to a degree, and without any warning cry of "stand from under," plies his strong bar of time. He is wise in saving his breath; he will want it all before he climbs that remaining 200ft. before he escapes into the air above.

A moment for cooling our lungs and then we look. For 1,000ft. or more in a downward course stretched the opening, 100ft. or so in breadth and height, ragged, torn, dripping with the sweat of its tremendous struggle, and the opening at the other end bathed in the vapor of a melting glacier. On our walk down we stopped often and stooped always over the soft tables of moss which, sheltered by the rocks, nurtured little pink and blue flowers. How gentle and soft was their fragrance after a breath blown from the sea!

"When do we reach Tromso?" was the first question the next morning, for there we were to see some real, live, genuine Laplanders in all their splendor (of dirt and poverty). About thirty of us were rowed ashore that afternoon and found as many shaggy little ponies. Three of us, more impatient than the others, were quickly mounted, and then a wild dash for three miles. The path led up a narrow valley between the gradually rising hills, crossing and recrossing a brook swollen into a muddy rush by the melting snow, and checked and turned in its course every few feet by the upheaved rocks. One of the ponies, being weighted down with the fat of forty years, gradually dropped behind, and we two alone splashed along, leaving behind the soft warmth of the sun near the ocean, and entering the chilling banks of mist drifting down from the snow banks above. The path became more rocky as we ascended, and it seemed as if each stone struck by the pony's feet relieved itself of a good share of its hardness, which darted up through the pony's leg, shoulder and my body, and ended with a thump in my head. When four separate and distinct shocks, springing from as many legs at one and the same time would meet at the base of my neck, I began to wish that the Laps were not so retiring in their habits. A sudden turn in our course and we reined up in the midst of scores of snarling, grinning dogs, who were so assiduous in their attentions that we unanimously decided to take our first view of the camp from our present lofty positions.

What a motly sight it was indeed! Half a dozen mud and skin huts scattered along the brook, with damp and smoke dripping and floating from every pore; the height of the hills behind squeezing out countless little streams of water from their vaporous sides; the groups of Laplanders, loose-jointed and seemingly incapable of bodily exertion, covered with reindeer hides, donned for as long as they would remain on the wearer, lying about; so much water about, and yet so much filth; and the foreground, the background and the remaining chinks of the scene filled and animated with the muddy legs, bedraggled tails and constant snarl of the omnipresent and always fighting dog, whose bristling back and eager nostril assured us that the saddle was the place of safety. The others of the party coming up, we were surrounded by the Laps, eager to exchange their leggins, shoes, tobacco-pouches of reindeer hide, knives sheathed in rudely carved walrus bone, spoons of horn and such other knick-knacks as they could make without any great expenditure of energy, for the coin of the realm—tobacco. Our attention was next attracted by their herd of about 400 reindeer which were "rounded up" in a brush corral, and as they were moderately tame, we had an opportunity of a good look at them. I was much disappointed in their size and appearance. Judging from the pictures one sees of reindeer pulling sledges over the snow, they appear to be nearly as large as a horse, whereas in life I saw none larger than our mule deer, and with their shedding coats and straggling antlers drooping on their shoulders they looked the picture of meekness.

One thing was noticeable all through the North, in both men and animals; there was no life, no animation. The children did not laugh over their play in the streets or fields; even a joyous expression was a rarity. The long, dark, cold winter leaves a chill in the heart, so deep that it cannot be reached by the warmth of the summer's sun. One was not awakened in the morning by the lusty crow of a cock, nor did the hens leave their nests, nor gather their chicks about them with the proud cluck of maternity. All the horses are left in the full vigor of nature, yet they stand quiet and passionless, unhitched in the streets of Norway. The reindeer, too, tame and almost lifeless, allowed us to walk within a few yards of them. One of our party producing a photographic apparatus, we grouped ourselves on a mound, a few deer being held in front of us with ropes, and to heighten the effect some of us covered ourselves with reindeer leggins, gloves, skins and in one or two instances a huge pair of antlers were tied on the shoulders—enough to puzzle the eye of any camera. The result was a strange intermingling of men with four feet and horns and reindeer with umbrellas and derby hats. Friends in America must have indeed thought that Norway was a strange land, upon receiving such pictures of life there. Returning to the steamer we lingered for a moment, but to the windward of a huge whale that had been killed ten days before by fishermen who were now cutting up and trying out the blubber. Fearful of our quickly waning appetites, we left the huge roll of fat and were soon on board.

One day we steamed through the Lofoden Islands. The morning was rainy and we were afraid that we might miss much of the beauty of the islands, but late in the afternoon, the mist rolling up, the mountains, every line came out clear and distinct. The colorings were almost startling in their contrasts. The sea, a cold blue where we were sailing, shaded out to a light green away back in the distance where the horizon bathed its arc, the surface dotted with fishing boats, thin curved lines, trireme-like, and brick red square sails drifting with the wind; the brilliant green of the land, low-lying at the shore, fading to a brown as it quickly rose into mountains, with thin cold gray hollows and the shaded blue of the rivers of eternal ice, and above all the pinnacles, spurs and knobs of the top, softened with the banks of snow and engoldened in the rays of the sun. Sunday morning we spent a few hours at Hammerfest, which is remarkable for one thing at least, that it is the most northern town in the world. It is made up of a hundred or two frame buildings, stuck up where room was found for them, and no two facing in the same direction. The sights of the town were few, the smells enormous. At almost every turn we saw strings of codfish hanging in the sun and air to dry, and so, no matter what direction the wind came from, it was sure to be laden, and heavily, with the sea's dead. A peep inside the four cold white walls of the church disclosed a sleepy congregation of fisher-folk and Laps and one or two light-haired Finns from the interior.

On our way back to the steamer we were run into by a Lap, who, doubtless thinking of the efficacy of oil on troubled waters, had reversed the matter, pouring into his oily self an unlimited amount of (fire) water, and his tottering legs heeded not the right of way as he came jibing toward us, crying some tribal song in his frenzy.

A few hours steaming brought us to Gull Rock near the North Cape, which is the home and breeding place of millions of gulls, attracted there by the fishing banks. A rocket or two fired against the rock and the gulls dropped from their resting place in infinite numbers, and floated in the wind like clouds of snowflakes.

We came to anchor late in the afternoon, and the mate told us if any were fond of deep-sea fishing, here was the place, and adding that skill was not necessary for a good catch, he enlisted the services of almost all of us. The cod lines were brought on deck, the hooks being attached to pieces of strong copper wire about 2ft. in length, bent in the shape of a half-circle and weighted with a huge piece of lead. The mate threw this contrivance overboard, and, paying out the line to within a few feet of the bottom, began to saw it up and down over the rail like one possessed. He told us to follow his example, and in a few moments we were all at it, pulling and letting go, all anxious for the first nibble.

While we were puzzling our brains with the question of how this was possible while our hooks were unbaited, we were startled with the shrieks of one of the ladies, who finally quited down sufficiently to tell us that there was something heavy at the other end of her line, and that it "waggled awfully!" Bent double over the rail, we watched that line as yard after yard of its dripping length was pulled in, and then something white was seen away down in the calm depth, and finally a handsome cod was hauled over on the deck, hooked through the tail, an object both of pity and admiration. Then we discovered the *modus operandi*. The hook did the biting, not the fish. The mate, with a twinkle, declared this necessary, as the fish were so thick below that there was not room for them to open their mouths. After sawing for a few moments, raising nothing but blisters on my fingers, I was content to sit watching the others as they pulled in fish after fish, each one coming aboard in a different way, as no two were hooked in the same place. A few moments before 12 that night found us grouped around the foremast. The engine had ceased its hot breathing, and the ship pulled lazily at its linked fastening beneath the precipitous and ragged height of the North Cape, outlined clearly against the blue sky. The sun, hid beneath a cloud, poured down its molten coloring upon the Artic Sea. Lower and lower it sank, and just before 8 bells rang out, in plain sight the midnight sun blazed and blinked away over the North Pole, only 1,200 miles distant. The scene was sublime, the stars and stripes at the masthead taking our hearts back thousands of miles to America and home, and the sun luring our eyes to penetrate its burning rays and see beyond. F'lin.

Natural History.

NAMES OF A WOODPECKER.

Editor Forest and Stream:

The articles on the popular names of birds, especially of our various shore birds, which you have published from time to time, have demonstrated the necessity of the scientific terms which appear so formidable to beginners in ornithology.

Many of our common birds are known by a variety of names in different localities, for instance, the golden-winged woodpecker (*Colaptes auratus*). I know of no bird to which so many different names have been applied as to this well-known picarian. Its color, mode of flight, peculiar notes and its slight resemblance to other birds have suggested most of its appellations. I send you the list of the names which I have heard applied to this bird, as well as those which I have found in the books. Some of the former I have never seen in print, and, therefore, spell them by sound. *Colaptes auratus* is the scientific and golden-winged woodpecker the common name of this bird with the ornithologists.

Ernest Ingersoll, in his "Birds Nesting," gives over twenty names, including those mentioned, which have been used to designate the bird in question.

1. Clape.	19. Piute or Peeritt†.... .N. Eng.
2. Crescent Bird.....West.	20. Sap-sucker†.....Florida.
3. Cave-Duc.....Maine	21. Shad Spirit†.. .. ...N. Eng.
4. English Woodpecker†...L. I.	22. Taping Bird.....Mass.
5. Fiddler†.....Cape Cod	23. Wake-up.....N. Eng.
6. Flicker.	24. Weather-hen.....Vermont.
7. French Woodpecker...N. H.	25. Wild-hen†.....Maine.
8. Harry Wicket.....N. H.	26. Will-Crisson.....South.
9. Hick-Wall.....Conn.	27. Woodcock (misnomer)..N. E.
10. High-hold.	28. Wood-wall.....N. E.
11. High-holder.	29. Wood-pigeon.....N. E.
12. High-hole.	30. Wood-pecker Lark†.Georgia.
13. Hittock†.....Canada	31. Wood-quoi†.....Conn.
14. Gel Specht†...Pennsylvania.	32. Yaffle.....Conn.
15. Ome-tuc†.....Maine.	33. Yarrup†.....Middle States.
16. Partridge Woodpecker.N.E.	34. Yellow Hammer.
17. Pigeon Woodpecker...N. E.	35. Yellow Jay.....N. H.
18. Pique-bois-jaune†.Louisi'na.	36. Yucker.

Those marked † were found in Ingersoll's book, already mentioned.

We find thirty-six terms in the popular list, though some of them, as Nos. 10, 11 and 12, cannot be considered different names, as they are attempts to describe one characteristic. W. W. COLBURN.

SPRINGFIELD, MASS., March 12, 1887.

AN ENCOUNTER IN THE GRASS.—When I was a boy, in Geneva, and when the cherries were ripe, it was my business before and after school, and on Saturdays and holidays, to keep the birds out of the trees, which I did very effectually with a light, double muzzleloading gun. One day while on the lookout for birds, I heard a peculiar squeaking in the grass, soft and low. Following the sounds, I soon found the cause. The squeaking came from a gopher (squirrel) which was lying on its back kicking. Fastened to its lower jaw, with long pinchers imbedded nearly out of sight, was a large black beetle. Taking a small stick I held the gopher with one hand while with the other I pryed open the beetle's pinchers and released the little prisoner. The blood ran freely from the wounds made by the beetle, but the gopher scampered off and disappeared in the grass.—C. F. COLE.

HYBRID GEESE.—Washington, D. C., April 7.—In your issue of March 31, "E. F. S.," of Byrdville, Va., speaks of having some hybrid geese. I write to urge upon him the plan of making tests with them to establish some facts in regard to the fertility or non-fertility of hybrids. It is an open question, and one of much moment in many ways. I hope "E. F. S." will make three combinations with his hybrids as follows: One male hybrid with one female domestic goose; one male domestic with one female hybrid, mating them with care and keeping each set confined by itself so there can be no possibility of any mistakes; then set the eggs of each female under most favorable circumstances possible, marking results so as to be made available as absolute proof respecting the sterility of hybrids, and reporting results through FOREST AND STREAM.—C. L. H.

SQUIRREL HIBERNATION.—Batavia, Ill.—I send a clipping from the *Sandwich Argus*, published in a neighboring county: "While playing about a hay stack at Colfax, one day recently, a party of boys found a specimen of the gray prairie squirrel. The animal was all curled up in a round ball, and was frozen as hard as a rock. The squirrel was taken into a house and placed under a stove, where, after two or three hours, it thawed out. It is now as frisky and lively as any of its kind." I spent a winter in "Egypt" a few years ago and found the squirrels more active than in the warm weather. A family of them lived in a large tree near our camp and they always took particular pains to get out on a dead limb and scold us whenever in camp. In this part of the State I think they are apt to "lie low" except on bright sunny days.—NIMROD.

THE JACK SNIPE AS A RUSTLER.—Dayton, Wyo., March 21.—In your issue of March 3, I saw a notice of the jack snipe as a hardy winter bird. I can verify "P.'s" statement as to the hardiness of the jack snipe. I procured a specimen on the 1st of January this year in a small spring on the ranch, and have noticed them quite frequently for the last three winters; and as the thermometer sometimes registers 40° below zero, I imagine they can stand almost any weather.—W. C.

AUK'S EGGS.—Fredericton, N. B., April 2.—"F." mentions in your last issue the sale of an egg of this bird for £50. I attended a sale in London in July, 1880, at which two eggs fetched £212.2.0 and £100 respectively. I have photograph of the most perfect one, length, 4 1/16 in.: diameter, 2 1/16 in.—CHAS. A. BRAMBLE.

ENGLISH SPARROWS.—Dover, Del.—In this town there is an English sparrow entirely black, and also one on the farm of T. J. Tucker, near Rolph's Wharf, Md., entirely white. Although we occasionally hear of a black English sparow, I think this the first white one seen in this vicinity.—W. G. L. TUCKER.

VEDDER'S MUSEUM in St. Augustine, Fla., to which "Nessmuk" referred in a recent letter, was burned in the great fire last Tuesday.

TO FIB OR NOT TO FIB.

AN ANXIOUS REVERIE.

WHEN soon the city's torrid streets
My torrid self shall claim,
'Twill then become my awful task
T' enumerate the game
That I have shot and I have hooked—
What number shall I name?

What though I vaunt of Little Moose—
Its waters clear as though
One were ballooning o'er the rocks
And plants and fish below—
They'll cry, "The number of those fish
You caught, we wish to know!"

What though I speak of driven deer
That fly through echoing wood
To seek the safety of the lake—
They, in sarcastic mood,
Will say, "The number of those deer
You shot is understood!"

That number—what, what shall it be?
How many that I caught?
How many shot? Oh, shall I say
'Twas fifty each, or ought
I tell the dire, the dreadful truth—
It was the number 0!

CHAS. P. SHERMAN.

SWELL DUCK CLUB ETIQUETTE.

IN times past I have frequently been urged to give some of the experiences that have presented themselves during the many years that I have pursued my favorite pastime of duck shooting at different clubs that center around that particular part of Maryland known as the "Neck," and famous alike for fever and ague and duck shooting. Here are located the "swell clubs," known as Carroll's Island, Benjies, Grace's Quarter, etc. Upon one of my early visits to one of these clubs a prominent member from Baltimore informed me that I must overlook many things that might occur, for he had found that duck shooting brought out all the savagery in a man's nature. My observation has convinced me that at these places at least, the general habits of men are entirely altered and if any peculiarity of disposition exists, it is certain to show itself there. Years ago the shooting at Carroll's Island, particularly on the Bar, was very fine. In the evening at 9 o'clock the drawing took place for choice of places, and the favorite blinds on the Bar were always the first selected. In those days there were but very few members, except from Baltimore, and these generally had the cream of the shooting. From the steps of the Maryland Club word would go inside the house "wind east," and wagons were soon hitched to fast trotters and they would be spinning away over the pike toward the favorite shooting grounds.

In those times it was generally conceded that few knew anything about duck shooting unless they came from Baltimore, and when these gentlemen made their appearance, members from the "rural districts" were obliged or expected to take a back seat. From time to time, as vacancies occurred in the membership, a few gentlemen from New York were taken in. Now, New York was never known to be behind any city in the world at anything. Baltimore was obliged to forego some of her superiority as to turning out the only duck shots, and New York was included. When there was a good flight of ducks over the Bar some of the scenes enacted there were very ludicrous; and as I now recall them to my mind, although many years have passed away and some of the good fellows, who were actors in them, have been laid away in their final rest, I cannot refrain from a hearty laughing fit that brings copious tears to my eyes. Fancy four New Yorkers and four Baltimoreans on the Bar. The rivalry between these two points is intense. Not a duck falls from the swift passing flocks that is not claimed by nearly every man on the Bar. The worn out servants run from blind to blind, duck in hand, at the command of the shooters, to show "on which side the duck was hit," or "with what number of shot, whether single Bs., No. 1s or No. 2s." I have seen staid and quiet men mount up on the top of the blinds and with excited gestures make "polite" speeches to one another. There was one member from Baltimore who invariably inquired of the servant, "Dick, was that duck hit in the craw?" He always hit *his* ducks in the craw. An old veteran from the same city was fond of "twigging" this party by saying "that he would like no better sport than to be a redhead and fly up and down the Bar and let him shoot at him." But these pleasantries were all forgotten when the boys returned home, and amid the hospitalities of the club and their beautiful homes they resumed their pristine gentility.

Carroll's Island was a vastly different shooting place then from what it is now. I have seen the ox team called down to carry the ducks to the house. Now, I fancy, a tolerable strong infant could easily manage "the bag." One reason for this result is the insatiate desire of man to kill ducks, no matter how or where, only to get a lot of ducks. Guns of No. 8 bore have been replaced by 24-pound No. 4s with 13 drams of powder and 2oz. of shot. Ducks are tolled, crept down upon, and in fact every conceivable expedient is resorted to by the "crack sportsman" to secure a lot of ducks to take home. As a natural result the ducks avoid these places of torture, and seek quieter spots for feed and repose. And these noble sportsmen, who have heard the weird stories of the past, and who have paid $8,000 for a share in a crack club, now wonder where all the ducks are. I write this really in a spirit of mournfulness, for I know it will be but a short time when the canvasback and the redhead will be things of the past, as far as the Flats, the Gunpowder, and Chesapeake Bay are concerned. They will share the fate of the buffalo and antelope of the Western plains. The old familiar cry of "Mark river!" or Mark bay!" as the graceful waving ribbon of tiny specks sweeps around toward the bay from the far off horizon—will be one of "the echoes of the past." We "old fellows" will recall, with tingling blood, the vision of a bunch of red heads doubling gracefully up to the wind toward our decoys. There are only one or two places that present a faint shadow of former times, "Benjies" being probably the best.

And now, in giving some "advice to a new member," let us select this Club as the one which he proposes to connect himself, although these rules apply to "the swell Clubs" in general. When you are proposed as a member it would be well to keep your "nationality" to yourself, unless you are from New York, Baltimore or the State of New Jersey. Nearly all "finished sportsmen" come from these points. As a new member of this Club and time-honored association, I offer a few hints that will serve to post you as to certain conventionalties that exist among finished duck shooters; a study of them cannot fail to prove beneficial to you, and will be received, I am confident, with thankfulness.

First—As regards general conduct. To be considered "a first-class sport," there are certain rules of conduct and manner that apply only to the duck shooter, and particularly to those who belong to the swell clubs. The shooting season commences on or about Nov. 1, therefore the old natural style of behavior must be thrown aside at this time, and the finished ducking style assumed. It would be well to commence practice about the 15th or 20th of October, so as to be well up in the style, for I assure you that without these qualifications you will never be considered among "the first class," as to style and finish. Upon meeting a fellow member of your club you must rush at him with outstretched hand and with elevated eyebrows and wide open eyes, and exclaim, "Why! what are you doing here? I thought you were down among the ducks!" And you must do this even if you are perfectly well aware that it would be impossible for your friend to have been away. Indeed, the more improbable the fact the greater must be your surprise. Or, if your friend has just returned from shooting, the most accomplished salutation is thus, "Hallo! got back, suppose you have killed all the ducks?" And then, if your friend does not respond, you can ask him *sotto voce*, "How many did you get?" If he has had good luck and has killed a large number of ducks, you must express no surprise. Remember that; no matter how great is the slaughter express no surprise, but if only a few ducks have been obtained, owing to adverse winds, you must show your evident distress, adding, at the same time, a suggestion that "there must have been some very bad shooting done," or some such kind of expression, calculated to allay his dissappointment. And remember that if you should happen to have a lucky trip and kill a good lot of ducks, when you reveal the fact to your fellow members, you must do so in a subdued and modest tone and air, adding the word "only," thus—"We only killed ——," and absolutely affirm, "that you had nothing but the longest kind of shooting, mostly at single ducks, and, in fact, the most difficult and ragged kind of shooting, losing fully one-half of the birds knocked down." Now, these are among the first essentials to assure you a place among the "elite of the duck shooters." Of course, when the season ends, you can resume your natural habit and converse.

Second—Your outfit. In selecting your clothing, no matter what color you may get, or how careful you may be in your selection, you will not obtain the right shade. It is absolutely impossible for you to arrive at a satisfactory result. You will find no two opinions alike, and I can assure you that all parts of the world have been ransacked to get a suit of clothes that will not frighten the ducks. Only age, dirt, moths and grease can produce a satisfactory result. So when you commence shooting do not be annoyed if the color of your hat or coat is chargeable with the result of ducks not decoying properly, or the frequent misses of your friend in the blind. As to your underclothing it is an open choice between a white muslin shirt or a colored flannel one; either is permissible without comment. But you must wear colored woolen hose. The question of boots has excited the club for years, and the question is still debated as to long or short ones. My advice is to have a pair of both, so by changing you can satisfy all parties. It will be well to have a full dress suit on hand, low vest, dress coat, black pants and white cravat, so as to be ready for "distinguished strangers."

Thirdly—Guns and ammunition. This is one of the most important features to be looked after, and upon these depend greatly your appreciation as a genuine sportsman. There is only one make of gun for duck shooting, and that is by "Pat Mullen," of New York. No matter what it costs or what trouble it entails, you must have one of these guns. As it requires this maker from one to three years to turn out a gun, you had better commence negotiations in ample time. In the first place you cannot approach this maker without a written recommendation from some distinguished member of a "swell shooting club," and only from one who has written a letter to Mullen assuring him "that he is the only gun maker in the world." When you are admitted to his presence you must get down on your knees and implore him to make you a gun at his own price. If it suits him he will probably tell you "that he never intended to make another gun, but he will break his oath and make the last one for you." From this you will perceive that it will entail considerable trouble upon you to secure this desideratum, but you must have it at any cost, for on your arrival at the club your gun is critically examined, and the recognized first examination of your outfit and the verdict settle your status for all time. If by chance or skill you happen to make a long and successful shot "over head," every member present will rush up to you to inspect your gun. If it is a "Mullen" no surprise is shown; if any other maker the shot is considered "pure chance." The gun gets all the credit, so you see the importance of having a "Mullen." There are a few other makes that are admissible, such as Reilly, Purdy or Scott, but these excite little remark. In regard to ammunition there is no room for argument, the matter is absolutely settled. If you wish to be considered "crack" you must use only Ely's imported shells, Curtis and Harvey's imported powder, and above all, Ely's pink-edged imported wads, and be certain that your shells are loaded with "pink-edged" wads, for if you are detected using any other your reputation as a "sport" is gone.

These are the most important requisites, but I will give you a few general instructions that may prove beneficial and add to your enjoyment duck shooting. When at table, no matter how distasteful the viands may prove, you must pronounce them "the finest and best cooked

that you ever tasted in your life," and at each meal, no matter if you have been a member for years, you must reiterate this assertion. If a duck is cooked, you must say "it is the finest you ever tasted." And remember it is considered outrageous to express an opinion that you get anything as good at home as at the club table. The longer time you take at your meal the more thoroughly your sportsmanship is pronounced. In fact, the best shots spend but little time at the shooting points, the sport becoming monotonous.

As regards the best shooting places, I would recommend that you stand in the road, just at a little bend, beyond the house. A few oyster shells sprinkled there make good footing in all weather. Here you do not disturb other members of your club, and are likely to be undisturbed yourself. It has many advantages; in case of storm you are near the house for shelter. From this point you have a fine view of Benjie's Cove, a sheet of water to the east, used as a kind of preserve for ducks. It becomes deeply interesting to the tired sportsman to watch their movements. In fact, some of the oldest veterans, men that are famous for great sporting deeds, find much more pleasure in watching the ducks with a field glass than in shooting them. And I would here say to you, never go to a shooting point without a field glass slung around your shoulders. In the blind you are expected to jump up every few minutes and scan the horizon and waters with your glass. This is a certain evidence of your being a true sportsman; indeed, your glass is examined nearly as critically as your gun. At this favorite shooting place, "the bend in the road," you are within easy sound of the guns at Main Point and Persimmon Cove. If you are on the Bar, the report of your gun might interfere with the sport of your brother members at the Point; and if at Standing Cove, the same trouble would be experienced by those at Persimmon, and such a course would not be sportsmanlike; therefore by all means stick to "the bend in the road," it will make no difference to you as to the amount of ducks you will secure. A few members in all sporting clubs always kill nearly all the ducks, whether they shoot or not, and when the time comes for return home the bag is divided by constituted authority; your share is securely bagged and tied up, and if you find a few baldpates, blackheads and cripples in your lot, you must never mention it, but be content.

If you occupy a blind with one of your fellow members who is a veteran, be careful not to shoot your gun off under any circumstances; if you do, you will lay yourself open to the charge of shooting over or near your friend's head, or of shooting too quickly or too late. You had better not shoot at all. Your friend will think that he killed all the ducks, whether you shoot or not. The most fun you will have will be to bend yourself in the most uncomfortable position in the corner of the blind, and remain there until he tells you to get up, which will generally be when he has had his shot. One of the first things to learn is to "keep down" in the blind.

I advance these points to you, knowing their value after an experience of a great many years. If you follow them rigidly you will be considered a sportsman; if not—well, your friends will call you what they please, but without them you will never attain to a finished duck shot. VETERAN.

IN A BOX.

SOME thirty years since, when I was younger than I am now, I left my home in western New York on a voyage of discovery in what was then the far West; and mindful of the stories I had heard of the plentifulness of all kinds of game there, I took with me my muzzleloading doublebarrel, and for a companion my setter Dash. Both were objects of affection and regard, and both had served me well on many a day's sport. My friend, upon whose invitation I undertook the trip, was engaged in building a railroad from a point on the Mississippi River to Omaha, I believe, and knowing my enthusiasm as a sportsman had given me some graphic descriptions by letter of the vast quantities of game to be found in the vicinity of his labors, and although my trip was purely a business one, I do not now believe I would have undertaken it but for the incentive his description of the game afforded. And I can truthfully say that he fell short of the facts rather than overstating them. Ducks of every kind, geese, turkeys, chicken, quail, woodcock and deer abounded, and for once I had all the shooting I wanted. The little hamlet where my friend resided was situated on the Ohio River, not very far from where it mingles with the Mississippi, and was surrounded on the east, south and west by a broad prairie, and the time being spring, every depression in the ground was filled with water, often broadening into quite large ponds, interspersed with smaller pools; and all were fairly alive with the various species of wild fowl. As these pools were without cover of any kind about them, the grass being down at this season of the year, it was extremely difficult to get within shot of the immense flocks that haunted these resorts.

One of the ponds, or as the dwellers there called them, sloughs, I particularly remember, and I have reason to. It was very large—in fact the largest one in the vicinity—and in its center was an island on which, as well as in the water about it, thousands of ducks were always to be seen. But their caution had always prevented my getting within shot, for at any advances I made toward acquaintance they would rise with an indescribable roar and much quacking and splashing. If I had a boat, I thought, I could row across to the island and pull the long fallen grass over it, and perhaps after a time they would come back and afford me the chance I longed for. But alas, there was not only no boat, but there was within five miles nothing that would even float. Repeatedly I went there and watched them through a pocket glass and calculated mentally, what would be the result if I could once got within range of the thousands of heads I saw; and every time I figured on it I became the more anxious, because every time I increased the estimate of killed, when both barrels of my good stub-and-twist should bellow at them. Indeed I pondered on how to do it when I ought to have slept, and no matter how good the day's sport might be, I always felt it might have been infinitely better if I could have managed to once snugly hide myself on that island.

Walking one rainy day through the village, I got a bright idea from seeing in front of a store a large drygoods box, which I believed I could turn into an ark, enough of an ark at least to carry me across the water to the island. I bought it and carefully stuffed the cracks with cotton; and hired a man with a wagon to haul it to the pond, five miles distant. I provided myself with two pushing poles, to be used as a motive power, and took along an unusual supply of ammunition, which, I reasoned, should be as a just proportion to the number of birds I had seen there—the birds being plenty the ammunition ought to be abundant, and it was; and I believe my ship drew considerably more water on that account.

The man who transported my "yacht" to its "native element" assisted me in launching her, and I was greatly encouraged to find that she was staunch and did not leak. The man handed me my gun and I went aboard. Then he handed me the poles to navigate with, and to my surprise the "boat" did not tip, but kept an even keel. My spunk, which had been depressed by a remark the man made to the effect that "he'd bet on my getting a good day's 'ducking,'" rose, and leaning my gun in one corner of the "yacht," I took a pole and shoved off. The craft stuck a little in the mud, and when she lost her grip on that, she started too enthusiastically and recklessly, and I sat down on the bottom very hard. She then began the most sickening series of evolutions and dippings I ever experienced, and had not the man rushed into the water and curbed her infernal desire to dance, I would have been dumped into the pond. I believe that pine box had got the notion that it was a schooner by the way it cavorted. However, he held it afloat till I ascertained where the center of gravity was, and using great skill and caution as a navigator and acrobat, I succeeded in crossing in safety. Stepping out of my ship I had the pleasure of sinking up to my knees in the black oozy mud, but after much effort I drew the box ashore, settled it firmly in the mud and drew up the long fallen grass around it and over it, and stowed myself in it to wait the arrival of the ducks.

The man, with the two dollars in his pocket, the reward with a promise of which I had induced him to transport myself and box to the pond, had gone back to the village. I was alone, and curling down out of the piercing March wind I waited patiently. Two hours, four hours, and not a duck put in an appearance. Occasionally overhead I could see a flock knowingly cocking their heads and looking squarely down at me in the box, and then winging their way to some other feeding place. At last the declining sun and waning light convinced me that it was a failure, and that I must once more face the difficulty of floating my craft back over the forty or fifty rods of water. Stiff and lame from the confinement, I crawled out and attempted to shove the box back into the water. Great Cæsar! I might as well have attempted to move the Goddess of Liberty from Bedloe's Island. The more I tried to push it free the further my lower extremities went into the mud, but the box moved not. My weight for many hours had settled it firmly into the black mud; and tear at it and strain as I would, I could not stir it. I looked at it and wondered if it was the same infernal pine box which only a few hours before had assumed the airs and rolled and cavorted like a wild ass.

Well, it could not be moved, and without its aid I could not get across to the shore; so there was nothing to do but to get back into it out of the wind and wait the course of events. I knew that some one would probably come looking me up if I did not return home; and so I quietly waited, possessing my soul with all the patience I could muster—but the patience crop that year was a small one, and I am afraid I used some rather strong language.

About midnight I was awakened from a doze by voices hallooing from the shore, and I knew that my friends were there; but my release from that wretched box came not until one of them rode back to the village and got a team and brought lumber enough to construct a raft, when at length, cramped and benumbed, I was restored to liberty just as the morning sun lit up the dark prairie. I am willing to risk something on the belief that that box is there yet.

I killed loads of ducks after that, but I can assure you, kind reader, I never again attempted a flank movement by trying a drygoods box ark. CHESTER.

NEW YORK.

DEER IN DEEP SNOW.

THE most Americanized town in the Province of New Brunswick is Woodstock. It is situated on the St. John River, twelve miles from the town of Houlton Me., and at the mouth of the Meduxnakio River, which latter flows through both of these border towns. In the year 1847, Woodstock was the center of a large lumbering district, where, during the summer months, the choppers or axe-men spent, in riotous living, their winter earnings. Scenes of drunkenness and riot were of frequent occurrence, and a company of British soldiers was here stationed to give occasional support to the civil authorities.

Among the officers stationed here were many really fine fellows, ever ready to join with our citizens in fun or fray. I often visited Wickham's quarters while stationed in Woodstock. He was a man of agreeable manner, temperate habits, a good physique and lover of music—he blew a cornet. Anxious to see something of the wild woods of America, and hearing of a place where deer might be found, we set off one bright morning fully equipped for the O'Donnell settlement. Arriving at one of the most remote houses, the horse hobbled and ourselves regaled with Dougherty's fresh eggs and hot barley cake, we mounted our snowshoes and, carrying on our backs of food and camp equipage from 40 to 60lbs. each, entered the woods. Our guide and escort was a young lad, D.'s son, and his dog.

Descending from the high land to a stream, the Pocamonshine, the bound of the wolf on its snowy level surface, showed plainly where poor puss met her fate, and the fragments—hair only—the fierceness of the onslaught. Pursuing our course down the stream until near nightfall, we prepared to camp. Using our snowshoes for shovels, we dug a hole 5ft. square by 4ft. deep. As I chopped into logs the nearest birch tree, W. twitched them with his comforter, and tumbled them into our nest for the night's fuel. Our couch lined with evergreen fir and blankets, and generous slices of bread and bacon disposed of, we sip a hot infusion of the fragrent herb, and discuss the merits of winter camp life in New Brunswick.

It was a clear, cold, windy night in March, and the branches of a projecting tree our only covering. From our slumbers—not the soundest—we were frequently aroused by the howling of the wolves, whose curiosity, we thought, might give practice to our revolvers. While the stars were yet twinkling, our fire, which had penetrated the swamp a foot or more below our level, was rekindled, another attack made upon the edibles, and we were ready for the tramp.

A little further down the stream we observed, on a mountain side, a growth of birch and other browse supplying trees, and proceded to ascend. Snowshoeing on a steep hillside, while a hot sun is shining upon it, causing the snow to load and melt upon your snowshoes, is a test of the patience and physical endurance of the hunter.

This was our experience for a short time, when heart and load were lightened by a discovery—we had struck a deer yard. Observing from the most recent marks of the animal its direction, we throw off all incumbrance and start in pursuit.

Following the yelp of our small terrier is the bound of a fine buck. After an exciting chase, the beautiful creature takes from a firm footing its final leap into the deep soft snow, where it lies helpless and powerless. As we stood around the poor captive, its dark lustrous eyes spoke to me what I cannot forget nor will I attempt to write. The extra garments peeled off during the chase being collected, and a double load for myself—now lightly borne—we turned our steps toward the clearing. W. led off, adopting a convenient method of carrying the buck, belly around the neck, with fore and hind legs in front and held by either hand.

From its neck the blood dropped into his pocket, from which a handkerchief was occasionally taken to wipe his perspiring face. Before night we arrived safely at the cabin. W., who had been leading, entered first. As he opened the door a prolonged Irish howl from Mrs. Dougherty startled us, the only distinguishable word being "murther!" On entering I immediately discovered the cause of her alarm—his face was smeared with blood.

The Dick Turpin effect was heightened by the ragged appearance of his "Kossuth," through which I had that morning fired two minie bullets before leaving the camp.

A reviver, not of the ardent, but of good tea, with solids, for which we had a relish, fortified us for the home stretch.

With W. and our trophy on the upper side of the sleigh, the road being slewy, I, of less avoirdupois, took the lower and the reins; and after a merry moonlight ride reached Woodstock without mishap. B.

A MARYLAND TRIP.

OUR party of four was on the way to the eastern shore of Maryland in pursuit of geese and ducks. Reaching Georgetown at 7 P. M., we were surprised to find the depot and open grounds adjoining densely filled with humanity of all colors and conditions. We were driven to the Brick Hotel, R. A. Rosenbaum, proprietor; a decided sportsman, by the way, who strongly urged us to tarry some days with him, as the season for quail would open in a day or two. We sought an explanation of the unusual crowd we met at the depot. Having been introduced to Governor Stockley, who was stopping at the hotel, and with whom we spent a very pleasant evening; he informed us that it was the continuance of an old-time custom, still prevailing in that county and probably in no other State in the Union. The occasion is known as "Return Day." It always occurs on Thursday after the election of Tuesday. Before the days of telegraphs and railroads, it must have been a wise and convenient method of learning the results of the canvas; and so in love are the country people with the custom that they still flock to the county seat in multitudes—men, women, children and babies, black, white and all the intervening shades—and according to Mother Goose, "some in rags, some in tags and some in velvet gowns;" in carriages, cars, carts, horseback, muleback, "on foot and across lots," as the girl went to get married. Quite like an old-time Fourth of July, or "general training day" at the North, with the accompanying cake and bar stands "so dear to the days of our childhood." But from the noise, shouting and crowing, which lasted till late in the night and was resumed by one old cock in the morning, it was evident that something stronger than "Adam's ale" had been imbibed by a portion of the crowd.

In our sleeping room we found two beds. The frame of one was of immense size (6ft. wide and 7½ft. long) and of ancient manufacture. It was a dark mahogany color and estimated to weigh about a ton. A search in the morning resulted in finding the doctor and his companion scattered in various places among the bedding, but sound in body and in good condition for breakfast.

As we must wait till after noon before we could proceed further south, we decided to explore the quaint old town, and one of the results was that the doctor was tied to the "whipping post," and afterward put in the "stocks." But fortunately the Governor was at the court-house, and on hearing the facts pardoned the doctor and set him at liberty. Afterward we were paid no little attention by the county officials, who took us through their offices and permitted us to examine some of the records of Colonial times, which were written in a remarkably beautiful clear hand, and well preserved.

The cars in due time brought us to Berlin, where we found our old friend and former host, J. Z. Powell, waiting for us. He soon had us, with our impedimenta, snugly stowed in his two covered carriages and on the way to his hospitable home at South Point, ten miles distant, where a cordial greeting and a warm supper made us forget the tedium of our long journey, and longer waiting. How we fared on the yacht, with Charlie for captain and cook, where we sailed, what game we got, what live decoys we lost, the stories told, and other interesting features of the trip, I leave for the doctor to relate, for "the half has never been told." J. H. D.

POUGHKEEPSIE, March 28, 1887.

PASSAIC COUNTY (N. J.) FISH AND GAME PROTECTIVE ASSOCIATION.—Officers for the present year: President, Eugene Stevenson; Vice-President, Joseph Bustard; Secretary and Treasurer, Chas. A. Shriner, Paterson, N. J.; members of the board of directors in addition to the above officers, Wm. M. Smith and Wm. B. Gourley. The association is continually gaining in strength.

NEWPORT, R. I., April 5.—We have had a very backward spring here; snow 10in. deep on the 22d inst. Notwithstanding all this cold a gentleman shot two killdeer plover two weeks ago. As yet no snipe have arrived, although the robins and bluebirds have been here a month. The sea fowl have been flying very thick, but as yet very few have been killed.—G. B. R.

BEAR STALKING IN CANADA.—II.

THE next day, Oct. 16, we set out on our way to our own hunting ground, which we reached, after a difficult journey, on the 21st. Here we went into camp to remain for some days. After dinner we started for an afternoon's hunt, the Colonel going up the river some distance and I crossing directly opposite our camp. Charles led the way toward the first range of hills over a flat tableland, divided by several steep ridges. While making our way along one of these, Charles suddenly stopped, and pointing to a ridge opposite crouched down behind a bush, and following his example I saw a large bear 500yds. off, feeding and not showing any signs of having detected our presence. Here was an unexpected piece of good fortune. The bear had wandered down from the mountains and was feeding along the river, the wind was favorable and we were in a capital position to stalk in upon him. Charles retraced his steps 100yds. and then plunged down the sharp declivity, bearing away a little to the south; then up the side of the ridge, and then we were directly in a line with our game and to leeward of it. Waiting only a moment for me to throw my coat to Joseph and change my rifle, we advanced directly toward the bear, stepping cautiously but quickly. In a very short time Charles stopped, and stepping to one side silently raised his arm and pointed ahead; and there, a little to my left, stood the bear, 70yds. off, as I made the distance. Charles stood like a statue, his gun in its case under his arm. Joseph, close behind, whispered to me to shoot.

The bear was quietly feeding, the forward part of his body covered by the bushes. Sighting as near his foreshoulder as I could, I pulled the trigger. A fierce jump, and the bear went directly away from us with a rush. I fired again and once more on his trail. Charles had already sprung forward in pursuit, at a pace I could not pretend to rival, and was soon out of sight. Handing my rifle to Joseph I followed as quickly as possible. I soon heard the loud report of Charles's gun, and when I came up to him, Joseph told me that he had seen the bear a long distance ahead, his pace reduced to a walk, and had taken a long shot at him but had missed. Charles took up the trail again, and when we came to where he had walked along a dead tree, the blood stains showed that he was badly hit, and Charles declared that he could not go far. On and on we followed, but the trail soon led us up the side of the mountain in the most impracticable ground, among rocks and fallen trees; but still the marks were there. I soon found that I must leave the trailing to Charley and make my way along the side of the mountain, keeping Joseph with me. We proceeded thus about half a mile, when it being after sundown and the trail still leading up the mountain, Charles returned, and we were obliged to give it up for the night. On the way to camp we met the Colonel coming down the river. He had seen a bear just north of camp, and had landed and stalked him, but the animal had become alarmed and made off. We had supper, talked over our adventure and turned in with orders to have breakfast ready at daylight the next morning.

Wednesday, 22d.—When we turned out this morning we found that ice had made in the night, ¼in. thick, in the pan of water in our tent. The weather was clear and bitterly cold. Breakfast over we started again, the Colonel up the river and I crossing with Charles and Edouard this time, to take up the trail of the wounded bear. The Indians took up the tracking where Charles had stopped, and followed it up until about eleven o'clock, when finding that it led them still straight up the mountain, without any sign of stopping, and that by proceeding further then, the wind would carry their scent to any bears that might be on the mountain to the northward, where we expected to find them, we turned back and made our way to the top of a mountain to the north, and from there watched the mountain to the west of us. We were then about 1,000ft. up. At the foot of the mountain was a valley with a stream running through it, and on the other side of this a much higher range of mountains. From our outlook we could see the country for miles around, and Charles soon discovered two bears on the side of the mountain directly opposite. This time I was perfectly satisfied to accompany my Indians back to our canoe and then to the camp for dinner.

After dinner I started again with Charles and Joseph, and back we went straight to our watching station, where we arrived at about 3 o'clock. We had been on the lookout only a very short time when I saw a bear come out of the woods on the slope of the opposite mountain, about half way up, and make his way across the clearing toward the opposite side. I could see him distinctly as he picked his way along the fallen trees, appearing and disappearing at intervals, and Charles, through Joseph, said at once that we would certainly find him feeding on the edge of the woods, toward which he had been making his way. There was no hesitation now, and in a moment we were off down the mountain side, bearing off again well to the south. The wind was blowing half a gale from the northwest, and this was favorable to us, and we could not have had a better day, nor been in a more favorable position for a successful stalk. We soon reached the valley; and here the walking was again terrible, but I pushed on and soon arrived at the stream. After we had crossed came the real tug of war, for we had to scale the mountain in front of us, and this was no child's play—some 1,500ft. to climb, straight up. Stopping occasionally to get my wind, up and up I toiled, and I was very glad when Charles at last, inclining his steps to the north, stopped at the edge of the woods and announced that we were above the bear and ought to find him not far below. A moment to get our breath and charge my rifle, a caution from Joseph to make no noise and to travel in Charles's footsteps, and we moved on right out into the open part of the mountain and downward. This part of the mountain was cleared of trees, but there were a good many bushes, which gave us some shelter, and behind these we made our advance, Charles stepping surely and noiselessly as usual, I following and Joseph bringing up the rear. We proceeded thus about fifty yards when again Charles stepped on one side and pointed down the mountain. There was the bear we had seen, feeding quietly, broadside on, but forty yards off, with his head in a blueberry bush. Without a pause, I covered him just behind the fore-shoulder, and pulled the trigger; at the crack of the rifle he rolled over, and then started off, crossing diagonally in front of us, but twenty-five yards away. He must have seen us, but on he went. I fired twice as he passed me and a fourth time on his trail, as he dashed into some thick bushes. Charles led off again in pursuit, and Joseph this time, in his excitement, followed him, leaving me to bring up the rear. I soon came in sight of them going across and up the mountain, and when they had gone about two hundred yards, I saw Charles suddenly stop and Joseph waving his hand frantically.

When I got up to them there lay the bear in a ravine unable to go any further. I was about descending when Charles stopped me and Joseph said that he was still dangerous. I gave him a final shot from where I stood, he stretched himself out and the hunt was over. I was a happy man and the Indians were happy, too: even Charles smiled with pleasure, and as for Joseph, he was fairly triumphant. Charles had very good reason to be proud. We had been an hour and a half in moving from our watching station to the point where we had begun to stalk the bear without alarming him, and that without having once seen him after we had lost sight of him until Charles pointed him out to me. He had given me the chance I had come so far to get, trusting entirely on his representations, and I had killed—and here was enough to please us all. Here were a skin for me to take home, bear meat, bear soup and bear tid-bits for the camp and a goodly supply of bear's grease, which the Indians highly prize for their own use.

We descended to where the bear was lying, and the Indians immediately began to make a pack of him so as to carry him to the canoe, three miles distant. This bear was not nearly so large as the one I had wounded, and yet he made a very respectable weight for one man. I could not have carried him 10ft., but the Indians will carry enormous loads on their backs when properly arranged. They first tied the ends of a cord round the hindlegs, and then bringing the parts round the frontlegs, made a loop which they then passed across their foreheads, with a strip of bark, to prevent the cord from cutting the skin. Then stooping down Charles soon had the bear suspended on his shoulders, and walked off with him without any apparent difficulty. Our road home was nearly all down hill, and when Charles was tired Joseph would take up the load, and so spelling each other in about an hour we arrived at the canoes. It was after sundown and we were soon in camp, where I found the Colonel, who had not seen anything. I was glad to turn in early that evening, as I had had a double tramp and was thoroughly tired out.

Thursday was a clear and warm morning. Feeling rather tired after yesterday's hard work I gave myself a holiday, sending Charles and Joseph off again to follow the trail of the wounded bear. The morning was passed in watching the Indians skinning the bear and stretching the skin on a square frame of poles to dry, and in reading and sleeping. We had bear steaks for dinner and found them capital eating; the bear was a young one, which doubtless improved their flavor. Black flies are here in swarms to-day, and it is a curious fact that we have found them all over, on the tops of the mountains as well as in the lowlands, along the river, and that, too, after such freezing weather as we have had. On the Saguenay, toward the end of July, they begin to disappear, and in August are almost entirely gone, while here we have had them in swarms in October.

This is a good place to say a word about the best footgear for the woods. The moccasins, as made by the Indians, either from the skin of the caribou or moose, are decidedly the best of all wear, being light and noiseless. Next to these come the Canadian boots; made of leather, cut out like the moccasin without hair, soles or heels, and with tops coming up to just below the knee and secured there either by straps or leather thongs. These boots are heavier than the moccasins, but for fishing or walking on rocks are the safest things a man can wear, as they rarely or never slip on stones; they are apt to slip on soft ground, it is true, when descending a steep hill, but then there is little danger, while a slip from the rocks, when salmon fishing, might be a very serious matter. Heavy boots or any kind of walking shoes, especially those abominations with nails in the soles, are entirely out of place in the woods or on a salmon river.

The Colonel went off in the afternoon for a hunt, and returned about sundown. He had seen a bear and had got within about two hundred yards from him, when his Indians, from the nature of the ground, had urged him to try a long shot, but the Colonel, fearing only to wound him at that distance, had decided to attempt getting nearer, but the bear scented or heard them and made off. The men returned a little later and reported that they had followed the trail a long distance, straight away over the mountains, and that in all probability the wound was not after all a mortal one, so we had to give it up.

Friday, Oct 24.—It was raining when we turned out, with a warm south wind. Weather squally all day. Caught eighteen trout, two quite large. After dinner we both went off for a hunt and returned without having seen anything. We have determined to move our camp about ten miles further up, and change our ground, as it is probable that the bears here have become alarmed and left for the feeding grounds.

Saturday, 25th.—Very cold night, at three, finding it impossible to sleep, we started a fire in our stove. We started about eight o'clock and went into camp again at twelve; took a light lunch and went off for a hunt, but neither of us saw anything. The day was very warm and pleasant with a southerly wind. Sunday it rained hard most of the day. Our dinner consisted of hare soup, bear steaks and partridge—quite a feast. The hare was caught in a trap, and the partridge killed by the Indians with stones. They are quite expert at this, and as the partridges here are very tame and will fly up into a tree close to you, the Indians do not waste powder on them, but knock them over with a stone or a club, and in this way they have furnished our table with some half dozen of these birds. Black flies are still on hand, the tent full of them.

Monday came in with northeast wind and rain. In camp all the morning. After dinner, as the weather showed signs of clearing, I started off with my men. We had a long and hard climb, and when we got to the top a heavy fog came rolling down upon us, and we returned to camp, changed wet clothes and made myself comfortable. The Colonel wisely staid quietly at home.

Tuesday, 28th.—Still raining hard, with northeast wind. Provisions giving out, and we must leave soon. No signs of clearing, and looks like equinoctial storm.

Wednesday, 29th.—Clearing, with northwest wind. Started after breakfast with my men, and after we had scaled a high mountain the weather changed, coming out bitterly cold, with a gale of wind and snow squalls. Could not stand it, and returned to camp about 6 o'clock without having seen anything. The Colonel went a long distance up the river to where we had intended to hunt, but saw nothing.

Thursday, 30th.—A very cold night and morning, with heavy frost. Broke camp and went down the river to our old camp for a last hunt. Arrived about 11 o'clock, and after a light lunch started out. I went to my old lookout and the Colonel this time went down the river. I came back about sundown, having seen nothing. The Colonel saw one bear, but did not get a shot. Start for home to-morrow.

Friday, Oct. 1.—Broke camp early and started down the river. On the way down we fell in with a wildcat and I killed him with a bullet through his head. He was a large and powerful animal, with long muscular legs and very gaunt, which at this season of the year was very singular, as hares and partridges are abundant. Leon skinned the cat, and the Colonel took the very handsome skin to Quebec to be made into a cap and gloves for his winter hunt. Edouard asked us if we would like to taste the meat, but we draw the line at wildcat meat, and they saved the carcass for the Indians whom we had passed on the way up. At one point we passed an Indian post office. As I was half dreaming in the canoe I noticed that my men were racing toward the shore with the baggage canoe, and supposing that they had seen something in the way of game, I seized my rifle, but as the two canoes ran in on the beach I was surprised at seeing my Joseph, who was in the other canoe, spring on shore and seize a piece of bark inserted in a slit in a pole, driven into the ground on the bank. The pole was the post office and the bark was the letter. It was soon read, and passing from hand to hand, at last it came to me. I found Indian characters scratched with some sharp instrument, and Joseph explained to me that it was a notice left there by the old Indian and his son (with whom we had made our treaty), saying that on such a day they had left the river here bound on a trapping expedition and that at that time all was well with them. This news the Indians would take to their friends below and at home. On the other side of the river and some distance below we passed a similar sign post, and below that stopped at an encampment, where we found the wife of the old hunter with a young boy, who would wait there entirely alone until the father should return, though that might be a month or more. Here we left the cat, which was thankfully received. Running a river is perfectly charming in fine weather; it is all down hill; the speed, especially in the rapids, is exhilarating beyond description. The canoes are now close together, side by side, then they separate as each pilot takes a different channel, then there will be a scrub race. It is like coasting down a steep and smooth hill, while ascending is like dragging your sled up the same hill. We were two days coming down the same distance which it had taken us five days to go up; and one of our Indians told us that one spring when the river was high he had started from our furthest camp, and had arrived at the mill before dark.

Sunday, Oct. 3.—To-day was lovely, like one of our own October days, with a bright blue sky and southwest wind. After dinner the Colonel and myself took a long walk up the mountain, and I showed him our watching place and where I had seen the bears; but nothing was in sight this time. This is our last night in camp, and to-morrow evening we expect to be on board our cutter. Yesterday afternoon we tried our rifles for penetration. At 50yds. the express sent a bullet entirely through a tree certainly 10in. in diameter, shattering the back part of the tree badly, while my bullet was found to have penetrated only about two-thirds in the same tree. Several trials gave the same result, and this convinced me that my first bear never would have escaped had I had an express, and my second bear would never have gone the distance he did and probably would have been killed dead at the first shot; for we found afterward that three bullets had struck him, one just back of the foreshoulder, one not far from it and a third in the flank ranging forward; and yet he had run at least 400yds. before giving up. My rifle was very effective for deer and small game, but entirely unfitted for heavy work.

Monday, 4th.—Broke camp and going merrily down the river arrived at the lumber mill, just in time for dinner with our hospitable friend; embarked and were soon on board our boat, which we found at anchor at the mouth of the river. The next night found us at the St. Louis Hotel in Quebec, and there I slept in a bed for the first time since leaving the mill on the Port Neuf. Thus ended one of the most successful and enjoyable trips I ever made—full of excitement and novelty and without an accident or a mishap. Both of us returned in splendid health. When I come to look back, however, at the exposure we went through and the weather we encountered I am surprised that we escaped so well. The great danger comes when you have arrived at your watching station. You are then thoroughly heated and you must remain there for several hours without any shelter; you cannot have a fire, but you may get under the lee of a rock, or under the crest of the mountain and there you can get a quarter-deck walk, but it is bitterly cold work when the wind is blowing a gale, and the risk of taking cold is very great. But either from the dryness of the mountain air or from the precautions we took in having something warm to put on when in the mountains, we neither of us suffered in any way from the exposure. We experienced very bad weather during this trip and were entirely disappointed in that respect. September in Canada is generally more like our October, and fine clear weather may be expected, although so far north as we were much colder weather is to be looked for. This month, however, was an exceptional one, and as the Indians declared worse than anything they had experienced for years, yet this trip will be long remembered by both of us as one of the most novel and exciting events in our hunting experiences.

N. P. R.

Oneida County Sportsmen's Association.—Utica, N. Y., April 8.—The following are the officers: President, Dr. W. H. Booth; Vice-President, M. M. Brunner; Secretary, H. L. Gates; Treasurer, O. A. Wheeler. The annual tournament of the N. Y. S. A. for the Protection of Fish and Game will be held here under the auspices of the O. C. S. A., commencing June 6 and closing June 11. Prizes aggregating over $4,000 will be offered.—H. L. Gates, Sec'y.

EXPERIENCE WITH CALIFORNIA GAME.

FOR several days three of us had been talking of taking a trip back into the California Coast Range, to look after some cattle there turned loose, and to brand and bring back any of the season's calves; and at length we started. The first thirty-three miles were to be made in a wagon, so I took my gun and some cartridges. My companions were Sam, an old stage driver of early days, who had driven coach and washed for gold back in the fifties; and Bob, of about twenty-five, who worked in the gold mill at Sulphur Creek, from which place we started. For several miles the way led up Bear Valley, beautiful with its large fields of flowing grain and grassy meadows, hemmed in by tree-covered hills, and with a bright little stream flowing through its center.

I soon found that putting in my gun was a wise proceeding, for quail appeared frequently along the road. Picking out the male birds (distinguished by a topknot), we secured seven, shooting five from the wagon. Few as these seem they constituted a meal, and I did not have the heart to kill any more for the mere pleasure of so doing. It would have been an easy matter, I believe, to kill as many dozen, they were so plentiful. The California quail is in color unlike our Eastern bird, and I think it much the prettier. A topknot of one feather, about an inch long, grows right from the top of the head, and falling forward in a graceful curve bobs up and down as the bird walks or runs. White feathers encircle the neck, these gradually turning into dark blue upon the breast, giving one the idea at first sight that the birds are totally blue. On the breast are some brown feathers, and under the wings are blue ones with white spots. The birds described, valley quail, are about the size of the Eastern bird, while the mountain quail are one-third larger and in color principally brown. Jack rabbits with their ears standing erect sat by the road side and watched us pass. Two little cotton-tail rabbits came within range and they too fell victims to my gun. At times the road ran through whole villages of ground squirrels, resembling the homes of the prairie dogs upon the plains.

We reached Stony Creek toward evening and staid over night with a Mr. Smith, a prominent man thereabouts. Utilizing the fine water power for a saw and grist mill, he supplies the neighborhood with flour and lumber. Not a prettier spot had I ever seen than where we stopped that night. It was in a little valley encompassed by low hills, which tapered toward a high snow-covered mountain. The melting snows of this peak fed a swift rushing stream, Stony Creek, running by the house. Here the creek makes an island of small extent, on which is built Smith's barn. Two sturdy old oaks, measuring in girth 19ft. and 18ft. respectively, guard the bridge from house to barn, shelter the fowl at night and giving shade to the work horses eating their noonday meal. Preparatory to an early rise I was asleep by 9 P. M.; by 5 A. M. we had finished breakfast, and 7 o'clock found us mounted and on our way. For a short distance a road was utilized and then turning to the left we took a rugged mountain trail, which led up a gorge in an old stream bed now dry, for the rainy season had closed more than a month before.

As we started to ascend a ridge a large doe went leaping across the top, disappearing on the other side. Reaching the summit the deer was not to be found, but a very beautiful view stretched away for miles. Through the Sacramento Valley the Sacramento River traced its silvery course as far as the eye could reach to north and south between the snow-capped peaks of the Sierras and the soft green tinted Coast Range.

But stopping not, we passed along the divide for many a weary mile, over a rocky trail 3,000ft. above the valley. On one side we were sheltered by St. John Mountain, 7,800ft. high, and on the other by Sheet Iron, 6,800ft.; to the left ran Stony Creek, and to the right Elk Creek, both of which I was told teemed with trout, but we did not try them, owing to the difficulty of reaching either. For over two hours we rode opposite the mountains, the wild scenery ever changing; each minute as we turned some rocky point new snow-filled gulches on the mountain appeared. We passed one little cabin in a pocket of the mountain, the home of a hunter, who hunted and trapped for bear in the wallows around the many springs near by. At times a pine forest sheltered us from the sweltering rays of the sun, and how often I dismounted to drink of the cool waters of some babbling brook, I dare not say. Crossing a divide we reached Cold Creek, named from its icy waters, and following it for a guide were led to a larger stream marked on the map as Eel River. Fording this but half a mile further and reached the cabin.

Bloody Rock, as the place is called, takes its name from a fight said to have occurred there between early trappers and the Indians. Bob and I each took one of the spears standing by, and made our way to the river in hopes of getting a salmon; but it was too late in the season, all the fish having gone to the sea, not to return until the rainy season. Salmon fairly swarm up the stream in winter, and for proof I saw large fish bones and shrivelled skins lying around on the ground, where the man who stays at the cabin all winter had thrown them.

Early the next morning, returning with horses from where we had picketed them in a glade the previous evening, I saw a deer on a knoll about 50yds. away, but Bob reached the cabin before me, and was back in a minute with his rifle; however, he was too slow, and the deer had gone elsewhere.

Sam and I got off about 10 A. M., and as Bob was going another way to drive some cattle, I took his rifle. It was loaded and I very foolishly shot it off at a mark. Thinking it not worth while I did not reload. When a mile on our way I regretted this oversight, for just in the woods ahead stood two deer. I loaded quickly, but it seemed as though everything was against my securing any large game, and the deer were gone before I could shoot my old muzzleloading telescope rifle. Deer paths at times branched off from the trail, and but for the instinct of our horses we would repeatedly have lost our way.

Opposite St. John Mountain is a little valley, in the center of which is a huge mass of red-colored stone. Having always in mind the discovery of a rich claim, we went over, leaving our horses on the divide, pecked out a few specimens and posted our notice for a mining claim (600ft. wide by 1,500ft. long). Quail became very numerous as night approached, awakening the echoes with their shrill calls. Along Dry Creek I must have seen several hundred in coveys of from two to ten. Jack rabbits seemed to be stirring at that time also, and just at dusk I emptied my rifle at one seated on his haunches 100yds. away, hitting just under, making the dust fly, and he sprang off in the flurry.

We reached Stony Creek at 8 P. M., night closing down upon us just as we finished a long, tiresome ride. The next day dawned bright, as it was sure to do there, much to my sorrow, but nothing daunted we were soon away to the stream. My outfit consisted of a stiff pole with short line tied to the end, and a brown fly. After several casts in a riffle near by I had a rise, and throwing again hooked my fish, and in a very unsportsmanlike style I jerked him ashore. He was a beauty; a trout weighing about three-quarters of a pound, of bluish tinge, and having a good many of those beautiful colored spots so characteristic of our eastern fish. Then how I did wish for a split bamboo and a picked book of flies. Moving a little up stream I cast again, securing another fish. My star was brightening. Thinking bait might answer better, I put on one of the lizards very numerous around there, and threw him overboard. His motions immediately attracted a large fish, and suddenly the water boiled about that lizard, calming as quickly and revealing to my astonished eyes a line devoid of bait and hook. Having another hook, I rigged up and tried again, but I don't suppose they indulge in more than one lizard to each meal.

Across stream I saw a rocky point, around which I felt sure some trout lay hiding. The ford looking about 12in. deep I stepped in boldly to cross. Water at times is deceptive, and recovering from a headlong plunge, I found it was up to my waist, but being in I went over. Climbing the ledge of rock and looking down I saw a deep hole, in which were swimming some large trout, which seemed to be a foot and a half long. My line was short, and to cast I was obliged to expose myself—a bad thing in trout fishing. Several rises rewarded my efforts, but only one took hold and he went with the stream, continuing right on when all the slack line was exhausted. Perhaps he is going still, for line and hook went with him. My star was out.

With good tackle no doubt I would have had fine sport, for they told me of a man who once waded the stream, fishing with a limber rod and reel and he caught more than one could carry. He was talked of as a great fisherman, but you see he just had the rigging. No luck attended my partner, and the next day we returned home, killing many quail on the way, enough even to supply the Sulphur Creek Hotel.

I cannot truthfully say the trip was a complete success, as our gold specimens contained iron and the deer killed were not many. G. F. B.

AN OCTOBER DAY.

JACK came to call on me on the 14th of October, and after remarking that "the law would be off on quail the next day," said he supposed that he "must load some shells, etc," as we were about to start on our annual vacation that we had talked over for a year previous. One would gather from that remark of Jack's that he had nothing in preparation, and was quite indifferent about the matter, but I well knew that his trunk was all packed, the guns were in their cases, and most of his duffle had been ready for weeks before, and was only waiting for the 15th of that month, which of all the months in the year stands pre-eminently at the head for the hunter and sportsman. We arrived safely at our destination, and of course Uncle John was at the depot with old Billy and the express wagon to meet us. Uncle John informed us that "it was an excellent year for game, partridges and squirrels were as thick as hops, and quail were quite numerous."

We were up and stirring before light in the morning, and such a sight as the woods and fields presented to our view I had never seen before, or at least had noticed the glories of nature as I did then. There had been a very heavy frost, and as the sun came up, the long meadows for two miles below looked like a sea of diamonds, as the particles of frost glittered, glistened and sparkled in the rays. The leaves were well off at this season, as the frosts came early, and the oak and pine form a rich contrast in their dress of red and green in the background, while near us we see the yellow buds or blossoms of the witch hazel and red berries of the black alder, all of which are well frosted and are sparkling in the sunlight. The brook which runs through the meadow back of the house is trimmed with icy fringe, and as we watch its course down to the river below, we catch sight of a pair of black ducks on the wing and steering their way due south. From the hills beyond came the cawing of crows and the scream of the bluejay, while from the "oak lot" we hear the chattering of the red squirrels as they search for their morning meal of acorns, and the blackbirds are talking Canuck French down on the island; and on all sides nature is alive and stirring. Our rifles are in hand, and with some instructions from Uncle John about the best places for squirrels we take ourselves to the woods, and not until I had been in the timber for some hours could I realize that I was really away from the dirty smoky city, away from the cares of business and free to follow any path that my fancy might dictate.

Jack carried a Winchester .32-cal. repeating rifle, while I had a Maynard .22-cal. rifle, using a center fire 10-grain shell. This is the best rifle for a .22-cal. toy that I ever saw, and I most heartily indorse this kind of an arm for all those who like to shoot squirrels and small game. I have doubled up crows repeatedly with it at from 75 to 150yds., while at short squirrel-shooting ranges it is simply perfect. The rifle was mounted with Lyman's rear and muzzle sights, which I consider the best hunting sights I ever saw. I have used them exclusively now for several years, and can do better shooting with them than any other. So much for digression on rifles.

We were out for a vacation and not for meat; for rest and recreation and not for work, and for pleasure and not for profit; and, therefore, about the first thing that Jack and I did when we came to an inviting old log on the sunny side of a hill just above the river was to sit down, fill our pipes, and chat for some minutes, when Jack saw something below us that disturbed his peace of mind, and although he was not certain of its being alive, ventured to throw a stone down at it. His aim was too true, for soon at the water's edge lay a cotton-tail rabbit kicking its last kick; the stone had struck it in the head and the bag received its first deposit.

As we sat smoking our attention was attracted by a swirl in the water below, and soon Jack said he thought he saw a pickerel or fish of some kind, so taking a careful aim six inches behind or under it, he fired. A few bubbles from the mud below rose to the surface, soon followed by the white belly of a large pickrel. Jack cut an alder and gathered him in, and wrapping him in fern leaves, stowed him away in the bag. We strolled along over the "oak lot" and sat down to watch for squirrels. Soon one showed himself on the top of a stone wall, 93 good long paces away, and I asked Jack if he could kill him from a rest. "No," he replied; "if I came within six inches of him I would do well." I suggested that he try the little Maynard on him, for as I knew Jack to be a good shot and the Maynard to be a good rifle, while the Lyman sights were perfect, I thought that the whole combination might be rather too much for the squirrel; and so it proved, for at the crack of the little gun the squirrel rolled off from the wall with the tiny .45gr. bullet through his heart. Jack was very much pleased with his success, and said that he wished that it were always October, pleasant weather, and we could loaf around in the woods.

We went down a hill where there were some shell-bark walnut trees, and gathered quite a supply to take home with us. We soon found that the trees were inhabited, for the chatter of a red squirrel set us to thinking about our rifles. In a few minutes I see a gray one move and try to play peek-a-boo with me around the crotch of a limb. I immediately raised the little gun, and as the white ivory bead came in a line with his head, he comes whirling down and goes into the bag. At the report of the gun I see Jack raise his Winchester; crack it goes, kerchuck goes the lever, crack speaks the rifle again, and another gray goes into the bag. I soon kill a red one, and then, whang goes somebody's gun, and as we look down the old road we see Uncle John with a partridge which he had "ground sluiced." He said that, although he had seen the time that he could not have done such a thing, he was glad that now he was able to shoot them any way; and as he is over 70 we forgave him, and so will the reader I think. The rest of our shooting I will tell you about in another letter. Iron Ramrod.

Massachusetts Association.—Nearly 75 members of the Massachusetts Fish and Game Protective Association met at the Tremont House April 5, on the occasion of the society's monthly dinner. The following gentlemen were elected to membership: Mark F. Burns, Charles V. Campbell, James H. Jenkins, Dwight M. Clapp, James N. Fry, Charles A. Lawander, John P. Treadwell, J. A. Newhall, Herbert Merriam, Warren B. Witherell, W. H. Wilkinson, Sidney P. Brown, Augustus B. Bradstreet, Frederick T. Proctor, Eliot B. Mayo and Winthrop Thayer. Fish Commissioner Brackett read a copy of the proposed law to be asked for from the Legislature for a close season for lobsters, extending from August 1 to September 15. The proposed law is drawn in conformity with the Maine law. The penalty proposed for killing, buying or selling lobsters out of season is a fine of not less than $10 nor more than $100. A penalty of from $25 to $50 is also prescribed for the selling of lobster nets or traps out of season, and a penalty for the sale of lobsters less than 10½ inches long is also imposed by the proposed law. Prof. F. W. Putnam, of Cambridge, then gave an address upon "The Prehistoric Races of America." He displayed specimens of implements which were the earliest evidences of the existence of men in the ante-glacial period of North America. Human remains, too, have been found in the auriferous gravels of California, showing that man lived on the Pacific coast before the glacial period on the eastern coast. We find in Europe the same condition of things, so far as the gravel in the river beds is concerned, evidence of the existence of man prior to the period of the deposit of those gravels. There is every reason to believe that man existed in Europe and America at one and the same time prior to the glacial epoch. In northern North America are found the evidence of the occupation by the prehistoric races. There is in existence a portion of a skull of that time, showing that anatomically the man of that time was as perfect as the man of to-day. In America we find two types of skulls, the short skull and the long skull. These skulls represent different races. The long heads seem to be found along the Pacific coast, and then extend across the country to the St. Lawrence, and then down the Atlantic coast. The Esquimaux are probably the remnants of the oldest race in America. The short-headed people came from the south. This indicates that a short-headed race came from the south and spread northeast until it met the long-skull race of the north. This short-headed race apparently reached South America from Asia by the way of the South Pacific islands. The old Mexican people, the cliff dwellers, were of this race. A line of fortifications extending across the country, traces of which stil exist, was evidently to resist invasion from the north. The northern race probably reached America by the Aleutian Islands, driving back the primitive race of man, of which the Esquimaux are probably a remnant. It is evident that America was not peopled by one race of men known as Indians at the time of Columbus. Successive migrations—not a single migration—from the east made up the population of America. Prof. Putnam exhibited photographs of spear heads, fish hooks, and of the interiors of the curious mounds of Ohio.

Deer and Dogs on Cape Cod.—East Wareham, Mass., April 4.—*Editor Forest and Stream:* The following incidents were told me to-day by a young man from Marston's Mills, Cape Cod: On the 24th of last month, a man driving along the road from Sandwich to Marston's Mills, when about 1½ miles from the latter place came upon three hounds which had just pulled a deer down and killed it in the road. The dogs ran off as he came up, but as he did not care to be seen with a deer in his possession L. drove on and left them. They had just killed it and had had a severe struggle, for the road was all tracked up and blood and hair were trampled into it. In February last, a man near Newtown in Sandwich, heard hounds after something just at night, and thought they were after his sheep; on going out he found that three hounds had got a deer down in a meadow and had bitten it in the hind legs and so tired it out that it could not run any further. He drove off the dogs and carried the deer up to his house thinking it might recover, but it died the next day. An instance of a deer being found dead in the woods is so common as not to excite much comment. I will furnish the names of all the parties to any one who will investigate this matter.—Walter B. Savary.

COLORADO GAME REGIONS.—Leadville, Colo., April 4.—The building of several lines of railroads through Colorado, some of which will be completed this summer, make a section of fine hunting country of very easy access and without the discomforts of a two days stage ride and then a further trip of several days on horseback, when everything has to be packed. This gives an unusual opportunity for Eastern hunting parties to reach a finer hunting and fishing country with no inconvenience. Within two years the large game will have moved on 200 or 300 miles further from a mountain range and hunting with any great success will be attended with its old difficulties and privations. I should be glad at any time to give information desired or to make any arrangements ahead and secure some good hunters and plan a trip or to do anything to help on a good hunting trip. I have, during the past two seasons, secured guides and planned a month's trip for three parties of well known sportsmen, to whom I can refer.—C. A. JUDKINS.

ARKANSAS.—Little Rock, April 1, 1887.—The Legislature has adjourned and our game law still stands. The Senate passed a bill prohibiting the export of game or fish and the House killed it. The House repealed the game law and the Senate sat down on the bill like a pile driver. The Senate then amended it so as to make the open season for deer begin August first and the House killed that, so the law stands just as it did, and, so far as I know, every thinking man is satisfied with the result. Colonel Crockett and his friends in the Senate made a good fight and headed off the enemies of the bill at every turn. Colonel Crockett will be candidate for Governor next year and from present indications will get there.—CASUAL.

BURLINGTON, Iowa, April 6.—Duck shooting is very good with us this spring, notwithstanding the low stage of water in the Mississippi River. The Crystal Lake and Eagle Grove Club own 3,000 acres of the best duck marsh in this vicinity, a fine club house, with 25ft. of water in the lake. We have a limited membership of 75. I hope spring shooting will be abolished before it is too late; if continued it will only be a question of a few years and duck shooting will be a thing of the past. The only argument I hear against it is, "After us the deluge; if we don't kill them some one else will."—TINO.

WOODCOCK AND GEESE.—Salem, Mass., April 11.—Black duck and whistlers were very numerous about Ipswich and Rowley Fast day. Experienced parties say they never saw them thicker. Woodcock have been seen in numbers; some snipe reported, but nothing definite. Kingfishers, white-billed swallows and blue herons are along. A bunch of eight haunted geese (shy ones) have been trying the patience and skill of local Ipswich gunners. Thus far the geese have outwitted *genus homo*.—X. Y. Z.

NARROWS ISLAND CLUB.—At the annual meeting of the Narrows Island Club of Currituck county, held at the house of Mr. Henry Sampson, 14 West 58th street, on Monday, April 11, the following officers were elected for the ensuing year: President, D. G. Elliot; Vice-President, J. A. Hewlett; Secretary and Treasurer, Chas. T. Barney; Members of the Executive Committee, B. Dominick, W. G. Dominick, and Henry Sampson.

DETROIT.—At the recent annual meeting of the Lake St. Clair Fishing and Shooting Club officers were chosen as follows: President, Wm. C. Colburn; first Vice-President, M. S. Smith; second Vice-President, Don. M. Dickinson; Treasurer, Hamilton Dey; Secretary, Geo. S. Hosmer. Directors, John M. Hinchman, Thomas S. McGraw, Henry C. Wismer, Edgar O. Durfee, George F. Moore, Frank G. Smith, Charles B. Hull.

VERMONT.—Highgate, April 8.—The first robin redbreast of the season made its appearance here yesterday the 7th. To-day bluebirds and song sparrows are here though the snow still covers the face of the country. Wild geese arrived ten days ago, but no open water in Lake Champlain for them. Spring duck shooting has commenced in the open glades of the St. Lawrence above Montreal.—STANSTEAD.

WILD GEESE FLYING NORTH.—East Auburn, Me., April 5.—The wild geese are moving north. The largest flock seen for many years rested on Lake Auburn last night, and were frightened off by gunners this morning. I should think there were from 150 to 200 of them. They found a snowy bed to rest on here.—W.

HIGH POINT, N. C., April 4.—The close season on partridge just begun. It should have begun a month or six weeks ago, for birds were scattering and pairing then. They are quite scarce near town. A gun club is talked of and will probably soon be organized. Woodcock are more plentiful than usual, though not even now in abundance.—POINT.

MASSACHUSETTS.—Mendon, Mass., April 4.—I have been out several times this spring to see how the birds wintered; have not seen any quail; think the hard winter must have killed them all. Found a few partridges left over. Woodcock have just commenced to come along. Yesterday we had one of the hardest storms of the season.—C. T.

FOREST RUNES.

[*From the Pittsburgh (Pa.) Chronicle Telegraph, April 1.*]

AN old trapper who devoted himself to field sports and spent much of his time in the unbroken forest, being endowed by nature with an innate love of poetry, and having, during his roamings through the fastnesses of the forest, fallen into the habit of rhyming, has transferred the poetic thoughts that ran through his head to paper, but many of them, in the first place, "to white birch bark," when no supply of paper was to be had. He disclaims all intention of setting himself up as a poet, a thing to which his thoughts and ambition do not aspire. Nevertheless he has produced a number of rather entertaining poems, some of which border upon, if they do not altogether come up to, the classical. In sentiment and humor he sometimes awakes the harp of Erin. Though the title is "Forest Runes," or mysteries of the forest, he does not confine himself to the sports of the field, but deals with numerous topics in a very entertaining manner, and generally in a quaint style, without offensive pedantry.

Sea and River Fishing.

THE BROOK TROUT.

THE beauteous trout, a prince among the fish.
The angler's pride and epicurean joy,
I court the muse and fondly of him sing.

In boyhood's wanton days I learned his haunts
In placid lake high up 'mid mountain peaks,
That pierce at eve the golden banks of clouds,
Or tremble while the storm's wild echoes ring.
Where winter snows, in summer, melt and flow
In gurgling rills, swift through the tangled grass
To join in romping rivulets, that form
The noisy mountain brook, which reckless leaps
Adown the rocky gorge, and through the glen,
Beneath the shade of cedar, spruce and fir,
Whose drooping branches glisten in the spray,
Or whispers low the sylvan chant of night,
As through the glade the evening zephyrs steal.

I've sought oft times and found him snug at home
In quiet woodland streams, that gleeful run
With rippling music over gravelly beds,
Then deepen into eddies, which soon form
Dark, shady pools beneath green leafy boughs,
Which, swaying in the wind, stoop low to kiss
Their beck'ning image mirror'd from below;
Then gliding off down through the open fields,
Where fragrant flowers the grassy meadows grace,
And sprouting grain the autumn sheaf foretells,
It winds its silvery course 'twixt cress-lined banks,
Where sunshine in the day, and moon at night
Cast light and shade across the limpid way.

In early spring, when, clothed with brightest green,
Dame Nature decked her brow with blue and gold,
When new-born leaves in hedge and woodland move
Responsive to the gentle breeze which wafts
To list'ning ears the happy song of birds,
When scent of violets, crushed beneath one's feet
In early morning hours, perfume the air
Like incense from the altars of the gods,
I like to take my rod, and wend my way
To some familiar stream, whose banks I've trod
In days before, when youthful hours sped fast
And lingered not to make a note of time,
Save as each dawn in evening melts away,
With golden promise that another morn
With crimson glow will break the midnight gloom;
And crouching there behind some moss-grown log,
Some lichen-covered rock, some stump of tree,
Or kneeling in the grass at easy range,
Let loose my silken line with skillful cast,
And watch the mimic flies sweep quickly down
The rippling current, to a deep, dark pool,
Where lurk the wary trout in quest of food,
Or moody silence in the heat of day.

Oft breathless have I stood with eager eyes
To catch the silvery gleam, that, splashing breaks
The languid surface of the limpid stream,
As from his lair with savage rush he'd seize
The dainty morsel, down the tide which floats,
As if with life the flutt'ring wings were fraught.

And as I feel the magic thrill that creeps
Swift down the rod, and tingles through my arm,
When in his mouth the barbed hook sticks fast,
Responsive to the gentle strike, I know
That only angler's skill and steady nerve
Can bring to net the gamy, struggling fish.

I like to feel him tugging at the hook,
And hear the lively clicking of the reel
As, dashing to and fro about the pool,
He seeks to rid him of the fatal lure
That clings intently to his horny jaw,
And checks his flight from danger's threat'ning mien.

I like to see the pliant tip of rod
Meet gracefully the fish's mad'ning lunge
With modest bow, as if to kiss the hand
That holds with firmest grip the sturdy butt,
Well shaped of choicest flinty wood that grows,
And girded round with silver'd bands of steel.

And when at last, by human skill out-matched,
His nimble strength gives out, his last device
For liberty is foiled, the fighting done,
The handy net has swept him from his realm,
And on the grassy bank he panting lies,
I like to look upon his gleaming sides,
Resplendent with the sunset's crimson blush,
And dotted o'er with spots of red and pearl,
Rich strewd along as with a lavish hand,
Dame Nature paints determined to adorn;
In happy contrast, creeping o'er his back,
Dark mottled bands blend with the brightest hues,
While gaily-colored fins bedeck his form,
And poise him in his native element.
His shapely head, and brilliant, flashing eyes,
His comely tail, with muscle strength well set,
Completes the picture I would fairly paint
Upon a tablet in my memory's hall.

I like to taste right well his broiled flesh,
Of bones so free, so juicy, rich and sweet,
So delicate of tint—delicious food!
More toothsome, too, than any fish that bears
Upon his shiny sides the glitt'ring scales,
From out the frozen North or balmy South,
Whose waters, warm or cold, yield up to man
The fruits of net or spear, of rod and line,
As plied for sport or hunger's cruel need,
The providence of Him who made them all
To grace the common tables of our land.

CANANDAIGUA, N. Y. CHAS. T. MITCHEL, M. D.

A LARGE TROUT.—A gentleman has just caught a brown trout on Lough Derg weighing 19lbs., length along side 2ft. 10in., over back 3ft., and girth 1ft. 8½in.—*Oxford (Eng.) Chronicle.*

NEW ENGLAND TROUT STREAMS.

THE opening of the trout season in Massachusetts, April 1, was not a very propitious one this year. There was probably never more snow on the ground at the time, especially in the extreme western and northern parts of the State. The streams were generally locked in ice, and since then they have been filled with snow water, which, as every trout fisherman is well aware, is anything but conducive to fun with rod and line. It is a very significant fact that trout have been unusually scarce in the markets up to the present time, and it would indicate that even the market fishermen had not found it easy to fill his orders. But warm weather appears to have set in in good earnest, and with it comes up the sportsman's hopes. Some of the streams on the Cape are being tried, but with rather indifferent success. The display of cultivated trout in the markets has been good this year, and Appleton & Litchfield have made their window display even better than a year ago. They have shown over 70 mature trout in their window-lake and the tank beyond, besides the trout in embryo in a glass jar. Among the mature trout was one of the Sunapee variety, concerning which the FOREST AND STREAM has given several valuable communications. This trout weighs 4¼lbs., and was a rare sight to those who have always been accustomed to the little fingerlings of the country streams. That display probably helps Messrs. Appleton & Litchfield to sell fishing tackle, but it certainly has afforded the thousands of people who have peered into the window a wholesome and an interesting sight.

The prospects of the opening of the trout season in Maine is gloomy, to say the least. A letter from the Androscoggin Lake region of Saturday states that there was then four or five feet of snow on the ice and fully as much in the woods. Warm weather, like that of the past two days, will work wonders on snowbanks, but at the best the season in that part of the country must be late. It is, however, very funny as it always is, to hear the old guides talk. Several of them are already on record, in spite of the vast quantity of snow, as predicting an early departure of the ice. Their theory is that so much snow "rots away the ice." But it seems a little more reasonable to conclude that in this case the wish is father to the thought. The earlier the ice leaves the lake the earlier will the work of these guides begin. It is dollars in their pockets. But they are not the only people who are already watching the news concerning the departure of the ice from the Maine lakes. Boston merchants and professional men are interested, though they are aware that the average time of the breaking up of the ice in the Androscoggin Lakes is not earlier than May 13, though that event begun on the 4th last year and the last lake was clear by the 10th.

The unusually deep snows have worked advantageously in one way this year. They have, in a measure, prevented the spring fishing through the ice, which the law allows to inhabitants of the State during March and April. Thus far but very little of such fishing has been reported. To say the least, this permission of the law to inhabitants of the State to take trout through the ice for their own use is one which has been much abused. Some of those guides, who are, of course, inhabitants of the State, have had in times gone by the holes all cut and the bait ready—yes, they have had the lines all in the water—when a sleigh would drive up, bringing Boston sportsmen; and they have helped catch the trout for the poor inhabitants of the State of Maine. How is that for an evasion of the trout law? Well, it will be lawful for anybody to catch trout in Maine and New Hampshire on May 1, and, to say the least, the prospects for high water are good. It is also contended by those who have given the subject much study, that high water in the fall and spring is conducive to good trout fishing, when the floods do subside. They reason that new feeding grounds and abundance of food are in such a manner put in reach of the fish. SPECIAL.

"FARMER BROWN'S TROUT."

Editor Forest and Stream:

I was reminded when I read "Farmer Brown's Trout," of a story told me some years ago by an old gentleman who was considered by many an oracle in all things pertaining to field sports. His story was of how he and a friend got into the good graces of an old farmer who had a stock of pet quail that he had wintered at his barn, and wished to keep on his farm just for the simple pleasure of having them there. He was foolish enough to tell these honorable sportsmen, as he took them to be, where these quail kept in his orchard. I think, though, that he added: "Don't ye shoot one on 'em!" Then one of them slipped into the orchard by a roundabout way and drove the quail into a piece of woods, where the other marked them down, and the two went in and had great sport in killing them all. The teller of the story thought it a very nice thing to do, and no doubt it was smart; but it seemed to me a mean and contemptible act. How does it seem to you? R.

VERMONT.

Editor Forest and Stream:

I arose from reading the communication in the last issue of your journal, entitled "Farmer Brown's Trout," with the feeling that no one could properly congratulate any of the actors in the tragedy which is there detailed with such singular satisfaction. That a full measure of sympathy is due to some of them no true sportsman is likely to deny. Probably it is that I retain some old-fashioned ideas, but I could not without loss of self-respect steal a pet canary or a pet trout; and just at present my sympathies are divided between the trout, the farmer, and the bull-pup, with a balance in favor of the pup. I cannot express my regret at the disappointment of that pup. KELPIE.

CENTRAL LAKE, Mich.

Editor Forest and Stream:

In your issue of March 31 appeared an article entitled "Farmer Brown's Trout." Allow me to say for one that such conduct as is therein narrated does more than anything else to prejudice one large and influential class of the community upon which sportsmen are dependent for many pleasures of the field. I hope some of your contributors who write a vigorous style will take up and criticise the actions related in the account in the manner they deserve. C. P. W.

AUBURN, Mass.

THE CLICK IN REELS.

IN the number for March 31 "Jo" asks for information about click reels. As the editor remarks, combination reels are "a necessity to those who own but one reel," and he points out the usual method of using them. There are other ways, however, in which the click is a very useful thing when fishing for bass, etc. from a boat, or even from the shore. For example, most anglers are given to smoking. One wants to replenish his pipe while his line is out. He puts on the click to prevent the line from running out, lays the rod on the gunwale of the boat, fills up his pipe, and then resumes the rod, takes off the click and is ready for whatever may happen. Other like uses will suggest themselves to the angler. A fish once hooked, I do not care for a click when the reel is above the hand, though I admit there are emergencies when it is useful. In trout fishing, however, the click is indispensable. Having a reliable click, I regard a drag as an unnecessary incumbrance.

During the past fifty years I have used all manner of reels, good, bad and indifferent; reels without a click, reels with a click, reels with a click and a drag, reels with a click and two drags, reels running out of gear, automatic reels, and so on, and in none of them (with but one exception) could the click be applied while the reel was in motion. As "Jo" suggests, there is no mechanical difficulty in the way of placing the click on the left. It is simply a matter of increased cost, and that is what many people object to.

But to return to "Jo's" chief point. He wants a click or drag that can be applied with the left hand while the crank or handle is in motion. His want has very recently been anticipated by Mr. T. H. Chubb, Post Mills, Vt. It is a four multiplier, and has an adjustable click; that is to say, a click that can be adjusted to run light or hard, and will remain as he sets it. In addition it has a drag set directly in front of the left hand thumb. His crank may be running with the velocity of a fly wheel, but he can control it completely with the thumb of his left hand, even to the point of stopping it instantly. The reel is called the Henshall-Van Antwerp. PETRA.

BALTIMORE, Md., April 3.—To help "Jo," of Wellsville, O., who is looking for a reel with click attachment on opposite side from handle, would say that I am using such a reel. They can be had of Conroy, New York.
C. F. HUTCHINSON.

PICKEREL IN NEW JERSEY.—At the last meeting of the Passaic County Fish and Game Protective Association, the validity of the law protecting pickerel during the months of March and April was discussed. There is a division of opinion among lawyers as to whether there is any law of this kind. There once was a law the provisions of which extended to bass, pickerel and perch; the Legislature clearly repealed the law as far as bass were concerned and passed another law, but whether the law was repealed as far as pickerel and perch are concerned is in doubt. The Fish Commissioners of the State declare that pickerel are protected during March and April; but they are not lawyers, and a number of the latter differ in their opinions from the Commissioners. It has frequently been suggested that it would be well to make a test case by arresting some person for catching pickerel during these two months; there would be no trouble in finding such a person, as the general impression is that there is no such law. The matter was discussed last night and soon resolved itself into the questions: Are the pickerel worth protecting? Does a prohibition to catch them during their breeding months protect them? Most anglers prefer black bass and are willing to see the pickerel exterminated in order to give the bass a better chance; others are of different opinions and like the long-nosed fresh-water shark. All the old arguments in relation to the question, "does protecting pickerel protect?" were gone over again. These arguments may be summed up in a nutshell. The pickerel when getting ready to spawn are more voracious than ever, and go about gobbling every other fish they can get hold of; a good lively pickerel will devour half a dozen smaller pickerel and other fish a day and frequently even more; ought the big fellow to be protected in his marauding career by prohibiting his capture or ought the little fellows to be protected by allowing the big fellow to be caught? Pickerel have been caught at all seasons of the year for many years and there is no perceptible diminution in their numbers, despite the fact that there are a dozen anglers now where there was one ten years ago. The members of the association were divided on these questions and no definite action was taken, so that pickerel fishers can go on with their fun without danger of being interfered with by the association.—*Paterson Press.*

THE BLACK-FIN IN NEW YORK WATERS.—This week we saw some specimens of *Coregonus nigripinnis* in Fulton Market. They were sent to Mr. Blackford by Mr. R. M. Shutts, of Plattsburg, N. Y. Mr. Shutts writes us as follows: "I shipped a box of fish to Mr. Blackford for him to classify. They are natives of Chateaugay Lake, and I have written Mr. Blackford of their habits. If you can give the matter your attention enough to tell me if they are different from other fish found in the waters of this State you will oblige. The fish is now found in Chazy Lake, which was stocked with them from this lake." Mr. Shutts's "find" is a valuable one, for this fish has not been recorded from New York. Jordan, Synopsis N. A. Fishes, gives its habitat as "deep waters Lake Michigan, locally abundant." Milner, Rep. U. S. F. C., 1872-3, gives it as the same, and the fish is not mentioned by DeKay, "Fishes of New York," nor Mather "Adirondack Fishes." It is related to the whitefish of the Great Lakes, and to the frostfish of the Adirondacks, but is a larger fish than the latter. It might be called the black-finned whitefish, as the color of the fins distinguishes it at once.

ADIRONDACK ICE AND SNOW.—Syracuse, April 8.—I have generally long before this each spring a longing for the woods, and not being able to go to them, next comes a desire to know how deep the snow is and how thick the ice; my only recourse is to write to my friends there. In answer, my guide, who pilots me through the wilds of Hamilton county, writes me under date of April 6, reporting "about 6ft. of snow and about 30in. of ice on the lakes. The deer have wintered well and the outlook for sport next summer is good. The chances are that it will be a busy time here next summer."—G. C. H.

THEY SHOWED THEMSELVES.—"Kismet's" article in your issue of March 3, on "Surface Schools of Fish," brings to mind an instance in my experience never seen before nor since. For three days my partner and myself had traveled down Fox River in our boat, stopping wherever the signs looked right to cast the fly. This day had been an unusually poor one, when we considered the fact that we were on familiar waters. It was about five o'clock and I was very tired and thoroughly disgusted. I had brought the boat down with me to the head of a fairly good stretch of water, determined to take the rest needed while waiting for my companion. I had not been there long when my eye caught sight of a small black object moving on the water not 50yds. below me. Led by curiosity I left the boat and, with rod in hand, walked as quietly as possible toward the spot. The object had disappeared, but showed itself again when I was near enough to see that it was the dorsal fin of a black bass, the size of which made me cast an anxious eye toward my rod—in a moment another one appeared. It did not take me long to get my flies in motion, and as the stretcher lit on the water there was a splash and a swerve and my reel hummed a happy tune as the line dashed out into the stream; but alas! A moment only was needed to replace the broken hook. When I left that "neck of woods" an hour later, 30lbs. of the finest black bass I ever saw taken on a fly hung at my side.—NIMROD.

THE MYSTIC ANGLERS' BADGE.—Fort Wayne, Ind.—April 2 has come and gone and Mr. Geo. Gebhard, the treasurer of our club, wears the beautiful gold medal recently presented us by Mr. John H. Bass. The above date was fixed to commence fishing for the jewel, and now the treasurer, by virtue of a 4lb. black bass, has possession, for thirty days at least, when he will have to render an account to nine others who are longing to get at him and his valued possession. A medal of this kind is a splendid thing to have in a club, for it wakes the boys up and keeps them in friendly rivalry all the time, and then you know how a fellow feels coming in with a magnificent catch only to find another that makes him go again, for the "big one" was not there. We all turn out and fish for the medal on the same day so that none of us have any advantages over any other member.—JOHN P. HANCE.

FIRST PENOBSCOT SALMON.—Proprietor Thayer, of the Bangor Exchange, had the honor yesterday of serving the guests of his popular house with the first Penobscot salmon of the season, a splendid specimen that tipped the scales at 19½lbs. The *Journal* man was among the favored ones who feasted on the delicacy, with the other good things accompanying it. The fish was taken at Winterport, and is the earliest "catch" on record. It is not every hotel man who can furnish his guests with fresh caught salmon and green peas when the streets outside are packed with four to six feet of snow.—*Bangor, Me., Industrial Journal, April 8.*

PENNSYLVANIA TROUT LAW.—Section 1. Be it enacted, etc., That it shall be unlawful for any person to catch, kill, or expose to sale, or have in his or her possession, after the same has been caught or killed, any speckled trout, save only from the 15th day of April to the 15th day of July, under a penalty of $10 for each trout so killed, or had in possession, but this act shall not prevent any person from catching trout with nets in waters owned by himself to stock other waters. Approved the 11th day of January, A. D., 1885.

Fisheulture.

THE SALMON.

(*Salmo salar.*)

WE make the following extract on the salmon from an article in the *Journal of the National Fish Culture Association*, by Dr. Francis Day, C. I. E.:

"The teeth on the body of the vomer become in a single row at an early age, grilse rarely possessing above two or three, and seldom above one or two at the hind edge of the head of that bone as in old fish. Scales on the caudal portion of the body are larger than seen in trout. Pectoral fin in the parr reaches two-thirds the distance to the ventral fin; caudal fin forked in the young, but altering and becoming gradually square with age. The colors of the adult are steel blue, with scattered black spots; but at breeding times, when these fish have passed into fresh waters for the purpose of spawning, numerous orange spots and streaks appear in the cheeks of the male, and also spots, and even marks of the same, and likewise of a red color on the body. It is then termed a "red fish." The female, however, is dark in color, and known as a "black fish."

In grilse the pectoral fins are often of a bluer color than in large salmon. Smolts are bluish along the upper half of the body, and silvery along the sides, due to a layer of silvery pigment being formed on the under surface of the scales, while they have darker fins than the yearling pink, but similar lateral bands and spots can be seen, as in the parr, if the example is held in certain positions of light. Parr have two or three black spots only on the opercle; also black spots and orange ones along the upper half of the body, but usually no dark ones below the lateral line, although there may be orange ones along its course. On the side of the body are a series (11 to 15) of transverse bluish bands, wider than the ground color and crossing the lateral line, while in the upper half of the body the darker silvery color of the back often forms an arch over each of these bands. A row of spots exists along the middle of the rayed dorsal fin, the adipose is leaden colored, and in rare instances, after death or under peculiar circumstances, has a narrow orange tip.

The names by which it is known in various places and at different ages are very numerous, the following being merely some of those more commonly employed: When in its full grown condition it is known as the salmon; in the Severn, one on its second return from the sea is often called a gerling or gillion or gilling, when from 8lbs. to 15lbs., or a botcher on its first return when under 5lbs. weight, although the more general designation is grilse; when under 2lbs. weight it is usually termed salmon peal by fishmongers. From one to two years old, before it has gone to sea, it is known as a parr, pink, smolt, smelt, salmon fry, sprag or salmon spring (Northumberland), samlet, brandling, fingerling, blackfin, bluefin, shed, skegger, gravelling, hepper, laspring, gravel laspring, skerling or sparling in Wales; spawn (in the Dart, A. Pike), morgad (Somersetshire) streamer (in the Tamar, W. Mason). After spawning this fish is a kelt or slat, but a male is generally termed a kipper and a female a shedder or a baggit. In the Ribble, according to Willoughby, salmon of the first year were termed smelts, of the second year sprods, of the third year morts, of the fourth year forktails, of the fifth year half-fish, of the sixth year salmon. The designation bull salmon and bull-pinks, employed in the Kircudbright Dee, has been said to refer to well-mended kelts. In Ireland, Sampson remarked upon a samlet or jerkin, which Tighe termed a gimkin, but the term parr was more frequently used to the north and gravelling to the south. Parr are also termed rack-rider or sprats, and larger ones leaders (Miller). At Kerry a kelt is termed a judy, and Rutty stated that a grilse was known as a grawl, and Johnson said that in Lough Foyle it was called a grayling, Welsh, cawg, male salmon; cemyuhwyddell, female salmon; if spawning a maran, or a salmon on his third return from the sea (Severn); (gleisiedyn, eog and maran, Pennant).

Although varieties among our British salmon are rare, still there are many local races dependent upon the size and character of the streams they frequent. Also in Lake Wenern and some other large lakes in Scandinavia there exists a landlocked race of this fish, which passes its life there without descending to the sea. On the American Continent there is a somewhat similar form found in the State of Maine and the neighboring portions of Canada, Lake Sabec, and the Schoodic Lakes, but all are merely landlocked forms of *Salmo salar.*

The salmon, during the summer months, roams along our coasts in search of food, and may be found close in-shore, loitering in estuaries and also at the mouths of rivers up which it purposes ascending. These fish are "anadromous," or forms which enter our fresh waters chiefly for the purpose of perpetuating their race; for this cause they select suitable spots wherein to deposit their eggs; here the young are hatched, and remain in the stream for the first years of their existence. Consequently, during their youth they live and feed in fresh water; as they grow older they descend as smolts to the sea, from whence, after a time, they return as grilse and salmon to the rivers; thus the waters they select for their residence differ from each other in their specific gravity, taste, temperature and products.

The ascent into fresh waters of these fish is a most important economic question, for some rivers are "early" and others "late," which terms have reference to the ascent of "clean fish" in relationship to the time of the year they are found there, the earlier being far the most valuable. A salmon or grilse recently arrived in fresh water from the sea has bright silvery scales, and is commonly known as a "fresh run" fish, and these are divisible into "clean salmon," or such as are in good condition and not near to their spawning time, and "unclean" or gravid fish, which are ascending to breed.

Some rivers have early ascending fish while in others they are late, and all intermediate grades are seen, for in many hardly a month passes in which, if sufficient water is present, "clean salmon" do not ascend, but often in an irregular manner and in various-sized companies. But the great autumn and winter ascent may be generally described to be for the purpose of breeding; while they appear to generally return to the stream wherein they were reared.* Mr. A. Young considers that in the colder seas of our eastern coast salmon do not loiter about in the ocean, but at once ascend into the warmer rivers; while on the contrary they behave differently along the Atlantic or on our southern shores. On this question many diverse views are held.

Grilse, being young fish, ascend somewhat differently from the more matured salmon, coming in large shoals, and rarely commencing to appear before the end of May, and in the largest numbers during July and August; the comparative size of the fish increasing with successive months, the latest comers having been longest in the sea.

During the ascent of these fish up rivers it is remarkable what difficulties they will surmount, while after crossing an obstruction or having ascended a rapid they seem to take a rest. For the purpose of assisting these fish to surmount natural or artificial obstructions which hinder their passage up stream to their natural spawning beds, fish-passes or fish-ladders are generally erected, especially at weirs where there is no free gap, and these may be described as a series of pools in which the gradient should not exceed 1 in 8. Although it has been asserted that salmon can leap up many feet perpendicularly, about six or seven is, perhaps, about the maximum. Passing up rivers, sometimes the sexes keep together, sometimes they do not, while the rate of ascent is, unless under peculiar conditions, not above two or three miles an hour.

The time of spawning on the redds generally takes place in Great Britain from the last week in October or first in November until the middle of February or later, and permitting the capture of the earlier ascending breeding fish is possibly a reason for making the river a later one. It has been shown that by permitting fish to get to their breeding grounds sooner, clean fish have come earlier into a river; and the innovation creeping in of shortening the back end of the season is likely to be fraught with much mischief to the fisheries.

The age at which salmon commence breeding has been found as follows at Howietown: Some were hatched in March, 1881, and most of the male parrs had milt in November, 1883, or when two years and eight months old; also two or three smolts of the same age had ova, which probably would have matured, but they jumped out of the pond and so met with their deaths. In November or December, 1884, or at three years and eight months age, all these fishes seemed ready to breed, and young were bred from their spawn. Consequently, descending to the sea prior to depositing ova is not a physiological necessity for young salmon as has been asserted.

It would seem from the investigations which have been made that it is probable that some of the early ascending clean fish are occasionally sterile, although it is generally held that in many ova and milt may be discovered on a microscopic investigation to be a very little developed, and although these last would probably be among such as push on to the upper waters, it seems still to require proof why it is that they should desire to remain so many months in the stream, away from the sea. This gives rise to the very important question of how frequently do salmon breed? In the United States Mr. Atkins has been able to prove from a series of experiments, extending over several years, that in the Penobscot the salmon (*Salmo solar*, var.) breeds every second year; and it is improbable that their natural mode of continuing their race differs in the United States from what obtains here. Also, if some, at least, of our British salmon are not seasonally sterile, the question must arise, "What, then, are the clean fish ascending for during the later months of the year?" They cannot breed the season they ascend. Are we to consider them permanently sterile, or, like their relatives in America, merely seasonally so?

The amount of eggs given by salmon is about 900 for every pound weight of the parent fish. While immaturity of the parents may occasion sterility of the eggs or disease, as dropsy of the offspring; and although the milt of parrs has many of the fertilizing qualities of the older grilse or salmon, the young would not appear to be so strong.

The redd, or nest, wherein the eggs are deposited, is

---

*Many modes of marking these fish have been adopted, but all with more or less bad success. As far as possible no portions of the fins should be cut, while puncturing holes in gill-covers or placing elastic bands around the free portions of the tail have been failures. In short, a metallic tag, stamped to order, is necessary, and attached by a wire to one of the fins. Up to the present time the best appears to be made of platinum, and fastened to the first ray of the back fin.

formed by the female, which lies on her side and fans up the gravel by moving the tail portion of her body rapidly from side to side, until she gradually sinks into a kind of trough, the male remaining near and ready to give battle to any intruder. The female now deposits her eggs in the trough she has made; these are fertilized by the male, and subsequently covered with gravel to some feet in depth, the whole forming a redd.

Should there be plenty of water to let the fish into rivers in time, salmon are many days constructing their nests, doing a little every night, but if prevented ascending until quite ripe they are much more rapid in their operations. When the salmon has formed her nest and deposited her first installment of eggs, she falls back into one of the deep pools below, until she has acquired sufficient strength to again shed more eggs. The absence of frost is favorable to the eggs in the redds, while, although floods may sweep away redds, moderate ones protect them from poachers. Mild seasons and late spates seem best adapted for preventing mortality among the breeders.

The period salmon eggs take hatching is subject to considerable variation; thus it has been found that at 45degs. Fahr. they require 90 days, at 41degs. 97 days, while their normal period of hatching has been deferred to the 148th day by placing them in ice vaults; but freezing them is probably fatal. Mr. Bartlett observed how some of these eggs were hatched in 30 days, the temperature of the water standing at 57degs.

At about the end of two months the alevins will probably be 1¼in. long, at four months 2½in., and at six months 3¾in.; but there are great individual variations in size among them. The yolk or umbilical sac in young salmon is generally of a much more orange color than is seen in the alevins of fresh water trout.

Many discussions have arisen as to whether the parr is or is not the young of the salmon, or even a hybrid between it and the trout, and though there exists a strong family resemblance between the young of the salmon and trout, still it has been abundantly proved that the *Salmo salar* passes through a parr stage. In fact it was long since pointed out that in rivers destitute of salmon there were no parrs, while wherever they existed there parrs were present. This point has now been most conclusively decided by hatching out eggs and milt taken directly from salmon and artificially rearing the progeny, the result being parrs. It has also been shown that similar parrs can be raised from the eggs of smelts fertilized from parrs, or salmon similarly fecundated, from grilse and salmon, from pure grilse, and from pure salmon.

It has been clearly proved that when half the parr descended as smolts one year, those which remained for another season consisted of fish of both sexes, consequently females do not migrate, as had been suggested, one year earlier than the males.

The parr, on assuming the smolt livery, which it does as a rule when commencing its seaward journey, changes from its brilliant, golden and spotted colors with its brilliant finger marks, that have been described, to assume a bright silvery appearance, both on its opercles and its body. This silvery color is not owing to their acquiring an additional coating of scales, as has been asserted, but due to the deposition of a silvery pigment on the under surface of the scales and opercles, which latter could not be so overlaid because they are scaleless. These silvery smolts, at least after they have been some time so, may be turned directly and without injury into sea water, while the scales are not nearly so adherent as when the fish had the parr livery, and the fish itself seems more susceptible of injury. Although the great seasonal migration is during April, or May and June, this is not the only period at which they descend seawards, as some do so during the autumn months, as well as probably throughout the year.

Smolts that have descended rivers have been shown to reascend as grilse, although some persons have maintained that they are a distinct species, but at Howietoun, parr raised in fresh water turned to smolts and subsequently to grilse, and from these last eggs have been obtained, and young in the form of salmon parr have since been raised. It has also been advanced that grilse cannot be young salmon, ignoring the fact that only in salmon rivers are there true grilse, and where they exist there also are salmon. Now, although it has been shown that grilse may be reared from salmon eggs, still it has been pointed out that salmon and grilse of the same size can readily be distinguished one from another. Doubtless there is a difference in the appearance of a small salmon and a grilse of the same size, but such is probably due to the former, from some cause, not having got into condition, and so lost a season.

As to the growth of the grilse, experiments have been made tending to show that it is very rapid. In May, 1855, 1,300 were marked at Stormontfield, by cutting off the adipose or dead fin, and twenty-two are said to have been recaptured as grilse the same summer, the first on July 7, when it weighed 7lbs. The Duke of Roxburgh, on May 14, 1855, had a smolt marked by the insertion of a peculiar wire through its gills, it was recaptured July 21, 1856, as a 6¼lbs. grilse. Many similar experiments have been recorded, from which it appears that some smolt return to the river as grilse the same year that they descend, while other do the succeeding season. As to the growth of grilse after they have spawned and are returning seaward as kelts, Mr. Scrope gives a list of ten captured during the months of February and March, all but one being 4lbs. each in weight, but the last being 12lbs. During the months of June and July, the succeeding year, they were recaptured as salmon, the first nine weighing between 7lbs. and 12lbs. each and the last having increased to 18lbs. weight.

The growth of the salmon has been similarly followed out; thus, in 1859, the Duke of Athol had three salmon captured while migrating toward the sea, and marked by a copper wire around their tails; they weighed 10, 11½ and 12¾lbs. respectively, and six months subsequently are said to have been retaken while returning to the fresh water, having augmented in size to 17, 18 and 19lbs. respectively.

Those forms which have completed their spawning are known as kelts or slats, or if males, as kippers. They drop down stream from pool to pool in a very thin and exhausted condition, the males much more so than the females. However, they generally remain in the river in a debilitated state, feeding upon whatever fish come in their way, not rejecting the young of their own species. At this period, owing to their weak condition, they are very prone to attacks of disease, often dying in vast numbers, while a heavy flood carries them off toward the sea; but as a rule they continue some time in the brackish water of the tideway before seeking the ocean. Although, doubtless, a few of these kelts mend in the river, recovering their silvery lustre prior to reaching the sea, and others return at a future period in a healthy state from the salt water, it seems questionable whether too many are not now permitted to mend, possibly to a great extent, upon the salmon fry, thus reducing the amount of stock in the river. In olden times fishermen took all spawned fish as their own perquisites, consequently, in some rivers but few descended to the sea; also poachers, assisted by otters and other vermin, kept the number of kelts in check. At the present time an epidemic of saprolegnia, which has destroyed multitudes of salmon, does not always decrease the aggregate weight of the succeeding year's fish. The kelt, having suffered severely, has been able to consume so many smolts, consequently the grilse augment in numbers, but very large fish are not so common.

As to the diseases from which these fish suffer, a species of fungus, *Saprolegnia ferax*, has existed in our fresh water from probably immemorial ages, but at last became epidemic about 1878, since which period it has committed great ravages. At first more or less restricted to kelts or weak fish, it has subsequently been observed to attack the newly-run ones. Although sea or saline water appears to check, and in some rare cases to cure this disease, it is not improbable that such may only cause it to remain dormant until the fish returns to fresh water. Salmon in the sea are infested with a parasite, *Lepeoptheirus stromii*, Baird, which dies in fresh water; while in fresh water they are subject to another form, *Lerneopoda salmonea*, which seems chiefly to attach itself to kelts. The hook in the jaws of old males sometimes ulcerates through the palate to the top of the snout, when, occasioning great irritation, the fish can no longer eat, and dies of starvation. Pollutions, occasionally aided by obstructions, have destroyed these fish in some rivers.

Its range extends in the northern hemisphere, between latitude 45deg. and 75deg., through the seas and countries of northern Europe, in and around the British Isles, and also in rivers flowing into and along the Atlantic coast of France, but it is not found in those which empty themselves into the Mediterranean. The male fish would seem to run to a larger size than the female, and Buckland cast one of the former of 70lbs. weight from the Tay.

OHIO PROTECTION.—Fort Wayne, Ind., April 5.—I have this moment received a letter from a member of our club residing at Defiance, O., and as it contains matter of interest to the people of Indiana and Ohio, I quote from it, hoping you will give the matter publicity. He says: "As near as I am able to ascertain the fish ladders at Independence are all right. I have not been able to learn whether fish can pass them or not, but I now think that they will answer the purpose very well. I made a trip to Maumee some days ago, and fell in with some of the fishermen there, and without them learning my business, I "got on to" their tricks. They are a little afraid that their right to catch with seine and pound may be denied, but they declare their intention to fight the matter to the end. They claim that the waters at that place are not under the control of the State, and that the Government does not dispute their right to fish as they please. They claimed to have over 400,000ft. of twine in the river at that time, in the shape of seines and pounds, and that they intended to use them till the general Government ordered them to stop. I intend to correspond with the fish warden of that county who lives at Maumee (South Toledo), with a view of ascertaining the exact state of affairs, and if the law is being violated, to report to the fish commissioners of the State." The gentleman from whom I received the letter is one interested in protection and holding an office of great public trust and can do much toward remedying the great evils now existing along the Maumee River, but it is necessary that he have the co-operation of all lovers of legitimate sport, and as I know you to be on the side of right always, I place these matters before you knowing greater publicity will be given this way than in any other.—JOHN P. HANCE.

THE NEW YORK COMMISSION.—At the hatchery at Clayton, N. Y., superintended by Mr. M. B. Hill, the following plantings have been made: Lake trout, 500,000, planted in Lake Ontario and Mill Site Lake; 512,000 whitefish and 120,000 ciscoes planted in Lake Ontario. Of brook trout there are some 20,000 for streams in the southern part of Jefferson county. At Cold Spring Harbor the distribution of trout will soon begin and besides the brook and brown trout there are 10,000 Sunapee trout sent by Col. E. B. Hodge, of the New Hampshire Commission, and some German saibling which have not yet been assigned to any applicants.

CALIFORNIA COMMISSION.—In a late issue we gave notice that two new members had been appointed and gave the address of one. The Commission has been reorganized and the Governor has appointed two gentlemen to act with Mr. Sherwood, who will act in concert with the U. S. Fish Commission. The board now stands as follows: Thos. J. Sherwood, President, Maysville; J. Downie Harvey, Los Angeles, and Mr. Joseph Routier, Sacramento.

REVELATION AND REVOLUTION.—Revelation and Revolution. These words are not the same. It makes quite a difference where the "e" and the "o" come in. Revelation is the discovery of a new truth. Revolution is that change in usage, life or society, which revelation brings about. For instance, twenty years or more ago, Dr. Humphreys began to teach the people that his Veterinary Specifics—giving but ten drops at a dose—would cure the diseases of domestic animals. This was a new truth—a revelation—but people could not see it at first. They had to be taught, and the truth shown and demonstrated again and again. But slowly they fell in. Seeing was believing, trying was success. When people believed they resolved, and so came the revolution. As the hilltops first catch the rising sun, so intelligent men first saw the truth and acted upon it. Now they no longer drug their stock. The bleeding, blistering, firing, balling, bottling and drenching has gone. In the place of all this the little Specifics—ten drops—are used. Colics, Coughs, Heaves, Pneumonia, Pink-Eye, Founder, Lameness and Rheumatism—all are vanquished with the ten drops of HUMPHREY'S HOMEOPATHIC VETERINARY SPECIFICS. Hence the grand revolution of modern times in curing diseases of domestic animals is but the result of revelation—or truth revealed.—*Ed.*

FIXTURES.

DOG SHOWS.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4827.**

THE BOSTON DOG SHOW.

MANY years ago Boston advanced the claim that it was the axis around which the rest of the universe revolved, and proudly pointed to the broad acres of its dearly loved Common as the very center of the whole world. Its wealthy and jealous rival, New York, determined to forever silence all pretensions of this kind, with lavish expenditure of treasure brought into being beautiful Central Park. Boston, dismayed, but not disheartened, put forth her energies and erected Music Hall, and as the swelling notes of triumphal march pealed through its broad aisles and reverberated from its lofty ceiling, she folded her arms and calmly smiled. New York met this move by creating Brooklyn Bridge, and beneath the arch of its stupendous towers she wrote boston with a little b. Now Boston has always taken a pardonable pride in her great minds and profound thinkers, and in this, her hour of need, she called upon them for aid. That her confidence in their ability was not misplaced the result has proved, for after mature consideration, the invincible John L. was evolved and launched like a catapult at her defenseless rival. This was a knock-down blow from which New York did not appear to have strength enough to recover, but she finally got her wind, and coming up smiling, countered with the outstretched arm of the Statue of Liberty. Boston was staggered, but with indomitable pluck she resumed the contest and has now indubitably proved her claim to be the Hub of the Universe a just one by showing us the best display of dogs ever brought together on this continent.

When we wrote last week that the Boston show was the best one ever held outside of New York we had not had time to make more than a very superficial examination, as our time was devoted to obtaining the awards from the judges' books and preparing them for the printer. Further inspection showed that we had failed to rate the show at its proper worth and that in comparison all shows previously held in this country must take rank below it. There were 1,039 entries, and in nearly every class there was at least one first-class specimen, while some of the classes contained a number of animals that have a world wide reputation as capital representatives of their breed. This was notably the case in the pointer classes; and never before in this country have nearly so many really good specimens of this breed been shown together. The quality of some of the other classes has never been surpassed if equaled. The management of the show, taken as a whole, was better than we remember to have seen. The dogs were nicely benched and presented a very attractive appearance. This was done by Spratts Patent and was an improvement upon that at Newark, as the wire partitions were more firm and the benches were better arranged. The same trouble exists as to the lack in height of the partitions between the medium-sized dogs and also in the lack of firmness of those between the large dogs. The metal points which project from the wires, the agent informs us, will be at once removed. Newark had more noise from the dogs than we remember to have heard at any previous show, and we naturally thought that it was owing to the benching, but this was probably wrong, as the show at Boston was one of the most quiet we ever attended. The hall in which the show was held is the best adapted for the purpose of any we ever saw. There is plenty of room, the hall being over 250ft. in length, exclusive of the entrance, which is nearly 100ft. more, and over 200ft. in width at the rear and 100ft. at the entrance. The room is very well lighted and has the best of ventilation. There are also a large number of rooms suitable for offices and waiting rooms, and a large restaurant up-stairs. The basement is of the same size as the hall, making an ample storage room for crates, etc. The judging ring in the center of the hall appeared to be of sufficient size, but some of the classes were rather crowded and more space was needed.

Judging began shortly before 11 o'clock on Tuesday, and good progress was made. The attendants were given the numbers of the dogs wanted, printed in large figures, and few mistakes were made and much time was saved. The catalogue was very neatly prepared and contained comparatively few errors. The name of the judge was placed at the head of each breed, together with the list of special prizes, the latter being decided in most cases as soon as the regular awards were made. This is a very good plan, as it often occurs that a judge goes home before deciding the specials, and some one else has to perform the duty. The management secured the good will of the exhibitors by attending to their wants and making them feel at home by a very cordial reception. Superintendent Read was the recipient of a handsome testimonial in cash from the exhibitors. Prof. Burton delighted large audiences each day with a display of his band of trained dogs that appeared to be not only well-trained but intelligent and cheerful performers. The attendance was very good at all times. On Thursday it was immense, the hall being uncomfortably crowded from early morning until the hour for closing. This, of course, means money, and the club must have placed to its credit several thousand dollars. We heartily congratulate it, and also the exhibitors of next year, as they are sure to reap no inconsiderable benefit therefrom in increased premiums and more valuable specials. The judging, upon the whole, was more satisfactory than is generally seen, and in most of the classes but little fault could be found. Many of the dogs are well known and have been described by us in our reports of previous shows, and it is not necessary to repeat the description here.

Following is a list of the judges: Mastiffs, St. Bernards, pugs and miscellaneous, James Mortimer, Babylon, L. I. Pointers, English setters, greyhounds, deerhounds, foxhounds and Chesapeake Bay dogs, John Davidson, Monroe, Mich. Irish and Gordon setters, W. H. Pierce, Peekskill, N. Y. Spaniels, A. Clinton Wilmerding, New York. Collies, Martin Dennis, New York. Great Danes, bulldogs, Newfoundlands, basset hounds, dachshunde, fox-terriers, Italian greyhounds and poodles, Ronald H. Barlow, Philadelphia, Pa. Bull-terriers, Thomas R. Varick, Manchester, N. H. Beagles, Herman F. Schellhass, Brooklyn, N. Y. Yorkshire, Skye, Scotch, Irish, Bedlington, Dandie Dinmont, black and tan and wire-haired terriers and toy spaniels, Edward Lever, Philadelphia, Pa. Veterinary, Dr. Al Watts, Boston, Mass. Superintendent, John Read.

MASTIFFS—(MR. MORTIMER).

Ilford Caution, looking well, was alone in the champion class. The open dog class was a good one with Minting first and Orion second. Mr. Lort at Ryde, Eng., last August placed Orion first and Minting second. Why he did this we cannot understand, as Minting is the better in head and bone and is more massive than Orion. The latter is a big dog with excellent legs and feet. He is too long in head and stands too high on his legs. We thought Minting an easy winner. Monarch, third, is a very promising puppy not so massive in head as the others and a bit off in muzzle he is good in body and fairly good in other respects. Lord Raglan we failed to find in his stall. Wacouta Nap, looking fairly well, we thought deserving the three letters. The bitch class was not well handled. Lady Gladys, first, was shown hog fat and was much too lame for a winner. Southern Belle, second, was rightly placed. She is a good bitch with lots of bone; she has a fair head, but is too long in muzzle; her legs might be set on better and she was out of coat. Lady Dorothy, placed third, is a splendid young bitch, worth all the others in the class; she is good in skull and muzzle with the best ears we ever saw on a mastiff; she is also good in body, legs, feet and tail. If she goes all right we shall expect to see her to the front another year, even in the best of company. Hilda V., looking well, was just about good enough for third place. Wacouta Rose, hc., also look-

ing well, was worth another lettter. In the dog puppy class first went to Monarch, third in the open class. Ilford Caution II., placed second, is a fairly good puppy, off in ears and not straight in forelegs. Lady Dorothy won in the bitch class, second going to Duchess, a nice bitch, not so good either in head, ears or legs as the winner.

ST. BERNARDS—(MR. MORTIMER).

All of the Hermitage Kennel entries were absent. In the champion class for rough-coated dogs Merchant Prince was placed over Otho, his only competitor. The former was looking better than we have ever seen him, although he was not quite right in condition. Otho was also looking fairly well. He is much better in front than Prince, but the latter beats him behind. Miranda, looking well, was alone in the bitch class. In the open dog class first went to Sir Charles and second to Bosco II. For reasons given in our report of the Newark show, we should place Bosco first with Sir Charles second and Hadjar third. Alvier, hc., a better dog than Eiger, reserve, should have exchanged places with him. In the bitch class Swiss Beda well deserved her first. Recluse, placed second, was in no condition to show; vhc. was about her place. Nora, third, was entitled to second place. Bonnie, hc., a well made bitch, fairly good in head, body and limbs, should have been third notwithstanding her washy color. La Duchesse, c., should have been higher up. The first and second winners in the dog puppy class were removed from the show before we had an opportunity to examine them. Princess, the winning bitch, has good limbs and plenty of size. She is rather light in head, but will probably improve. Francis, second, is fairly good in head, body, legs and feet, and has plenty of length, her worst fault is a long and pointed muzzle. Milly Rose, third, is good in back, loin, quarters and tail, her head is not good and she has a sheepish expression, she is also light in limbs and washy in color. In the champion class for smooth-coated dogs Hector was alone. This was his first appearance in the champion class, and he well deserved his honors. In the open dog class first deservedly went to Montrose. Wotan, second, should have exchanged places with the small but typical Rigi, placed third. Wotan is also too small, he is faulty in skull, with a moderate muzzle, and his legs are not quite straight, he is fairly good in body. In the bitch class first went to Gip, not good in skull, too light in eyes and a trifle slack in back, she is good in chest and has fair legs and feet. Queen of Sheba, second, and Kader, third, are well known. First was withheld in the dog puppy class. Earl King, second, was removed before we saw him. Lord Snowden, com., has too much coat for the class. In the bitch class Topsy, the winner, is blind of one eye, her chest, back, loin, quarters and coat are fairly good; she is bad in head and her ears and tail are not very well carried. Apollona, placed second, is much the better of the two; she is fairly good in head and of better type and sound.

ULMERS—(MR. BARLOW).

Don Cæsar, placed first, has improved and was looking well; Cæsar coming second. They were given equal first at Providence. Both are grand dogs. There was nothing else in the class worthy notice in such company. In the bitch class first went to Juno, described in our Buffalo report. Big Kate, placed second, is not very big and not nearly so good as the winner. She has a fair head, but is too wide in chest and is not quite straight on her legs. Tiger, the winner of third, is fairly good in body but not first-rate in head.

NEWFOUNDLANDS—(MR. BARLOW).

The Newfoundlands were a poor lot. Folly, the winner in the dog class, was the best; he was vhc. at Buffalo. Bruno II., winner of second, is fairly good in head, but is hollow in back and his coat is not straight.

DEERHOUNDS—(MR. DAVIDSON).

With the exception of Dr. Clyde, absent, and a foxhound puppy, all of the entries in the deerhound classes were owned by Mr. Thayer. There has never before been seen in this country so grand a showing of this magnificent breed. Although all in the champion and open classes have been frequently shown, they have not previously been shown together. In the dog puppy class Robber Chieftain was the only one shown. He is a very promising youngster of good size, plenty of bone and a good coat. Both of the bitches are also promising. Theodora, the winner, is of good type, with a fairly good head and a capital coat. She is racy looking, but a trifle light at present. Lorna Secunda, placed second, is stouter than the winner, but does not show so much quality. The classes were well judged.

GREYHOUNDS—(MR. DAVIDSON).

Champion Memnon had a walk over in the champion dog class. His mouth is gone otherwise he was in good form. Mother Demdike, looking well, was also alone in the bitch class. Balkis, the Providence winner, had an easy win in the open dog class. Peacock, placed second, is rather a nice brindle shown in elegant condition. He is not quite right in shoulders and forelegs. Pembroke, third, well known, is quite as good as Peacock, and in equally good condition can beat him. Joe Jumper, reserve, is not a show dog. He is very coarse, has a bad head and neck, is straight behind and lacks character. Lancashire Witch, in the bitch class, was away ahead of the others; both of them are light and weedy—not show animals. The two dog puppies shown will not develop into future winners, both are deficient in character.

CHESAPEAKE BAY DOGS—(MR. DAVIDSON).

There were six of this breed shown, five dogs and one bitch. All are well and strongly made, and looked a workmanlike lot. Four of the dogs are litter brothers. Rum, the winner, has a good head with a very intelligent and wide-a-wake expression. His color is a sedge-brown without any white. He has a thick coat, wavy on his sides, but tightly curly on his back. He has powerful legs and is a very easy mover. Rock, second, is a smaller dog than the winner but very much like him in type and coat. He is also narrower across the head, more pointed in muzzle and has a white patch on his chest. He also moves nicely. Undoubtedly, many duck shooters would not place Joe, winner of third, over Rex, given vhc. on account of his color, which is too light, but the judge evidently preferred the better form of Joe to the better color of Rex. The latter is faulty in head and back, and did not move near so well as the others. Sport, given an equal second, is a well-put-together, powerful dog, with a very short and thick coat of rich seal-brown color. Ripple, a very compact, workmanlike looking bitch, was awarded first prize in the bitch class. She is of good coat and color, except that she has a white frill and white toes. She is undershot and begins to show her age. She is the dam of the four brothers in the dog class.

POINTERS—(MR. DAVIDSON).

The display of pointers was by far the best that has ever been seen in this country. Four well-known ones, all looking well, were in the champion class for large dogs. Beaufort, not at his best in coat, was rightly placed at the head. Although a taking-looking dog and one that every judge of the breed admits to be a good specimen, one is not so greatly impressed with his many good points until he is placed beside a good dog and the two are carefully compared; it is then that Beaufort shows up just what he is, the best dog. Robert le Diable, greatly improved since the Newark show, appeared to be confident of victory. Graphic was also looking fairly well, although not fully recovered from his injury. Nick of Naso, for the first time in this class, found himself in pretty hot company. Meadly, looking well, was alone in the bitch class. In the open dog class, Lad of Bow was shown for the first time in this country. He is a fine upstanding dog with a very good front, a deep chest, fair quarters, good tail, legs and feet. His eyes are too light and his ribs might be better sprung; he is also rather light and flat in loin. A good dog and an easy winner. Tammany was placed second, he has grown coarse and throaty. Sachem, winner of third, we liked fully as well as Tammany; he has a nice head and good body and carries himself very nicely, he might be better in forelegs, stifles and hocks. Cully, reserve, is much the same stamp as Sachem, but not quite up to him in head. Songo, vhc., has not greatly improved since we saw him at New Haven last year, he has filled out but is not quite right in his forelegs. William Tell, Capt. Fred and Dick were in too good company, and could only get hc. each. Two or three others that were unnoticed could easily get cards in an ordinary class. In the bitch class Patti M.; filled out and much improved, was placed first, with Kate VIII. second, she was shown a trifle better than at Newark, but was not at her best. Daisy Ranger, reserve, might have been higher if her feet were good. Sal, hc., was nursing a young litter and not in show form. Belle Randolph, com., we failed to find in her stall; we remember her as quite a fine bitch. Phyllis, first at Newark, was unnoticed. In the champion class for small dogs the well-known Donald, although nearly ten years old, was placed over Bracket. Donald has been a capital dog and is now far from being a bad one, but age has told upon him; his eyes are dim, his once wonderful quarters are shrunken, and his forelegs are getting shaky. Bracket, although shown too thin, was looking well and we thought him just about good enough to have won. Robin Adair, also entered in this class, was at home nursing wounds received from a bigger dog. There were no entries in the bitch class. In the open dog class Naso of Kippen was clearly entitled to his first. Bowdoin, placed second, was second in the puppy class at New Haven last year. He has has improved, but shows in his quarters that he has not had the proper amount of exercise to properly develop him. Third went to Beppo III., a good dog with a fairly good head, beautiful ears, good coat and color, and with considerable quality. His eyes are too light, and his ribs might be carried further back and better sprung. He is a trifle flat in loin, and his quarters, although well turned, are rather light. He has a good tail, legs and feet. Van, com. at Providence, received the reserve card, with Pommery Sec vhc. Several of the others in the class we failed to find in their stalls. In the bitch class first went to Queen Bow, hc. at Newark and second to Glauca, first at the same show. In our report of the Newark show we said, "Queen Bow, hc., is better than any in the class, although Glauca is very close to her." Third went to Lass of Maine, rather a good bitch, with a good loin and capital legs and feet. She is a trifle round in body and wide in front, and a bit straight behind. Daisy A., reserve, was second at Providence. Bonanza, unnoticed, must have escaped the eye of the judge. She is quite a nice bitch, and should have been well up in the list. Lady Maine, vhc., is but little behind her sister, Lass. Kent Queen and Tuck, both hc., deserved their cards. Model Doodle, also hc., we did not see. Penelope, c., would not have disgraced another letter or two. There were several others that in an ordinary class would have received notice. In the dog puppy class, first went to Fashion, a very promising youngster, he is a son of Champion Donald and out of Revel III., a well-bred one and good-looking; he is too light in eyes and not square enough in muzzle, and not quite straight on his forelegs, but he may improve in this respect with age. Donald IV., his litter brother, was placed second, he is very near the winner now, and if he goes all right will be able to give him points next year, notwithstanding his bad color. Third went to Pommery Sec and reserve to an unnamed son of Naso of Kippen, not a good one. Glen Graphic, vhc. was first at Providence. In the bitch class Revel IV., litter sister to the winning dog, was placed first. She is a nice bitch, with lots of quality. Except for her too fine muzzle, her head is good; she is fairly good in chest and back, has nice shoulders, good quarters and capital feet; she is rather long and flat in loin; she was quite sick with pneumonia after the judging, but appeared to be better on the last day. Lass of Maine, third in the open class, was second, with Frivolity, litter sister to the winner, third. She is a pretty little bitch with a great deal of quality; she has a fair head, good shoulders, chest, loin and quarters; she might be better sprung in ribs and has a malformed tail. Lady Maine, reserve, and Belle of Maine, vhc., made up the class, which for quality we have never seen equaled. All of the classes were very well handled. In the exceptions noted the difference is so slight that an honest difference of opinion can easily be excused.

ENGLISH SETTERS—(MR. DAVIDSON).

These classes were well filled and the quality was up to the average seen at our large shows. That they were well handled goes without saying, as Mr. Davidson knows a setter and seldom makes a mistake. Rockingham, somewhat improved since Newark, reversed the decision there by beating Foreman and Plantagenet in the champion dog class, and his kennel companion, Cora of Wetheral, scored her first win in the bitch class. All of the winners in the open dog class are well known. Royal Albert scored another win, with his brother, Royal Prince II. second and Gus Bondhu third. The latter was our choice for second place, as he is much the better in feet and pasterns and shoulders. Rollo, reserve, has grown quite thin since he was at Newark. Pride of Dixie, looking well, was vhc. Rock Bondhu, also vhc., we could not find. Count Paris, hc., we well remember as a good winner here five years ago; he was badly shown and has a curly coat. There were several unnoticed ones in the class that were good enough for one or two letters had the judge been short of good specimens. Daisy Foreman, looking well, won first in the bitch class. Lou Gladstone, placed second, is a nice looking, well made bitch with a fair head and body, and very good quarters. She is light in eyes and might be better in feet. She also stands a trifle low in front. Eudora, third, is also quite a fair bitch. She has greatly improved since we saw her two years ago, having filled out in loin and quarters. She is not so good in head and muzzle as the winner, but very near her at other points and ahead of her in feet. Mavis, looking well, received the reserve card, with Daisy, the winner at New York last year, vhc. She was looking fairly well. Princess Novel, also vhc., is too plain in head to get higher up, her good body, legs and feet gave her the card. The puppies were just a fair lot, with nothing remarkably good or promising.

IRISH SETTERS—(MR. PIERCE).

Nearly all of the winners in the Irish setter classes are well known. Mr. Pierce handled them very nicely. Elcho Jr., looking well, scored another win in the champion dog class, as did Mollie Bawn in the bitch class. Tim was again to the front in the open dog class. Bruce was placed second, but after the judging it was found that he was entered not for competition, and Dash, winner of third, was moved up a peg, and Kennerson's Tim, vhc., was advanced to third place. The latter is a fairly well made dog with good coat, body, legs and feet; he is heavy in head and shoulders and has a light eye. In the bitch class Nellie, third at Newark, was placed first. Lulu III., greatly improved since we last saw her, was second, with Daphne third; the latter was well shown and deserved the place. Syren, vhc., is growing old. Loo, entered not for competition, somehow managed to get a vhc. card. Yoube was transferred to the champion class, Lorna was absent, and Jessie was not for competition. There were no wonders in the puppy classes.

GORDON SETTERS—(MR. PIERCE).

There were 46 entries in the Gordon class with only two absentees. We thought them as well placed as was possible. Nearly all of the bitches were shown so fat that it was impossible for the judge to pass upon their relative merits. Royal Duke was placed over Argus in the champion class, both were looking well. Nora won in the bitch class. In the open dog class Tom II. was first and Mont second, both are well known. Dash, placed third, is a fair dog, with poor color, a light eye, and is too straight behind. Dick, vhc., is well known. Phil was absent. The bitches appeared to be quite a fair class, but nearly all of them were too fat for one to form a correct opinion of. The dog puppies were a poor lot, and the prizes were very properly withheld. Only one bitch was shown, she is small but quite promising.

SPANIELS—(MR. WILMERDING).

Mr. Wilmerding is a good judge of spaniels, and made but few mistakes. Only two Irish water spaniels were shown. Both are well known, as are the winning Clumbers, except the first prize bitch, which we failed to find in her stall. The field and cocker classes were well filled. Nearly all the winners we have described before. The judge placed Shina over Miss Obo II. in the champion class for cocker bitches. Both are capital bitches. Shina is too light in muzzle, and turns her toes in when she walks. Miss Obo II. is far better in head, although she is a bit heavy in skull. She was also off in coat. We thought her just about good enough to beat Shina, notwithstanding her lack of condition. In the cocker bitch class we noticed two puppies that are very promising. Dolly Obo, vhc., is the better of the two, although the other one, Roxy, was placed one notch above her. The judge got them all right in the puppy class, where he probably paid them more attention, as they are too young to compete in the aged class. If they go all right, both of them will beat the ones placed over them out of sight next year. In the dog puppy class Moral II. should have been placed over Popinjay, the winner of first. The latter is heavy in head, underhung, and is not quite straight in his forelegs. Aside from this decision and the placing of Shina over Miss Obo II. the classes were well handled.

BEAGLES—(MR. SCHELLHASS).

There was a very good showing of beagles, many of the best known ones being present. Mr. Schellhass has had considerable experience with the breed and took a great deal of pains to get them right, and in most of the cases he did fairly well. Some of his decisions, however, were not quite satisfactory. There is not much to choose between Little Duke, the winner in the champion dog class, and Rattler III. The latter has the best head, while the former is the better at other points. In the open dog class Racer, Jr., hc., is a better hound than Leader, reserve. Van, hc., and Rip, c., were lucky to receive cards in this company, both are off in head, coat and tail and are coarse and lacking in quality. In the bitch class Zulu, reserve, is long cast, deficient in muzzle and short in coat, not so good a bitch as Thorn II., hc., although the latter was heavy in whelp. The two winning dog puppies are very promising. The bitches were not nearly so good as the dogs.

BASSET HOUNDS—(MR. BARLOW).

Only one very moderate animal was entered in these classes and the prize was very properly withheld.

DACHSHUNDE—(MR. BARLOW).

These classes were fair in quality, we thought them well judged.

FOXHOUNDS—(MR. DAVIDSON).

The foxhounds were few in numbers but very good in quality. A very workmanlike looking lot with capital legs and feet.

COLLIES—(MR. DENNIS).

The collies were a capital lot and Mr. Dennis handled them very well indeed. In the champion dog class Glengarry was placed over Royboy. There is not much to choose between the two, Royboy has the better head and harder coat, while Glengarry is perhaps superior in other points enough to overcome this. Neither of the champion bitches was in good coat, the winner having a trifle the worse of it in this respect. The winning dogs in the open class are well known. Several of the unnoticed ones were worth cards, among them was Karo, a nice dog that would not have disgraced the two letters. In the bitch class the judge caught on to the good qualities of Spoiled Miss notwithstanding her bad color, and placed her over both Helen and Lady Ellis. Helen in good coat can beat her, but her coat is now soft. Clifton Maid we could not find and conclude that she was absent. Aside from the winning dog and bitch in the puppy classes there was nothing remarkably good.

POODLES—(MR. BARLOW).

The poodles were not a first-class lot. Caro, the winning dog, is not good in color and not close enough in curl. Beauleau, placed second, is well known. The bitches were both too open in coat.

BULLDOGS—(MR. BARLOW).

All of the bulldogs are well known. Mr. Barlow disqualified Hillside upon the ground that competent authority had decided at Newark that he had been castrated. The matter was referred to the veterinary in charge, Dr. Al Watts, who made an examination and unhesitatingly pronounced the dog all right. Hillside the next day proved that the decision was correct by serving champion Britomartis. The class was rejudged after Hillside was pronounced eligible, and he was awarded second.

BULL-TERRIERS—(MR. VARICK).

There was a nice lot of bull-terriers and Mr. Varick handled them very well. All of the winners are well known.

FOX-TERRIERS—(MR. BARLOW).

There was a good showing of fox-terriers with nothing of note turning up as a new comer With exception of placing Cornwall Duchess over Verdict in the bitch class, we thought the classes well handled. Mr. Lever judged the wire-hairs. Only three were shown. Both the winners are well known. Spot, winner of second in the bitch class, is off in head and light in bone.

TERRIERS—(MR. LEVER).

Mr. Naylor showed four Scotch terriers, one in each class, and scored four firsts, which the dogs deserved. Only four Irish terriers were shown, Greymount, winner in the dog class, much the best. There were also but four Dandies. Pansy, the winning bitch, has a capital head and is good in body. She was the best of the lot. No Bedlingtons were shown. In black and tan dogs the winner, Vortex, is of good color and has the best of legs and feet. He is a bit faulty before the eye and in chest, and his thumb marks are not well defined. In the class under 7lbs. there was nothing very good.

In Skyes our old friend champion Jim, looking well, had no trouble in disposing of the others in the dog class. In the bitch class first went to Lass o' Gowrie, shown too thin. Countess, second, is too large; she should have exchanged places with Lady Kate, although the latter is too small. There were quite a number of Yorkshires shown with several fair specimens, but as a rule, short coats and bad color prevailed. The judge placed them about right.

PUGS—(MR. MORTIMER).

There was a large class of pugs, with several good ones in, but the everage quality was not very good. Bradford Ruby, looking well, won over Young Toby and Max in the champion dog class. Santa Claus, winner in the open dog class, is a fair dog of good size, a bit long in muzzle, loose in coat and his tail is not well carried. Rob Roy, placed second, is not a good one; he is much too large, smutty on head, is long in muzzle, poor in wrinkle, and has hazel eyes. Buff, third, is much the better dog. Othello, vhc., is better than he looks,

as is proved by his winning the stud dog prize. In the bitch class, first went to Bessie, a very nice little bitch of nice size, good in nearly all points; her chief fault is lack of trace. Daisy, placed second, was lucky; she is long in muzzle, flat in skull, light in eyes, and has white toe nails. Flora, third, was still more lucky, as there were several better ones in this class. Smut, vhc., should have been second. She is of nice size, good in body, coat and tail. She is a trifle dark in color and long in muzzle, but better than any in the class except the winner. Toodles II., unnoticed, was the next best. She is fairly good in size, color and mask. She is a bit long in muzzle, lacks trace, and does not carry her tail well. Tragedian, the winning dog puppy, is long in muzzle, underhung, smutty in head, has a white vent, is over at knees, and has large open feet; he has a good body and tail. York, placed second, is by far the better dog; he is fair in skull and wrinkle and not particularly bad at any point.

TOY SPANIELS—(MR. LEVER).

There was a very good showing of King Charles. In the champion class Milwaukee Charlie was placed over Roscius, the latter is better in muzzle, stop and skull than the winner, and although larger is more compact. Nearly all of the winners are well known. In the Prince Charles or Ruby class first went to Josephine, a very pretty well made little bitch with a good skull, she is a trifle long in muzzle and was short of coat and feather. The winning Blenheims are well known except Posey, second in the bitch class, a nice bitch well placed.

ITALIAN GREYHOUNDS—(MR. BARLOW).

Both of the dogs are too large and leggy, as is the winning bitch. Minnie, just a fair one, was the best of the lot.

MISCELLANEOUS—(MR. MORTIMER).

In the class over 25lbs., first was given to a fairish Airedale, with good head and color; he is short in muzzle, undersize and soft in coat. Sir Lucifer, placed second, is much the better dog. Third went to a very moderate Pomeranian. In the light-weight class first went to a fair Maltese terrier. The other winners we failed to see. A list of the awards up to Tuesday night was published last week.

Following are corrections and additional

AWARDS.

In mastiff dog puppies A. F. Cowles' Ilford Caution II. was second, and third was withheld. In bitch puppies Lady Dorothy was first and Duchess was second. In English setter bitches G. J. Lewis's Eudora was third instead of Bent's Queen, and A. A. Welch's Maud was high com. In the open class for Irish setter dogs T. Wilson's Dash was second, and Kenerson's Tim was third. In bitches D. Meagher's Loo was very high com. In spaniel dog puppies other than black or liver, J. B. Daniels's Pete was first and E. White's Whitie and Brownie were high com. In collie bitch puppies Highland Belle was first, and Chestnut Hill Kennels' Pearl was third. In pug dogs Dr. M. H. Cryer's Othello was very high com.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Wanda. OPEN—*Dogs:* 1st, 2d and 3d, J. E. Thayer's Highland Laddie, Bras and Duncan. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Ramona, Thora and Berger. PUPPIES—*Dogs:* 1st, J. E. Thayer's Robber Chieftain. *Bitches:* 1st and 2d, J. E. Thayer's Theodora and Lorna Secunda.

GREYHOUNDS.—CHAMPION—*Dog:* Terra Cotta Kennels' Memnon. *Bitch:* C. D. Webber's Mother Demdike.—OPEN—*Dogs:* 1st, H. W. Huntington's Balkis; 2d, Miss Ida M. Simpson's Peacock; 3d, C. D. Webber's Pembroke. Reserve, Heathfield Kennels' Joe Jumper. High com., J. A. Davis's Stag. Com., A. Beard's Prince. *Bitches:* 1st, H. W. Huntington's Lancashire Witch; 2d and 3d, Heathfield Kennels' Satchel and Mystery.—PUPPIES—*Dogs:* 1st and 2d, J. P. Marcotte's Jeneve and Skip. *Bitches:* No entries.—

CHESAPEAKE BAY DOGS.—*Dogs:* 1st, Dr. F. B. Greenough's Rum; equal 2d, C. B. Jenning's Sport and Captain C. Dunham's Rock; 3d, E. Burr's Joe. Very high com., T. D. Boardman's Rex. *Bitches:* 1st, Dr. F. B. Greenough's Ripple.

GORDON SETTERS.—CHAMPION—*Dog:* E. Maher's Royal Duke. *Bitch:* J. L. Campbell's Nora.—OPEN—*Dogs:* 1st, F. M. Harris's Tom II.; 2d, Dr. W. H. Tillinghast's Mont; 3d, C. H. Leonard's Dash. Very high com., Merrimac Kennels' Dick. High com., C. E. Molloy's Jack. Com., E. Lafaviere's Dash II. and H. F. Aten's Glen III. *Bitches:* 1st, L. Wells's Vic; 2d, G. E. Brown's Jessica; 3d, W. E. Rothermel's Rose. Very high com., C. H. Jones's Diana. High com., C. T. Brownell's Beaulah and Gordon Chloe. Com., M. McLean's Daisy Blossom, Merrimac Kennels' Neva, C. F. Roberts's Ithona and Inwood Kennels' Belle.—PUPPIES—*Dogs:* Prizes withheld. Very high com., C. T. Brownell's Monarch. High com., W. G. Drew's Heather Jock and A. H. Aldrich's Forest King. *Bitches:* 1st, A. H. Aldrich's Heather Clytie.

BEAGLES.—CHAMPION—*Dog:* A. H. Wakefield's Little Duke. *Bitch:* Woodbrook Kennels' Myrtle.—OPEN—*Dogs:* 1st, reserve and high com. (2), A. H. Wakefield's Fitz Hugh Lee, Leader, Racer, Jr. and My Boy; 2d, G. Laick's Ratiler; 3d and very high com., Woodbrook Kennels' Chimer and Little Prince. High com. and com., M. J. Gaines's Van and Rip. *Bitches:* 1st, 3d, very high com. and high com., Woodbrook Kennels' Lou, Vixen, Betty and Thorn II.; 2d, A. H. Wakefield's May Belle II. Reserve, M. W. Hammond's Zulie.—UNDER 12IN.—*Dogs:* No entries. *Bitches:* 1st, Linden Beagle Kennels' Belle; 2d, withheld. PUPPIES—*Dogs:* 1st, Woodbrook Kennels' Rowdy; 2d, L. E. Wentworth's Tracer. *Bitches:* 1st and 2d, J. H. Appleton's Melody and Sylvia; 3d, E. S. Emery's Lou. High com., L. W. Wentworth's Fidget and Vixen.

FOXHOUNDS.—*Dogs:* 1st, 2d and 3d, Myopia Hunt Club's Dashwood, Benker and Rock. Reserve, S. Dexter's Dix. Very high com., S. E. Ward's Music. *Bitches:* 1st, 2d and 3d, Myopia Hunt Club's Rebecca, Fairmaid and Roma. PUPPIES—*Dogs:* 1st, S. K. Williams's Major. *Bitches:* No entries.

BULL-TERRIERS.—SMALL—*Dogs:* 1st, F. F. Dole's Silver; 2d, C. J. Lincoln's Turk; 3d, withheld. *Bitches:* 1st, H. W. Lacy's Nanon; 2d, I. W. Newman's Nellie; 3d, withheld. PUPPIES—*Dogs:* 1st, W. J. Comstock's Jubilee; 2d, withheld; 3d, E. J. Souther's Royal Dandy. Com., D. T. Hagerty's Bendigo. *Bitches:* 1st, H. W. Lacy's Nanon; 2d, W. C. Hook's Mercedes Royal; 3d, withheld.

FOX-TERRIERS.—WIRE-HAIRED—*Dogs:* 1st, B. B. McGregor's Trophy. *Bitches:* 1st, G. Bell's Bristles; 2d, B. B. McGregor's Spot.

SCOTCH TERRIERS.—*Dogs:* 1st, J. H. Naylor's Glenlyon. *Bitches:* 1st, J. H. Naylor's Rosie. PUPPIES—*Dogs:* 1st, J. H. Naylor's Lowrie Dunbar. *Bitches:* 1st, J. H. Naylor's Fannie Fern.

IRISH TERRIERS.—*Dogs:* 1st, G. D. Fowle's Greymount; 2d, R. G. Shaw's Irish; 3d, H. Baxter's Paddy. *Bitches:* 1st, Morris & Clancy's Nancy.

DANDIE DINMONT TERRIERS.—*Dogs:* 1st, J. Rae's Bobbie Burns; 2d, J. H. Naylor's Bonnie Briton. *Bitches:* 1st, J. H. Naylor's Pansy; 2d, G. G. Cleather's Meg.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, J. F. Campbell's Vortex; 2d, J. Whittaker's Beppo. *Bitches:* 1st, J. F. Campbell's Squaw. UNDER 7LBS.—*Dogs:* 1st, Dr. H. R. Surles's Allspice. *Bitches:* 1st and 3d, Dr. H. R. Surles's Spice and Dot; 2d, S. W. Borrowscale's Boston Belle.—PUPPIES—*Dogs:* 1st, J. Walter's Rexy. *Bitches:* No entries.

SKYE TERRIERS.—*Dogs:* 1st, Dr. W. P. Sanderson's Jim; 2d, J. H. Naylor's Drollie; 3d, F. P. Kirby's Donald. Very high com., C. D. Martin's Colin. *Bitches:* 1st and very high com., Dr. W. P. Sanderson's Lass O'Gowrie and Bessie; 2d, F. P. Kirby's Countess; 3d, J. H. Naylor's Harrie. Very high com., C. A. Shinn's Lady Kate. High com., W. B. Gifford's Daisy. *Puppies:* Withheld.

YORKSHIRE TERRIERS.—*Dogs:* 1st, J. F. Campbell's Spink; 2d, W. E. Morris's Jingo; 3d, Mrs. E. S. N. Goodall's Laddie. Very high com., P. H. Coomb's Tug; High com., E. P. Saltonstall's Fussy and C. N. Symond's Harry. Com., P. Gough's Sandy and C. N. Symond's Roy. *Bitches:* 1st, C. N. Symond's Floss; 2d; J. F. Campbell's Dolly; 3d, P. H. Coombs's Bradford Lill. High com. and com., Morris & Clancy's Lady and Flirt. UNDER 5LBS.—*Dogs:* 1st, Mrs. Ella Carleton's Armande; 2d, C. N. Symond's Dick; 3d, W. Borrowscale's Dandy. *Bitches:* 1st, C. F. Sullivan's Lucy; 2d, Mrs. H. M. Shepard's Camille; 3d, E. G. Carleton's Pink. High com., Mrs. W. E. Morris's Lilly.—PUPPIES—*Dogs:* 1st, M. E. Doherty's Tiny; 2d, withheld. *Bitches:* 1st, J. C. Daly's Belle.

KING CHARLES SPANIELS.—CHAMPION—*Dog:* F. B. Fay's Milwaukee Charlie. *Bitch:* No entries.—OPEN—*Dogs:* 1st, King Charles Kennels' Duke; 2d, Dr. A. Hodge's Prince; 3d, R. T. Ross's Jo Jo. Very high com., F. R. Graves's Rupert. High com., F. B. Fay's Alecl. Com., R. T. Ross's Prince. *Bitches:* 1st, 3d, very high com. and com., F. B. Fay's Dolly, Minnie, Nell Gwynne and Floss; 2d, Miss Belle Borrowscale's Pretty Polly. High com.; R. Russell's Dot and King Charles Kennels' Minnie May. Com., R. T. Ross's Blanche.—PUPPIES—*Dogs:* 1st, F. B. Fay's Royal. *Bitches:* 1st, R. T. Ross's Beauty; 2d, F. B. Fay's Exeter Queen.

PRINCE CHARLES OR RUBYS PANIELS.—1st and 2d, A. W. Lucy's Josephine and Princess Alice; 3d, Mrs. E. S. N. Goodall's Charlie. Very high com., F. B. Fay's Ruby.

BLENHEIMS.—*Dogs:* 1st, W. Phillips's King Pippin; 2d, Miss Lillie Hart's Banjo; 3d and very high com., F. B. Fay's Exeter Earl and Exeter Duke. *Bitches:* 1st, 3d and very high com., F. B. Fay's Joan of Arc, Exeter Lady and Exeter Beauty; 2d, S. Hammond's Posy.

ITALIAN GREYHOUNDS.—*Dogs:* 1st and 2d, Dr. H. R. Surles's Dandelion and Guess. *Bitches:* 1st, Dr. H. R. Surles's Zephyr; 2d, Mrs. A. A. Moorhouse's Minnie.

MISCELLANEOUS.—LARGE—1st, Dr. A. Watts's Tatters; 2d, Glencoe Collie Kennels' Sir Lucifer; 3d, Mrs. J. M. B. Reynolds's Blanche. SMALL—1st, H. E. Paul's Lady Fannie; 2d, Mrs. Annie E. Krouse's Queen; 3d, C. Krouse's Beauty. Very high com., Fannie J. French's Captain Dangerfield.

SELLING CLASS.—Equal 1st, G. A. Coleman's English setter dog Count Dash and H. F. Chute's collie dog Jerry.

SPECIAL PRIZES.

MASTIFFS.—Best kennel (two), E. H. Moore; stud dog, E. H. Moore's Ilford Caution with Ilford Caution II. and Duchess; best dog or bitch, E. H. Moore's Minting; dog in open class, the same; best get of Ilford Caution, A. F. Cowles's Ilford Caution II. American Mastiff Club Sweepstakes, 1st, E. H. Moore's Duchess; 2d, C. R. Allen Boss's Zulu.

ST. BERNARDS.—Best kennel, rough or smooth, E. H. Moore; rough, the same; smooth, Hospice Kennel; stud dog, rough, E. H. Moore's Merchant Prince with Prince Barry and Princess; smooth, Hospice Kennels' Wotan with Montrose and Kader; best in show, Hospice Kennels' Hector; rough-coated bitch, E. H. Moore's Miranda.

NEWFOUNDLANDS.—Best, W. W. Silvey's Folly.

DEERHOUNDS.—Kennel, J. E. Thayer; best, J. E. Thayer's Chieftain; stud dog, the same, with Robber Chieftain and Theodora.

GREYHOUNDS.—Best, H. W. Huntington's Lancashire Witch; brindle, Miss Ida M. Simpson's Peacock; brace, H. W. Huntington's Balkis and Lancashire Witch.

CHESAPEAKE BAY DOGS.—Best, Dr. F. B. Greenough's Rum.

POINTERS. Kennel, Graphic Kennel; stud dog, large, Graphic Kennels' Graphic with Lad of Bow and Bracket; small, Graphic Kennels' Donald with Fashion and Revel IV; best in show, Chas. H. Mason's Beaufort; best dog, the same; bitch, Graphic Kennels' Mealy; puppy, Graphic Kennels' Fashion.

ENGLISH SETTERS.—Kennel, Blackstone Kennels; best, F. Windholz's Cora of Wetheral; stud dog, A. M. Tucker's Gus Bondhu with Rock Bondhu and Chiquita; puppy (two), A. J. Ward's Donna.

IRISH SETTERS.—Kennel, Max Wenzel; best (two), Dr. W. Jarvis's Elcho, Jr.; dog in open class, Max Wenzel's Tim; bitch, Chestnut Hill Kennels' Nellie; puppy (two), L. & J. Backer's Irish Laddie.

GORDON SETTERS.—Kennel, Inwood Kennel; best, E. Maher's Royal Duke; puppy (two), A. H. Aldrich's Heather Clytie.

SPANIELS.—Kennel, J. P. Willey's; stud dog, cocker, J. P. Willey's Black Pete with Miss Obo II. and Popinjay; best cocker dog, J. P. Willey's Black Pete; bitch, J. P. Willey's Shina, Clumber, Mercier & Hill's Johnny; field, dog, A. E. Hendle's Compton Bandit; bitch, J. P. Willey's Miss Newton Obo; puppy (two), S. R. Hemmingway's Popinjay. Irish water, Associated Fanciers' Duchess II. American Spaniel Club's cocker spaniel sweepstakes—1st, S. R. Hemmingway's Popinjay; 2d, J. P. Willey's Beatrice W.; 3d, E. S. Bird's Dolly Obo.

BEAGLES.—Kennel, A. H. Wakefield; best dog, A. H. Wakefield's Fitzhugh Lee; under 12in., Linden Beagle Kennels' Belle; puppy, Woodbrook Kennels' Rowdy; stud dog, Woodbrook Kennels' Rattler III. with Little Prince and Rowdy. American English Beagle Club's cup for best dog in open class, A. H. Wakefield's Fitzhugh Lee; bitch, Woodbrook Kennels' Lou.

FOXHOUNDS.—Three couple, Myopia Hunt Club's puppy, S. K. Williams's Major; best Dachshund, L. & W. Rutherfurd's Rubenstein.

COLLIES.—Kennel, Chestnut Hill Kennels; stud dog, same owners' Dublin Scot with Scotilla and Dublin Scot, Jr.; best dog, Dublin Scot; bitch, same owners' Flurry II.; puppy, Dublin Scot, Jr.; dog in open class, Scotilla; bitch, under 9mos., same owners' Pearl. Best poodle, J. M. Sears's Caro.

BULLDOGS.—Kennel, Hillside Kennel; best, J. E. Thayer's Britomartis; stud dog, same owners' Tippoo with Hillside and Juanita.

BULL-TERRIERS.—Kennel, F. F. Dole; best dog in open class, W. J. Comstock's Jubilee; puppy, the same; best, F. F. Dole's Count; bitch, same owners' Maggie May; stud dog, same owners' Count with Young Count and Nanon.

FOX-TERRIERS.—Kennel (two), Hillside Kennel; best, Blemton Kennels' Lucifer; best dog, the same; stud dog, J. E. Thayer's Mixture with Raby Jack and Sandy Mixture; best four, dog and bitch, and dog and bitch puppies, Blemton Kennels. American Fox-Terriers Club's homebred puppy stakes, J. E. Thayer's Sandy Mixture. Best wire-haired, B. B. McGregor's Trophy. Best Scotch Terrier, J. H. Naylor's Glenlyon. Irish, G. D. Fowle's Greymount. Dandie, J. H. Naylor's Pansy. Black and Tan, J. F. Campbell's Vortex. Skye, Dr. W. P. Sanderson's Jim. Yorkshire (two), J. F. Campbell's Spink.

PUGS.—Best dog (two), City View Kennels' Bradford Ruby; bitch, Dr. M. H. Cryer's Bessie; stud dog, same owner's Othello, with Buff and Bessie.

KING CHARLES SPANIELS.—Kennel, F. B. Fay; best, F. B. Fay's Milwaukee Charles; stud dog, A. W. Lucy's Duke, with Milwaukee Charles and Minnie May. Best Prince Charles, A. W. Lucy's Josephine; best toy spaniel, F. B. Fay's Milwaukee Charles. Italian greyhound, Dr. H. R. Surles's Dandelion; largest dog, E. H. Moore's Minting; smallest, Miss Ella Carleton's Armande.

PITTSBURGH SHOW.

[Special to Forest and Stream.]

PITTSBURGH, Pa., April 12.—The show which opened this morning promises to be a success. There are 488 entries, and the quality in many of the classes is up to the average. Pointers are not well represented, and while setters are numerous, they show a decided lack of quality. In mastiffs, Lady Clare (given hc.), a new one, is an excellent specimen and the best of the breed in the show. Spaniels are very light classes, excepting the Irish water, which is fairly good; but greyhounds are very poor. The management so far is good. Judging did not commence until 3 o'clock, and proceeded slowly until 6. There has been a fair attendance all day, but it is not a select one. These are the

AWARDS.

MASTIFFS.—CHAMPION—No entries. OPEN—*Dogs:* 1st, Wacouta Kennels' Wacouta Nap; 2d, F. Ardary's Bevis. *Bitches:* 1st, F. Ardary's Jessica; 2d, J. C. Kay's Imogene; 3d, Wacouta Kennels' Wacouta Rose. Very high com., J. C. McClure's Mabel. High com., G. and H. B. Cromwell's The Lady Clara. *Puppies:* 1st, C. C. Cook's Rena.

ST. BERNARDS.—SMOOTH-COATED.—CHAMPION—*Dogs:* Hospice Kennels' Hector. *Bitch:* No entry. OPEN—*Dogs:* 1st and 3d, Hospice Kennels' Montrose and Wotan; 2d, C. A. Painter's Perro.

NEWFOUNDLANDS.—*Dogs:* 1st, D. O'Shea's Bruno; 2d, J. M. Steigewald's Frank. *Bitches:* 1st, D. O'Shea's Jano; 2d, J. Strauthers's Diana. *Puppies:* 1st, D. O'Shea's Bruno II.

ULMERS.—*Dogs:* 1st, Osceola Kennels' Don Cæsar; 2d, Wolverine Kennel Club's Cæsar. Com., C. Grassell's Nero; E. P. Hodge's Cæsar. OPEN—*Bitches:* 1st and 2d, Wolverine Kennel Club's Juno and Lady Gray. High com., H. M. Mayer's Elza.

GREYHOUNDS.—*Dogs:* 2d, Nuttall & Riddle's General. Very high com. reserve, G. H. Bailey's Fritz. Com., E. M. Brackemeyer's Don, R. S. P. V. McCall's Mac. *Bitches:* 2d, and com., J. W. Beddow's Bess of Braddock and Blue Ruin.

DEERHOUNDS.—CHAMPION—*Dog* and *Bitch:* J. E. Thayer's Bran and Perth.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Bras and Duncan. *Bitches:* 1st and 2d, J. E. Thayer's Berga and Thora. *Puppies:* 1st, W. H. Mullins's Custer.

POINTERS.—OVER 55LBS.—*Dogs:* 1st, J. R. Daniels's Donald's Ranger; 2d, Mrs. C. I. Engel's Young Meteor; 3d, H. J. Bigger's Dick Swiveler. Com., Dr. J. F. Halston's Business, J. O'H. Denny's Prince.—OVER 50LBS.—*Bitches:* 1st, C. White's Mollie Faust.—UNDER 55LBS.—*Dogs:* 1st, C. L. Dick's Hamlet Sleaford; 2d, F. Billing's Tamarack; 3d, S. F. Chisholm's King.—UNDER 50LBS.—*Bitches:* 1st, C. M. Munhall's Patti M.; Mrs. C. I. Engel's Lady Trinket; 3d, C. Myer's Devonshire Lou. Very high com., J. Myer's Joy. High com., I. P. Mang's Belle Bravo, J. A. Robinson's My Queen.—PUPPIES—*Dogs:* Withheld. *Bitches:* 1st, C. A. Painter's Nanon; 2d, Mrs. C. I. Engel's Lady Trinket.

ENGLISH SETTERS.—*Dogs:* 1st and 2d, P. H. & D. Bryson's Goldstone and Keystone; 3d, E. V. Hale's Pride of Dixie. Very high com., R. B. Morgan's Mandan. High com., Pittsburgh Kennel Club's Royal Victor. Com., S. L. Bogg's Blue Prince, J. Daniel's Brandy Boy, C. M. Munhall's Pendragon, D. L. Pickrel's San Roy Boy, P. B. Spence's Dan Voorhees, J. C. Head's Prince Royalty, J. J. Lynch's Blue Hope, R. T. Kennedy's Prince Royal II. *Bitches:* 1st, P. H. & D. Bryson's Lillian; 2d and 3d, J. Lewis's Lady Rock and Glidalia. Very high com., E. Grey's Vic Noble. High com., P. Trettner's Nellie T., R. B. Morgan's Pearl Mandan and Rose Mandan. Com., S. L. Bogg's Sparkle, J. Ritz's Louisetta. PUPPIES—*Dogs:* 1st, C. M. Munhall's Clingstone; 2d, J. O. Home's Westmoreland. Very high com., Dr. J. A. Hartman's Flash Noble. *Bitches:* 1st, P. Wolfenden's Blink Bonney; 2d, R. B. Morgan's Rose Mandan. Very high com., R. B. Morgan's Pearl Mandan. High com., Lake Shore Kennels' Druid Veta, Pittsburgh Kennel Club's Nell and Dell. Com., G. L. Pearson's Bethina.

CHESAPEAKE BAY DOGS.—OPEN—*Dogs:* 1st, 2d and very high com. reserve, G. W. Kierstead's Barnum, Monday and Friday. *Bitches:* 1st, 2d and very high com. reserve, G. W. Kierstead's Nellie, Shaw and Nan. *Puppies:* 1st and 2d, G. W. Kierstead's Naylor and Seattle.

IRISH WATER SPANIELS.—OPEN—*Dogs:* 1st, Excelsior Kennels' The O'Donoghue; 2d, Stockey and Chisholm's Patsy O'Connor. Very high com., Excelsior Kennels' Storm. *Bitches:* 1st and 2d, Excelsior Kennels' Chippewa Belle and Mildred O'Donoghue. *Puppies:* Excelsior Kennels' Colleen O'Donoghue.

BLACK SPANIELS.—OVER 25LBS.—OPEN—*Dogs:* 1st, W. A. Partridge's Rob; 2d, withheld. *Bitches:* 1st, W. A. Partridge's Critic.

BLACK COCKER SPANIELS.—UNDER 25LBS.—CHAMPION—*Bitch:* W. O. Partridge's Helen. OPEN—*Dogs:* 1st, Canonsburg Kennels' Keno; 2d, Pittsburg Kennel Club's Peerless Gloss, Jr. Very high com., Lake Shore Kennels' Silk Jr. *Bitches:* 1st, Lake Shore Kennels' Bene Silk; 2d, Canonsburg Kennels' Bella. Very high com., Lake Shore Kennels' Bessie Obo. *Puppies:* 1st, Canonsburg Kennels' Bella.

"COLLIES AT NEWARK."

Editor Forest and Stream:

He who introduces vulgar personalities into a discussion invariably comes out second best. Abuse is the argument of fools. Falsehood is the hiding place of the sharper. Truth is the armor of those who plead strong cases.

I won't bother your readers with plaintive appeals to a "discerning public," but will proceed to state a few facts and ask Mr. James Mortimer one or two questions which I hope he will endeavor to answer in a gentlemanly way and without forcing the blood up into his neck.

When I came to this country, six years ago, an individual who is, unfortunately, among us no more, called upon me at the Ashland House in this city and opened my eyes to the rotten state of affairs existing at that time. He strongly impressed upon me the advisability of "liking" certain dogs and assured me that if I did not "like" them it would go hard with me in this country. "You cannot get along," said he, "without the support of these men." I requested him to explain more fully, whereupon he gave my leg, just above the knee, a squeeze, which, with "Tut-tut! let's take a drink," was the only reply I succeeded in eliciting. Your readers are well aware that I most positively refused to "like" the dogs for the simple reason that they were very ordinary specimens, and from that time the "discerning public" was constantly being told that I was a humbug and a fraud. The "combine" did not stop there, but engaged the editor of the *Western Blunderbuss* to kill me (at what price I don't know), and when the scare-crow of the dog fancy informed his readers in a senseless three-column editorial that I had faked an Irish terrier's black nose by making it white, the combine fairly shouted themselves hoarse. The only assistance I had in a controversy extending over a period of more than twelve months was one letter, a very able one I admit, from a gentleman whose name is dear to all who know him—Col. Stuart Taylor. Mr. James Mortimer now tells us that Whitford, D. Bryson, P. H. Bryson, Bailey Harrison, James Mortimer, Jex Blake, "Our Dogs," and a large number of mongrel dogs whose names are too short to remember, were thrashed to death in a public discussion by a man of "unbalanced intellect." The "discerning public" will now want to know why these men are allowed to be at large.

James Mortimer, the Solomon of the nineteenth century, has discovered that the man who taught him what he knows about dogs, has an "unbalanced intellect." This would account for James knowing so little. But will Mr. James Mortimer kindly tell the "discerning public" why, when he was unable to proceed with his judging (?) at a certain show he appealed to the "unbalanced intellect" to judge the dogs for him before they went into the ring, and send him into the ring the numbers of the dogs as they should be placed? And will Mr. James Mortimer explain how it is that my reports are all copied by him for a certain Western paper, and even my style of writing them aped by him? I will refer your readers to my notes on the mastiff Nap in my report of the Buffalo show, and then ask them to read Mr. Mortimer's copy in his (my) report of the Newark show in a Chicago paper. The "discerning public" will be pleased to know why Mr. James Mortimer strives so industriously to build for himself a reputation founded on the "vindictive vaporings of an unbalanced intellect." The strength of a man's position is manifest when he is blackguarded by those who ape him.

Mr. Mortimer's conduct is over the same. Last year when he slaughtered the fox-terrier classes at Hartford he turned on the reporter for this paper because he consistently called attention to such fearful work as this—Splauger first, Bacchanal second, Shovel reserve, Valet and Gibson's Nick vhc. A few weeks later Valet won the cup at Newport as best fox-terrier in the show, the judge being Mr. Redmond, who has owned and bred dogs and is a judge of them. Just fancy Splauger in front of Valet and Bacchanal, and then picture Valet chained up in a stall alongside of Gibson's Nick with a vhc. card nailed over him. Why, if a judge in England should make such awards he would be hissed out of the ring; but here, when one politely draws attention to such work in order that the "discerning public" be not fooled too much, the judge lashes himself into a red rage and threatens to "lick" the reporter. Mr. Mortimer kicked again when told that he had blundered in placing Duke of Leeds over Leila, Mr. Hearn's beautiful bitch being in superb condition at the time, but a few months later he acknowledged the justice of your remarks, and actually wanted Mr. Davidson, myself and Mr. Wilmerding to give Leila the special prize at Waverly for best dog in the show, the bitch being in much worse condition than when placed behind Duke of Leeds. Then we had Merchant Prince placed over Duke of Leeds, and to wind up the farce Hector is placed over Merchant Prince, and is, therefore, in Mr. Mortimer's opinion, the best St. Bernard in America, rough or smooth. Because attention is called to such palpable blunders Mr. Mortimer feels aggrieved. Why should he? The object of dog shows is to improve our dogs; they are not given for the benefit of individuals or cliques.

Mr. Mortimer's statement that he was strongly "urged" to judge collies at Newark will be accepted by the "discerning public" at its true value. I wonder if Mr. Mortimer was "urged" to judge St. Bernards at the show he manages. It seems to me that the only "urging" Jas. Mortimer gets comes from Jas. Mortimer. I would also like to know if Mr. J. Otto Donner was "urged" to judge pointers at New York, and if he will be "urged" to judge Mr. Hitchcock's dogs and other dogs owned by members of the W. K. C. Also if Mr. Jas. R. Pierson was "urged" to judge deerhounds and greyhounds, and if he was "urged" to tell me at Washington (1883) that he knew nothing about show dogs. There appears to be an "unbalanced intellect" at

work somewhere, and it should be unearthed. Come, Porky, turn up the sod!

Mr. Mortimer denies that he wished to give first prize to Lady Ellis and accuses me of having told a "wilful and malicious falsehood." We will see who has told a wilful and malicious falsehood by-and-by. Mr. Mortimer then proceeds to stroke Mr. Apgar down the back and concludes by saying, "I am quite sure Mr. Apgar will willingly confirm these statements." I am just quite sure Mr. Apgar won't do anything of the kind. Mr. Mortimer will perhaps remember that in my report of collies at Newark I said Clipper was my choice for second place. Mr. Dennis confirmed that opinion at Boston. I also said that Helen should beat Lady Ellis. Mr. Dennis indorsed that opinion by giving second prize to Helen and fourth prize to Lady Ellis. Again, I said Spoiled Miss should not have been overlooked at Newark; she was second at Boston. I also stated that she is a much better bitch than Daisy Dean who beat her. Mr. Dennis again indorsed my views by not noticing Daisy Dean.

It seems strange that one cannot make a clear statement of facts and express an honest opinion without engendering such bitter feelings as that displayed in the face of Mr. Mortimer's letter. Personally, I have none but friendly feelings for the W. K. C. superintendent, but to puff him up as a judge until he has had experience as an exhibitor is something I have never done and never will do. Neither will I, when reporting for this or any other paper, conceal what I believe to be blunders, whether they be made by James Mortimer or anybody else. Before I put my pen aside I will remind Mr. James Mortimer that for eight years I reported the English shows, and during that time was never accused of being dishonorable or incapable; that I was a prominent exhibitor before Mr. Mortimer owned a dog, and acted in the capacity of judge before the W. K. C. superintendent ever saw a first-class specimen. If Mr. Mortimer doubts the correctness of these statement he has the record to refer to and produce. The editors of this paper have confidence in my integrity and ability, and that confidence which has never been abused is certainly not likely to be shaken by the windy effusions of supersensitive creatures who are unable to show a decent record, either as judges, owners, breeders or exhibitors in this or any other country.

CHARLES H. MASON.

NEW YORK, April 11.

INSTINCT OR REASON?

Editor Forest and Stream:

The following anecdote of a mastiff bitch belonging to my brother is, I think, worthy of record. It occurred about a month ago at Flushing, L. I. Gwen, who is now nearly two years old, cut, in some way, the upper claw of one of her forefeet, and forthwith started up into the village all alone, and presented herself at the door of the drug store. There she remained for nearly two hours, refusing to be driven away, until finally the druggist, opening the door, called her into the store. No sooner was she fairly inside than she raised the injured foot and mutely appealed for treatment. The druggist examined the foot and, washing out the cut, united the edges with some adhesive plaster. He then opened the door, and apparently satisfied that all that was necessary had been done, Gwen started for home immediately.

The explanation of Gwen's action is, I think, as follows: When not more than eight or nine months old she was unfortunate enough to break through the glass sash covering a celery pit, and cut one of her ankles. The cut, which was a severe one, was duly treated, and probably some strong-scented ointment applied to hasten the healing; at any rate it was three or four weeks before the injured leg was well, and the accident and the treatment undoubtedly made a great impression on the pup's mind. Being in the habit of following the man-of-all-work when going into the village, she has frequently been with him when he has stopped at the drug store, and no doubt has there noticed the same odor which was associated in her mind with the treatment of her foot after the first accident. So when she again injured her foot she decided to go where she had last noticed the odor of the healing salve and endeavor to get some one to fix her injured claw. Whether this is really the true explanation or not it is hard to say, but I think it will answer. Gwen had never been treated in that drug store before, as all dressing of the first cut was done at home. If this was not reason what was it? R. B. L.

EASTERN FIELD TRIALS CLUB.

NEW YORK, April 5.—At a meeting of the Eastern Field Trials Club, the secretary was instructed to advertise and issue a circular to all breeders and trainers, as per copy inclosed. There were present: Messrs. Donner, Coster, Hitchcock, Godeffroy, Leach, Cornell, Gregory, and Elliot Smith. Member elected, Dr. Robert J. Hampton, of Athens, Ga. The circular is as follows:

To Owners and Trainers:

In issuing the revised running rules for 1887, the governors of the E. F. T. C. hereby call the attention of all owners and trainers to the following considerations and requirements. Comparison will show that but slight (though beneficial) changes have been made since 1886 in either the rules or instructions to judges as printed, the club believing, until better advised, that the object of the trials can be justly reached under these rules if interpreted in accordance with past experience.

The club adheres to the principles upon which these rules were originally framed; first, that the club is organized for the improvement of the field qualities of our setters and pointers and that a record obtained at the trials should be gained mainly by the exhibition of qualities which, through natural inheritance, will prove of benefit to breeders and to the country.

Experience has, nevertheless, shown that a dog to exhibit his natural qualities to the best advantage, must be well broken, and in order to relieve the judges from all possible responsibility in awarding a heat between a dog of great ability insufficiently broken, and an inferior dog well broken, the club will insist upon all dogs being thoroughly trained. They will instruct their judges to insist upon perfect backing, steadiness to shot or wing, obedience and retrieving, and to penalize disobedience, false pointing or any other quality impairing the usefulness of a dog for every day shooting, to the fullest extent of which the rules admit.

[The revised rules will be published in our next issue.]

HARTFORD DOG SHOW.—*Editor Forest and Stream:* We shall divide the champion pug and bull-terrier classes by sex. A good many specials are offered, among them a silver ice pitcher for the best clumber spaniel in the show. Mr. Ronald H. Barlow has kindly consented to take the following classes: Bulldogs, Newfoundlands, Great Danes, black and tan, Irish, Dandie Dinmont, Bedlington, Skye, Yorkshire and toy terriers.—HARTFORD KENNEL CLUB.

THE NEW YORK DOG SHOW.—Intending exhibitors must not forget that the entries for the Westminster Kennel Club's show close on Monday, the 18th. The managers inform us that the prospects for the best show that they have yet held are very flattering. There will be a large number of valuable special prizes offered. Among them is one of $25 for the best kennel of pointers, offered by a member of the W. K. C.

PHILADELPHIA SHOW.—J. H. Winslow will judge pointers.

CITRATE IRON AND STRYCHNINE.—*Editor Forest and Stream:* If any of your readers have any doubts as to the strict propriety of your prescription of the above, let them do as I did, cut it out or copy it, hand it to the druggist on the next corner and note how Galen, in spite of "learned physicians," will turn round and put it up in as matter-of-fact a style as though he were putting up ipecac, which, by they way, wouldn't be a bad thing for some people. For further satisfaction he might ask the druggist what he would do if required to put 2grs. strychnine in a pill.—W. WADE (Hulton, Pa.).

PUG CLUB.—I am much pleased to see that an effort is being made to organize a pug dog club. This is a step in the right direction and I heartily indorse Mr. T. F. Rackham's article. What we are sadly in need of is a standard as to size, etc. As the little pug is gradually growing in favor again as a house pet, I think there should be no time lost in organizing a club. Mr. Rackham has informed me that the attempt to organize will be at the next New York dog show in May. Let there be a big turn out.—GEO. W. FISHER (Catawissa, Pa.).

ST. PAUL SHOW.—St. Paul, April 4.—At a meeting held to-day of the St. Paul and Minnesota Kennel Club we decided on holding our first bench show from Sept. 12 to 17 and claim the dates.—W. G. WHITEHEAD, Sec.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Bertie II. By E. K. Leffingwell, Brooklyn, N. Y., for liver and white pointer bitch, whelped December, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rob—Bellona).

Tammany II. By John S. Dunshee, Plainfield, N. J., for liver and white ticked pointer dog, whelped Dec. 14, 1886, by Tammany (Tory—Moonstone) out of Bertie (Rob—Bellona).

Tim Gawrie. By John J. Ohrt, Burlington, Ia., for sage Chesapeake Bay dog, whelped July 24, 1886, by Gawrie (Sunday—Nellie) out of Kate (Bob—Nellie).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Flash R.—Mainspring. D. S. Gregory's (New York city) pointer bitch Flash R. to J. T. Perkins's Mainspring (Mike—Romp), March 26.

Beatrice—Ponco. R. D. Locke's (Chicago, Ill., English mastiff bitch Beatrice (A.K.C.S.B. 4,405) to Owen McGourty's Ponco (Grant's Kent—Ashmont Nun), March 24.

Lassie—Tom Pinch. Wm. Schreiber's (San Francisco, Cal.) pointer bitch Lassie (Prince—Forest Lily) to J. Martin Barney's Tom Pinch (Tom—Beulah), Feb. 5.

Lady B.—Tom Pinch. Gaston Bartie's (San Francisco, Cal.) pointer bitch Lady B. (Dash—Lady Flora) to J. Martin Barney's Tom Pinch (Wise's Tom—Beulah), Jan. 25.

Passion—Storm. S. T. Hammond's (Springfield, Mass.) English setter bitch Passion (A.K.R. 3424) to C. P. Hodge's Storm (Carl—Countess Vesta), April 8.

Lassie—Kilmarnock Bruce. F. G. Bixby's collie bitch Lassie to Kilmarnock Kennels' Kilmarnock Bruce (Manus—Drumlin Isle), Feb. 6.

Ruby—Bute. Kilmarnock Kennels' (Braintree, Mass.) collie bitch Ruby (——Westmoreland Lassie) to Kilmarnock Kennels' Bute (Rutland—Noisy Girl), Feb. 27.

Maida—Royal Albert. J. E. Eveleth's (Brookline, Mass.) pure Laverack bitch Maida (Tempest—Lill) to Blackstone Kennels' pure Laverack Royal Albert), April 7.

Judy—Greymont. W. T. Reynolds's (Poughkeepsie, N. Y.) Irish terrier bitch Judy (A.K.R. 2199) to G. D. Fowle's Greymont (A.K.R. 4234), Feb. 20.

Vesta—Master Shina. H. G. Charlesworth's (Toronto, Can.) cocker spaniel bitch Vesta (Obo II.—Dinah) to his Master Shina (Young Obo—Shina), April 6.

Bene—Doc. Dr. J. S. Niven's (London, Ont.) black cocker spaniel bitch Bene (Bobb III.—Black Bess) to American Cocker Kennels' Doc (A.K.R. 3795), April 9.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Hope. E. Dexter's (Buzzard's Bay, Mass.) English pointer bitch Hope (A.K.R. 4172), April 3, seven (six dogs), by Highland Kennels' Robert le Diable (Croxteth—Spinaway).

Fussie. G. H. Nixon's (Leesburg, Va.) pointer bitch Fussie (Beaufort—Maggie), April 4, six (five dogs), by Sam Norris's Jacksnipe (Joker, Jr.—Lady Mc.).

Nell. Victor M. Haldeman's (Milford, Del.) English mastiff bitch Nell (A.K.R. 3647), April 9, eight (four dogs), by his Hero III. (A.K.R. 1765).

Queen Obo. American Cocker Kennels' (Camden, N. J.) cocker spaniel bitch Queen Obo (A.K.R. 3082). April 1, three (one dog), by their Doc (A K.R. 3795).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Boss, Jr. (*A.K.R. 4156*). Fawn English mastiff dog, whelped Aug. 8, 1886, by Bess (A.K.R. 2218) out of Lillie (A.K.R. 2981), by R. C. Pate, North St. Louis, Mo., to E. Mansfield, St. Louis, Mo.

Ashmont Sam (*A.K.R. 4153*). Fawn mastiff dog, whelped May 20, 1885, by Hero II. (A.K.R. 545) out of Ashmont Lady (A.K.R. 2614), by E. Mansfield, St. Louis, Mo., to R. L. Pate, North St. Louis, Mo.

Ponto. Liver and white pointer dog, whelped July 2, 1886, by Joker, Jr. out of Lady Mc., by G. H. Nixon, Leesburg, Va., to Mayo James, Clarksville, Tex.

Bertie II. Liver and white pointer bitch, whelped December, 1887, by Tammany out of Bertie, by Fred Bollett, Brooklyn, N. Y., to E. K. Leffingwell, same place.

Dick Swiveler. Red Irish setter dog, whelped Aug. 5, 1886, by Bruce out of Leigh Doane II., by Wm. H. Child, Germantown, Pa., to P. Camblos, Philadelphia, Pa.

			654				631

FAST DAY MATCHES.

THE old Puritan holiday was duly celebrated or observed in modern fashion by a good deal of powder firing on many down east ranges. Targets both fast and flying were duly honored by leaden salutes. Some of the events were as follows:

SALEM, April 7. The Salem Rifle Association had a shoot at its range to-day, and it was one of the largest attended and best the club has had. All but one score was shot with military rifles. The scores:

Practice match—W. H. Merritt 77, G. H. Wilson 65.

Special match—W. S. Merritt 151, W. G. Hussey 138, S. R. Ayers 125.

Second class, special match—W. M. Ward 98, G. R. Nelson 111, G. H. Ropes 94, R. W. Ropes 93.

Third class—A. N. Locke 70, C. S. Hinman 60.

Challenge medal match—W. G. Hussey 65, S. R. Ayers 60, G. H. Lawrence 59, A. D. Gardner 54.

Second class—A. N. Locke 34, C. T. Ropes 31, E. C. Ropes 27.

Match for State Militia—Quartermaster-Sergeant Dodge 70, S. R. Ayers 85, G. R. Nelson 72, A. N. Locke 52, G. A. Ropes 77, C. C. Redmond 76, J. M. Wilson 77, A. D. Gardner 76.

WAKEFIELD, April 7.—A picked team of 5 men from Company A, Richardson Light Guards, and the same number of men from the Wakefield Amateur Rifle Association, shot a friendly match this forenoon at the rifle range, Wakefield, resulting in a victory for the military team. Following is the official score: Company A—Corp. R. Howard 43, Lieut. G. Taylor 41, Pvt. J. W. Babbitt 41, Sergt. E. J. Gibson 39, Corp. W. E. Gray 38, total, 202; points for military rifles, 10; total, 212. Association team—William Coon 40, J. D. Whitcomb 37, N. Young 34, William Danniel 32, E. A. Atherton 23 total, 166.

BOSTON, April 7.—There was an excellent attendance at Walnut Hill to-day, and some excellent scores were made. The results are appended at 200yds. for rifle:

Decimal Off-Hand Match.

MALDEN, April 7.—The range of Co. L. at Bears' Den was thronged to-day with military men from various regiments, and, although the conditions were not of the very best, some excellent scores were made. In the State match for bronze medals the following were the winners: Priv. Ellis, Co. L, 89; Priv. Grant, Cadets, 74; Lieut. Saunders, Co. L, 1st reg., won the silver medal. In the practice match, possible 50, the following scores were made:

Corp Cook, L, 8th reg	43	F Edgerly	25
Priv Allis, L, 8th reg	40	A B Amerige	34
Corp Richards, L, 8th reg	40	Priv French, A, 5th reg	28
Whitcomb	39	C P Hanson, E, 5th reg	28
M S Drew	37	C Crowthers	28
Lieut Kirk, M, 8th reg	38	H Jenkins, A, 5th reg	27
W A Bacon, L, 8th reg	33	Priv Thayer, 1st Cadets	26
Priv Bigelow, L, 8th reg	30	Priv Belyea, L, 8th reg	23
Priv A W Furlong, Cadets	31	Priv Stevens, L, 8th reg	26
George Lennox	27		

There was a match shoot in the afternoon between two teams from Company A, 5th regiment, Charlestown Cadets. Following is the score at 200yds., 10 shots per man, Creedmoor target:

Capt. Jenkins' Team.		Capt. French's Team.	
Corp Horton	36	Lieut French	16
Corp Jenkins	36	Priv Crofford	40
Priv Barrow	27	Priv Day	37
Priv Smith	6	Priv Burbank	14
Priv Tolman	30—107	Priv Leavitt	36—180

CAMBRIDGE, April 7.—The usual holiday rifle shoot of company B, 5th regiment, was held to-day at its range in North Cambridge. The number of entries was smaller than usual. There were four matches, the scores being as follows:

First all-comers match.

Lieut B B Edes	24	Lieut Smith	22
Priv J W Blake	24	Capt T C Henderson	19
Priv C C Foster	23	Sergt-Maj Cabot	19
Lieut W H Merrill	23	Priv J Fitzgerald	19
Sergt W T Goodwin	22		

Second All-comers' Match.

Priv H W Clark	23	Priv J Hickey	20
Sergt Balmer	21	Priv E Mason	19
Priv W S Sawin	20	Corp G Blair	19
Priv F H Robinson	20	Priv H W Brace	19

Bullseye Match.

Lieut B B Edes	21	Priv W S Sawin	19
Sergt F Merrill	21	Priv Lounsbury	19
Priv C H Chuttick	21	Capt H C Fox	19
Capt T C Henderson	21	Sergt Balmer	19
Sergt Savery	20	Lieut C H Cutler	19
Capt F W Dallinger	20		

Pool Match.

Lieut R B Edes	22	Capt F W Dallinger	21
Priv C C Foster	22	Priv W M Merrill	20
Sergt F B Blake	22	Priv J F Fitzgerald	20
Sergt W T Goodwin	22	Lieut Smith	19
Priv J W Blake	21		

LAWRENCE, Mass.—The decimal handicap match opened in December closed Fast Day, 5 scores to count, 10 shots, possible 100, 200yds. off-hand, standard target. Handicap allowed according to previous record of the different competitors. Seven cash prizes were offered and won as follows:

C M Hill	84	78	82	85	78+25	—432
O M Jewell	84	84	89	84	85+ 0	—426
W M Fisher	82	75	79	79	77+25	—417
J W Bean	71	77	69	72	70+40	—399
D P Norris	65	70	66	70	72+45	—388
M Beal	67	74	70	68	71+40	—387
I F Butler	67	53	59	55	66+45	—345

On Fast Day the club held a shoot at the range at Riverside Grove. There was a large attendance. The wind, being very strong, interfered with the making of large scores:

O M Jewell	10	10	7	10	9	10	6	9	9	9—89
C M Hill	8	10	10	8	7	9	8	8	5	10—83
W Fisher	8	10	6	10	8	9	5	6	9	8—79
Colonel S M Decker	8	8	9	8	6	7	10	8	8	6—78
P Wood	10	6	8	9	7	7	7	9	10	—75
J W Bean	9	6	5	10	10	7	6	8	6	8—75
Colonel M Beal	8	6	5	8	9	6	10	5	10	8—75
C Frost	10	5	8	9	5	8	6	7	5	7—70
E Archibald	8	9	8	8	8	6	3	5	10	5—70
F Clark	8	9	5	7	7	4	8	9	10	3—70
W Arthur	9	8	7	7	6	8	8	6	7	3—69
H P Simpson	8	4	6	4	10	6	7	10	8	5—68
E A Rogers	5	7	6	9	4	10	9	5	3	7—65
I F Butler	7	7	8	6	8	5	10	3	3	8—65
D P Norris	4	7	4	5	5	8	9	7	6	10—63
H Preston	7	5	7	4	2	7	3	5	4	4—48

QUINCY, April 7.—The Berdan Rifle Corps, of Milton, held its Fast Day target shoot at Bellevue Park range, North Quincy, this afternoon. The wind was very strong throughout. The innings:

E B Souther	7	5	10	8	7	7	5	7	10	8—74
D B Ernst	3	3	9	8	9	5	9	8	8	4—66
M A King	6	5	3	5	7	9	5	7	9	8—64
H A King	3	6	4	5	2	10	4	9	7	5—55
H Perkins, sporting rifle	3	3	5	7	5	5	7	3	4	6—48

HAVERHILL (Mass.) RIFLE CLUB.—Good attendance at the range. Prize match opened Fast day, April 7, to close July 4. Best scores as follows on standard target 200yds. off-hand:

H Tuck	5	10	9	8	10	9	9	8	6	8	—82
Palmer	7	9	7	10	7	9	9	8	7	8	—81
A Edgerly	9	6	7	9	9	9	5	9	8	10	—81
J F Brown	6	9	10	9	8	9	6	8	9	5	—79
Johnson	6	9	10	6	10	9	8	6	8	5	—78
J Busfield	7	7	8	8	7	8	5	6	6	8	—72
L Jackson	7	7	5	3	6	8	6	10	5	10	—67
Green	6	7	5	7	10	7	7	6	4	5	—64
R Grillin	8	4	7	6	6	6	10	6	6	4	—63
B F Eaton	7	3	7	4	3	9	5	10	1	2	—51

ASHBURNHAM, Mass., April 8.—On Fast day members of the Rise Guards, Company E, 6th Regiment, M. V. M., had a target shoot. Also a telegraphic match with Company H, 6th Regiment, which is at Stoneham. The result was Stoneham 137, Ashburnham 140. The score of the Rise Guards in details was as follows:

Lieut A S Fullford	5445453—30	Priv C A Williams	4533445—28
Capt C H Pratt	2553565—28	Priv W H Sawtelle	4434454—26
Sergt A E Willard	4344454—28		

MILFORD, April 7.—The telegraph match between company M of Milford and company F of Marlboro was shot this afternoon. Score—Company F, 189; company M, 150.

DANBURY, Mass., April 9.—Record match:

H Tusk	8	10	10	8	7	10	8	8	8	8	—85
J Busfield	8	8	6	7	8	8	10	10	7	9	—81
J F Brown	7	10	8	7	7	10	9	7	10	10	—88
S Johnson	10	9	5	9	9	6	8	8	10	7	—81
A Edgerly	8	9	7	9	9	4	10	10	7	6	—79
F Merrill	8	7	4	6	10	6	10	7	6	8	—72
L Jackson	9	6	7	5	4	7	6	5	8	8	—65

HOLYOKE, Mass.—The Holyoke Rifle Club's first competition for the silver cup, at Piedmont range, under the new handicap rules. The scores corrected for the handicap, made at 200yds. off-hand, standard target, 10 shots each:

A James	10	9	5	9	8	4	8	5	7	10	—100
R Clark	6	7	5	9	9	5	7	5	5	10	— 98
C Axtell	8	8	6	9	8	8	10	6	10	5	— 97
W Smith	6	10	6	5	7	7	6	7	7	8	— 94
C Newcomb	5	5	7	7	4	9	10	7	8	7	— 93
H Whitney	6	5	10	5	5	10	5	7	7	5	— 90
T Lyman	5	7	9	6	6	7	4	5	7	4	— 90
Dun Well	6	5	5	9	9	6	9	9	8	8	— 78
W H Edson	6	6	5	8	5	5	2	7	5	4	— 74
I Gordon	6	3	4	7	6	4	3	6	3	3	— 71
G Dayton	5	5	4	4	7	5	8	5	5	4	— 69

A. James wins the cup for the first time. It must be won three times before becoming personal property. The second competition will take place Saturday, April 16.—PAPER CITY.

WILMINGTON, Del.—Regular monthly competition for the gold badge of the Wilmington Rifle Club, standard American target, possible 100 points, off-hand, 200yds.:

C Heinel, Sr	4	7	10	6	10	7	8	6	5	6	—69
J Scott	5	8	5	3	9	7	6	8	7	8	—64
H A Heinel	6	7	6	4	4	9	5	9	10	8	—63
U Fuller	5	5	3	7	10	3	5	4	6	7	—55

A L Rice	7	8	8	6	7	6	7	6	10	8	—71
S Clark	8	10	6	4	8	6	9	7	8	10	—78
M Ferguson (military)	4	4	8	1	1	1	3	6	7	8	—43

At the range of the George H. Ward Post 10, the following totals were made:

	500yds.	200yds.		500yds.	200yds.
A C White	42	20	J B Willom	38	20
L N Taylor	41	16	C R Shumway	38	23
C L Macomber	41	16	M R Morgan	36	16
James Early	39	20	H N Pepper	36	18

GARDNER, Mass., April 8.—The Gardner Rifle Club have elected the following officers: President, H. C. Knowlton; Vice-President, F. E. Nichols; Secretary and Treasurer, C. N. Edgell; Executive Committee, W. C. Loveland and G. C. Goodale. The Bullard rifle recently won by the club is to be sold at the next meet at auction, to the highest bidder. The three badges recently won by the club are to be contested for on regular shooting days, the contest to close July 4. Scores at Hackmatack range on Fast Day, standard target:

W C Loveland	8	5	8	2	—167	F E Nichols	7	5	5	7	—149
G C Goodale	8	4	7	9	—163	C Crabtree	7	2	6	7	—139
G F Ellsworth	8	2	8	0	—162	A Knowlton	7	3	3	6	—137
G H Warfield	8	3	7	8	—161	E Taylor	7	1	6	2	—139
C N Edgell	8	5	7	5	—160	C L Leland	6	6	6	6	—135
A Mathews	7	8	8	0	—158	D E Warfield	6	5	6	5	—122
H C Knowlton	7	9	7	5	—154	F A Parker	6	5	5	5	—117

LONDON, Ont., April 7.—The Victoria Rifle Club, a new association, was organized to-night, and the following officers elected: President, Hon. John Carling; vice-presidents, Mr. J. H. Marshall, M. P., and Col. Fisher and Lewis; treasurer, H. B. Elliott; secretary, C. F. Cox; executive committee, Hiscott, Elliott, Payne, Hayes and Noble.

WHITE ELEPHANT RANGE.—The following scores have been made during the past winter in the White Elephant rifle range, Broadway, New York city. This shooting surpasses anything done previously, as some of the scores are so well held that a silver 10-cent. piece would cover them. Creedmoor targets, 200yds., with rest, out of 100 shots, bullseyes were made as follows: N. F. Brisac 100, E. E. Tiffany 100, J. E. Soule 89, E. K. Bispham 99, W. E. Kelley 94, George Bliss 62, J. S. N. Crane 50, J. W. Bowen 58, G. Bliss Jr. 20. Creedmoor targets, 200yds., full scores were made by Leon De Bost, L. V. Sone, D. H. Davis, W. G. Nesson, C. W. Minor, C. S. Toule, J. H. Brown, Wm. Hayes, Fred. Kuhule, Wm. Blake, W. Arnold, Foxhall P. Keene, Fritz Giese, A. Salvini, A. J. Levey, H. Dunman, R. Lockhart, C. A. Lummis, A. L. Roth, J. H. Gregg, Col. H. F. Clark, D. S. Jocobus, H. P. Gardner, W. C. Pepper, W. H. Warren, P. Rhinelander, Dr. F. N. Boynton, W. E. Livingston, J. H. Matthews, H. G. P. Mellage, C. A. Tucker, Mercer Beasley, F. L. DeForrest, W. W. De Forrest, F. E. Moser, H. A. Alexander, H. M. Bradhurst, Thomas Doolittle, F. W. Gawtry and J. M. Bolton.

NEWARK, April 5.—The second match of the series between the Our Own and Rutgers rifle clubs was shot this evening on the Our Own Range, No. 93 Mercer street, and resulted as follows: Our Own Team.—Weeks 105, Werder 101, Ferd Freienshener 100, F. A. Freinshener 96, Dietzel 96, Bertram 95, Gill 93, Drexler 90, Smith 89, Friedenheit 76; total 941. Rutgers team—Farrell 97 Hellenbrand 93, Clark 92, Dietz 92, Miesel 91, McArdle 90, McCraith 88, Allen 83, Snyder 82, Frost 81; total 889. The Our Own won by 56 points. This makes the score for the two matches as follows: Rutgers 1,849, Our Own 1,843, leaving the Rutgers 6 points in advance for the final match. The time of the final match has not been decided upon yet. Among the guests present were members of the Essex and Caledonian rifle clubs, of this city; and Zettler and Pastime clubs of New York.

THOMASTON, Conn., April 8.—On Good Friday occurred the first shoot of the season of the Empire Rifle Club. A good light with scarcely any wind were the weather conditions:

E Thomas	7	8	6	9	7	7	10	9	9	8	—80
F Whitlock	8	7	8	7	8	8	8	7	6	10	—77
C F Williams	5	8	10	4	9	6	8	9	7	10	—76
G A Lemmon	8	5	8	6	4	9	7	8	7	10	—74
H E Canfield	10	6	9	4	3	7	5	3	7	8	—62

SAN FRANCISCO, April 4.—There was a very slim attendance at the Shell Mound shooting range to-day. Two teams from Battery A shot with pistols at the 30yd. range. Messrs. D'Arcy, Elliott, Manly and Fisher made 90 points out of a possible 100 to 88 points for a team composed of Messrs. Smith, Brown, Sime and Wickenhausen. A match was made between Officer Bixby of Captain Douglass' watch and L. F. Moore of the Nationals to shoot at 200 and 500yd. ranges for a trophy worth $100 on April 17.

HAMILTON, April 8.—The Victoria Rifle Club had a shooting match to-day for a sweepstake at 200, 500 and 600yds. Thomas Mitchell was the winner with a total score of 80, in possible 105. A Paine and W. H. Clarke tied for second place with 72 each.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y. city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

WASHINGTON, D. C., April 2.—Capital City Gun Club, match at American clays, No. 2, 5 traps, N. G. A. rules:

Green	1100001010101100— 6	Godey	1000011000011111— 7
Edelin	0001110000000100— 4	Collison	0001101000001001— 5
Whitman	0100101000110110— 7	Cunningham	0111011101101010—10
Wilson	1111110110001010—10	Mills	0011100011111101— 9

Second match:

Green	0010110000—4	Edelin	0101011101—6
Cunningham	0111011111—8	Mills	1001011111—7
Godey	1101101110—7		

April 9.—Capital City Gun Club. Two of our traps out of repair, hence no Record match. American clays No. 2, 3 traps, N. G. A. rules.

First match:

Cunningham	1101011111—8	Dan	1011111001—7
Green	0100100100—3	Whiteman	1000111011—6

Second match:

Cunningham	0111011000—5	Collison	0100000010—2
Daw	0111110101—7	Wilson	0110110100—5
Whiteman	1111111010—8	Edelier	1000010111—5
Hart	1000010010—3	Hosford	1111011011—8
Farnsworth	1000011100—4	Thompson	0000000001—1
Wagner	1111101001—7		

Third match:

Cunningham	1111111111—10	Collison	1111111111—10
Daw	0011011001—5	Wilson	1110110101—7
Whiteman	0111111000—6	Edelin	1111101110—8
Hart	1100110000—4	Thompson	1100001111—6
Farnsworth	1011101000—5	Green	1011001100—5
Wagner	1111111011—9		

CHATHAM CENTER, N. Y., April 9.—Chatham Center Gun Club, Peoria blackbirds, 21yds. rise, new Long Island rules:

Milton Powell	1111011111111111—14	C H Minisee	1010000000001000— 3
J Goodrich	0111110101011111— 12	B Lamousee	0010110111111111—11
A Chichester	0100010011110000— 6	G L Bogardus	0001000000011001— 4
J V Williams	0000011010111111— 7	F L Fowler	1101100111111111—12
J N Lunnen	1001100100100101— 7	Van Alstyne	0110101100 — 5
E T More	1011101011101001— 9		

BRIGHTON, Mass., April 7.—The first prize winners in to-day's shoot of the Brighton Gun Club, at 5 bats, clays or Peorias, were J. Coyle, O'Connell and Breroogel.

SAN FRANCISCO, April 3.—The California Wing Club opened the season at San Bruno to-day. Eight men shot for the three club medals, on a handicap ranging from 26yds. to 30yds., Hurlingham rules.

Fay, 30yds	2211111111112	Slade, 30yds	1210011221200— 9
De Vault, 30yds	0211102011101— 8	Meile, 26yds	0201020010110— 5
Brand, 26yds	2221110000000— 6	Murdock, 26yds	0022010000111— 5
Loynachan, 30yds	0120011212121— 9	Coffin, 30yds	1101112011111—10

The next shoot was a handicap sweepstakes, $2.50 entrance, at 12 single birds. Here again Fay came to the front with 12 straights. Slade tied him with 12 also to his record.

Fay, 30yds	1211112112111—12	Brand, 26yds	1112112112000— 9
De Vault, 26yds	0101121101111— 9	Meile, 26yds	0010110011011— 6
Slade, 28yds	1121112121112—11	Coffin, 30yds	0112111111111—11
Loynachan, 30yds	1011111001110— 8	Thompson, 28yds	0012101111101— 8

The birds supplied by Murphy were as usual above reproach, and seemed to take quite an interest in existence. Ed Fay shot 24 straight birds at 30yds. rise with a 12-bore gun. It has never been done on the San Bruno grounds before, and there, if anywhere, is the true test of skill. W. L. Eyre acted as judge and referee. At McMahon's Station the Golden Gate Gun Club met. The inducement was an open tournament at 15 single saucers, 18yds. rise, $2.50 entrance. It resulted as follows, the three eleven men dividing the pot $37.50:

J Bruns	111101011111011—13	E Donaldson	1111011111111110—13
J Potter	111111111110311—13	D Cronin	1101111111001100—10
C Cote	0111111111100001—11	J Fanning	1111111010101010—11
Coykendall	1110101111111100—10	Alex Allen	0111110010011001— 8
W Ashcroft	0100110110110010— 8	J H Mangels	0111110011010001— 9
M Campbell	1011111111111011—13	S G Scovern	1100110000000111— 7
E Dunshee	0110111111101100—10	P Schleuter	1111011111101100—11
Al Donaldson	0111111101111011—12		

At 10 single birds, 18yds. rise, $2 entrance, 10 men entered. Cronin took first with a straight 10. At 5 pairs of doubles, 18yds. rise, Cronin, Campbell and A. L. Donaldson divided with the most creditable score of 10 each.

SAN FRANCISCO, April 3.—The rifle contests at Harbor View to-day attracted a large number of spectators, and the scores made were, if anything, above the average. The Eintracht Schuetzen Club mustered in force, there being about eighty members present. The following is the result of the score for the usual monthly match: Champion medal, F. A. Kuhls 412 rings; first class, H. T. Ropke 363; second class, L. Schmidt 331; third class, A. Wirtner 291; last best center, B. Overmohle. The following is the score of the California Schuetzen Club: Champion medal, K. Wertheimer 409 rings; first class, I. Dornbier 425; second class, O. F. Young 407; third class, A. Gumbel 345; fourth class, F. Attinger 333; cadet class, A. Ehrenfort, first class, 303 rings; Wertheimer, Jr., second class, 242 rings. This club also competed for $100, divided into thirty-five prizes, ranging from $10 to $1, for best centers. One of the features of the day was an exact center shot by I. Dornbier. There is a return match on the tapis between the Carson City Guards and the California Schutzen Club. The latter team won the first match last year by fifty-seven points, and the return match, if arranged, will take place under the same conditions. There will be 20 men, 20 shots each with military rifles at 200yds., Creedmoor rules.

WORCESTER, Mass., April 8.—There was a large gathering yesterday at the Coal Mine range of the Worcester Sportsmen's Club. The principal event was the twelfth and last open contest for the Climax diamond badge at 10 blue rocks and 10 clay-pigeons:

	Blue Rocks.	Pigeons.
O A Dickey (Boston)	1111111111—10	1011111110—9—19
T Strater (Boston)	1110111111—9	1111111110—9—18
H W Webber (Worcester)	1111111111—10	1101111011—8—18
H W Eager (Marlborough)	1111101111— 9	1011011111—8—17
J B Tougas (Worcester)	1101111111— 9	1110110111—8—17
M D Gilman (Worcester)	1101111111— 9	1001011111—7—16
A R Bowdish (Oxford)	1111100101— 7	1011111111—9—16
E T Smith (Worcester)	1111111111—10	0111101100—6—16
G Sampson (Clinton)	1011011110— 7	0111111111—9—16
C M Stark (Dunbarton, N. H.)	1110111111— 9	1100101111—7—16
Francis	1111110101— 7	1101110111—8—15
Robson	0101111101— 7	1001111111—8—14
W S Perry (Worcester)	0111110011— 7	1110011110—7—14
W L Davis (Worcester)	0101111111— 8	1010100011—5—13
Stone	1011111010— 7	0311011100—5—12
Bonner	1111101111— 9	0010011000—3—12
H C Dean (Fitchburg)	1110111100— 7	1000011110—5—12
Brooks	1111100011— 7	1000111010—5—12
Spencer	1011111101— 8	0001100101—4—12
Whittaker	1110110001— 6	0010110011—5—11
G F Rugg (Worcester)	0011011110— 6	1010001011—5—11
Linfield	1001010101— 5	0001111010—5—10
K Hudson (Worcester)	0110011111— 7	0000101010—3—10
Franklin (Worcester)	0101110011— 6	1001010100—4—10
Gibson	0110001011— 5	1101110010—5—10
E F Swan (Worcester)	1010110010— 4	1100111001—6—10

The badge has been won as follows: H. W. Eager, C. M. Stark, and T. Strater, each three times; E. F. Cooper, of Exeter, N. H., M. D. Gilman and O. A. Dickey, each once. Under the conditions Eager, Stark and Strater will shoot 100 birds to decide the ownership of the badge. The remainder of yesterday was occupied in shooting 4 sweepstakes and 19 events, which aggregated about 400 entries.

PROVIDENCE, R. I., April 8.—A little windy but bright and pleasant was the time for the fourth weekly shoot for the R. I. K. C. champion cup at the grounds of the Narragansett Gun Club. The shooting was excellent. Messrs. George W. Carey and C. M. Sheldon each scored a point for the cup:

C M Sheldon	445445—20	W H Sheldon	424244—20
G W Carey	554354—20	C C Gray	451344—19
P H Randall	344453—20	C B Payne	234225—18
E W Tinker	432534—21	George Greene	234144—18
W G Crandall	433343—20	C B Potter	445111—16

Then came the big race, 50 clay-pigeons, 18yds., for a purse of $10, divided into three moneys:

C M Sheldon	5445544554—45	E W Tinker	3545424434—38
P H Randall	5545555343—44	C C Gray	4543144234—33
G W Carey	5444545444—43	Geo Greene	2535333333—33
W H Sheldon	5433435544—40	C B Payne	4225233433—31

Sweepstakes match:

P H Randall	55455—24	W H Sheldon	54334—19
C M Sheldon	54455—23	Geo Greene	25354—18
G W Carey	54445—22	C C Gray	45431—17
E W Tinker	35454—21	C B Payne	42252—15

In the second 25-birds sweep the wind was blowing fresher and the scores were not so good:

C M Sheldon	44554—22	C C Gray	44224—16
W H Sheldon	35544—21	George Greene	33333—15
G W Carey	45444—21	C B Payne	33433—16
P H Randall	55343—20	E Wilkinson	23232—12
E W Tinker	24434—17	F J Phillips	13222—11

A 30 blue rock sweep proved interesting, and was won by Carey and C. M. Sheldon, who divided first, Randall taking second, E. W. Tinker third, while W. G. Crandall and W. H. Sheldon divided divided fourth. Short sweeps were then begun.

TORONTO, Ont., April 8.—The West End Gun and Dog Sports Club held their annual Good Friday sports to-day at D. Blea's place, West Toronto Junction, under the happiest auspices, the attendance being great, the day bright, the number of competitors large, the interest great and the shooting good. Two prizes were given in each class. Each competitor shot at 15 birds, 5 live pigeons and 10 Peoria blackbirds. For the pigeons H and T ground traps were used at 25yds. rise and 100yds. boundary. For the blackbirds there were three screened traps at 18yds. rise. Following are the scores:

First Class.

J Bailey	111011111110111—13	E Brown	011111110010111—11
P Wakefield	111001111011111—12	D Blea	101011100101101— 9
E Dollery	100111111110110—11	R Wilson	110000100011111— 0

Second Class.

T Boswell	010111011100000— 8	G Spiller	010000101011010— 6
B W Clarke	100010001101101— 7	C Hill	001000001001111— 6
Wharrington	001110101001001— 7	A W Duncan	000111000011001— 6
H Derry	000110005101011— 6		

Clarke and Harrington shot off the tie for second place, the latter winning.

Third Class.

F Habart	100011011100000— 8	A Lynch	100000011100011— 6
D Beatty	000010111111100— 8	Gorman	010010001001000— 4
H G Jackson	000101011111011— 8	C Gentleman	000000010000100— 2
W Milling	010000111010011— 7	G Gentleman	000090000000100— 1
Saunders	001000161111110— 7		

The first three shot off ties, winning in the order given.

WINCHENDON, Mass., April 8.—The Winchendon Gun Club have elected the following officers: President, James Sutherland, Jr.; Vice-President, H. J. Lawrence; Secretary and Treasurer, Elisha M. Whitney. Directors, P. S. Davis, C. T. Houghton, H. J. Lawrence, T. E. Mann, and F. F. Hopgood. A badge is to be offered for the best score made during the season. It is to remain the property of the club and to be contested for yearly.

PHILADELPHIA, April 7.—The second of the series of shoots between, John Brewer of Philadelphia, and William Graham, of London, England, at 100 birds each for $250 a side took place today at Point Breeze. The attendance was a very large one, and although rumors were afloat that the Society for the Prevention of Cruelty to Animals would endeavor to stop the shoot, yet the affair was not interrupted. The wind blew across the track, which favored the right quartering birds, and these were a very good lot. Both men shot remarkably well, but Graham had decidedly the worst of the luck, although he shot in good form, killing 26 straight birds, but the Quaker City representative on his own ground eventually beat him by three birds. A fine lot of birds were provided by J. Frank Kleinz, the handler of Brewer, and as the latter was in so much better physical condition than in the first match, he proved the victor by a score of 92 to 89. It was a capital shoot throughout, and was witnessedby about a thousand people. There was but very little betting done, the Philadelphians being doubtful as to the condition of Brewer. The match was shot under Hurlingham rules, thirty yards rise, five traps and eighty yards boundary. Graham won the toss, but his first bird, a fast quarterer, was missed. Brewer made his first miss on the seventh bird, a strong driver, and he also lost the ninth, but after that he made seventeen consecutive kills. Graham missed his third and eleventh birds, but he captured fourteen in succession, leaving the score at the twenty-fifth bird but one in favor of Brewer. Both men appeared in good form but Brewer maintained the lead until the forty-sixth bird, when Graham passed him, and when the fiftieth bird had been shot at Graham had two birds the advantage. A short intermission followed. When the shooting was resumed Graham missed his sixtieth and sixty-seventh birds, and when seventy-two had been shot at Brewer led by a bird. The latter was doing some fine execution, and bringing down forty-eight out of the last 50, won one of the finest pigeon shooting contests e er seen in the Quaker City. A third match to settle the question of superiority was talked of, but nothing was settled upon. Brewer said he was anxious to shoot Graham again, but he would not meet him on the latter's own grounds. He credited Graham with being the best shot he ever met.

Score of the shoot.

Brewer...21112, 10110, 12212, 11121, 11121, 12021, 10211, 11112, 12101, 02212, 22011, 12122, 11211, 21222, 21212, 21101, 21121, 12221, 12121, 12111; killed, 92.	Graham...02011, 12211, 01121, 11211, 21221, 02121, 21202, 11112, 11111, 22211, 12112, 11110, 22111, 20112, 10111, 11122, 10122, 12111, 20022, 21111; killed, 89.

Time of shot, 2 hours, 21 minutes. Referee, Mr. F. Quinlan, of Newark. Figure 2, second barrel. Graham—Right quarterers, 37; left quarterers, 21; drivers, 31; incomers, 0; towerers, 2; use of second barrel, 41 times; greatest break 27. Brewer—Right quarterers, 39; left quarterers, 23; drivers, 30; incomers, 8; use of second barrel, 43 times; greatest break, 25; fell dead out of bounds, 1. Graham used a 12-bore bun, weight 7lbs. 13 oz.; cartridges, 3¼ drachms of powder, 1⅛ oz. shot. Brewer shot a 12-bore gun, weight 7¼lbs.; cartridges, 3½ drachms of powder, 1⅛ oz. shot.

MERIDEN, Conn., April 8.—The Parker Gun Club's Fast day shoot was held to-day; the day was fine, no wind blowing until late in the afternoon. There were nearly fifty shooters present from different clubs in the State, and about 200 spectators, among them a number of ladies. American clay birds, 3 traps, 5yds. rise, 3 angles, except straightways, which was at 21yds. Following are the scores:

Five birds at 18yds.—A. Trager 5, Waite 2, R. Penn 4, Widman 3, Geo. Saunders 4, N. D. Folsom 3, F. Clark 4, A. Ives 2, F. G. Potter 2, Higby 0, Alber 3, E. Avery 2, Reynolds 1, E. A. Folsom 4, F. Brown 3, S. F. Hendre 2, J. Baker 3, A. Stokes 2, C. Bristol 4, Viberts 2, C. Burnham 3, H. Burnham 3, Melrose 4, S. Beers 1, M. Cook 3, Hansom 4, J. F. Ives 4, A. W. Adams 4, H. Venter 4, Ensign 2, Carey 1, C. Longdon 3.

Six birds, 18yds.—Trager 5, Wate 3, Penn 3, Widman 3, Saunders 2, N. D. Folsom 5, Clark 3, Potter 5, Higby 1, Alber 5, E. A. Folsom 5, Brown 4, Hendree 4, Dickinson 1, Bristol 4, Viharts 5, Burnham 5, Melrose 2, T. Burs 5, Cook 1, Hansom 5, J. F. Ives 6, Adams 6, Venter 5, Ensign 4, Carey 3, Longdon 5, L. Gaines 3, Foley 4, A. Merriman 6, Soper 4, Mirriman Ives 6. Ties divided.

Five birds, 3 angles, 18yds.—Trager 5, Waite 4, Penn 4, Widman 1, Saunders 8, N. D. Folsom 3, Clark 4, A. Ives 3, Potter 4, Higby 0, Alber 5, E. A. Folsom 3, Brown 3, Hendree 5, Baker 3, Bristol 2, Viberts 3, C. Burnham 3, H. Burnham 2, Melrose 5, T. Beers 4, Cook 5, Hansom 4, J. F. Ives 4, Adams 4, Vinter 4, Ensign 0, Carey 2, Longdon 3, Gaines 5, Merriman 1, Soper 4, Holister 3, G. L. Strong 1.

Six birds, straightaway, 21yds.—Bristol 5, E. A. Folsom 4, Melrose 4, N. D. Folsom 5, Clark 5, Ives 5, Brown 3, Hendree 4, Gaines 4, Viberts 6, Merriman 3, Longdon 5, Alber 3, Saunders 4, T. Beers 5, Cook 6, Nichols 4, C. Beers 5, Touney 3, Hubbard 3, Hansom 5, Widman 2, Trager 5, Venter 3, Potter 4, Adams 4, Penn 4, E. Booth 3, Strong 1, Birdsey 2. Ties divided.

5th match—Saunders first, Clark second, Bristol and Folsom third, E. A. Folson fourth.

6th match—Botler first, Nichols second, Vibarts third, Tousey and Gaines fourth.

7th match—Penn and Hendree first, Beers and Folsom second, Venter and Vibart third, Bristol fourth.

8th match—Vibarts first, Longdon, Alber, Clark and Bristol second; C. Beers, E. Folsom and Hendree third; Hubbard fourth.

9th match—Nichols and Gaines first; Widman, Hansom and Venter second; Penn and Avery third.

10th match—Nichols first, Venter second, Gaines third.

11th match—Trager first, Longdon second, Stokes third.

HAMILTON, April 8.—In a shooting tournament here to-day under the auspices of the Wildfowler's Gun Club, a match for a divided stake of $50 was got off. The conditions were 15 Hamilton blackbirds each at 18yds. rise. The first prize of $20 was taken by Wayper, of Guelph, and the second, third and fourth prizes were divided by J. Cline, Griffith and R. Stroud, who made scores of 11 each.

FRANKLINVILLE, N. Y., April 6.—Monthly shoot at Peoria blackbirds, 18yds. rise:

W A Day	0000000101—2	Sherman	1000001100—3
W H Ferris	1101000111—6	Farrand	0001110001—4
W Phillips	1010010011—5	Geo Ferris	0000000001—1
Geo Mayhew	0000100100—2		

TEXAS TOURNAMENT.—The five days tournament at Gainesville, Texas, is full of promise. The Gainesville Gun Club members anticipate a big time. They will have a prize list valued at $4,000. The traps are to be worked by electricity, and every man is expected to shoot like lightning. Of the grounds and the event itself they say: "The use of the driving park was donated by our big-hearted fellow citizen, Major Cairnes, of the Red River National Bank. The grounds are beautifully located, perfectly level, and are about one mile square, without any obstruction, giving a charming background of green grass and flowers to shoot against, and it is the intention of the managers to make this tournament so pleasant and comfortable that it will bring together the giants of the trap from all over the United States, and shall be known as the Monte Carlo of this country." Address Gainesville Gun Club, P. O. Box B.

WELLINGTON, April 7.—The northwest wind to-day made it difficult to make good scores. Three score of shooters were present. The first prize winners were: 6 blackbirds, McCoy; miss and out, Sanborn; 6 pigeons, Forrest, Sanborn and Nichols; miss and out, Perry and Sanborn; 6 pigeons, Steele and Plympton; 6 blackbirds, Bradstreet; 6 pigeons, Gerry, Sanborn and Bradstreet; 6 pigeons, Clark; miss and out, Sanborn; 6 pigeons, Lewis and Sanborn; 6 blackbirds, Gerry and Sanborn; 6 pigeons, Forrest and Steele; 6 blackbirds, Clark, Evans and Steele; miss and out, Sanborn; 6 blackbirds, Clark, Steele and Evans; 6 pigeons, Nichols; 6 tin birds, Richards; 6 pigeons, Steele; 6 blackbirds, Gerry; 6 pigeons, Nichols and Gerry; 6 pigeons, Gerry; 6 blackbirds, Gerry, Sanders and Renaud; 6 pigeons, Steele and Gerry; 6 blackbirds, Steele and Sanborn; 5 pigeons, straightaway, Gerry; 5 pigeons, straightaway, Sanborn; 6 blackbirds, Gerry and Sanborn; 6 pigeons, purse taken by Gerry; 6 pigeons, Nichols, 6 blackbirds, Gerry; 3 pigeons, Atkinson.

ST. GABRIEL ROD AND GUN CLUB, Montreal, Can.—The annual election of officers resulted as follows: President, A. W. McLis. re-elected; Vice-President, C. H. Wallace; Treasurer, J. McNab; Secretary, W. McCaw; Committee, A. H. C. Walpole, John Ryan, F. Sly. Mr. Morris presented the club with a very handsome silver cup for the best average score for the past season. It was won by Mr. A. H. C. Walpole, who certainly deserved it, not only for being the best shot in the club, but for not having missed a single meeting or practice during 1886. Mr. Morris has kindly promised another cup, to be competed for this year.

WELLINGTON, April 9.—The shoot to-day was attended by several whose faces have been missed for months, some of whom got in at the stakes. The score: 1. Six blackbirds—Swift and Evans first. 2. Six tin birds—Stanton and Swift first. 3. Six pigeons—Swift and Stanton first. 4. Six blackbirds—Swift and Stanton first. 5. Six pigeons—Gerry and Swift first. 6. Six blackbirds—Stanton first. 7. Ten pigeons—Schaefer first. 8. Six tin birds—Gerry first. 9. Six pigeons—Stanton first. 10. Six blackbirds—Gerry and Stanton first. 11. Six blackbirds—Snow and Stanton first. 12. Six pigeons—Stanton and Swift first. 13. Miss and out—Swift and Stanton first.

BROOKLYN, April 6.—The regular shoot of the Fountain Gun Club, at Parkville, L. I., to-day, was remarkable for the fine quality of the birds. They were veritable flyers, and a good cross wind helped them considerably to get away. The first prize and a special prize given by C. W. Wingert was won by L. Davenport, 29yds., he killing 7 straight. Dr. Wynn, 30yds., and W. Hunter, 23yds., each killed 6 out of 7, and in the shoot off Dr. Wynn killed 5 more and won it. C. Fisher, 30yds., took third prize with a score of 5 out of 7 killed. Several sweepstakes were shot afterward, in which Jones, Fisher and Davenport were the winners. Jones's score for the day was very good. He killed 16 birds straight—all he shot at.

THE DORCHESTER SPORTSMAN'S CLUB, formed several years ago, was recently reorganized, and will hereafter be known as the Dorchester Gun Club (limited). Officers: President, D. F. Eddy; secretary, P. J. Andrews. Committee, F. H. Carter, L. Eddy, C. P. Grant, F. H. Perrin, M. H. Robinson. The first shoot of the season took place on the club grounds at North Quincy, April 17, sixteen members participating.—P. J. ANDREWS, Sec.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual. Staten Island.

JULY.

18-31. W. C. A. Meet, Ballast Island.

AUGUST.

1-12. Northern Division, Stony Lake.
12-26. A. C. A. Meet, Lake Champlain.
13. Lake St. Louis Chal. Cups, Lochine.

A. C. A.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

A CRUISE OF THE WASHINGTON C. C.

PART II.

WEDNESDAY, May 5, 1886.—Before sunrise the camp was astir, and while the skipper and crew of the Iola took their morning dip, with the calisthenic performance thrown in as a prelude, and the "boys" greeted old Sol's appearance with a salute from their small battery, the Commodore and Corporal Hatch prepared breakfast, and the skipper of the Iola busied himself about his boat. For breakfast we had shad roe in addition to the usual bill of fare, and to its discussion the whole party brought a rousing appetite.

After breakfast we found that the wind was blowing a gale too strong to offer any encouragement to the canoeists to venture out, and an hour or two was spent in loafing about the camp, which looked really picturesque in the early morning sunlight.

At about 9 o'clock it was decided to make a start and to endeavor to reach Indian Head. Camp was speedily broken and the fleet started, Petrel leading, followed by Iola, Meteor and Mermaid bringing up the rear. As usual the latter soon got ahead of the others, and then Meteor crept up on Iola, and after sailing with her on three or four tacks, forged ahead, leaving the beauty to take her regular place, where she commanded a view of the maneuvers of the rest of the fleet.

It was exciting sailing from the start. The wind blowing half a gale and the whitecaps rolling in from seaward and breaking over the bows of the vessels. Several schooners bound upward sailing under reefed canvas, one passed, and a couple of sound boats, laboring heavily along, each propelled by thirty or forty stalwart negro oarsmen, and vividly recalling the "galleys" of old Egyptian pictures, were sailing by. The wind freshened until it raised a heavy sea, and prudence dictated putting in to shore. All got in in reasonably good time but the unhappy Iola, which was caught in a tremendous sea crossing to Indian Head on the last tack. From the shore it seemed as if she could not live it out. Now she would be raised on the crest of a sea, and then she would plunge into the trough and be almost hidden from view. To the two persons on board it was just exciting enough to keep the nerves at a pleasurable tension. True, the crew unbuttoned and took off his shoes and stockings, and got ready for the swim that seemed inevitable, but he afterward declared that he had thoroughly enjoyed it all. It certainly put no damper on his enjoyment of the occasion to reach the shore. Iola had to be again bailed out, and the delighted crew, wet to the skin, had to be again dried before he was in condition to do any further work.

Then followed a pleasant paddle down the shore, one of the most picturesque stretches on the river, where the solitude was unbroken, save at one or two fishing stations, except by the singing of the birds and the gentle rustling of the leaves stirred by the breeze from the river. Just as we were about to round the long, sandy peninsula that forms the northern jaw of Mattawoman Creek, there suddenly appeared, outlined in bold relief against the sky, on the very extremity of the point, a denizen of the locality, a razor-backed hog, who looked as though he had made a "hazel-split" in Missouri and come over to project himself before the eye of the skipper of the Iola to keep him from getting homesick. The latter wanted to go ashore at once and make camp, and only the fact that the crew was paddling on the port side kept the boat from going ashore.

However, we rounded into Mattawoman Creek under a stiff breeze, and after a hard struggle against wind, tide and current worked our way for a mile or so up the creek and around a point into a pretty landlocked bay, where we ran the boats ashore. Lunch was prepared and eaten with a relish. It consisted of fried bacon, hardtack, fried eggs, potatoes, pilot bread with cheese, and oranges by way of dessert, the whole topped off with coffee.

Just as we were finishing the meal, the steamer Mattano came in sight, bound to a landing further up the creek. In a moment it was determined to send word to the families in Washington, and the Commodore, with his usual good nature and thoughtfulness for our comfort, volunteered to catch the steamer before she left. He had a mile and a half to run, with a fair wind up the stream. The steamer had reached the landing before he was ready to start. Then followed one of the most exciting races the narrator of this has ever witnessed—a race against time. The Meteor spread her broad wings and fairly flew before the wind. As we watched her from the shore it seemed as if she must undoubtedly go over. But the Commodore gallantly held her on her course, though the Corporal was obliged to lie out over the windward gunwale, and two or three times the Commodore was compelled to let her fall off to keep from driving her under water. It was a short race, for in twelve minutes by the watch, the canoe had covered the distance and rounded to on the other side of the steamer and put the messages on board.

Before the return of the Meteor the sky became overcast off to the north, and the low muttering of thunder gave warning of the approach of a storm. The camp had been made on a long narrow peninsula which offered no shelter in case of a storm, so we hastily determined to run for the main shore. In very short order the two canoes were stowed with their cargo, and in a few minutes we were on the opposite shore. Here was found what promised to be a charming camp. A broad ravine in the midst of a pine forest, sheltered from the wind on three sides. The ground was perfectly dry and carpeted with pine needles which gave forth an aromatic odor as the boys tramped about. Surely we could not be much better placed. But alas for the short-sightedness of amateurs! However, I will not anticipate.

The Meteor had followed us from the other shore, and the Mermaid also found us out, while the Commodore and his crew and the "boys" attended to the setting of the tents and making camp, the skipper and crew of the Iola started off in search of fresh water. It was a long search, and, as far as a supply for the camp was concerned, a bootless one. The searchers beat the forest back and forth, but not a drop of water could be found. The forest was as dry as if spring and never existed and rains were unknown. At last, following a hog path through the timber, the scouts struck an old wagon-road, apparently long unused, that led into the forest and which it was thought would bring them to a farmhouse. For a mile this road was followed through the thick woods, in whose depths lingered a perpetual twilight, the water-seekers marking the way as they went so as to avoid losing it on their return, and at length they debouched on a clearing of a few acres, in the center of which stood a dilapidated farmhouse. Approaching this house they inquired of two women who were apparently the only occupants, whether there was water in the vicinity, and were directed to a spring a sixteenth of a mile further on. A beautiful spring it was, too, gurgling out of the base of a hill in a small gully, the sides of which were lined with some magnificent oaks, and how refreshing were the deep draughts of the cool water, drunk from a gourd found placed by the spring. They thought of the party in camp and would have liked to bring them a canful, but that was out of the question, so another visit was made to the farmhouse and a bucketful of sweet milk purchased, with which they wended their way back to camp. It proved a precious boon to the rest of the party, and was drunk in silence, and standing, so as to do it proper honor.

By this time it had dawned upon us all that our seeming paradise was anything but a pleasant camp. The dry pine knob on which we had set our tents was surrounded by swampy ground, there was no potable water to be had in the vicinity, and last, but most conclusive of all reasons, the intrusive wood-tick was found to have already pre-empted the claim, and was in actual and multitudinous possession. That settled it. We might have risked the malarial air from the swamp, might have been content to paddle out to midstream to fill our camp kettles, but to share our quarters with the wood-tick—never! True, we were all tired, the Vice-Commodore especially, and the nearest good camping ground, Chickamuxon Creek, was three or four miles distant (paddling distance at that), but never wavered after the wood-tick had served notice of ejectment upon us. Tents were again pulled up, dunnage once more stowed, and the fleet again put out and headed for the main river. This was reached after an easy paddle just as the sun went down, a glowing ball of fire in the west, and then in the fast gathering twilight we headed our course for Stump Neck. At dark we reached the peninsula dignified with that classical appellation and paddled "its slow length along" with dogged pertinacity. As far as we were able to judge Mr. Stump, in life, was a long-throated creature, for night had fallen when we rounded the northern jaw of the mouth of Chickamuxon Creek, and glided like shadows into the stream. A hundred yards up the creek we ceased paddling and hauled the boats up on the bee line. A dry camping place was selected in the center of a clump of willows and the scenes of other nights of the cruise re-enacted. Just as supper was ready it began to rain, and a hasty adjournment was taken to the large tent, in which the meal was eaten, in crowded quarters to be sure, but with good humor that enlivened the party as champagne at feast. The bill of fare was: Fried bacon, pilot bread, fried hard-tack, hard boiled eggs, raisin bread, currant jelly, tea. It was the turn of the skipper of the Iola to wash the dishes, and while he sat at work out in the rain, clad in his "oilers," others of us lay stretched at ease in the carpeted tent, facing the fire, and chatted and smoked till the rain ceased. Then a big fire was built up for the night and the party went to bed.

Camp Linton, May 6, 1886.—The camp was early astir on the following morning. The swimmer corps of the Iola was reinforced by the crew of the Petrel and the Commodore acted as chief cook in preparing breakfast. He tried his 'prentice hand at corn bread, and only the fear of a general court martial restrained the expression of the unanimous verdict of the fleet on that corn bread. However, his intentions were good, as they always are. Our menu was: Fried ham and eggs, cornbread (so called), hard tack and cheese, coffee.

After breakfast Corporal Hatch took the Petrel and paddled across the creek to visit some friends living on a farm near by; the Commodore and the crew of the Iola in the Meteor, the Vice-Commodore in the Mermaid, sailed over to Quantico to inquire for mail matter at the post office there, where we had directed our friends to write us if any reason existed for our return and also to replenish our dwindling stock of provisions; and the skipper of the Iola with the crew of the Petrel in the Iola paddled back to Mattawoman Creek in search of an overcoat accidentally left behind in our hasty departure the day before.

Thus the morning was spent. All parties got back safely to camp, which had been left in charge of the skipper of the Petrel, and all had been successful in their respective missions. The craft that sailed to Quantico, however, had a narrow escape from being caught out in a terrific wind and hail storm that came sweeping down the river as they crossed over to camp. Few grander sights than the coming up of this storm had ever been witnessed by the party, and to them this spectacle was fraught with the interest that attaches to attendant peril. It came up suddenly, raged with great violence for ten minutes, the wind, rain and hail lashing the waters into fury and stripping the trees of young twigs and then passed over, leaving the sun shining brightly as before. The canoeists had hardly time to make the creek and this only after a desperate spurt of paddling and to haul their boats up on the beach, when the storm struck them in all its fury. They took refuge in the woods and warded off the hailstones, which rattled down as big as marbles, by stretching the dandy of one of the canoes from bough to bough above their heads. When the storm ceased they crossed over to camp.

All were in humor for dinner as soon as it was prepared. The skipper of the Petrel gave us a new dish—maccaroni and cheese, added to the usual dinner bill of fare. After dinner the time was spent lounging about the camp, smoking and chatting, rain having set in steadily. Late in the afternoon, the sun having come out again, the Commodore and the crew of the Iola spent a couple of hours fishing up the creek. The fish caught were few in number, half a dozen small perch, but the scene up the creek, in the quiet of the sunset, was worth the labor of reaching it. As the fishermen paddled down the creek, the light of the camp-fire was seen glimmering through the trees, and supper was found ready when they reached the camp. Bill of fare for supper: Fried ham and eggs, boiled potatoes (jacketed), hard tack, corn bread, currant jelly and tea.

After supper some of the party went to Mr. Linton's farm across the creek and spent a pleasant evening, with music, singing, etc. Then back to camp and a good night's rest to be ready for an early start for home in the morning.

Homeward bound, Friday, May 7, 1886.—A raw, cloudy morning, with every prospect of a northeaster. A hurried meal was prepared and eaten and a hasty departure followed. Before starting, however, the crew of the Iola determined that the blame for future bad weather should not rest with him, deliberately offered up his meerschaum pipe as a sacrifice on the altar of superstition. The grand character of the sacrifice will be appreciated when it is stated that he had another and better pipe stowed away in his dunnage. However, the albatross pipe was safely and slyly deposited among the branches of a tree near the camp, and the Iola sailed away without it.

Alas for human calculations! Whether it was that this was not the Jonah, or that the influence of the action of another member of the party (to be explained later on) was potent for ill, the abandonment of the pipe did not bring luck to the fleet. Hardly had the canoes got well out in the river than the rain began to come down again—steady drenching rain, from a dull, leaden sky—rain that soaked through the clothing even of those who wore oilskins, filled the cockpits of the canoes ankle deep, and loaded the sails until they hung like sheet lead from the spars, and maneuvering the canoes became quite difficult as well as dangerous. Fortunately there was wind with the rain and the canoes kept on their course, although it was a steady beat against a head wind, with a strong outflowing tide and a heavy sea. The Iola sailed pretty well but not as well as the others. She made two tremendously long tacks to port, each of an hour's length, and might have repeated the feat of the tortoise on the straight road had she not in the effort to weather a point, run too far into Occoquan Bay, out of which she found it almost impossible to beat, and thus lost nearly an hour's time. During her desperate struggles to beat out against the head wind and the heavy sea and tide, she was passed by all the other craft, and all of them got a good lead of her.

Our objective point was Camp Silsbee, where we hoped to lunch and camp until the storm was over. Several times during our beat to that point the canoeists lost sight of each other, the rain came down so thick and heavy that it veiled objects at a distance of twenty yards. For six hours the canoes held on their course in this miserable weather. Most of them thought they enjoyed it. Perhaps they did, but there were few expressions of this kind heard until the next day, when perhaps, in recalling all the circumstances, this little spell of weather may have seemed enjoyable by comparison with what followed. I must not anticipate, however. The historian of the cruise, being aboard of the Iola, had an excellent opportunity to follow the course of the other canoes, when the rain let up sufficiently for him to see across the river. On one of these occasions it was found that the Meteor had put in to Clymont. The Commodore, it was afterward learned, thought that the other canoes would follow him in this move, but they failed to understand his motive and continued to head for Camp Silsbee.

This was reached about 1 o'clock in the afternoon. The Petrel and the Mermaid got in ahead of the others, followed by the Iola, later on by the Meteor, which crossed over from Clymont when the Commodore saw that we had not understood his wish that we put in there. As Corporal Hatch hauled the boat ashore he reached into the cockpit and fished out something which he held aloft as he shouted, "Say, B., you forgot this when you left camp." The crew of the Iola turned to look. Heavens! it was—the pipe! the albatross. Had there been annihilation in a look, Corporal Hatch would have fallen in his tracks as the skipper and crew of the Iola recognized the pipe. As it was, he was permitted to wade ashore without a helping hand, and the canoeists of the Iola retired in disgust. The Corporal, on the breaking of camp, being the last man to leave, searched for anything left behind, and finding the pipe, brought it along. Of course he was held responsible for the bad weather that followed when the Meteor with the pipe aboard put out from Camp Linton. In disgust he threw the pipe into the woods on the edge of the camp.

After the Meteor got in we began making camp, which was no easy job in the rain. The small tent of the Patrol was already staked and preparations were at once made to build a fire. As the ground, and of course all the driftwood, had been rained upon for half a day, getting up a fire was no easy matter. However, a couple of good sized logs of driftwood were rolled into the tent and with a sharp hatchet the wet outside was chopped off. Then from the dry heart of the log sufficient chips were cut to start a small blaze in the center of the tent. By vigorous fanning and the addition now and then of more chips, live coals were obtained, and on these small twigs and sticks of wet driftwood were placed, which, after much simmering and smoking, were finally coaxed to burn. Then the tent was taken down and set up some distance off, logs and other drift gathered and piled on the fire, which soon roared out with a very comforting sound. Some of the party were detailed to keep it going, and others set to work to build a shelter house, or "shack," as one razor-back from Missouri called it. A corps of hatcheteers went out in the woods and cut down saplings with which the frame work of the "shack" was constructed. Others cut young branches with which to thatch the hut. We built it about the fire. Six saplings sharpened at one end and left forked at the other were driven in the ground for the upright supports, three of them being made shorter than the others so as to give a slope to the roof. Four young trees, stripped of their branches and laid in the forks of the uprights, formed the horizontal supports of the roof, and across these were stretched branches with the leaves on them, and over them smaller branches were piled until the roof was fairly thatched. The windward side of the hut was walled up with boughs in the same way, and then the mainsails of the canoes were drawn about the windward wall and across the roof, and more branches piled on so as to keep out much of the rain and wind.

All this time the rain kept pouring down steadily, and the canoeists could certainly be considered in a "demnition moist" condition. But we got the shelter house up, and the Commodore erected his tent, while the skipper of the Iola built another fire in a sheltered spot at which to dry some of our blankets and clothing.

A decent lunch was out of the question until we were dried, and as we never got dry at Camp Silsbee, it follows we did not get a decent meal there. However, we got something to eat after the shack was put up, and some hot coffee, and spent the rest of the afternoon drying our clothing.

The rain ceased to pour down and a strong northwest gale blew steadily, lashing the river into fury and threatening every moment to blow down our shelter or to scatter our fires. It was a time to try the mettle of the canoeists, but all seemed to be equal to the test. Due regard to truth, however, compels the writer of this log to say that a much more wretched looking lot of people he has seldom seen grouped together, than the seven canoeists who about 8 o'clock in the evening gathered under the shelter-house to eat supper. Squatted in uncomfortable positions around the fire, with one side scorching and the other chilled by the rain and wind which the sides of the shack failed to wholly keep out; blinded by the smoke from the fire, compelled to shift every moment to dodge the stream of water that every now and again trickled through the roof, their lot at this particular time could not be called happy. But not a word of complaint was heard, not even when the wind, blowing under the sides of the hut, would raise a cloud of ashes and smoke that filled the tent and half-blinded the party, and a good share of which ashes was deposited on the plates from which they were eating. "Ashes are good for digestion," was the consolation received by any one who objected to the gritty deposit he found on his grub, after he had wiped the tears from his eyes, and coughed away the smoke that had all but strangled him.

The storm increased in violence as the night came on, and heavy peals of thunder and vivid flashes of lightning accompanied the roaring of the wind and the steady downpour of rain. Everything afloat seemed to have sought shelter from the storm except the Norfolk steamer, which passed our camp about 10 o'clock in the evening bound down. From our point of view she seemed to be laboring heavily as she steamed along, her lights only being visible to us, save when a flash of lightning pierced the gloom.

Owing to the violence of the storm it was deemed judicious to set a watch about the camp to look after the boats and tents and keep up the fire. The skipper and crew of the Iola took the first watch from 10 to 12 P. M., the Commodore and his crew were assigned to the next "trick," and the Vice-Commodore and the crew of the Petrel to the early morning watch. Now the storm raged up to midnight. The wind seemed to blow from all points of the compass and the rain came down in torrents. Peal after peal of thunder crashed over our heads and the lightning flashed in broad sheets of flame across the sky. At intervals through the night the watch took lanterns and visited the boats to see if they were safe, and also visited the tents, where the tired canoeists slept as if rain and wind and thunder and lightning were unknown. Under the shelter-house a good fire was kept going, and the watch sat and smoked and talked of the weather.

At midnight, following a terrific clap of thunder, the wind died out as suddenly as if a draft had been shut out by closing a door or window. The calm that followed was remarkable. Even the thunder ceased only to mutter in the distance, and the rain almost entirely ceased. This lasted half an hour and then the rain began to come down again and continued all through the night.

Camp Silsbee—Saturday, May 8, 1886.—When morning came the river presented such an angry appearance that it was at once concluded that there was no further progress to be made that day. It had been proposed, if the storm did not abate, to endeavor to cross to Glymont, and there putting our canoes aboard the steamer run up to the city as we had promised to be home by evening. This was now seen to be impossible, and after a council of war, it was determined to make ourselves as comfortable as possible and trust to some favorable opportunity to get word home.

After a good deal of tramping around in the rain, across swamps and plowed fields, we hit upon three different schemes to get word home. The skipper of the Iola chartered a scine boat at a fishing camp near by, and helped to row her out in the river as the steamer Corcoran passed on her up trip, and hailing that vessel in midstream, tried to throw a package of letters aboard. The rocking of the boat in the heavy sea confused his aim, the package fell short, and in a moment was churning under the wheels of that steamer, and, of course, was lost. The steamer sailed on, and after some desperate hard rowing the skipper of the Iola managed to get ashore, much chagrined at his failure. Meantime, in anticipation of this result, the Commodore, with duplicates of the letters thus lost, had made a trip up the shore two miles to a landing at which the steamer sometimes stopped, and there intercepted her and put the letters aboard. In addition to this the crew of the Iola hunted up a fishing camp near at hand and there found two men who were going to Occoquan that afternoon, they consented for a trifle to carry some telegrams to the office at that point.

The successful conclusion of this business enlivened the whole camp. In the meantime the proprietor of an abandoned ducking club house a half mile beyond our camp, had placed it at our disposal for quarters for the night, and as the storm held out no prospect of abating, we accepted his invitation, although we had made considerable progress in the erection of a new, larger, and better shelter in the cutting down of material for which the axmen of the party had labored for a couple of hours.

This work was, however, now abandoned, and as it was deemed unwise to venture out any distance in the canoes, they were strung together by a tow line, and with one man in each to pole it along and two others on the shore dragging a line attached to the forward canoe, we managed to portage our belongings from the camp to the club house. Our wet clothing and camp equipage were hung out to dry, and a hearty meal was prepared and eaten with a relish; the boys took their pipes and the old salt of the Mermaid pulled out a mouth organ, on which he played for an hour or two, and with that music, singing, dancing and story-telling, the evening passed rapidly. About midnight all turned in. More than one of the party would rather have camped out in the open air, but for several reasons that was out of the question.

May 9, 1886.—Sunday morning dawned bright and fair and an early start was made to get breakfast and be off to take advantage of the fair wind and tide. After breakfast and after the Commodore had extended to the owner of the club house the thanks of the party for his courtesy, the fleet again put off from the shore. It was about 7 o'clock when we got off, the Petrel leading by about half a mile, followed by the Iola with the Meteor and Mermaid a quarter of a mile behind that craft.

We had a fair wind up the river as far as Fort Washington, when the wind gradually fell off and about the same time the tide turned and ran out. The river, swollen by the heavy rains, was running in a regular freshet, and after the wind died out the prospects for our getting home by evening began to look blue.

For an hour or more after passing Fort Washington we paddled on close together, taking it very easy and then ran over to a creek and had lunch. It was the last camp-fire on the cruise we built, and harbored the thought with regret, for in spite of the baffling winds and disagreeable weather we had all enjoyed it to the full. But all things must come to an end, canoe cruising as well as others and thus philosophising we ate our last outdoor meal together with hearty appetites and prepared for the long twelve-mile paddle against the freshet that was before us.

At 1 o'clock we got under way, having taken and stored our sails, and hugging the shore to avoid the worst of the current we buckled down to work, the Commodore's craft taking the lead. All went well until we reached a point just below the Long Bridge where, in order to avoid the current which was running out with resistless force, we tried to cross the swash channel through a jutting point of land. We found there was not water enough in it to float all the loaded canoes, especially the one with the heavy centerboard. While one of the other canoes in the rear was struggling with this obstacle, we heard the "whoop-pee" of the Commodore in front, and hailing him we soon came up and he told us that it was impossible to get through the bridge owing to the force of the current. He informed us that he had tried it with the Meteor and had barely escaped an upset. After some conference it was decided to tow the centerboard boat around the point, and this was safely accomplished by the Commodore and the skipper of the Mermaid. The Petrel paddled through the channel and the skipper of the Iola took a tow-line from that craft while his crew poled her along, and thus tugging and pulling she was also got through. Then hugging the shore closely we worked our way to Long Bridge, where we found the Corporal in charge of the Meteor. Drawing the canoes up on the shore, a council of war was held.

It was certainly aggravating to be stopped at this stage of our homeward journey. The lights of the city glimmered through the darkness and the boat house was just beyond them, but further progress seemed for a time impossible. The novice lit his pipe and walked up to the arch of the bridge. The water fairly boiled between the piers with a roar like that of a cataract. No boat could make headway against such a current. To cross to the other side was clearly impossible. Returning to his companions he found them discussing the advisability of leaving the canoes in charge of a boat-keeper near the bridge until morning and making for home on foot. This proposition received a hasty negative, as did another one for the party to break up here, half to stay and take care of the boats until morning and the others to go home.

Finally, after careful examination of the surroundings, as far as it was possible in the darkness, it was decided to portage the canoes around the abutment of the bridge (a distance of several hundred feet) and drop them in on the other side and then endeavor to paddle up to a point opposite our boat house and try to cross there.

Tired as we all were, this portage of the heavily loaded boats was no easy task. However, we set about it with a will. Masts were unshipped from the four canoes, part of the baggage taken out, and then the canoes were lifted up, one after another, and carried to the other side of the bridge. It was difficult work. First, we had to climb the very steep bank of the river, then walk about twenty yards across a level railroad yard, steering our tortuous course between piles of lumber and railroad ties. Then up a steep embankment, lifting the boats up on the station platform, across this and down a similar steep embankment on the other side, then across a mud road leading from the river, and then for the second time through the mud to the edge of the river bank again. Such a portage of the heavily laden canoes was severe work, though we had six men to lift each boat.

However, all arduous tasks must end some time, and in about half an hour all four boats were ready to be launched on the upper side of the bridge. The word was given by the Commodore, and in they went, and then began an exciting race up the river.

The danger before us was in letting the boats get too far from the shore. Once caught in the terrible current that swept past us and destruction was certain. With nerves at a tension and straining every muscle, as we plied the paddles, we gradually worked up the stream. Neither moon nor stars were to be seen and the darkness made our task more difficult while it added to the danger. At the suggestion of the Commodore we kept close together for mutual assistance in case of accident, for the night was so dark that it was almost impossible to see each other. We moved on in single file, and only the nearest boat was visible to the occupant of any other. At times all the others would be hidden in the darkness from the occupants of any individual boat. We literally felt our way along. Now and then the gloom lifted a little and we got a glimpse of the surrounding, but most of the time we could see little more than the outline of the river bank.

About a mile above the bridge, at a suggestion of the crew of the Petrel, who were most familiar with the river, we entered Little River, which is simply an arm of the Potomac that reaches round between a low flat island and the Virginia shore. We hoped to find the current less strong and we were not dissappointed, fortunately for us, for it would have been impossible to have made any further headway in the main river, the current seemingly flowing much stronger as we passed the city than below.

Piloted by the Petrel's crew we made good progress up this branch of the river until we reached a point where an old abandoned causeway, which had been intended to connect the island with the mainland, barred our progress. Our pilot suggested, however, that the water which was running over this causeway might be deep enough to float the canoes over it, and, with the sanction of the Commodore, we attempted to cross it. After a good deal of struggling and splashing in the dark, by dint of paddling and poling and helping ourselves along by the aid of branches of bushes growing on the causeway we succeeded in getting over the barrier and into deep water again.

After a tedious paddle of three hours from Long Bridge (about a mile to the hour) we at last reached a point opposite the boat house and again drew the canoes up on the shore. The strength of the current even inshore and the angry appearance of the river as far out as we could see, convinced us that the crossing of the river was impossible, so another council was held, at which, after earnest discussion, it was decided that the skipper of the Iola, his mate, and the Commodore, leave the Vice-Commodore, Corporal Hatch and the "boys" in camp to take care of the boats, and make their way across the river by the Aqueduct Bridge to Georgetown and thence home. They were the married men of the party and wished to relieve the anxiety of their families, which it was feared must have been raised by the knowledge of the stormy weather and the swollen condition of the river.

It was an inglorious ending to the cruise, but it was the best that could be done under the circumstances; so having put up the large tent, carefully beached the canoe, started a fire, and made everything secure for the party left behind, the three who were to cross the river reluctantly bade good-by to the others and dissolved the partnership which had resulted so much to the satisfaction of all for seven days.

After the separation of the party, the boys who were left in camp set about getting something to eat; but so tired were they that they dozed over the cooking, upset the coffee pot in the fire, and at length lunched off some cold victuals. Then, rolling themselves in their blankets, they dropped down in the tent and were fast asleep.

It rained more or less during the night, but they were unmindful of the weather. About 8 o'clock in the morning the keeper of the boat house, having been notified of the whereabouts of the party by the Commodore, took a boat across the river, the freshet having subsided somewhat. With his assistance, one by one, the canoes were taken some distance up the river and then (running with the current) by dexterous and vigorous paddling they were shot diagonally across the stream to the boat house. Here the Commodore, the skipper and the mate met the rest of the party about noon. The boats and luggage were stowed away and a final pot of coffee made up and drunk to the memory of past adventures, and this ended the cruise.

[Notice.—In unpacking the dunnage of the Petrel, the "albatross" pipe was found in the forward compartment. Who picked it up at Camp Silsbee is the secret of the stowaway unwittingly, is not known. No one will confess, but the pipe now occupies a conspicuous place in the boat house, and the last thing done by a cruising party now before leaving the house at any time is to see that it is still there and has not been taken aboard.]

PEQUOT C. C.—The officers are: Com., R. P. Wakeman; Vice-Com., F. P. Sherwood; Secretary and Treasurer, F. P. Lewis. The club signal is a pointed burgee, white field with a red border, and a red Swiss cross in center. The sailing signal is a red Swiss cross.

SOUTH BOSTON C. C.—The burgee of this club is a blue ground with two diagonal stripes of white and a red Maltese cross. The sailing signal is an octopus.

A MEET ON THE PASSAIC.

THERE are a number of canoe clubs on the Passaic River about Newark, Passaic and Paterson, which have grown up quietly and without attracting attention until they now muster a large body of canoeists and a numerous fleet of canoes. Thus far they have not attended any meets and have no organization of their own, but this year they are determined to make a start, and to that end a meeting was lately held at Newark at which it was decided to hold a meet on July 4, and an invitation is extended to all canoeists to join the camp at Dundee Lake, near Paterson, on the Friday next preceding. Com. A. S. Pennington, of Paterson, will give all information regarding camp ground, routes, etc. The Passaic is little known to canoeists at a distance and the cruise from New York and the Hudson will be a pleasant one and will not take much time. The route lies through the Kill von Kull, thence up Newark Bay and the Passaic River, past Newark to Dundee Lake, a distance of about 25 miles. Canoes from the Hudson may be taken by rail from Jersey City, Hoboken, or Weehawken to the river near Newark or Passaic.

A WINTER CRUISE IN CANADA.—The first cruise of the Lake Saint Louis C. C. in 1887 took place on April 8 from the boat house, Lachine, to Chateaugay Basin, about nine miles distant. The river opposite Lachine is always free of ice except a bordage of about 50ft., which still stays with us, although it is a very unwelcome guest at this time of year. The following canoes left about 10 o'clock: Maud, M. Robertson and E. Phillips; Anna Smith, J. H. Stewart and Archie Henderson; Rival, G. H. Duggan and J. D. Thompson; Coquette, Thos. Stewart and J. K. Bruce; Marion L., Geo. Auldjo and F. W. Stewart, making in all ten members. On arriving at the mouth of the Chateaugay River, we found it frozen over, and had to leave our canoes and walk to the hotel, some three miles distant, taking our paddles with us. Arrived at Mine Host Desparois, who, by the way, is commonly called "Spring Chicken Jack," owing to the excellence of the poultry found there for those who care about that fowl, the barn door rooster. We had dinner, and those who have not tried a lower Canada Frenchman's Lenten spread have a questionable treat in store. Having got through the above very necessary proceeding, we had a game of pig, then some hockey and a game of euchre. It being now about 3 o'clock, we had a farmer drive us as far as the water again, much against his will, he being afraid to risk his horse; but being assured that we were just the kind of men to buy his whole rig, he at last landed us beside our canoes. We arrived home about 4:30 well browned by the sun and ready for a home supper.—MARION L.

SAFETY FOR NOVICES.—When the great number of ignorant persons who venture on the water is considered the wonder is that so few are drowned. This is particularly the case in canoeing, as a so-called canoe of some kind is within the reach of almost any and the temptation is strong to take dangerous risks. Two things are essential before a boy is allowed to try a canoe alone or to make any trips in one; and if parents and those having the care of young boys would look to them the danger would be much lessened. First, any one who goes in a small boat, unless in the care of some one perfectly competent to rescue him in an emergency, should know how to swim. Secondly, he should know how to enter and leave a boat, to move about and should acquire that confidence which comes from a knowledge of what the boat is capable of. The first part is learned only by practice, but much of the second may be acquired from "Canoe Handling," in which plain and reliable advice is given to beginners by one who is fully competent to instruct in all that pertains to canoeing. It is not always possible to keep a boy out of a canoe, but by means of Mr. Vaux's valuable book he may be taught how to avoid those dangers which come from ignorance of canoes and their management.

LAKE ST. LOUIS C. C.—The annual meeting was held on April 6, the officers elected being Com., W. H. Rintoul; Vice-Com., Alex. W. Morris; Rear-Com., George Auldjo; Sec., J. H. Stewart; Treas., Sneaton White; Committee, C. B. Seward, C. P. Draper, F. Stewart, H. M. Molson. The following cruise was porposed for May 24: To leave Lachine on Saturday for St. Ann's, leave St. Ann's Sunday morning and proceed to Bout de l'Isle on the Ottawa River, staying Sunday night at St. Rose, arriving at Lachine on Tuesday night. The conditions governing the challenge cup race were altered so that now the cups must be won three times by the same crew, in canoes not over 16ft. long, not under 30in. beam and 12in. depth, with single blades, the course being 2 miles. The race this year will be at Lachine, on Aug. 13, entries closing on Aug. 12 with J. H. Stewart, secretary Lake St. Louis C. C. In 1884 the cups were won by Shaw and Shearwood, of Lachine, and in 1885 by Leys and Jaques, of Toronto.

RACERS AND CRUISERS.—*Editor Forest and Stream:* In his remarks on Pecowsic Mr. McKendrick mentions the old Venture as a racing boat and not a cruiser, a small and unsafe craft. Perhaps he is not familiar with the boat or he would know that she is a Shadow canoe of the usual size and built for crusing, for which purpose she has been used for seven or eight seasons by Mr. Jones. While she has often raced she has been more frequently used for cruising about New York, the Connecticut River and Long Island Sound, and after years of such work, with large sails and without any mishap, it seems hardly fair to condemn her as a racing machine.—C. A. J.

A. C. A. MEMBERSHIP.—Trenton, N. J., April 9.—*Editor Forest and Stream:* The following-named gentlemen have applied for membership in the A. C. A.: W. E. Pentz, New York city; Geo. W. Busch, J. D. Parker, Hartford, Conn.; Nathan A. Gibbs, Norwich, Conn.—WM. M. CARTER, Sec. A. C. A.

CORONET AND DAUNTLESS.—On April 8 Captain Samuels arrived at New York on board the Adriatics, and Captain Anderson, the navigator of the Coronet, arrived on the Baltic. A sad surprise was in store for the latter, as his little daughter had died during his absence, and the letter announcing her death was handed him on his arrival at Quarantine. Captain Samuel denies entirely the reports of a disagreement between him and Mr. Colt. From his account it appears that the Dauntless leaked very badly during the trip, and her two 8in. pumps were kept busy a great part of the time. The Dauntless will refit at Southampton for a cruise to the Mediterranean, and the Coronet will refit at Cowes. An offer of a cup of $5,000 value has been made by Mr. Fox of New York, for a race home, but neither owners will accept it.

NEWARK Y. C. SPRING REGATTA.—The Newark Y. C. will sail its spring regatta on May 30, over the club course on Newark Bay. The classes will be: First Class—Cabin sloops, under 35ft.; Second Class—Jib and mainsail, 19ft. and over; Third Class—Jib and mainsail, under 19ft.; Fourth Class—Catboats, 19ft. and over; Fifth Class—Catboats, under 19ft. The entrance fee is $3 and the race will be open to all. There will be special prizes and the regular sweepstakes. The members of the Regatta Committee are: Charles H. Mayhew, 214 Garside street, Newark; Edward M. Grover, 1 Cedar street, Newark, and William Murray, 180 Mulberry street, Newark.

GENERAL PAINE'S NEW YACHT.

THOUGH the news which we gave last week is confirmed, little more is known of the new yacht. She will be nearly 86ft. l.w.l., with clipper stem and a long stern like her predecessors. The beam will be less than Mayflower's and the draft greater, but the exact figures have not been made public. The yacht will be built of steel by Pusey & Jones, of Wilmington, Del., and Mr. Burgess is now in Wilmington laying her down. The following correspondence has passed between Gen. Paine and Mr. Jas. D. Smith concerning her:

NO. 32 CONGRESS STREET, Boston, April 6, 1887.—Dear Commodore Smith: As I consider the dimensions of the Thistle are capable of providing a yacht of much greater speed than that of any yacht yet sent over here from England and as I have not been able to learn that any one else has proposed to build a new one as a possible competitor, I have decided to build and have contracted for a new steel boat, varying only by a few inches from the dimensions of the Mayflower, except over all, but of course embodying two or three changes of form, as to which I wish to experiment. I hope to have her in commission for the N. Y. Y. C. cruise, though of course much depends on how soon the mills will furnish the steel. I am very sincerely yours, CHARLES J. PAINE.

NEW YORK, April 7, 1887.—Dear General Paine: I have yours of yesterday. As a member of the America Cup Committee, officially and personally I am pleased with your letter. You exhibit a most liberal and commendable spirit and it will be highly appreciated by the yachtsmen of this country. If the conditions imposed by the owner of the English yacht Arrow are reasonable and agreeable to you, you will have a fast yacht in Europe, and I sincerely trust and hope a faster one at home, to become a competitor in the defense of a cup that England's yachtsmen for thirty-six years have struggled to take back to their country, but so far in vain. I should do injustice to my own sentiment and feeling if I did not warmly congratulate you on the chivalrous and genuine spirit you have always manifested in upholding the supremacy of America in the best interests of yachting. Yours truly,

JAMES D. SMITH.

The new yacht will of course have all her lead in the keel like Galatea and Vanduara. The New York papers have been negotiating for the sale of Mayflower to Dr. Barron, but Gen. Paine has denied the many reports current that he has disposed of her.

THE SECOND CRUISE OF THE PILGRIM.

PART V.

THE grand event of the season was a trip to Bar Harbor and around Mt. Desert Island. The summer loitering was over and nearly everybody had returned to work. Charles and I were the only ones who could afford to cruise for pleasure in this busy September. Even the children were so occupied with school they could only sail Saturdays, and we could not entice any one upon the adventurous journey proposed. There was a dread in the minds of the people about going around the southern side of the island, and I remembered when I had a cruise to Southwest Harbor in a launch in 1870, that some one I met upon its salt-cured wharves advised me not to venture to Bar Harbor, because many craft had been capsized and some persons drowned off the mountainous shores of the island. So I anticipated a rough time and felt eager for it. "Now, be careful, Will," said my sister as we parted; "the seas are just dreadful around the Island, and it is awfully squally and rough. A steamer rolled so there that a passenger was tipped right overboard, campstool and all."

"Never fear, my dear, I'll come back all right. The Pilgrim is uncapsizable, and will not sink unless we fill her, and we don't intend to do that," I replied, laughing. Then we loaded up with baskets of bread, doughnuts, pies and apples, and meandered down the quiet maple-shaded streets of Belfast to the wharf, stared at by persons we supposed from our yacht uniforms that we were stray policemen or castaways from a steamboat. Our tender was twenty feet below the wharf, and we performed some acrobatic feats in getting our traps and selves down the ladder and into her without mishap; then we were soon aboard the little ship and had things stowed away below. Charles loosed the staysail and jib while I took the gaskets off the mainsail and changed the ensign from topping lift to peak halliards. Then we hoisted the mainsail, had the head sails ready for hoisting, and tackled the anchor. It came short and staid there, cable up and down, thirty-five pounds deep under blue mud, and two red-faced, sore-handed, perspiring contestants on deck, grinding their boot heels into the soft pine, and straining hard to lift the weight aboard. We hauled very taut, made fast around the bitts, went out upon the bowsprit and lifted up the length that led to the sheave, and tugged and twisted and swayed, but a mermaid held the iron down. Our weight had settled the bow and the rope held her nose down. I thought of a watch tackle, but we went away aft, jumped up and down a little, saw the bow rise slowly and the deed was done, the anchor was away. Charles hauled it up and hooked it, hoisted the staysail and jib, and I trimmed sheets and pointed for the open sea. Finally, we did.

There was a strong southwest wind, and in an hour we were past Turtle Head and approaching Coomb's Point, when the wind failed entirely and left us plunging and rolling without steerageway in quite a nasty sea. Half an hour was spent tumbling around, dodging the boom and growling, then a fresh northwest wind darkened the waters and we ran into Castine for the night, as I feared we could not get around Cape Rosier and into a safe anchorage before dark.

The wind died away at sunset, the starry canopy was cloudless, and we tried to smoke on deck after supper, but the cool air made the cabin much more comfortable, so soon turned in and went to sleep. The wind was fresh from the southeast at daylight. We got a hasty breakfast, made sail, and were soon dashing into the heavy seas that may be met between Cape Rosier and Isleboro nearly every day when the tide comes in. It was refreshing, exhilarating and exciting, with the rail under every jump and the spray sparkling in the sunlight, as it flew against the mainsail and into our faces, to see the Pilgrim creep steadily to windward against tide and sea, sometimes burying her bowsprit and dipping several cloths of the jib into the brine. It was not heavy weather; only the compliments of that lofty, stony-faced, spruce-whiskered Cape Rosier, around which the incoming tide always sweeps with a rough, violent surges, which has always been innospitable and threatening whenever I have essayed to pass by in little craft. It was this Boaz pillar of Penobscot's portal that nearly wrecked my launch load in 1870, and did catch my punt towing astern, break its painter, and smash it against its flinty face in pure wantonness. It forced me to double reef last year, then smiled after we had passed, and let us make all sail immediately. It seems to frown upon me and I shake my fist at its furrowed brow and say, "Curse you, old Rosier! I defy you. What have I ever done that you should so savagely assail me, my passage east and west in summer weather?" The answer of the surges upon the scarred and battered neck sounds to me like, "Nicht Glück! Kein Glück! Nicht Glück! Kein Glück!" until I pass out of hearing. So we kept well to windward and, when I judged it safe to ease sheets and we swept like a race horse to the eastward, we seemed to draw toward the cape in such a mysterious way that I feared for a while we would be obliged to flatten in again to clear my ancient enemy. But we were not; the sentinel spruces of the shore marched to the west rapidly, Spectacle Island was recognized, the buoys of Little Deer Island we passed, the lighthouse keeper saluted, and we were fairly into Eggemoggin Reach by the time shore folks were eating breakfast. Hurrah! for the early start. How bright the sun and sea! How crisp and sweet the air! How blue the sky! How green the fields and forests in the early, dewy morning! Charles and I wiped the salt off of our faces, gave a pull on the sheets and took a smoke. That was all we needed then to make us perfectly happy.

Eggemoggin Beach is one of the prettiest inland water courses upon the coast. It is from one to three miles wide and fifteen miles long, and lies between Little and Great Deer Islands and the mainland upon the north side. There are about five fathoms of water throughout. The shores present every variety of feature—short sandy strips, low shelving rocks, little grassy plots, and groups and groves of evergreen trees upon one side, and walls of rock, grassy points, high hills and heavy forests upon the other. There are several good harbors and little villages scattered along the shores, and well cultivated farms are conspicuous near Byard's Point, but the region is sufficiently wild and picturesque to suit the hater of city bricks and cobblestones, and furnishes almost a continuous entertainment in the steady run of vessels of all kinds which hasten east and west through this thoroughfare. The scenery is so charming, the water so thoroughly landlocked and safe, the little coves and harbors so frequent and easy of access, and the forests so inviting, that I thought as we sailed along, what a perfect place for the A. C. A. to hold a midsummer meet. Here the tired boys of the city could bring their canoes safely by steamer and have such a glorious time that it would make a story for the fireside for years to come. Salt water travel is so beneficial to the health, and so cheap and comfortable from New York to Mt. Desert, I wonder canoe and yachtmen are not seen in greater numbers exploring the byways of the Maine seacoast.

The wind had been increasing and hauling a little while we were slipping along the pretty shores, and when Byard's Point was passed, we trimmed sheets flat and barely held our course for a few miles. It continued to head us and when we had arrived at Cape Carter, at the entrance to Benjamin River, leading to the village of Sedgwick, the sky looked so threatening in the southeast and the sea had become so considerable that I had a strong notion of seeking a harbor with a little sloop that had eluded us by shooting into the gap of the river. I reflected that it was only 10 o'clock, we might as well keep on for a while and watch the weather, as we would have good harbors to leeward and could run back to them in the afternoon if it was necessary. So the Pilgrim was put about and we stood across the reach. We saw a schooner coming from the eastward and we ran close aboard upon the next leg, said, "Good morning," and asked about the weather. The captain said, "Guess we're goin' to hev a southerly."

"Think it'll be heavy?"

"Wall, looks that way, kinder."

"Thank you!" then we were out of speaking distance.

Whew! how the puffs came off shore. Pretty soon we took in the staysail to keep dry. What a relief not to have to reef a big jib. How it relieved and lifted the ice rail even to get the little headsail down. It was very squally near the windward shore and islands. It seemed as if the wind doubled in strength whenever we approached, and grew steady and less violent out in the wide water. We were now beyond my last year's cruising ground, and my memory of the 1870 cruise was too defective to be any help in the further navigation, but the chart showed the course and the islands. The latter were not labeled and were a little too numerous in the eastern end of the reach where we were now sailing; therefore I hailed a fishing schooner that we had overhauled in the race to windward and asked, just to be certain, "Is this Conary Island?"

"Yes, that's Konry."

"Then that's Hog over there?"

"Yes, sir-r-r," and the wind kept up the rolling of that final letter for a while.

I wanted to ask, "What in thunder are you going out upon the south side of Conary for?" He nearly misled us, and we might have struck bottom had we not parted company. I prefer to follow the chart, when I have one, rather than to try to dodge rocks and shave shoals with these ubiquitous fishermen. I remember when on the sloop-of-war Juniata in war times, we ran half way down the east side of Eleuthera Island thinking it was Abaco, until careful study of the shore and chart corrected the poor meridian altitude and saved a noble ship and her armed host of patriots.

The channel buoy outside of Hog Island was found, and the course shaped, after much study with the glasses, for the wooded hills of Burnt Coat Island. It was rougher here. The seas swept right inward unobstructed by reefs or islands and we did some plunging, but the wind was strong and steady and Hog Island faded as the bold wooded shores ahead grew plainer. We soon saw York Narrows like a long canal between Burnt Coat and Orono, but were afraid to venture into it because the C. P. says: "The current runs with great velocity, and strangers, therefore, must under no circumstances attempt to pass through." I felt a little troubled about trying Casco Passage; the book says: "Strangers must not attempt this passage without a pilot. The channel is narrow, and full of ledges, and the current sets strongly through York Narrows, rendering the navigation dangerous to those who are not familiar with the set and strength of the tide." I could not spare the time and breast the sea going outside of Burnt Coat, and did not like to go to leeward around Pond Island, so kept on toward Buckle's Island to get a good look at both passages. The C. P. had no chart, but a large chart of Mt. Desert showed many buoys and dangers. Near Buckle's a striped buoy caught the eye, then a black one off the point of Orono and another black one beyond to the north. There was the course into Casco, and there was not a sign ahead of any guides to York. We were going southeast. Near the striped buoy we came to, tacked, payed off sheets and flew away northeast by east, leaving black buoys to the left till we were on the lookout for sailing a large surveying steamer at anchor in the passage, whose crew gathered in the stern to look at us as we shot by, were told to keep as we were, leave the nest of black buoys on the left hand, and give Burnt Coat a wide berth. We followed directions and were soon in clear water, heading for Bass Head lighthouse, and Mt. Desert was before us in all its glory, I felt scared when it was all over. I think I should scare beforehand with a deeper draft.

Mt. Desert can never be mistaken for any other land upon the coast. It shows a ponderous pile of barren ledges, deep valleys, dense forests and forbidding shores. The mountains bathe their feet in the sea, and their brows are kissed by the clouds. The winds rush out of its gorges with terrific force, and the sea lashes itself into foam against its granite walls. It offers few harbors to the mariner, is beset by fierce gales and boisterous seas, and the husbandman gleans scanty crops from the barren soil. The trout stull lurk in its ice-cold lakelets and the red deer finds easy hiding places from the pursuit of man. The few settlements upon its shores do not alter its majestic appearance or blemish its rugged beauty. It unites the booming surf and the mountain shadows; the sandy beach and the precipice; the deep, dense green of the primitive forest and the glint and sparkle of the summer sea. Like the union of the earth and the ocean, here the mountains make obeisance to Amphitrite, and she sends her mermaids singing in the caves her waves have fashioned in the overhanging cliffs.

It was a rough run to the eastward around Baker's Island, and when we turned and headed for Egg Rock, with the main sheet all out and the headsails slatting, we realized what a long, heavy sea was sweeping northward. Several times the tender shot up past the stern upon a comber, and once struck the stern a heavy blow, then we set the spinaker to keep ahead of it. Though I had to be watchful in steering before the hissing billows and lighter wind, I was often lost in admiration of the island that frowned upon us, yet was miles away. The sun was just sinking behind the mountains, a purple tint lay like a lovely veil over the rude features of the landscape, and the shadows grew deeper and darker down to the white line of surf upon the shore. An hour we crept along and feasted our eyes upon the magnificent picture, wishing for artist brush and talent to transfer it to canvas that we might delight our friends with what will ever be to us a glorious memory.

The wind was drawing more along the shore and increasing; as we advanced the spinaker was taken in and the head sail hoisted, and we were with wind upon the port beam approaching Bar Harbor. Just off Rodick's Cove we opened a mountain gorge and the wind swept down upon us with terrific force. The jib had fouled and been hauled down; the main sheet was payed out till the sail was nearly parallel with the wind, and I let the staysail sheet fly, as we could not luff or run before it, yet such was the force of the blast that it pressed the lee side down to the cabin windows and drove us forward rapidly. The jib was bellying out, the staysail slatting, the mainsail shaking, some of the spinaker gear trailing astern, and Charlie grabbing at this and that and dodging things forward in his endeavors to put things to rights, when we made our hasty and inglorious advent in the harbour, downed topsail, took in the slack of main sheet, saw a vacant mooring and caught it, swinging head to wind, dropped the mainsail and sat upon it to keep it aboard, while we watched the bitts to see if they would hold us in the howling squall and jumping sea. They held, so did the six inch cable, and we rolled in a fisherman's furl in the sails and took a rest. We had sailed sixty miles in exactly ten hours and towed our 12ft. boat, the best day's work the Pilgrim had ever done. After a while a reporter for the *Bar Harbor Journal* came aboard and had me write up my own notice of arrival; an old fellow thumped the side and asked if we wanted wood or water, and the crew of a nearby sloop pulled around us and took a critical survey of the Boston yacht.

"Fine craft you have here, Cap'n. Stood up to it bravely off Cat Island. Tho't you'd lose that long topmast or split somethen. How much ballust you got?"

"Five thousand pounds."

"Gosh! Tho't somethen was a keepin' you mighty stiff. Awful loud for a little craft, but you need all you can get round here. I've seen many a craft capsized and badly broke down there. Cat Island is nasty. None of us (the usual shallow excursion sloops) would venture down there in this breeze 'thout double reefs. Get some of this every day. It'll blow out by sundown. Seen it blow a gale here in the harbor and be dead calm out in the bay beyond the Porkipines. Know the Vega? Big schooner, hails from Pittsburgh. She was sailin' along mighty pretty with all kites up and lots of shore folks aboard, and next minute her rail was under and her topmast was a hangin' down wrong end up. Good moorin' you've got. Belongs to the R., but she's laid up in winter harbor and her owner is gone home. Jest hang on's long's you want ter. You've got jest as much right to it 's anybody."

Saying all this the good-natured Yankee told the boys to pull aboard his own vessel and left us to cook supper. The blow and sea continued all night, and we slept with one eye open and occasionally went on deck to see if the lantern was burning and the moorings secure. I was very glad we did not have to depend upon anchors, as the fleet was thick around us and the lee shore looked very rough and threatening.

There was not wind enough to lift the ensign at 8 o'clock next morning, and after breakfast we locked up and strolled through the city, suburbs, hotels and stores. The place has greatly improved during the four years since I visited it. All of the desirable sites are built upon and the few lots around are held at fabulous prices. A Boston man bought a piece of land about two year ago, made $50,000 by selling off lots, and has one-third of the plot left. The boom is on, the hotels are all full during July and August, and one must engage rooms some weeks ahead. There are the usual number of shops selling shells, coral, alligator teeth, feathers, fur, and Indian trinkets, manufactured by pale faces, but one can buy baskets and gull's breasts from genuine Penobscot and Passamaquoddy Indians who live in tents and huts along the shore. All branches of trade are represented; the stores struck me as being particularly light, bright and cheerful, and the attendants were very polite and agreeable. Canoeing and boating are well represented. Many ladies have their own birches made by the Indians, who teach how to paddle in primitive fashion. Everybody knows how to row—or all think they do—and single and double scull boats are largely patronized. I saw dozens of canoes and not less than 100 rowboats at the landing stages, drying out preparatory to winter storage.

When I was here in 1872, a 6ft. Penobscot Indian taught my wife and myself paddling, and took us one day in a birch some distance out to sea. It was like floating upon feathers, or sailing through the air; so light, easy and pleasant was the motion. In strolling up to the West End Hotel, I met a six-footer and said to him: "Are you Big Thunder?" He stopped, scowled and said: "By ——, stranger, that's too bad! I'd like to know what I've done that you should take me for a dirty, lousy red Injun. Me, a man what's born and bred up on this site or within twenty miles or this very spot, and has sailed in scow, wood-boat, fisherman and square-riggers out er Maine ports goin' on these forty years. An' now to be taken fur one er them lice-eatin' basket makers! It's too much, Mister, or Cap'n, as I s'pose you are, an' no credit to yer inginooety."

I hastened to assure him I was getting old, my eyesight was a little bad, and I had judged by his size without having a good look at his features, which appeased his wrath, soothed his wounded feelings, and we parted amicably.

I noticed that the rude buckboards of early times, which were so rough yet healthy to ride upon going over the mountains, have disappeared, and finely finished, painted, varnished, upholstered things have taken their places, with the usual attachment of uniformed and degraded footmen and drivers to smirk before customers and charge fifty cents a grin. A little ride to a lake, a steamboat sail across, and a railroad ride up to the new hotel upon the mountain now take the place of the health-giving buckboard ride of old times. The people will not use things conducive to their well-being, but must carry style and effeminacy into the by-ways of the world. CARESWELL.

A BRITISH PLEA FOR THE CENTERBOARD.

OUT of the dense fog of prejudice and ignorance which is obscuring one side of the discussion on centerboards now pending there comes a ray of justice and hard common sense in the shape of the following letter to the *Field* from Mr. Landseer McKenzie, an English yachtsman, who has frequently in the past urged the claims of centerboard boats for certain uses where a keel is impracticable. British yachtsmen may be loath to take the word of Americans in regard to the speed and advantages of the centerboard, but they cannot ignore the points made in this fair and manly letter by one of their own number whose experience with centerboard boats of various kinds qualifies him to speak. The main issue just now is not whether the centerboard is good or bad, but whether the keel boat can beat it, and the friends of the latter abroad cannot afford to indorse the confession of some of their number, that they are afraid to race the centerboard boats on perfectly even terms, but must ask a handicap. Mr. MacKenzie says:

"It is rather amusing to notice how apt we are to stigmatize that very class of vessel that we don't quite like as a "racing machine." I have myself derived great comfort from applying the term to our own measurement-pinched productions. Perhaps they won't deserve it now as much as they used under the old system. But what constitutes the centerboarder a racing machine? Is it merely that she uses a movable appliance beneath the water which is preëminently suited to its purpose? Then every craft that wags a rudder is in the same unhappy case. She cannot evade the rating; with equal lengths, sailing power is taken as the criterion of speed—not that I think it is altogether, but this by the way. I am justified in arguing on the popular belief. Her centerboard does not add to her stability and consequent sail power, but, if anything, the reverse. And it would be both difficult and inexpedient to make the fact otherwise in a vessel of any size. Large centerboards are weighted at the top, not at the bottom, and only enough to sink them to the required depth. It is merely used to aid the vessel in going to windward, an auxiliary, in fact; like the spinaker, which is merely used to aid the vessel in running. Why, then, should it be 'anathema?' It is a satisfactory sign of progress that the R. L. Y. C. have entertained the idea of throwing their races open to centerboard boats at all, and the club deserves all praise for taking the lead of other clubs in initiating such spirited action. But their manner of doing this is unfortunate. The proviso that the board shall be kept down throughout the race is prohibitive, and so I should think the Americans, if they are well advised, will regard it. Besides, the R. L. Y. C. lay themselves open to the suspicion that they desire the credit for generosity, but not the cost, a suspicion which I am sure would be utterly undeserved. Moreover, the proviso I have referred to makes it abundantly clear that we are afraid to match our yachts against the modern centerboarder of Yankee evolution on even terms.

"What astonishing inconsistency! We English, who have asserted with blind dogmatism for years past that depth, even though it doubled the actual in relation to the nominal tonnage of a boat, must be ignored in measurement, and must on no account be interfered with, suddenly foreswear our traditions when it comes to a question of a few feet, more or less, of movable keel.

"These attempts in the council chamber to regulate the results of matches are much to be deprecated; better to leave the question of admitting centerboards alone altogether than to deal with it in a partial and compromising spirit. Such a vessel has no advantage in racing over the keel boat beyond the perfectly legitimate one, that she obtains great power of lateral resistance with a minimum of wetted surface.

"If the belief exists that a centerboarder would score in working to windward against a foul tide along the edge of a sand, it is scarcely well founded, I think. It must be borne in mind that, with board down, she draws most water of the two; and with board up she makes most leeway. But she must lift her board to go further in on the sand than the keel boat, and not drop it again till she gets back into deeper water. It is on the cards that the loss from leeway would quite counteract the gain from an easier tide. If the board be sealed half down, the argument still holds good. Besides which, the vessels would be mustered the match in a confessedly crippled condition. Running and reaching under the above supposed circumstances, she would certainly have some slight advantage. To insure that she does not cut corners and pass over sandbanks into deep water beyond is entirely within the province of the delimitators of the course.

"Compare the draft of Mayflower, 9.5, with that of Galatea, 13.5, difference, 4ft. Again, assuming that the board is to be kept down as decreed by the R.L.Y.C., then Mayflower's draft becomes 19 at least, and the difference, now in favor of Galatea, 5.5ft.; but if 4ft. in favor of the Yankee is unfair, 5.5ft. in favor of the Englishman must be yet more unfair, because the difference is greater and the weatherliness of the latter is uniform, so that the boot is very astutely shifted on to the other leg altogether.

"Surely we have slightly forgotton our chivalry. It is rather premature for the R.L.Y.C. to admit, even by inference, that the British type is inferior; yet, even should it be eventually so proved there is not much to be despondent about.

"The modern Yankee centerboard boat is no longer an unsafe, unseaworthy 'skimming dish,' but a wholesome craft enough; of about the proportions, in fact, which in years gone by it was fondly hoped and intended the old Thames rule should stereotype, and of which we were erstwhile so proud. The recollections, too, that she is at best a compromise, should serve to take the sting out of defeat, if such be in store. English features and methods enter so largely in her design that it is really difficult to say which country has the greatest claim on her; nor need we forget that deep keels and deep-bodied centerboard boats—on a small scale at any rate—have been built and raced in the United Kingdom during the whole of the past decade."

CRUISING.—Namouna, steam yacht, was last reported at Batavia, Java.... Sunbeam was at Colombo from Bombay on March 5.... Brunhilde, schr., Mr. J. J. Phelps, arrived at Rio Janeiro on April 8.... Julia, schr., Mr. Chester W. Chapin, has returned to her builder's yard at Wilmington, where a racing rig will be fitted.... Regina, sloop, Mr. Ralph N. Ellis, arrived at Morehead City, N. C., from Charleston an April 6 and sailed on April 9 for New York.... Wanderer, schr., Mr. G. W. Weld, arrived at St. Thomas on March 18 from St. Croix, and sailed on March 30 for Havana.... Helen, sch., Mr. C. D. Middleton, left Charleston at 11 A. M. on April 4, and arrived on April 6 at Morehead City, sailing on April 9 for Philadelphia.... Reva, steam yacht, Mr. Pierre Lorillard, was at Norfolk on April 6, bound from Florida to New York. Her owner and family returned by rail from Charleston.

THE CUP RACES.

THE full text of the reply of the N. Y. Y. C. to the challenge of the Royal Clyde Y. C., is as follows:

NEW YORK YACHT CLUB,
NEW YORK, April 4, 1887.

William York, Esq., Secretary Royal Clyde Yacht Club, Glasgow:

DEAR SIR—The acting Secretary of the New York Yacht Club has handed to the committee of the club appointed to make arrangements for contests for the America's Cup, your communication dated March 16 last, giving on behalf of Mr. James Bell, vice-commodore of your club, a formal notice of challenge for a match for the America's Cup with the yacht Thistle, against any one yacht or vessel constructed in the United States of America, and naming the 4th day of October next for the commencement of the match.

The committee is also in possession of the documents which accompanied your letter, viz.:

1. Certified official transcript from the Custom House register of Thistle.

2. Statement of her measurement certified by Mr. G. L. Watson, naval architect.

3. Extracts from the minutes of a meeting of the committee of the Royal Clyde Yacht Club, dated September 21, 1886, and of a general meeting of the said club dated October 26, 1886, certified by the secretary, all of which have had the committee's most careful consideration.

The committee find the papers in proper order, and note that Mr. Bell is prepared to accept, with slight modifications, the arrangements of the Genesta and Galatea matches sailed in 1885 and 1886; considering, therefore, as settled all regulations for those races concerning which you suggest no change and referring in detail to the alterations which you suggest, the committee instruct me to say:

Dates of Races.—In the opinion of the committee it will be unwise to make these fixtures before the arrival in this country of the Thistle. If, however, after her arrival the dates mentioned by you should appear to be suitable they will be accepted.

Number of Races.—In view of the possibility of postponement of races and other delays, and of the fact that the committee consider three sufficient to test the speed of the vessels, they are not willing to make any change in this respect.

Umpire.—The committee think the terms of the race should be mutually agreed upon by the representatives of the Thistle and themselves, and that no referee should be needed upon any questions connected with them. Should, however, differences arise as to construction of terms, to decide which it would be desirable to appoint an umpire, the committee will gladly accept Mr. George L. Schuyler.

Patrol Steamers—The committee can promise that the officers of the club will do everything in their power to secure fair races, and to that end will join Mr. Bell in any arrangements which, after his arrival here, it may be found possible to make, including those which he suggests under this head.

Accidents—The committee is willing to agree that in case of accidents happening at any time, either yacht shall have the time necessary for repairs provided that no races shall be sailed after the close of the yachting season as prescribed by the club rules.

Referring to the last clause in your letter, the committee will be very glad to ask Mr. Lloyd Phœnix to act as representative of the New York Y. C. on board the Thistle during the races.

The committee desire me to add that they are at your service for further information if needed, or to assist in making arrangements for the Thistle in this country either before or after her arrival, and I remain, yours faithfully, WILLIAM KREBS,
Secretary America's Cup Committee, New York Y. C.

P. S.—In replying, kindly address J. D. Smith, Esq., Chairman Committee, No. 23 Broad street, New York.

The only point on which the club objects is that of the number of races, the proposal of the challenger that five be sailed being rejected, and the number being reduced as in the past two years. While it is in every way desirable that the test be a thorough one between the two boats, it was not to be expected that the club would consent to more than three races, as men cannot, as a rule, spare so much time in October, and a series of five races would probably mean six or seven days if the weather should be light. In regard to the interference of the steamers, past experience has proved that the club is utterly powerless to control the attendant fleet, and the only step it can take is to go as far outside the Bay as practicable, into open water at least, and to leave the club course for club picnics.

NEW YORK AND BOSTON.

IT is in no way creditable to the yachtsmen of New York that with the news of the new yacht building by a Boston yachtsman they have abandoned all ideas of doing anything to help themselves, and now sit quietly by, watching Boston do the work and reap the laurels. We are told now that the defense of the Cup is not a mere local matter, but that it is a national affair in which all Americans are concerned; all of which is true in a certain sense, but at the same time it is no excuse for the lack of spirit and enterprise displayed by those to whom the yachting interests of New York have been intrusted. Of course the action of General Paine settles one very important question; a suitable defender of the Cup will be ready in time. But what of the other question that the New York Y. C. seems determined to dodge at any cost, "What can New York do in her own defense?" Much has been said of late years about the defenseless condition of New York Harbor, and the ease with which any hostile power could place the city at its mercy. The case is parallel in yachting; the cups that New York holds and the place she has in the yachting world are both at the mercy of any wideawake and enterprising yacht club.

It is instructive, if not flattering, to compare the course of New York and Boston in this last matter of the Thistle's challenge. Six months since the New York Y. C. received what was practically a challenge for a match this season, coupled with a request that it would name the length of yacht which it would prefer to race, so that the challengers might build of the same length and thus avoid all time allowance. At that time there were half a dozen men ready to build for the 70ft. class, and an exceptionally good opportunity was offered to build up this class, always the favorite one, to have half a dozen new yachts and as many old ones in the trial races, and to give an immense impulse to New York yachting. It is evident that the 85ft. boats are not wanted in this country; they were required for a special end, but they do not suit the wants of our yachtsmen, and no one cares to buy them. The second class, on the contrary, has long been established as the standard size for singlestickers, a boat well suited for American uses, cruising through the season and also for the half dozen races which any sailer each year. It was clear to all that no good could come from the continuation of the large class, but that in the second class much might be done toward building up the fleet; and the Clyde challenge put the opportunity directly in the hands of the New York Y. C.

Did this great club consider the question from the point of view of its bearing on American yachting and New York's place therein? Of course not; it did not propose to be dictated to by any foreign club as to the size of yacht, it took no notice of the request to fix this size, and it went on in blissful serenity, regardless of the dangerous vessel building in the dark. Confident and contemptuous, it made no plans to meet the challenger that was certain to come, except that, in anticipation of Thistle being in the second class, the ancient Pocahontas was brought to the light again, and dark hints were thrown out of what she might do in the trial races.

The whole policy of the club is well shown by its action in this matter; every one knew that some New York yachtsmen were anxious to build provided the boats were not over the second class; and yet the club made the technical objection, that as it did not build a yacht itself to defend the Cup, but must depend on individuals, it could not bind itself to any one size. The consequences were that Americans waited anxiously all winter to know how long Mr. Watson's venture was, and the two boats built in New York in hope of meeting her are both far too small. Again, the club has known that a yacht was building specially to race for the Cup, all the world has known it, and yet the pleasant fiction has been kept up that no challenge was before the club, consequently that it could take no measures to meet one. When a challenge was received it would be time to consider it. If Mr. Gilbert had lately found anything half as ridiculous as these two ideas, Ruddygore would have been a great success instead of a lamentable failure. Every yachtsman knows that if the club had answered the Royal Clyde Y. C. openly last fall, and said that it would race a boat of 70 or 75ft., there would now have been available both Shamrock and Titania, and the lesser cost and greater usefulness of such boats would have led others to build; and it has been equally well known that the New York Y. C. was certain to be called on to meet a new and dangerous boat, and that it would be necessary to build to meet her. Even here an excuse was ready, "we do not know how long Thistle is, so we cannot build yet."

So the time has passed, and with it New York's opportunity to regain what she has lost in the past two years, and now, as far as her place and prestige is concerned, it matters little whether the Cup is lost entirely or only held by outside intervention.

What course has Boston taken, what excuse has she made? No more was known in Boston than in New York, but her yachtsmen realized that the present attempt was far more serious than either of the preceding ones, they knew their own strength and weakness, and at once began the work of preparation. True, while Thistle's length was unknown, no yacht could be built to meet her, but there was much preliminary work to be done. The questions of model, details, builder, material, the supply of steel, and many others were settled so thoroughly that hardly had the news of Thistle's length reached New York, and the New York Y. C. written to ask the loan of Mayflower, before a contract was signed to build and deliver in 90 days a steel yacht for Boston. Comment is unnecessary, the facts carry a lesson strong enough to reach the most conservative and non-progressive.

None can fail to admire the pluck and spirit of Mayflower's owner, who, with one expensive yacht and a foreign challenge on his hands, does not hesitate to duplicate both; but the question may be fairly asked whether, in the interests of American yachting it would not have been better for Boston to have left New York to her own resources this year, to lose the Cup if she is no longer worthy to defend it.

Why not turn the Cup over to Boston now? No doubt the club that has actually defended it for two years and will do so again this season, will be ready to assume the nominal as well as the actual task; and New York Y. C. will be rid of the expense of the races as well as from an exciting and disturbing element in the quiet tenor of her home yachting. Once rid of the Cup, no further trouble need be feared from enterprising Scotch and English yachtsmen; no alarm and disquietude need be felt over the advances of naval architecture abroad; the British jack will be seen no more over challenging yachts in New York Bay, and the New York Y. C. can resume once more the peaceful and placid existence that was interrupted so rudely some years since by the advent of lead keels and Lapthorn's canvas.

MAYFLOWER AND ARROW.

THE answer to Gen. Paine's challenge containing the conditions imposed by the Yacht Racing Association, to which Mr. Chamberlayne has intrusted the matter, arrived this week. Messrs. Paine and Burgess have declined to say what their course will be until the conditions have been fully considered, but they will enter no race where a full and unrestricted use of board is not allowed. The conditions are:

First—The course shall be from off Ryde Pier round the Warner light vessel, thence westward round the Brambles Shoal, and a buoy or mark boat off Lepe and back to Ryde. The yachts shall sail twice round the course, but the owner of the Arrow shall have the right to decide on the morning of the race whether the yachts shall proceed to the eastward first or to the westward. Such decision shall be given before the lots are drawn for stations.

Second—No restrictions as to number of crew or visitors.

Third—The yachts shall start from their own anchors, with no sails set, according to rule No. 16 of the Yacht Racing Association rules for 1887, and their stations shall be arranged by a committee of the Royal Victoria Y. C.

Fourth—The only sails to be carried shall be mainsail, yard topsail or jibheaded topsail, foresail, jib and spinaker.

Fifth—The Mayflower's centerboard, shifting keel or plate, shall be so stopped or bolted that it may not be lifted above the maximum draft of water of the Arrow, but it may be lowered to its full depth, and as compensation for this 10 per cent. shall be added to her rating.

The conditions governing the future contests for the cup are as follows:

First—The cup shall be deemed the property of the yacht club whose representative has last won it, and such club shall be responsible for it. But it shall be allowed by permission of the club to remain in the care and custody of the owner of the yacht which has won it until he is again challenged and his vessel beaten. Nevertheless the owner of the Arrow reserves to himself the right of withdrawing the cup from competition at any time while it is in his possession unchallenged.

Second—No challenge shall be made before March 1 or after April 15 in each year.

Third—Should the club responsible for the cup be dissolved, it shall be transferred to another properly constituted and recognized yacht club willing to undertake its charge. A certificate of tonnage, with the length, breadth and depth of the yacht must be sent with the challenge.

Fourth—Matches for the possession of the cup shall be sailed between a challenging yacht duly certified to represent a properly constituted yacht club of British or American nationality and the yacht which last won it and holds it. And if such yacht be not in existence, or if her rig be altered, her owner or his representative shall select a vessel to compete and defend the cup.

Fifth—The only vessels eligible to compete shall be cutters or sloops, and they shall be not less than thirty tons register, British Custom House measurement.

Sixth—The matches shall be sailed within six months from the date of the challenge, and the holder of the cup shall have the right to determine dates for the matches within that limit of time, one month's notice being given, or this right may be waived by the holder of the cup and the dates decided by mutual agreement.

Seventh—Two matches must be won by one of the yachts to decide the right of possession of the cup.

Eighth—The matches shall be sailed according to the rules of rating and the time allowances of the British Yacht Racing Association for the time being, except where these conditions specify to the contrary.

Ninth—The course shall be the ordinary regatta course of the club holding the cup unless some other course is mutually agreed upon.

Tenth—Sections Nos. 1, 2 and 4 of Yacht Racing Association rule No. 52 of the year 1887, as to cruising trim, shall be observed in all matches.

Eleventh—If one yacht has a fixed keel and the other a shifting keel, centerboard or plate, such shall be so stopped or bolted that it may not be lifted above the maximum draft of the fixed keel yacht, but it may be lowered to its full depth, and as compensation for this ten per cent. shall be added to her rating.

Twelfth—A referee shall be agreed upon and appointed.

Thirteenth—If either yacht declines to start after the date has been mutually agreed upon, and should the excuse for so doing be not considered by the referee to be reasonable, one race shall be awarded to the other yacht without sailing over the course.

Fourteenth—A representative of the owner of each yacht shall be placed on board the other in each race. In case of any dispute the referee's decision shall be final, but he may, if he choose, refer the matter to the Council of the Yacht Racing Association, if the race is sailed in British waters, or to a committee of the New York Y. C., if the race is sailed in American waters.

Fifteenth—If in any match an accident occurs to either yacht, when she is in such a position that in the opinion of the referee she must, beyond all reasonable doubt, have won, he shall order the match to be resailed at as early a date as can be arranged. Under any other circumstances each yacht must abide by its own accident.

Should Mayflower cross she will carry her racing mast with a mainboom of about 50ft. The bowsprit will be 26ft. outboard and the mizzenmast will be 50ft. above deck and stepped 10ft. forward of the wheel. She will carry main and mizzentopsails and a square sail that can be utilized as a spinaker.

THE BOSTON SCHOOL OF DESIGNING.—The winter term of this school closed last week and this week an exhibition of the work was held at the Bird Schoolhouse on Monday and Tuesday.

OUTING.—The sensation on the river last Thursday was the arrival from Waveland of the original, veritable sloop yacht Outing. It will be remembered that the Outing sailed from New York some time last year under the command of Captain Cloudman, an experienced sailor and journalist, to make the circuit of the world. The expedition was inaugurated by the *Outing Magazine*, and the narrative of the yacht's voyage was to be published in that journal. Notices of the yacht's progress and well being were published from time to time in the papers at the ports where she put in, and all seemed favorable till she got off House of Refuge No. 2, on the Florida coast. Here a fierce squall struck the tiny ship and capsized her, bringing the expedition to a summary conclusion. Capt. Cloudman and his companion were rescued and cared for by the keeper of the House of Refuge, brought up to Titusville by the Messrs. Gardner, and thence, via Jacksonville, returned to New York. He reported the Outing wrecked with scarcely a vestige of the yacht left. This was, however, erroneous. She is a staunch little craft. Capt. H. E. Olds, of Waveland, saw her in the surf and bought her as she lay. When the sea went down he got her off, and found that only a couple of planks had been started off one of her sides. With these replaced and the rents in her sails sewed up, the Outing was herself again. Capt. Olds has cut down her keel, so that she now draws about 22in. against 28in. before, and has placed a centerboard in her. This famous yacht is now listed with the boats on Indian River, and her home port is Waveland.—*Cocoa Fla., Messenger, March 29.*

IREX.—Mr Jamison's cutter is fitting out at Fay's yard, where she is being recoppered.

YACHTBUILDING IN SCOTLAND.

IN the same yard where the Thistle is building Messrs. Henderson have in hand a cutter, being built from the design of Mr. G. L. Watson for Mr. W. A. Coats, of Bergeslie, Paisley. This cutter will be about 15 tons yacht measurement, but will be rated among the twenties under the new rating. She measures 45ft. on the load line by 10ft. beam. She is building of wood, and will of course be coppered; steel floorings strengthen her, and, with other appliances, the heavy lead keel will be held in its place. The hull is completed, and deck laid. Deck fittings are of teak, with very low elm rail. A very small and ingenious windlass is fitted forward. The feature of this cutter is a large-sized cockpit, which can be transformed into an after cabin or smoking cabin. This is simply attained by sliding aft a big hatch or companion, that slides forward when not wanted over the cabin companion. This appliance, besides, guarantees safety in the event of a big sea coming aboard the cutter in rough weather. The accommodation below is ample, including forecastle for three hands, pantry, main cabin, closets, and smoking cabin. This cutter is strictly intended for cruising in Clyde, and her gear will be furnished with this intention.

Besides these yachts, Mr. G. L. Watson has on hand two small cutters for Windermere, built after the peculiar fashion and mode which prevails on that lake. Short, broad and deep, these cutters have enormous counters, and carry an extravagant pile of canvas.

The Fifes have in hand a handsome looking schooner of 70 tons. This wooden craft is rounder in the side, has, in fact, got quit of the flat, lean look that was increasing under the older rule of the Y. R. A., and was a particular eyesore to the older Fife. In consequence the schooner is regarded as a prettier boat than has been launched in recent seasons from the famous yard, and Mr. Fife has every reason to feel proud of his latest handiwork. The turn of the quarter and the counter are very graceful indeed, and the clipper bow has had equally good taste bestowed on its form and sweep. And, of course, the line of the deck partakes of the amended form, the craft being altogether about the bonniest of the many bonny boats launched at Fairlie. With a heavy lead keel, the schooner has been strengthened accordingly, and the floors and keelson warrant any amount of strain. The topsides are of teak, with covering board and deck fittings of the same material. The bottom planking is of American elm. With oak stanchions, the schooner will be a very stout cruising craft. Substantial fittings are being put in below, and with plenty of headroom, the vessel shows very large accommodation for tonnage. With Oregon spars and Lapthorn's canvas, she will be ready for any cruising matches, and with her schooner's allowance, will be a nimble opponent any good down-wind day.

Besides the schooner, there is building a cutter up to the 15 rating of the altered rule of the Y. R. A. This yacht has clipper bow and very handsome counter. She is being planked for a very strong scantling to carry any lead she may want. She is intended to race among the twenties under the new rule, and when an owner is found, will be hurried on for the first of the season. With Lenore and Zulu and Amathea, she will help to fill up the 20-ton matches which once on a time were the pride of the Clyde regattas. The Fifes have also on hand a length class boat for Mr. Kenneth Clark, of Paisley, to replace the one he sold last year. She is to have what has got to be named in Clyde a "dislocated" helm, which means that the helm retains its rake above water, while the sternboard remains plumb above water. By this arrangement the helm has the look of having been unshipped, and provokes warnings from passers-by not acquainted with the arrangement. Messrs. Kenneth and Norman Clark have taken exceptional interest in the lugsail match sailing on Clyde, and this new boat will be an addition to the entries.—*London Field, March 26.*

YACHTING IN SAN FRANCISCO.—San Francisco, April 5.—*Editor Forest and Stream:* We are enjoying clear, beautiful weather; the first of the summer trade-winds have come, only to be interrupted once or twice perhaps by the southern rain winds, until the trades gain strength in June to keep the sky clear until November comes. But yachting here, however, is not as steady or as strong as these summer winds, due, in the opinion of some, to the fact that the advent of the larger yachts has hurt the sport, probably by their monopoly of the social field. The Corinthian Club, organized last year to counteract this tendency and give a show to the men of moderate means, seeks to do so by limiting the length to 45ft. l.w.l and it is to be hoped that they will succeed in making the sport as robust and the active fleet as large as it was six or seven years ago. They will open the season and their new club house at Point Tiburon simultaneously. As usual with Mr. Gutte, he has kept the Chispa in commission all the year round. The schooners Lurline and Aggie and the sloop Annie as well as the schooner Virginia (formerly the Con O'Connor) are nearly ready for active work. The yawl Emerald is being renovated after a two years' rest at Stone's yard. The yawl Ripple also goes into commission and will probably have another bout with the Thetis this season. The yawl Frolic is laid up and her owner is in Europe. During the year but one yacht has been built, the singlehander Windward, while I have to chronicle the loss to the fleet of several fine vessels, notably the schooner Halcyon, which after passing through several hands, has at last joined the Oregon fisheries at one-fourth her original cost. Others gone into trade are the Fleur de Lis and the Ariel, formerly of New York. The sloop Clara, also a New York built boat, is now owned by boatmen and so is the Elia. The schooner Whitewing is also for hire. The Dawn now belongs to San Diego, the Rambler at Los Angeles and the Sea Nymph at San Pedro. From statements in the local papers many supposed that Mr. Donalhue's proposed flyer was in process of construction, but it seems that the contract has yet to be signed. It may be that we are in a state of transition similar to that which prevailed in New York and Boston upon the advent of the English cutters. If one could just plump the cutter Clara into this bay how quickly indecision would vanish. At North Beach the Harold brothers have put in their spare time during the past year in building a singlehander on the lines of the Windward, shown in Mr. Kunhardt's "Small Yachts." She is rigged as a yawl, is 18ft. l.w.l. and has a low deck house. It is a wonder to many how so much space below, with standing room almost, can be got with such a fair easy form in such a small boat. Her builders, both amateurs, have succeeded in doing creditable work. I should not be surprised if more like her are built, now that our amateur sailors have an opportunity to test for themselves the amount of solid enjoyment such a boat affords. She is to be launched the second week in April.—S. F.

"WHO WON?"—Under this title Mr. J. C. Summers has compiled a large amount of information in regard to yachts and yacht racing, and has published it in a very neat little volume of convenient pocket size. The principal feature of the book is a list of last year's racers, corrected and verified as completely as possible, and arranged in a very compact but explicit form. The steam yacht record includes the first races of the American Y. C. in 1884, and so is complete to date. Among other interesting matter is a summary of the principal events in American yachting from 1844 to date, a full summary of the races for the America's cup, sailing directions for Long Island Sound, the signal code, weather and storm signals, list of captains of yachts, and flags of the yacht clubs. From the handy size of the volume it may be easily carried in the pocket, and in these days when every one wishes to see and understand all about the races it should meet with a hearty reception from both those who are and those who wish to be yachtsmen.

A SAILING DORY.—New York, April 9.—*Editor Forest and Stream:* My opinion is that if "Albatross" should get caught in a westerly gale like one I was last August, he would not sail dories next summer. A boat 11ft. long may be all right, but 20in. is too shallow. A boat for that neighborhood must be weighted heavily and to be so she of course must be deep. Every one that has sailed a small boat in a seaway knows that she cannot get to windward half as well when she is light as when weighted heavily. Therefore, a good strong boat 18ft. long, 3ft. deep and about 5ft. 6in. wide is as small a boat as can be safely used about there. I was in a sloop yacht 40ft. long and we had all the fun we wanted before we got under Orient, but if it had been "Albatross's" dory we would have started an ocean race of our own.—G. S. T.

LAKE CHAMPLAIN Y. C.—For some time past Mr. W. H. Murray has been doing good work on Lake Champlain and about Burlington by writing, lecturing and talking in behalf of yachting. He has succeeded in building a fleet of sharpies well fitted for cruising and sailing, and has awakened much interest in yachting. This year it is proposed to carry on the work still more actively, and to this end the Lake Champlain Y. C. will be formed, taking the place of the Burlington Sharpie Y. C. A club house will be built at Burlington, and a large membership is anticipated for the coming season.

A LONG CRUISE IN A SMALL BOAT.—A boat 20ft. long, 7ft. beam, and 4½ft. depth, lately arrived at Dover, Eng., from Natal, South Africa, which port she left in May last. The Homeward Bound, as she is called, was manned by three Norwegians, who brought her safely around the Cape of Good Hope. She was covered with barnacles and the paint was gone from her topsides, but the hull was sound and seaworthy after the long voyage.

ANOTHER RIG FOR A SMALL BOAT.—The following account will interest many of our readers who own rowing and sailing crafts, as the details are given with exactness. It is written by Mr J. C. Wilcocks to the *Field*: "As a constantly increasing number of readers of *The Field* of all ages are so much interested in small boats capable of being pulled and sailed, I give the following particulars of one just built by Mr. W. Darion, Mount Batten, Plymouth, for a friend. The dimensions are: Length, 12ft. 6in.; beam, 4ft. 6in.; depth amidships, 1ft. 10in.; draft aft, 9in.; forward 5in. The boat is carvel-built, for the convenience of being so much more easily kept clean, and the plank is yellow pine, the timbers steamed American elm, 1in. wide by ½in. thick, with a space of 7in. from center to center of each timber. The fastenings are copper throughout, the nails rooved with from two to five in each timber—the latter number in a few places where a quick curvature of the bilge requires additional fastening. The gunwales and rowlocks American elm; keel, English elm; thwarts, side seats, stern seat, top strake, and rubber moulding, teak. The stern seat, 15in. wide, forms a convenient locker. The knees are oak, the mast thwart is also oak, and the positions of the various thwarts are as follows, measuring from the foreside to the stern: Mast thwart, 1ft. 3in.; second thwart, 3ft. 4in.; main thwart, 5ft. 10in. The space aft to the stern from this thwart is 6ft. 6in. As these small boats are constantly put too much by the head, when two are sailing, this has been provided against by a plan of shifting thwart, quickly shipped or unshipped at pleasure, and which, being placed 2ft. more aft, keeps the boat in good trim by the weight of the stroke. I found this of great advantage in a 12ft. boat I owned some years since, when pulling a long distance in a calm, or against a fresh wind and adverse tide. The side or quarter seats have shelves attached to and under them, which are very convenient for temporary stowage of a gaff, lines, a sandwich box, or other small matters, or the tiller, etc., which are thus out of the way, and not likely to go overboard. The reels of fishing lines can be placed here when the lines are set for work. The idea of these shelves I took from Guernsey fishing boats. Although this small boat has been built for pulling, she will have two sails for use when the wind is not ahead—namely, a standing lug and a sharp-headed, otherwise known as a shoulder-of-mutton, or Mudian, mizen. Dimensions of standing lug on luff, 5ft. 4in.; head, 9ft. 2in.; foot, 7ft. 9in.; leech, 15in.; mizen on luff, 7ft. 3in.; same on leech; foot, 4ft. 3in. As the owner of this little boat has also a powerful small lead-ballasted cutter, drawing 4ft. water, for which this smaller boat will also do duty as a dinghy, she will not have a centre-plate, which would certainly be an advantage to an owner who kept no other boat."

BUILDING NOTES.—The cutter which Lawley & Son will build from Mr. Burgess's designs for the Agassiz Brothers, will be 52ft. over all, 42ft. L. W. L., 12ft. 6in. beam and 8ft. draft, with 13 tons of lead in her keel. The latter will be cast next week. She will be fitted for cruising....Mr. Morey's steam yacht has been named Janira....Herreshoff Bros. launched on April 9 the steam yacht for Mr. Chas. Kellogg, of Athens, Pa., owner of the Lucille. The name of the new yacht is Clara....Thistle, Mr. Ziegler's sloop, is being lengthened amidships and a new stern added, by Smith & Terry, of Greenport....The plating is completed on the Titania and part of her deck frame is in....At Mumm's yard Shamrock has her deck laid and outside planed and painted....Medusa is afloat again and lying in the basin....Vision is having a new layer of 1¼in. yellow pine over her original planking with a new stem....Pocahontas has received a new rail, planksheer, stanchions and bulwarks....The steam yacht for Mr. Aspinwall is in frame and partly planked.

HOLLOW MASTS AND SPARS.—A correspondent asks the following questions about hollow spars, perhaps some of our readers who have tried them can answer him. One method is to bore the spar with a pump log auger, using a smaller bit as the boring advances from the heel to the head. The old Maria had a hollow boom some 90ft. long and 3ft. diameter, built up of staves and hooped with iron like a barrel, and the rolling booms of the latest catamarans are similarly constructed on a smaller scale. 1. Will a mast sawed down the center and hollowed out and then glued together again, answer for a 38ft. l.w.l. cutter 15 tons displacement? 2. Please explain the process? 3. Would a hackmatack stick do? 4. What thickness of wood should be left for a mast 8½in. at largest place? 5. Must the stick be dry or would a green one answer? 6. What sort of glue is best for the work? 7. Should the stick be sawed fore and aft or athwartships? 8. What wood is best for the purpose? 9. How many bands round a mast 40ft. long are required?

AN OPINION AS IS AN OPINION.—How little is required to make a reputation as a yachtsman is shown by the fact that the owner of the Coronet, simply on the strength of having put his money into a yacht as a business venture, in the same way that he has put it into a magazine and various other investments, is now appealed to on all questions that arise in regard to yachting. Here is a sample of this expert's testimony: "The less water a yacht draws the faster will be her progress; for the water near the surface is less dense than that below. A yacht that has a straight keel plows through the water, and it takes more wind power to force her along than a yacht that is of lighter draft and so shaped that she has a constant upward motion and climbs toward the surface of the waves."

ICE YACHTING IN APRIL.—The season has closed on the Hudson, but further north there is still plenty of ice, and on April 6 the Burlington (Vt.) Ice Y. C. sailed its annual regatta on Lake Champlain in a strong northwest wind. The race was for the pennant held by the Waukeegan, Mr. F. H. Barnes, and the course was triangular, 5 miles, three rounds. The entries were; Brush, Whiting and Rogers; Brownie, Lane and McKillip; Craze, Lyman, Severson and Hendie; U. S., A. Button, and Disease, Grant and Chiott. On the second round Brownie broke her mast and Disease her rudderpost, and both withdrew. Brush won in 33m. 1s., with U. S. second.

THE FITTING OUT SEASON.—The work of the yachtsman changes with the seasons, and now, with the warm April weather, all are busy fitting out. The time for planning changes and alterations is past, and all hands are busy with the scraper, the caulking mallet and the brush. Before you take the cover off your yacht look at "Small Yachts" and refresh your memory on a dozen trifling details that you are likely to overlook and that may give much subsequent trouble if not attended to. They are all laid down in the chapter on Fitting Out, and a few minutes spent in looking them up will be well paid for before the boat is in commission.

ROCHESTER Y. C.—The first meeting of the Rochester Y. C was held on April 4, the following committees being appointed Regatta, W. A. Stace, J. W. Harmon, J. G. Cramer, F. W. Brickford, E. P. Olmstead, J. W. Gee; Membership, C. M. Everest, D. D. Sully, W. H. Briggs. Com. Newell, Vice-Com. Cartwright and Secretary Worts were elected as delegates to the meeting of the L. Y. R. A. The anchorage has been secured and the club has a balance in its treasury. A cruise is planned for Decoration Day to Big Sodus. The cutter building by Williams, of South Boston, for Messrs. Wallbridge, Briggs and Everest will be ready by the end of May.

QUINCY Y. C.—Officers—Com., C. F. Adams, 3d; Vice-Com., H. H. Sheen; Fleet Capt., C. F. Colby; Sec. and Treas., H. M. Faxon; Meas., A. B. Lelois; Regatta Committee, the commodore (ex-officio), E. W. Baxter, H. M. Faxon, G. G. Saville, W. F. Page. The measurement has been changed to length plus one-fifth overhang aft.

THE MOSQUITO FLEET.—There was a brisk N.W. breeze and cold weather for the skippers of the Mosquito fleet to face on April 7, but a good race was sailed. The winners were: First class—First prize, $10, Lady May, Mr. J. W. Tiller; second prize, $5, Baby, Mr. Charles Borden; third prize, a pennant, Sport, Mr. W. Smith. Second class—First prize, $10, Bunty, Mr. M. W. Ransom; second prize, $5, Bessie, Mr. W. P. Cherrington: third prize, $3, Clyde, Mr. B. Walbridge.

FROM HALCYON TO MAYFLOWER.—Once upon a time New York sold to Boston a yacht that had never done anything specially remarkable in the way of speed, and it was a great surprise to many to find that this slow boat had developed, in the hands of her new owner, into a very fast craft. Now, when New York is in a very bad predicament, it is to this same gentleman that she turns first for aid, and moreover she gets it very promptly. Boston is not at present buying any second hand yachts from New York.

A GRATEFUL WHIFF OF THE BRINE.—Leadville, Colorado. I still read the yachting columns of your paper with great interest, although it is six years since I have seen blue water, and round the walls of my mountain cabin are hung many a yacht's lines and plans, cut from your paper—an interesting collection.—C. A. J.

FIFTY YEARS OF YACHT BUILDING.—At the annual meeting of the Institute of Naval Architects last month, Mr. Dixon Kemp read a paper with the above title, in which the development of the modern yacht from the old revenue cutters and the influence of measurement rules, was fully traced out.

BURLINGTON BAY.—The cutter Whistlewing is having 2½ tons of ballast removed from inside to the keel. A cutter is also building for Mr. Webster, to be 31ft. on deck, 23ft. 6in. l.w.l., 5ft. beam and 4.38 tons (short) displacement. Her mainsail will have 356ft., staysail 78ft., jib 119ft., topsail 86ft., a total of 633ft.

INTERNATIONAL RACES AT BOURNEMOUTH.—The dates set for the International Regatta at Bournemouth, Eng., are Aug. 9 and 10. The sum of £400 will be given in prizes, the largest being 125 guineas for the cruising yachts.

SOUTH BOSTON Y.C.—Officers—Com., Arthur Fuller; Vice-Com., G. S. Reed; Fleet Capt., C. F. Morrill; Sec., John C. Merry; Treas., Thomas Christian; Meas., James Bertram; Trustees, C. McKenna, Charles Griffin and A. H. Hall.

THE TRAVELERS paid an average of 60 accident claims a day in 1884.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. S. I., New York.—There is no such list.

TEJA, Washington, D. C.—The rifle you name will answer the purpose.

F. M. H.—Monument Beach is near Beverly, but there is another on Cape Cod.

A. L., Metamora, Mich.—"Gibson's Complete American Trapper" is the right book.

L. W. M., Dillingersville, Pa.—The rust spots can be removed without injury to the choke.

J. T. R., Stratford, Conn.—We have never published the lines of any of the boats you mention.

A. A. G., Brainerd, Minn.—Write to B. Greenwood, corner Barclay and Church streets, New York.

T. A. R., New York.—See the late numbers of the FOREST AND STREAM for information about birch canoes.

H. O. B.—The best thing on the gun-shy dog subject is Hammond's treatment of it in "Training vs. Breaking."

J. D. E.—1. For alligator hide quotations write to R. G. Salomon, Newark, N. J. 2. We have never heard of the use of alligator oil.

J. E. R., Wellsbridge, N. Y.—There is nothing published on the building of paper canoes. Canvas canoe building is described in "Canoe and Boat Building."

L. E.—1. Sheepshead Bay, Coney Island Creek, Fort Hamilton, etc., are favorite fishing resorts. 2. The gun is a safe one and has been used with satisfaction.

B. S. H., Albany.—Correspond with any one of the dealers whose addresses are to be found in our advertising columns. You will get the double-barreled gun for $35 and the single for $15.

J. G. B., Kootenai Lakes, Alberta.—We presume that the eagle claw trap, if still in the market, can be procured from any of the dealers in sportmen's goods. It is a villainous contraption.

C. P., Brooklyn, N. Y.—1. Inquire of the secretary. 2. The *Canoeist* publishes a list of canoe clubs and secretaries. 3. A canvas canoe is the easiest for a beginner and will make a very serviceable boat.

A. S., Medford, Ont.—1. We will endeavor to get the plans of sharpie. 2. There is none in New York, Boston or Philadelphia. 3. A pleasure vessel cruising in United States waters would pay no duty or dues.

A. A. Burlington, Vt.—There are several makes of copper paint for bottoms, which are intended to prevent fouling and the growth of weeds and barnacles. They can be had of dealers in paint in New York or Boston.

O. A. M., Toronto, Can.—The preparation of bottom paints is a specialty with the large manufacturers and their receipts are kept secret. It will pay you better to import some good make than to try to mix a paint yourself.

J. W. C., New York.—Will you kindly inform me of some first class places for black bass fishing and oblige? Ans. Go to Back Bay, Lake Champlain, or to Lake Erie at Kelly's, or Pelee Islands; or to Brant Lake, N. Y.; or to Lake Hopatcong, N. J.

J. H. S., East Oakland, Cal.—We repeat information already given: Sleeping bags are usually oval and oblong and the ordinary size is six and seven feet in length by three or four wide. The bag should be doubled, the inner one being of the skin selected, and the outer of canvas, duck or drilling. The two should be sewed together around the top and at the corners at the feet. A stout string—tape or cotton cord—should run round the opening of the bag so that if he desires to do so, the occupant can tie the bag tight about his throat. The choice of a skin for the inner bag may present some difficulties. Blanket is sometimes used, but it is not nearly so comfortable nor so warm as fur. The skin should be light and dressed very soft, and should at the same time be well furred. Buffalo is too heavy, caribou skin is highly recommended and would be admirable we imagine in very bitter weather. Lynx is light and well furred. One of the best of the bags that we have seen was made from a number of small skins, apparently of dog. We think that woodchuck skins in good fur would make a capital bag. It would be well in making a bag for use in an open camp where one may have to sleep close to the fire, to have the canvas or duck which forms the outer envelope, dressed with some preparation which would make it fireproof. Most of those who have camped in this way will remember how often they have had their blankets burned by sparks which snap from the fire during the night, and as canvas might catch from a spark and smoulder a long time, the bag might easily be ruined—the outer covering being burned and the skins scorched.

DAKOTA.—A dictionary of the Dakota language, by Riggs, was published by the Smithsonion Institution in 1852. It has long been out of print, and can be secured only at second-hand book stores. The Bureau of Ethnology (Washington) is preparing a revised edition for the press, but it will not be published for a year yet.

R. H., Syracuse, N. Y.—Last fall I shot an uncommonly large gray squirrel, and noticed a bunch at the base of the jaw about the size of a hickory nut, with a very small opening in it. The hair around the bunch was worn away as if the animal had tried to get rid of the disagreeable bunch. Upon opening it with my knife and pressing on it, out came the inclosed, which was about as large again, but has dried up. Ans. The grub is an *œstrus*, not infrequently found in squirrels; allied species infest deer, rabbits and cattle.

ORION GUN CLUB, Orion, Ill.—Is there more penetration with more recoil? Ans. The force of the recoil will vary with the charge; a heavier load will give greater recoil. Penetration also depends upon size of charge; the best penetration will be secured with the largest powder charge that the gun will burn. The more powder (up to this limit) the more penetration and the more recoil, other things being equal. On the other hand an increase of shot, without an increase of powder, would add to recoil, but not give better penetration.

THE FOREST AND STREAM'S EXPEDITION.

[From the Philadelphia Times, April 7.]

THE *Times* prints to-day by special arrangement with the New York FOREST AND STREAM, the first of [its] letters, giving the only description ever presented of a winter journey through the wonderful National Park of the Yellowstone region. Few of even the more intelligent citizens of this country have any conception of the grandeur and romance of the Yellowstone. If it could be found in Italy or Russia, it would have been immortalized in song and story by American writers long ago; but it is here in our own green land, accessible by railway, and American tourists are content to be whirled through it behind the iron horse in summer, and leave it to forgetfulness in winter. Scores of every nationality have braved the perils of the Matterhorn, and many have given their lives as the price of adventure; but until now no man has ever explored the romance of the Yellowstone in winter, and the story [of the FOREST AND STREAM'S Commissioner], confined to unvarnished truth, makes romance pale before it.

In addition to the general interest that must be awakened by [the Commissioner's] winter exploration of the Yellowstone the public will be quickened in interest in the subject by the fact that the National Government has set apart the Yellowstone region, by special act of Congress, as a National Park. It is to stand alone in all its virgin grandeur, while the march of civilization will speedily efface much of the natural beauties of the other portions of the great mountains of the West. In no part of the continent is there such varied and matchless natural splendor as is to be found on the Yellowstone. There is not a wild freak of nature that is not there presented in inconceivable beauty, and half a century hence, when the new Empires of the West shall have their tens of millions of people, the Yellowstone Park will be the objective point of the tourist, the adventurer, the invalid and the scientist. It is the patrimony of the whole American people, and the one spot between the Eastern and Western seas that will be preserved in all its natural magnificence.

Much has been written about the romance of the Yellowstone, but little of it has been other than fragmentary and traditional. Its summer beauties have been described and illustrated many times; but its winter solitude and grandeur have never before been thoroughly explored or presented to the world. It has until now been an unknown land from January until spring time, and expeditions under the protection of Government troops and the guidance of Indian scouts have hitherto failed to make a winter exploration of the Yellowstone: but [the FOREST AND STREAM'S Commissioner] has finally accomplished it, and his story is as truthful as it is thrilling and romantic. We need not offer apology for the space the first of the letters occupies, as it will be universally read and with uncommon interest. The whole story will be told in three additional chapters.

[From the New York Herald, April 8.]

But exploration is feasible here, as has been shown since the "fakers" fled eastward. A few weeks ago a party equipped by the FOREST AND STREAM came all the way from New York to explore the park in the winter, and they came here without any "blowing," went through and have got back again with some real information. Their purpose was not to post advertisements on the rocks or to measure big icicles or fathom deep snow drifts. They came largely to learn whether the great National Park was fulfilling one of the chief purposes for which this reservation was originally set apart—namely, whether the park is becoming in fact a refuge and breeding ground for the great game animals and birds of the forests and plains of Montana, Wyoming and the Rocky Mountain slopes. For a quarter of a century the tide of settlement has passed the game backward into smaller confines, and the ruthless slaughter of both animals and birds, practically unchecked by any legislation, had diminished the herds and flocks until there was great danger of the extinction of the various species. It was then argued that the Yellowstone Park region, being actually useless for purposes of settlement, might if properly protected become the refuge and home of the hunted denizens of the wilds, and that instinct would soon lead them to seek its seclusion when they found that there alone, amid all the surrounding wilderness, they were unmolested.

DIFFICULTY of breathing, a short, dry cough, a quick pulse and pain in the left side are symptoms of approaching consumption. Relieve the chest and cure the cough with Hale's Honey of Horehound and Tar. Sold by all druggists. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

THE NEW L. C. SMITH HAMMERLESS GUN.

This new gun embodies all the essential features of our hammer gun, together with a new oscillating cocking mechanism and automatic and independent safety combined. This gun is not equalled in ease of manipulation, symmetry, durability and shooting qualities by any hammerless gun made.

Of the eleven gentlemen who broke 100 straight inanimate targets for a place in the Chamberlin Cartridge Tournament prizes, five of them used the "L. C. Smith" gun. The following are the gentlemen: D. C. Powers, Cleveland, O.; Andy Meaders, Nashville, Tenn.; H. McMurchy, Syracuse, N. Y.; Fred Erb, Jr., La Fayette, Ind.; J. C. Hendershot, Cleveland, O.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

A DUTY OF SHOW MANAGERS.

THERE was a disgraceful incident at Pittsburgh, which, because the principles involved in it concern all bench shows, deserves comment.

D. Bryson put in an appearance at the show, where he and his brother, P. H. Bryson—the self-confessed profferer of bribes at field trials—had some setters on exhibition. Among the visitors in attendance was Mr. Chas. H. Mason, who was by special arrangement reporting for the FOREST AND STREAM. On Wednesday, as Mr. Mason was engaged in taking notes of the dogs, he was approached by this fellow Bryson. The Memphis bully, club in hand, pistol in pocket and "backed" by two burly individuals presumably hired to help him, came up to Mr. Mason in a menacing manner and assailed him with profanity and foul language. Mr. Mason, too much of a gentleman to lower himself to bandy words with a blackguard, at once called upon the show managers to eject this band of ruffians from the hall, pointing out to President Gregg that fellows of their stripe never should have been suffered to gain admission to the show. By reason of cowardice or through subserviency to the Bryson clique, the managers sucked their thumbs and did nothing. Thereupon Mr. Mason very properly repaired to the Mayor's office, where a warrant was issued for Bryson's arrest, and a police officer being sent to hunt him up, he was put under bail to appear for trial in the police court at 9 o'clock the next day. At the appointed hour the complainant was on hand, but Bryson jumped his bail, which was then and there declared forfeited; and the Mayor publicly thanked Mr. Mason for the very commendable action he had taken.

The conduct of the show managers in this affair was simply disgraceful. It was a plain shirking of duty, and one part of it has a worse look than even that. When the policeman was hunting for Bryson, instead of helping the officer to collar him, as they ought to have done, Mr. Gregg and others actually denied to the policeman any knowledge that such a person was attending the show; and this in the face of the fact that Bryson had been constantly with Major Taylor, the setter judge, both in the show building and out of it.

There was but one right course for the Pittsburgh managers to have pursued. When informed of the presence of foul-mouthed brawlers, they should promptly have taken some action which would at least have demonstrated a desire on their part to secure for their patrons immunity from ribaldry. This is the duty of all bench show managers, if these exhibitions are to be kept within the pale of respectability and dog show reports are not to come under the head of police news. If Bryson and others of his kidney are to have unrestrained license for ruffianism like that enjoyed by them at Pittsburgh, self-respecting exhibitors will cease to patronize the shows, and the public will not attend them. No decent dog owner cares to be mixed up with such a crowd; and the ladies and gentlemen who now support the shows with their gate-money will not be likely to risk their lives by venturing into an exhibition hall where a shooting affray may take place at any moment.

This is a subject on which, if any, the American Kennel Club should take immediate and decided action. The ruffianly element must be eliminated from dog shows. In this particular case, both members of the firm of P. H. & D. Bryson should be debarred from entering their dogs at field trials or bench shows. P. H. Bryson is, by his own shameless confession, guilty of an attempt at field trial bribery, and on this ground the Brysons' entries should have been refused at Pittsburgh. In addition, D. Bryson is guilty of such conduct at a show as to have caused his arrest by the authorities of the town where the show was held. Bryson the field trial briber and Bryson the bench show brawler should both be read out by the kennel authorities competent to act.

MAKE IT A CRIME.

LAST Sunday furnished its quota of did-n't-know-it-was-loaded fatalities. A half-breed in a Chicago dime museum, to show the action of a revolver, pulled the trigger, and as the press dispatches have it, "the usual explosion followed," the bullet entering the breast of a bystander. On the same day a party of friends, among whom was Frank M. Fonda, superintendent of the main stem of the Georgia Central Railroad, set out for Savannah on a steamboat for a trip to Tybee Beach. The excursionists were in high spirits, laughing and joking, and good feeling reigned. Here is what happened, as told in the newspapers:

> While crossing the sound Fonda left the party in the pilot house and went back to the cabin. Half an hour later he returned to them. As he started up the ladder leading from the deck to the pilot house he called to Abrams, who was leaning out of the window, "Jack, I'm coming."
>
> Abrams laughed and replied, "No, you're not."
>
> "Yes, I am," Fonda said and climbed up to the window.
>
> Abrams picked up a Winchester rifle which lay on a seat in the pilot house, pointed it at Fonda, not knowing that it was loaded, and pulled the trigger. The weapon was discharged, and Fonda, who was half way up the ladder, let go the rail to which he held and fell back on the deck dead. The rifle which Abrams thought was not loaded had been loaded by Fonda himself soon after the tug left the city. The ball entered just under the left eye and pierced the brain. Death was instantaneous.

There should be a strict law, strenuously enforced, making it a criminal offense to point a firearm at a human being under any circumstances except where actual shooting would be justifiable. Such a law is not needed for the added punishment of the fatuous individuals whose fatal foolishness brings wounds and death to their victims and anguish and remorse to themselves. Magistrate's fine and jailer's bar would add little to the self-wrought punishment of a man who, in joke, slaughters his friend on a sunshiny Sunday morning. The benefit of such a statute and its enforcement would be found in its preventive effect. If every time a pistol or shotgun or rifle were aimed at a person, the fool at the stock was haled before a magistrate and fined, people would, after a while, begin to understand that this sort of play must not be indulged in, and the jocular murders would decrease. So long, however, as a man who goes through the pantomime of killing another in play, or who actually does kill, is let off without any punishment, the "accidents" will be multiplied.

THE wild beast resources of the New England States are by no means exhausted. They pay $10 a scalp for bears in New Hampshire, and the crop yields between $800 and $900 annual bounties.

SNAP SHOTS.

THE British Columbia Game Protection act of 1887, of which we give an abstract in another column, is plainly inadequate in many of its provisions. Deer are forbidden to be killed for their hide alone, but nothing is said about the killing of elk, caribou, mountain sheep or goats for their hides or heads. As British Columbia is likely to be the coming hunting ground for big game shooting, it is a great pity that some more satisfactory provision with regard to these large animals was not inserted in the bill. The act is further open to criticism because it affords no sufficient protection to birds other than game. On the other hand the provision which permits game to be sold only for three days after the commencement of the close season might well serve as a model to legislation in our own States. This law will, it is hoped, be improved at another session of the British Columbia Legislature, and when this is attempted, the framers will do well to consult Mr. John Fannin, Curator of the Provincial Museum at Victoria. Mr. Fannin is an old hunter and a naturalist as well, and no one more competent to advise on game legislation can be found in the Province.

Finn, the Park Row saloon keeper and Assemblyman in the New York Legislature, who wants to serve baby lobsters as free lunch to his patrons, has pushed through the Senate his bill to repeal the present law. It is reported that the bill was passed on the representation of Senator Murphy, that Commissioner Blackford's opposition to it had been withdrawn, and Mr. Blackford is said to be highly indignant that he should have been so misrepresented, and the Senate deceived. There is nothing novel in this strategem of passing a bill by hoodwinking the members. When it comes to game legislation at Albany anything is fair so long as it carries a point. This repeal of lobster protection is a vicious measure and is just the sort of bill that Governor Hill may be expected to sign with cheerful alacrity.

Residents of Gardiner, Montana, who have tried the Yellowstone for trout this year, complain bitterly of the scarcity and small size of the fish. Before the railroad was built it was an ordinary thing to catch a string of from ten to fifty pounds of trout, while now an angler has to be content if he carries home three or four pounds. This is not in consequence of over-fishing, but it is a result of the infernal devices employed by the road graders. These lazy fellows—too lazy to fish—had a way of exploding dynamite cartridges in the pools and then scooping up such big fish as floated within easy reach, while the rest were carried on by the stream. This depleted the river. It is not the only river that has suffered in this way, nor is it likely to be the last.

Mr. George M. West, Assistant Superintendent of the Chicago and Northwestern Railway Co., sends us a handsomely printed volume, privately printed as a souvenir of a canoe cruise taken by himself and companions from Escanaba, Mich., to Traverse Bay, in August, 1886. The illustrations are artotypes from negatives made by the amateur photographer of the party, and some of them are exquisite bits of work. The preparation of such a volume, text and illustrations, is an admirable method of preserving the pleasant memories of cruise and camp.

"Wolves" are said to be making great havoc with the deer in the vicinity of Bog Lake, in the Adirondacks. George Muir, the Lowville trapper, recently reported finding six partially devoured carcasses of deer which had been killed by "wolves." This comes of letting the "wolves" go unchained, and turning them loose to forage in the woods to support themselves through the winter, so that when the city "sports" arrive in mid-summer the "wolves" will be in condition to run deer into the water.

Whatever has become of that scheme of buying up thousands of acres of New Jersey pine lands and converting them into a gigantic game preserve?

Arbor Day is an anniversary which is growing in favor, and each year sees its wider observance. The influences of the day are all good.

April is not a decent season for deer killing, though it is in practice an open month in some of the Southern States.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

SPRINGTIME IS COMING.

SEE! on the elm boughs the robin is swinging,
Hark to the note of the bluebird clear ringing,
List to the tidings they sweetly are bringing,
Springtime is coming, and summer is near.

Now o'er the ledges in cataracts leaping,
Now in still pools 'neath the dark hemlocks sleeping,
Now in long curves through the brown pastures sweeping,
Hear, the brook tells us that springtime is near.

Swift to the northward the wildfowl are winging,
Soon in the shallows the trout will be springing,
Soon in the meadows the bobolink singing,
Springtime is coming, and summer is near.

Soon on the hillside the grouse will be drumming,
Soon 'round the flowers the bee will be humming,
All their notes saying that summer is coming,
Summer is coming and springtime is near.

Daily the shadows are length'ning before us,
Soon will the leaves cast their soft shelter o'er us,
Nature exulting will join the glad chorus,
Summer is coming, and springtime is near.

Welcome the guests with a greeting of pleasure,
Open your hearts to receive the sweet treasure,
Tune all your voices to join in the measure,
Summer is coming, and springtime is near.

CHARLESTOWN, N.H., Easter Sunday, 1887. VON W.

WINTER IN WONDERLAND.

THROUGH THE YELLOWSTONE PARK ON SNOWSHOES.

III.

AT the Lower Basin we found Mr. James Dean and wife in charge. They were living in one of the comfortable log cottages belonging to the hotel. Mr. Dean is one of the old assistant superintendents, who for years did more to save the Park from destruction by fire than any other assistant. Stationed in the cottage at Norris he daily rode each way on the road, putting out fires and removing obstructions from the geysers and springs; keeping a sharp lookout for specimen fiends. It is to be regretted that Congress did not appropriate money for the protection of the Park and place such men as Mr. Dean in charge. The Yellowstone Park Association have had him in charge of their hotel at this place ever since they started. During the winter he has been keeping a record of the maximum and minimum thermometer readings, the depth of snow fall and earthquake shocks. The latter occurred first on the 5th of November. There was first a slight shock, with a long rumbling sound accompanied with a jar, the sound coming from the east and passing on west, where it appeared to strike the hill on the west and stop.

On the 7th, or more properly the 8th, at 12:50 A. M., occurred a second shock. There was a rumbling, and then a shaking and swaying of the cabin so that the dishes rattled. Mr. Dean was awakened by the movement of the house; a large dog asleep in the next room was frightened, and going to the door begged to be let out. This was the heaviest shock felt, and, I believe, the one that was so heavy at Norris. The next night, Nov. 9, there was a rumbling sound which came from the east, a very sudden shock or jar, the sound passing on and ending apparently at the hill on the west; the whole thing was over in less than ten seconds. On Nov. 27 the same rumbling sound was heard coming from the east; as it passed under the cabin there was a slight shock felt. On Dec. 20, at 7:30 P. M., a slight jar and shock was felt, accompanied with the usual rumbling noise. This account is as Mr. Dean gave it to me, and can be depended on as reliable, without any sensational additions.

The thermometer readings for that part of January while the Schwatka explorers were finding the snow so deep on Willow Creek, and the cold so intense (—51°) I give below. The readings are taken at noon from self-registering thermometers:

	Max.	Min.		Max.	Min.
Jan. 6....	+26°	— 1°	Jan. 8....	—13°	—31°
Jan. 7....	+ 5°	— 5°	Jan. 9....	0°	—22°

The highest in January was on the 3d, +33°, and the lowest the 8th, or night of the 7th, —31°.

The snowfall up to date was for October, November and December, 58in.; January, 51in.; February 1 to 18, 44in., a total of 153in. or 12ft. 9in., a very respectable amount of snow, considering that March and April are very snowy months, some years as much falling in these two months as in all the others put together. The snow was drifted around the buildings in immense piles. This hotel is the only one at all exposed to the wind, the others are sheltered either by timber or hills. Around each building on three sides would be a narrow space, the snow drifted in perpendicular walls. On the other or north side it will be piled up against the building 7 and 8ft. deep.

On Feb. 18 I made a new pair of snowshoes for Jack, his being, for him, unmanageable. This took most of the day. Flocks of ducks were often seen flying up or down stream. Their "quack, quack" could be heard in the streams on each side of the group of houses.

On the 19th, a clear day, I visited the Lower Basin, crossing the open meadow between the hotel and the Fountain Geyser. On this flat I found the snow from 1 to 3ft. deep. I turned aside to the Third Geyser Group, but saw nothing unusual here. The Surprise Geyser showed no signs of having had an eruption this winter, and the other pools and springs on the flat were about as usual. At the Fountain I was rewarded by a beautiful sight. A small grove of trees about a hundred yards to the northeast were a mass of ice formed from the steam that had drifted to them from the Fountain Geyser. The central tree was a white monument, a tower resting on a base seemingly formed by arches of ice uniting around the tree some 10ft. from the ground, making a grotto through whose passages one could walk, the tree's trunk supporting the whole. This monument was surrounded by others, each one glittering in the bright sunshine and well worth a fifty-mile snowshoe trip to see.

Approaching nearer and going around the group, I noticed a great change. Most of the limbs and twigs had no ice or snow on them on the side away from the geyser. Toward the geyser there was a thin ribbon of ice fastened by one edge to the twigs and small limbs, while on the body and large limbs the ice was in masses. These ribbons were two inches wide and less than a quarter inch thick. They were made up of bands of different shades of ice. Next the limb was a clear, transparent strip a quarter inch wide, then came a band of white ice, then a thread which was perfectly clear, next a line beautifully shaded, like porcelain. The whole was like a ribbon of banded agate, the outer edge being a pure dead white. The last addition of frost to the ribbon was a little thicker than the rest and somewhat more wavy—sometimes almost like a fringe. These ribbons followed the line of everything that supported them. In a few places they were broken off; but on the whole, everything that could support their weight was thus ornamented.

Leaving here after spending an hour and only once attempting to make a sketch of this beautiful grove, I moved on to the great Paint Pots and other geysers. Here I saw nothing as interesting as the frost work. The coloring was not as brilliant as in summer. The ice and snow came up to within a few inches of the pools and to where the water fell from the geysers. Wherever the hot water had cut channels through the fields of ice, the bottoms of the streams were colored, as is usual where the water is hot.

Returning to the Fountain I enjoyed, before I left, another look at the Monument Grove. While looking at it the Fountain went off, and I was soon surrounded by clouds of steam from the overflowing water. As a strong cold wind was blowing from the southwest, I left here to get away from the steam, following down one of the channels on a run with the hot water only a little way behind me. Getting to the flat I used my snowshoes again. In recrossing the meadow I saw many very thin places in the snow, and some spots where the ground was bare. Either the ground is warmer here from internal heat or the snow has blown off, as there were many wet places. It seems probable that the slight depth of snow here may be accounted for by the heat having melted most of it.

Rabbit, fox, coyote, wolverine and lynx tracks crossed and recrossed one another on the flat. They tell me here geese and swans have been seen in the Fire Hole River this winter, but I saw none.

Soon after my return to the hotel, Mr. Kelly came in from Norris with a man Sullivan, whom Mr. Dean had sent for to work around the place. Sullivan had started from the Mammoth Hot Springs with a very poor pair of snowshoes. Foolishly passing the tent we had propped up, he went on a little further, and when night overtook him, camped in the snow. Breaking off dead limbs he lit a fire by some dead trees and this he kept up all night. In the morning he was down in a hole in the snow, out of which he could not see. He had frosted his feet during the night while gathering firewood. The next day he made in to the Norris Hotel in an exhausted condition. He went to bed soon after arriving and Mr. Kelly let him sleep some sixteen hours. The third day, after having rested up, Sullivan started for the Lower Basin. Mr. Kelly accompanied him, intending to go only part way, but finding that S. was inclined to stop too often, Kelly concluded to come on to the Basin with him, fearing that if he was left alone he would not make in or freeze to death in the night. By alternately encouraging and threatening, Kelly induced him to keep on until he got him safe to the hotel. If left alone there is little doubt that Sullivan would have frozen to death that night, as it was very cold, —21°. Mr. Kelly, although a new hand at snowshoeing, has been out frequently on the road, helping men in, and looking for the overdue. He was out after some of the Schwatka party when their own men would not go, was out looking for Con when he came to our camp, helped Sullivan through, and rescued for Mr. Jones a horse that had been left on the road exhausted.

On the 20th, a bright cold morning, the thermometer reading —21°, we started from the Upper Basin. As the telephone wire was down we took a piece to repair it, expecting to find it broken where it passes over a hot spring where, when it is very cold, the wire gets heavily loaded with frost from the steam. The road was often crossed by small game tracks. We flushed two dusky grouse, saw several pine squirrels and a flying squirrel. These last I did not suppose, a year ago, were to be found in the Rocky Mountains, but they are very abundant about some parts of the Park. I have seen them only at nightfall. I think they are about but little in the daytime. Soon after crossing the Fire Hole River, I saw a very large lynx. I called Jack's attention to him and he thought it was a lion until he saw there was no long tail. A little further on we came to a place where the lynx had watched our approach. Wishing to know more about us he had crossed the road and was passing to the windward of us when I saw him. He was grayish on his back, had reddish gray sides and light gray belly—a Canadian lynx and a very large animal of its kind. Its track measured 4in. wide and 6in. long. It did not stop long in sight, but soon disappeared in the timber. I gave a cat-like call, hoping to stop it, which I did, but it was behind some brush and out of sight. Here it stayed a moment and then trotted on.

While traveling through this section I was constantly on the watch for bison or their sign, as I have reason to believe there is a small band wintering within a circuit of two miles or so of this locality from signs seen in the early spring last year. I was disappointed in not seeing them. Had I had the time, I would have devoted a week to looking them up.

We soon came to the Midway Geyser Basin, a part of the Lower Basin, and sometimes called "Hell's Half Acre." Here are the Excelsior Geyser, Prismatic and Turquois Springs, with several others of lesser note. The whole surface of the formation was covered with snow and ice, except in a few narrow channels made by the overflowing waters. Even some of them ended in fields of ice and snow, especially those from the Prismatic Spring, only one or two streams finding their way to other pools of hot water, the rest disappearing in the snow. Leaving our snowshoes we traveled from place to place in these channels, which we could easily do, as the water in them is very shallow. At the Turquois Spring the snow and ice came so close to the hot water that we could not walk along the edge of the spring without stepping in the hot water. The spring was as beautifully blue as in summer—even more so by contrast with the surrounding banks of snow. We could walk around the Prismatic Springs without trouble, as the overflow is about the same everywhere, melting the snow off for from 10 to 50ft. Here the coloring, as usual in winter through the Park, was dull.

Wading through banks of snow we came to the great Crater of the Excelsior, the largest and most powerful geyser in the Park and in the world when it was in action. It was boiling and bubbling all over, and most of the surface was hidden by dense clouds of hot vapor. The center was boiling more violently at times. Now and then one could catch a glimpse of a mass of water 25ft. in diameter, thrown up from 5 to 6ft., sending to the shore waves which constantly wear the banks away, undermining the sides until they cave in, only to be worn out again by the constant wave motion of the hot water. There is often a roar as the steam rushes up through the water, giving one the impression that there is going to be an eruption at once.

There has been a great amount of sensational stuff written about this geyser. One writer has it in eruption at the time of the Charleston earthquake, throwing out red hot rocks, flames, water, steam, sulphurous gases, smoke; in fact, a volcano. Others have seen every indication of "its having just gone off, it was so wet around there," forgetting that the waters of the Prismatic Spring flow all around it. No reputable witness claims to have seen it in action since the fall of '82, which was the only time I was fortunate enough to see it in all its glory. It did throw out pieces of geyser formation some 4in. in diameter and 2in. thick; they were the largest pieces I saw thrown out. I have heard people say that they have seen it "throw out rocks as big as that stove."

As a proof that no eruption has taken place this winter, on all sides banks of ice and snow, from 1ft. to 5ft. deep, came down close to the edge of the crater. On the west and south sides there was no room to walk, and we had to keep back on the snowbanks. On the side toward the Prismatic Spring great icicles hung from the formation almost to the surface of the water. On a piece of fallen formation, forming a little island near the shore, was a little snow. The porous nature of the formation makes this rock a very poor heat conductor, and I believe this to be the cause of so much ice and snow so near the great bodies of hot water. We visited the other pools, but saw nothing of special interest. Just before reaching the bridge where we recross the Fire Hole, we met the man in charge of the Upper Basin Hotel, Mr. Roake, and his son Willie, a 12-year old boy, both out on snowshoes, the boy being able to do his ten miles in a day with any one. They had just repaired the broken wire where the break was supposed to have been, and were looking for us, expecting to see us on the road. With this addition to our company we went on, noticing many ice-covered trees like those at the Fountain Geyser, wonderful and beautiful beyond words. Soon after Mr. Roake turned back with us, we came to a large lynx track which had struck his trail, followed it a little way, and then crossed the

road back and forth, ten or fifteen times, traveling like the letter S. Just before getting to the Basin, another son of Mr. Roake came to us, Bert, a boy 14 years old, and a good snowshoer.

Mr. Roake and his family were living in the log-house in front of the hotel, which they had fixed up for the winter. We soon came in sight of a stove-pipe above a bank of snow which showed where the cabin was. We could just see the top of the house when we got on the same level with it. The snow through this section had settled considerably, as was shown by little mounds 2ft. high around every tree, bush and stump; still, on a level, there was 7ft. of snow. Soon an object came up out of the snow which proved to be another son of Mr. Roake, Harry, a little fellow seven years old, and soon a little girl four years old popped up out of the entrance to the cabin to tell us that the telephone was all right. We soon descended into the cabin, and were surrounded by these children, whose nearest neighbors were ten miles away—too far for a call except over the telephone, which they all use. Sending to Mr. and Mrs. Dean word of our arrival, we were soon sitting down to a good meal, and, as this was to be our last stopping place before striking out for the forests and streams, and lakes and rivers of the Shoshone and Yellowstone country, we made the most of it.

We built a fire in a tent which had been standing here ever since the old Y. P. I. Co. started. This we made comfortable for our sleeping room.

Before dark we saw a fine display by the Beehive and Old Faithful geysers. The evening we spent with Mr. and Mrs. Roake's happy family. All the children know how to play chess, an unusual thing in the mountains. Even the four-year-old Topsy played two games. I left my king exposed to see if she would notice it, which she did, mating me at once.

The morning of the 21st, in company with Mr. R. and son, I visited the whole of the Upper Geyser Basin, going out past the Castle to Iron Creek, which was open, crossing it twice on a snow bridge without getting off our shoes. Along this stream down to the Specimen Lake and Black Sand Geyser there were many bare spots with bright green grasses, and several water plants growing in the warm water and earth, some even showing flower buds. The bright green mosses and plants looked doubly green beside the white snow. All along this creek was to be seen the usual number of ice forms. One in particular was very life-like. It looked like an Esquimau, dressed in white bear robes, with a bundle of sticks in his arms. He had a woe-begone expression on his face, as though in trouble because he had so little wood.

We passed across Specimen Lake on snowshoes and by the Black Sand Geyser, the Devil's Punch Bowl to the Splendid Geyser. This went off very soon after we had reached it, giving us one of the finest displays I have ever seen it make. I was under the impression that the geyser action would not be as attractive in winter as in summer, owing to the great amount of steam thrown off in cold weather, but I find that I was mistaken. The steam only adds to the general effect, the jets of hot water shooting up through the clouds leaving a trail of steam behind, turning in the air and descending like a comet with the tail of steam following them until lost in the rolling masses of vapor lower down. This geyser I believe to have increased in action since last summer. Crossing the Fire Hole River on a snow bridge we saw all the great geysers. Near the Giantess was the usual display of ice-covered trees. This geyser has been in eruption all winter with intervals of nine to fourteen days. We returned by Old Faithful, which has been regular all winter in its hourly eruptions.

On the 22d, with Mr. Roake and his son Bert, I went out to the Lone Star Geyser. We traveled among the snow-laden pine timber, zigzagging up a long hill until we had reached the summit of the ridge. Keeping along this for a mile we then went down the open meadow on the Fire Hole, and turning to our left around a point of timber we came out to the geyser, which was not in action. We thus had an opportunity to examine the most beautiful cone in the whole Park. For 10ft. around the cone there was no ice or snow, but to the east there was a great mound of ice, a dome-shaped pile 15ft. high. While we were on top of this looking at the "pepper box" like top of the cone, the geyser suddenly began to play, sending showers of water on us. We soon got away from there. A strong wind was blowing from the west, quite cold, although a bright sun was shining from a clear sky. Going around to the north side we had a fine view of the geyser in eruption as it shot its hot waters 60ft. above the cone. The clear waters and the white steam clouds showed finely against the bright blue of the sky for a background. Several little holes in the top of the cone were shooting little jets of hot water that, descending, left a trail of steam behind them as they fell over the sides of the cone and added very much to the beauty of the display. This lasted twenty minutes.

Off to our left on the side of the hill across the river, in a sheltered gulch, were some ice-laden trees over 60ft. high, looking like huge giants standing guard over some steam vents in the hillside. The sun just touched the tops of the trees, giving the figures the appearance of wearing burnished silver helmets. As we were leaving this place, I noticed a sort of opening through a screen of icicles in the northeast side of the ice mound mentioned. Going to it we broke away some of the screen and saw a cave-like tunnel into which we walked some distance. It soon became dark and I lit a candle, with which we went on for 50ft., though often obliged to stoop. The passage continued 25ft. further to where we could see a pale, blue light, made by the sunshine on the ice where it was getting thin on top. After getting out of here we noticed that our hats and coats were covered with a white, pasty substance, rubbed off the roof of the cave. This I presume was silica, thrown out with the geyser water and deposited with the ice. As the ice gradually melted from beneath, the silica was left on the surface in a pasty form. I had noticed the same thing as sediment around all the active geysers on this trip, something I have not seen in summer.

We decided to return by following the Fire Hole down to the Basin. This we did, keeping to the river, first on one side then the other, crossing the open waters on snow-covered trees which had fallen across the stream. Over these bridges we walked on our snowshoes. We passed Kepler's Falls and Cascades, but the effect of these was spoiled by the depth of the snow which hid them from view. The cañon below was very pretty with its tall, dark firs laden with snow, the points of rock in the cañon covered with masses out of all proportion to their support hanging over the edges ready to drop with the slightest touch.

Before reaching the Basin we came to a small open stream on the east side of the Fire Hole. Here is the home of several beaver, and as we were crossing on a snow bridge one of them swam out to see what was going on overhead. We had but a glimpse of him. Along here in this stream and the Fire Hole some twenty beaver live in the banks, and as they increase very fast, the stream will soon be restocked. Now and then a tourist sees one.

As we passed the hotel on our return we went up to the second story verandah for a slide down the hill. Off the roof we went, getting headway enough to take us to the cabin door. Before the snow had settled around here the cabin was completely buried. One morning Mr. R. had to crawl up through a small hole dug from the inside of the house with a fire shovel, to get out, and then to work for a long time to clear the snow away from the only door the family could use. From the record Mr. Roake has, he makes the snowfall at the Upper Basin from Oct. 1 to date, Feb. 22, 15ft. 10in. From all the indications I think that is not far from correct, as there appears to be more snow here than at the other basins.

The last part of the day was devoted to preparing for our trip around the lakes. Mrs. Roake had baked for us a lot of oatmeal biscuits. With 8lbs. of them for bread, 5lbs. of fresh beef, 2lbs. of bacon and 2lbs. of boiled corned beef, a few cookies and the provisions we had with us, we made up our packs, which weighed about 25lbs. each.

ELWOOD HOFER.

SAM LOVEL'S BEE HUNTING.

A SEQUEL TO SAM LOVEL'S THANKSGIVING.

"GOOD Lord o' massy! if I haint jest abaout clean tuckered aout!" Mrs. Purington gasped, exhaling a long-drawn sigh as she dropped her portly person into a creaking splint-bottom chair in her own kitchen, then flopped her sun-bonnet into her short lap, and stroked the hair back with both hands from her heated brow. "Whew! 'f 't aint hot, jest a roastin', bilin' hot! Huldy, reach me a dipper o' water, won't ye; I'm e'en a'most choked. I sot that ere pitcher o' emptin's on the winder stool; you ta' keer on em, won't ye." Huldah brought her mother a quart dipper fully of cool water from the pump, that with its dolorous squeaks and hollow groans always reminded her now of last year's Thanksgiving day.

"Lord o' massy! I b'lieve I *be* roasted," Mrs. Purington exclaimed, regarding her scarlet reflection in the bright interior of the tin dipper, after she had taken a long draught. "Wal," she said, after resting the dipper on her knee, and wiping her face with a corner of her apron. "I've ben all 'raound Robin Hood's barn tu borry them emptin's. Fust I went tu Joel's, though I might h'a knowned better 'n tu, for Jemimy she allers uses milk risin'; mis'able flat-tasted bread it makes tu. Ketch me a makin' bread wi' milk risin'! Then arter I'd sot an' talked wi' Jemimy a spell—Joel, he's got a *'consarn'* a workin' on his mind, an' he's a goin' off on a preachin' taower jes' 's soon 's they get through hayin'. Shouldn't wonder a mite 'f he did afore if the weather happens tu come on ketchin'; n' like 's not 't will, for dog days haint over yit, an' nob'dy never knows what the weather 's a goin' t' be in dog days. The idear o' goin' shoolin' off 'wi one o' his *'consarns'* leavin' 'n' her an them child'n an' the farm tu 'tend tu'! Ketch me a marryin' a Quaker, 'at's allus lierble tu be took with a *'consarn'!* Arter I sot an' talked wi' Jemimy a spell I went on tu Briggses; but Miss' Briggs she haint got nothin' but yeast-cakes, an' I haint uster usin' them. So arter I'd sot an' rested me a spell—she's got a new quilt on the frames—pretty time o' year tu be a quiltin'—sunflower patch work it is, an' 'll look o'nsid'able scrumptious when 't 's done. I went on tu Hillses' an' Miss' Hill she'd jest sot a mess tu workin' 'n' so she hedn't got none. Jozeff he's a hayin' on 't, arter his fashion! Then I went along over to Uncle Lisher's, an' there I made aout tu git me some emptin's. Uncle Lisher he's jes' fairly got tu hayin' on 't, haint ben begun more'n tew three days. Tom Hamilton he 's a helpin' on him—payin' up his shoemakin' like 's not. They've just hed a letter f'm George aout tu the 'Hio.' Says crops is looking well in the 'Hio, an' he's a doin' well, an' wants 'em both to come aout there an' live 'long wi' him. I don't scasely b'lieve they ever will, but I do' know. They're a getting 'long in years, an' it's a turrible ways off. Why, that letter was wrote the last o' June or fo'part o' July, an' here it is the middle of August! Wal," taking another draught from the dipper, and making slow preparations to rise, "we've got us some emptin's to start with, an' naow we've got tu set tu work an' make some. Hope yer father won't tip over the pot agin, pokin' raound in the suller. You've skum the milk, I s'pose, an' got the pans washed an' scalded?"

"Yes," Huldah answered from the sink, where she stood washing and peeling potatoes.

"You be dreffle mumpin' this summer," said her mother after waiting a little for her to speak further. "It's jest yis an' no with ye, an' ye never laugh ner sing a mite 's ye uster. I b'lieve I'd orter steep up some boneset an' hev ye take some; *I* b'lieve yer stomerk 's aouten order."

"Why, mother, I'm jest as tough as a bear," Huldah declared, blushing and making a brave effort to laugh; she could not help smiling at the thought of boneset as a remedy for her ill—heartsease would be more to the purpose it seemed to her.

"It is a turrible job tu fix them ol' pertaters fit for cookin'," said Mrs. Purington, now apparently just noticing her daughter's occupation. "Seem 's 'ough we'd ort tu hev some new ones by this time. Wonder 'f yer father 's dug int' any hills tu see? Where 's Sis?" she asked after looking thoughtfully at Huldah and the potatoes as she went to hang the dipper and sunbonnet on their respective nails, "I haint seen ner hearn nothin' on her sen I come in." It was indeed noticeable that the six-year-old pet of the household had not even in so short a time in a wakeful forenoon in some way made her whereabouts known, and her mother wondered now with a maternal qualm of conscience that she had not sooner remarked the absence of the child's voice, talking to herself or asking endless unanswerable questions, or singing her rag doll to imaginary sleep. She suddenly realized how still it was, that there was no sound in the kitchen but the buzzing of the flies, the ticking of the clock and the fluttering splash and chip, chip of the potato washing and paring, and that from outdoors came no sound but the lazy "crating" of the hens, the dolorous mixture of peep and cluck wherewith the half-grown chickens expressed their contentment, the dry clap of a locust's wings followed by his long, shrill cry when he had lighted in the chip-littered yard, and from further off the faint ringing of the mower's whetted scythes.

"Why," said Huldah, coming with a start out of a maze of troubled thoughts, "she was a tewin' 'raound an' a pesterin' me half tu death 'baout this an' that she wanted t' du, an' at last I gi' 'n her her little baskit 'at—'at she thinks so much on, an' tol' her she might gwup in the stump lot a blackbaryin' a spell. I tol' her she mustn't gwaout o' sight o' the haouse."

"Wal," Mrs. Purington said, looking out toward the hills, "I guess you hedn't orter let her. I d' know 's she'd orter gwup there 'lone. She'd better ben a watchin' the ol' hen turkey an' her young uns. If they git up tu the aidge of the woods the foxes 'll ketch every identical one on 'em. O dear me suz! Seems 's 'ough the pleggid foxes hed ort tu git some scaser, wi' Sam Lovel an' mongst 'em a huntin' an' a haounin' on 'em half the year; but they don't. Seems 's 'ough that young un ort tu be some'eres in sight er a comin' hum by this time. Haow long's she ben gone?"

"She's ben gone," Huldah answered, looking at the clock—"why, it's most an hour an' a half! Mother, 'f you'll put the pertaters in the kittle, I'll go an' git her. 'F I don't git back soon 'nough, the pork 's all cut an' in the fryin' pan ready for fresh'nin'." So putting on her sun bonnet she went out, her mother following to the door to say, "jes' 's like 's not she's over in the medder 'long wi' yer father 'n' the rest on 'em." With this hope Huldah went out toward the meadow till she could see her father and the two hired men swinging their scythes with even strokes, but there was no little sister there, and she went on quickly, crossing the brook where its summer-shrunken current wimpled among the stones in the shade of a thicket of young firs. She saw a print of a small shoe in the soft gravel, half filled, and pointing toward the berry lot. Surely, she thought, she must soon find her now, and listened a moment with the expectation of hearing the child prattling to herself or rustling among the bushes. But she heard nothing but the hum of insects, the chirp of crickets and an occasional bird note, and calling, got no answer. But she must see her presently, for it was impossible to keep out of sight in the field that the axe had swept all tree growth from only two years ago. But when she entered it after beating along its lower edge for a while, she was surprised to see how tall the sprouts and bushes had grown since she had last been there. It now seemed hopeless enough to look here for one grown to full stature, much more so to find a child whose head would be overtopped by the lowest of the blackberry brambles that reared themselves with rampant growth about every blackened stump and log heap.

Perhaps Polly had fallen asleep on some inviting bed of moss by the brook. Nothing was likelier, and it was strange she had not sooner thought of it. Returning, she followed all the turns of the little watercourse along the border of the stump lot, but saw no living thing she cared to now; nothing but a scared trout flashing across the shadows of a pool; heard nothing but the warning cry of a mother partridge and the startling whir of wing when the old bird and her well-grown brood burst away in brief flight, and then the lisping call that gathered the scattered family. Why would not her little chick of a sister hear and answer her call? Huldah went back into the brush and swiftly threaded the maze of cowpaths, and with laborious climbing gained the tops of the tallest stumps, whose height showed how deep the snow was when the trees were felled, and scanned all the thickets she could overlook, always hoping to see somewhere among the tangle of stalks and leafage the little pink sun-bonnet moving about. Once she thought she had surely caught sight of it, but on approach it proved to be only the full-flowered spike of a willow-herb nodding to the breeze or bending under the shifting weight of the bees. She called loudly and often, but was answered only by the mewing of a catbird that flitted near yet unseen in the thickets, and by the sudden jangle of a cowbell as its startled wearer crashed away through the brush. Sometimes the mysterious murmurs of the forest would fool her ear for a moment; then when she listened they seemed

to come from everywhere and could be located nowhere. One moment she was so vexed and impatient that if she had come upon the little wanderer her first impulse would have been to give her a scolding; the next she was choking with a swelling ache of dread that she would have given the world to have cured by a sight of the yellow-polled pet and tease, whom if she might but find alive and well she would never scold again. So she hurried on in her fruitless search till she came to the upper end of the half-cleared field where the lofty branches of the great trees linteled the doorway of the ancient forest, whose depths and darkness and mystery she feared but would dare to enter if there was one promised chance of her finding the lost child there. Yes, lost. The fact with all its terrible possibilities forced itself upon her, and horrible visions floated in swiftly returning procession before her misty eyes of the little form lying dead at the foot of a precipice, or drowned in a brook pool, or torn by wild beasts, or at best stumbling blindly onward in a craze of fright perhaps to a worse death by starvation and terror. It would be only a waste of precious time for her to go into the woods; there was nothing for her to do but to hasten home and rouse the neighborhood for the search. She mounted a great boulder for one more unrewarded look, and to make another unanswered call. She could see her home basking in the August sun with such a restful air as if it was never to shelter the sorrow that was soon to enter it; and a wood thrush filled the cloisters of the woods with his sweet chime of silver bells as if there was naught but peace and happiness there. Huldah was no saint, and she felt an angry resentment of this mockery of her trouble. She could have wrung the thrush's neck to end the song so ill attuned to her feelings, and it would have been a slight relief to see some token of disturbance about the house, though it would not have quieted her self-reproach. If this wrathful feeling had not been overpowered by the stronger emotion of grief before she reached home, it might have been somewhat appeased by the pervading air of anxiety that brooded over the household. Her father, watching for her as he smoked his after-dinner pipe, came out to meet her, questioning her with a troubled face. She only halted to say in a choked voice, "Oh, father, she's lost! Hurry, an' raout aout everybody!" and answered the inquiring look of the hired men who stopped their meditative whittling and arose from the doorstep at her approach with, "Polly's lost! Go an' tell 'em all tu come an' help find her!" Her mother, meeting her at the door, heard this, and retreating to the nearest chair, sat down, spreading a helpless hand on either knee. "O dear me suz! Huldy, I don't see haow on airth you ever, ever come tu let her go!"

"O mother, *don't!* Is the' any tea left? I'm a chokin', an' tuckered." She poured out a cupful from the teapot, swallowed it at a draught, and went quickly out. "I'm a goin' tu Joel's an' Solon's an' Hillses' an' that way 's fur 's I can tu tell 'em," she said to her father, who was hurriedly consulting with the men. "You an' John an' Lije go t' other ways. I searched and hollered all over the stump lot, an' never seen nothin' on her but her track where she crossed the brook, a goin'," and she hastened down the road.

"Thee don't say so!" Jemima Bartlett said, her placid face full of pity when Huldah briefly told her errand. "The poor little precious! I'll call the men folks right off up aouten the medder. They'll come tu rights when they hear the horn. Thee 'd better come in an' sed daown an' rest thee a spell, thee does look so beat aout, poor child."

But Huldah sped on while the blasts of the conch shell were echoing from the hills, and when she looked back as she turned into Solon Briggs's yard, she saw Joel and his hired man trudging along the road toward her home.

Solon happened to be mending his "hay-riggin'," and, dropping his tools in the door-yard chips, he hastened away as soon as he heard her message, stopping only to ask if it would be "more essifactions for him tu go an' help her raise a human-cry?"

Joseph Hill came to the door in his stockings trying to rub and gape away the left-over sleepiness of an after dinner nap. When he had slowly pulled on his boots he was ready to go; he hardly knew which way till he had "told M'ri," who came with the youngest baby in her arms, and two a-foot tugging at her skirts and peeping from behind them, while she offered her condolences. The whistling growl of Gran'ther Hill came from where he sat in his armchair at the back door, asking many questions: "What is 't yer a talkin' 'baout M'rier? Somebody lost? Who is it? Purin't'ns' young un? Don't Purin't'ns' folks know no better 'n tu let a baby gwoff int' the woods? Why didn't they chuck her int' the cist'n? Then they 'd ha' knowed where she was! Wal, I s'pose we all got tu turn aout an' sarch arter her," and he came stamping through the house with his hat on and his cane in his hand. "You needn't talk to me M'rier!" he said, glowering fiercely at his daughter in-law when she mildly protested against his going, "I haint ol' nuther, I tell ye. Eighty-five year haint nothin' tu a man 'ats ben where I ben, when the's babies lost in the woods! I've tracked Injins, an' I guess I c'n track a foolish little young un!" and he marched off with his son with as much alacrity as he had responded to Ethan Allen's call in the long past May of his youth.

Presently Huldah was at Uncle Lisha's telling her sympathizing old friend, Aunt Jerusha, of the loss of the child, and she added as she had not before, "It's all my fault—I let her go a baryin'!" The old man was in the shop mending a piece of harness, and the door between the shop and the house being open, as it usually was when he had no visitors, his ears caught the girl's voice and something of her story.

"Good airth an' seas! Huldy, what's that you're a sayin'? Sissy lost? Haow? Where?" he shouted as he suddenly appeared in the doorway with the tug in his hand. Then she told him all she could, repeating that it was all her fault, for she found a little comfort in making this confession now.

"Wal," pitching the tug back into the shop, and untying his apron and sloughing it off on the threshold, "I'll go an' du what I can. I c'n waddle 'raound in the woods arter a fashion, an' I c'n holler c'nsid'able, an' I tell ye hollerin' caounts sech times. Fust I'll go an' holler fer Tanmus. Say, Huldy, I'll tell ye," he said, turning toward her while one upstretched hand groped along the pegs for his hat, "the's one man in Danvis 'at I druther hev a sarchin' for Sissy 'an all the hull caboodle on us, ol' an' young, big an' little. He knows the woods julluk a book, an' c'n read every sign in 'em—an' that 'ere man is Samwill Lovel! You're spryer 'n I be, 'n' some spryer 'n Jerushy, I guess. You cut over to his haouse an' start him!"

"O, Uncle Lisher! I *can't!*" Huldah gasped, her hot tired face paling an instant, then burning redder with blushes, "I can't! Somebody else 'll tell him. You go an' tell him!"

"I tell ye Huldy, *you* mus' go! The' haint no time for me tu turkle over there, an' you comin' this way they'll depend on your tellin' on him! Good airth an' seas! gal, this haint no time for stinkin' pride 't you *be* aout with him. He'd sarch tu the eend o' the airth if you ast him—he warships the graound you tread! Go right stret, an' clipper, tu!" and having got his hat on he took her by the shoulders and gently pushed her outdoors, and as far as the gate, facing her the desired way. She went on, accelerating her pace till she was running when she came to the door of the Lovel homestead, caring for nothing now so much as the finding of her lost sister.

Mrs. Lovel, Sam's stepmother, a gaunt, hard-featured woman, came to the open door beating the threshold with a broom to frighten away some intruding chickens. "Shoo! you pesterin' torments! I wish 't the aigs o' yer breed was destr'yed! Why, massy sakes alive! Huldy Pur'n't'n! What be you in sech a pucker 'baout?" she cried in astonishment when Huldah's swift approach diverted her attention from the objects of her displeasure. "Why, you look 's 'ough you'd ben dragged through a brush heap, an' scairt aouten your seben senses!"

"O, Miss' Lovell, Polly 's lost in the woods. Where's Samwell? I want him tu help find her. Where is he?"

"Polly lost!" Mrs. Lovell repeated, regarding Huldah with a reproachful severity in her countenance that the poor girl felt she deserved. "Up back o' your haouse? Wal, I shouldn't wonder a mite 'f you never faound her a livin'. Like 's any ways she'll tumble off 'm the rocks an' break her neck, 'f the' don't suthin' nuther ketch her afore. Some on 'em was a tellin' o' hearin' a wolf a haowlin' an' a haowlin' t' other night, an' some thinks the' 's a painter a hantin' 'raound. The' 's allus bears, an' they du say 'at the' haint nothin' 'at bears likes better t' eat 'n child'n. There 's them young ones 'at sassed Lijer, wan't it? Ye know the' was three bears, on'y jest three, come aouten the woods an' eat forty on em!"

Huldah, rejecting such consolation with raised hands and averted face, asked again for Sam.

"Sam! Humph! Sure 'nough, where is he? You tell. Him an' his father finished up hayin' yist'd'y, an' of course he hed tu put off a bee huntin' the fust thing arter breakfus this mornin'; nob'dy knows which way. He'd a 'tarnal sight better ben a fencin' the stacks so 't the kyows c'ld be turned int' the medder. An' Lovel, he's a putterin' 'raound daown in the back lot 'baout suthin' 't haint no vally, I'll warrant. O, my eyes an' Betty Martin! If these men haint 'nough tu drive any womern distraced! Haow ol' *was* Polly?" as if the bright little life was assuredly ended.

"Six, the twenty-fourth o' June," Huldah answered, and turning away went wearily homeward, half the hope dying out of her heart now that there was no hope of finding Sam.

When Joel Bartlett arrived he went in and shook hands with Mrs. Purington as solemnly as he performed the same ceremony when he "broke the meetin'" on First and Fifth Days. "I wanter tell thee, Mary Pur'n't'n, tu keep quiet in thy mind," he said. "Aour Heavenly Father withaout whose knowledge not a sparrer falls tu the graound will ta' keer of a precious little child; an' I feel it bore in upon me 'at thy little darter will be restored tu thee. Sech poor insterments as we be o' His'n, we will du aour best indivours. An' naow, Mary, keep quiet in thy mind, an' seek for stren'th in Him tu help thee tu bear this grievious trial o' waitin' on His will."

The rescue party had been quickly mustered, and the plan of search agreed upon. It heartened Huldah when she reached home to know that twenty-five or thirty stalwart men were already ranging the woods in quest of her lost sister, all so inspired with neighborly kindness that they would spare themselves no pain or hardship in the search.

But O, if the keenest and bravest woodsman among all these hills were only on the same quest! Why of all the days in the year must he have chosen this most anxious one of a lifetime wherein to go bee hunting? Huldah mentally relegated the bees to that limbo whither she had long before in like manner banished the foxes.

Away up on the mountain side where some hopeful pioneer had hewn out of the wilderness a few acres with slight and remote possibilities of a future pasture, Sam Lovel was wallowing at noon among the golden rods, willow-herbs and asters that filled this wild garden with yellow and pink and blue and white bloom, yet more varied with the hightening and deepening of their colors by sunlight and shadow, and contrast. The bees were making the most of such bountiful pasturage; the clearing droned with their incessant hum, and the drowsy murmur of their toil seemed to have lulled the forest to sleep, so still were all its depths. Sam had no trouble to imprison one of the busy horde in his bee box, but more to line his liberated captive and the mates returning with her, for the little square of sunlit sky was flecked with hundreds of hurrying brown specks. But his sharp eyes were not easily foiled when he set them fairly to their work, and he had not lain long on his back among the ferns before he caught the airy trail of the bees that carried their burdens of sweets from his box set on the nearest tall stump. He did not follow far into the woods before he found the great tree where they were hoarding their wealth. "Tu easy faound for fun," he said, as he lighted his pipe and began to cut his initials on the trunk of the old maple, "but bee huntin' 's better 'n no huntin', an' more fun 'n fencin' stacks 'at c'n jes' 's well wait a spell while the rowen grows, er a hearin' everlastin' tewin' an' scoldin'. An' it helps tol'able well ter keep a feller's mind off 'm onprofitable thinkin'. Wal, there you be, Mister L.," slowly pushing his knife shut against his thigh as he critically regarded his carving, "an' you 're the best letter I got in my name, for the' 's an l in Huldy. I sh'd like tu put tew more on ye in her'n. Ho hum! Wal, come, you dum'd ol' long-laigged fool of a S. L., le's go an' find another bee tree." And he took himself back to the clearing. He captured a bee on the first "yaller top" he came to, and soon established another line, but it took much longer to trace it to the bee's home, and when he had set his mark on this, it was time to be going to his own home. He took his unerring course through the pathless woods, stopping now and then to rest on a log or knoll that seemed to be set with its cushion of moss on purpose for him. During one of these halts, when half way through the woods, he heard a cry, so strange that he paused to listen for a repetition of it while his lighted match went out before it reached his pipe, or the pipe his mouth. Once more the distressful wail struck his ear, whether far away or only faint and near he could not tell. "Wal," letting out his held breath and striking another match, "'f I've got another painter on my hands, I wish 't I hed the ol' Ore Bed 'long. But like 'nough 'tain't nothin' but a bluejay 'at's struck a new noise—I thought they hed 'em all a'ready, though." And he went on, pausing a little at times to listen to and locate the voice, which presently ceased. "'F I hed a gun I'd go an' see what kind of a critter 's a makin' on't," he said, and then half forgot it. He had come to where he got glimpses of the broad daylight through the palisades of the forest's western border, and where long glints of the westering sun gilded patches of ferns and wood plants and last year's sear leaves, when his quick woodsight, glancing everywhere and noting everything, fell upon a little bright-colored Indian basket overset in a tuft of ferns, with a few blackberries in it and others spilled beside it. "Why," he said, picking it up and examining it, "that's the baskit I gin' little Polly Pur'n't'n last year when the Injins was here! It haint ben dropped long, for the baries is fresh, 'n' there's a leaf 't aint wilted scacely. She dropped it, for there's some puckerbaries, an' the' wouldn't nob'dy but a young un pick them. Haow com' that little critter here?" Then he heard men's voices calling and answering in the woods far away at his left. "God A'mighty, she's lost!" he exclaimed, as he quickly formulated the sounds he heard and the signs he saw. "That was her 'at I hearn! What a dum'd fool I be!" He dropped his bee-box, marking the spot with a glance, and sped back into the heart of the forest so swiftly that the inquisitive chickadees which had gathered about him knew not what way he had gone. He spent no time in looking for traces of the child's passage here, but made his way as rapidly as possible to the place which the cry had seemed to come from, listening intently as he glided silently along, for he knew that if she had not sunk down exhausted with wandering and fright, she would be circling away after the manner of lost persons, from where he had heard her. Moving more slowly now and scanning every foot of forest floor about him, he at last saw a broken down stalk of ginseng, its red berries crushed by a footstep, and noting which way it was swept and how recently, found on a bush beyond it a thread of calico, then a small shoe-print in the mold, and further on a little garter hanging to a broken branch of a fallen tree. According to established usage in such cases he should have put this in his breast, for he knew that Huldah had knit it, but he only placed it in his pocket, saying, "If she haint never faound it'll be a sorter comfort tu 'em tu see this—but I'm a goin' tu find her—I got tu!" He was assured of her course now, and thought she could not be far off, but he did not call, for he knew with what unreasoning terror even men are sometimes crazed when lost in the woods, when familiar sounds as well as familiar scenes are strange and terrible. While for a moment he stood listening he heard the distant halloos of the searching party—then rushing away from them, a sudden swish of leaves and crash of undergrowth, and then caught a glimpse of a wild little form scurrying and tumbling through the green and gray haze of netted shrubs and saplings. He had never stalked a November partridge so stealthily as he went forward now. Not a twig snapped under his foot, nor branch sprung backward with a swish louder than the beat of an owl's wing, and there was no sign in glance or motion that he saw as he passed it, the terror stricken little face that stared out from a sprangly thicket of mountain yew. Assured that she was within reach, he turned slowly and said softly, "Why, Sis! is this you? Don't ye know me, Sam Lovel? Here's yer little baskit 'at you dropped daown yunder, but I'm afeared the baries is all spilt!" and then he had her sobbing and moaning in his strong arms.

"This is the best day's huntin' ever I done," he said, his voice shaking with the full thankfulness of his heart. He called again and again to let the searchers know that the lost child was found, but if they heard they did not heed or understand his calls.

When he came to Stony Brook with his burden asleep on his shoulders, he seated her on the bank and bathed her hot face and gave her grateful draughts from a dipper that he made in five minutes with a sheet of birch bark folded and fastened in a cleft stick, and here he shouted lustily again, but got no answer.

"Come, Sis," after listening, stooping and reaching out his arms, "we must be a moggin'!"

"I be awful heavy, Samwell, but I can't step a step," she said apologetically, as he took her up, "O, how good you be!"

Sam's long shadow had ceased following him, and was blurred out in the twilight when he crossed the door-yard chips that his feet had not trodden since that Thanksgiving Day. Polly was asleep again in his arms when he entered the open door of the kitchen which bore a funereal air, with a dozen neighboring women sitting against its walls speaking to each other in hushed solemn voices, one standing beside Mrs. Purington, ready with a harts-horn bottle when she should take her apron from her face. The poor woman was reaching out blindly with one hand for the comforting salts when Sam, unseen by any till now, set Polly in her lap, and then casting a longing look along the line of gaping, speechless women, he disappeared before the feminine chorous of "Oh's!" and "My's!" and little shrieks had swelled to its height.

Huldah was out in the back yard trying to comfort herself with listening to the faint halloos of the searchers, and with watching the occasional glimmer of their lanterns and torches, dim stars of hope to her now, when she heard the indoor stir, and hurried in expecting to find her mother in a fainting fit. But there was her little sister with her mother crying over her and scolding her in the same breath, and all the other women letting out their pent-up speech in a hail storm of words, wherewith fell a shower of tears. When she had hugged Polly and kissed her, and sprinkled her with the first tears she had shed that day, she asked, "Who fetched her?" and out of the confusion got this answer: "Sam Lovel, an' the great good-for-nothin' cleared right aout an' never said one word!"

He could not have gone far. "Samwell! Samwell Lovel!" she called softly, running out toward the road.

"Was you a callin' me, Huldy?" a low voice answered out of the dusk.

"Won't ye come an' blow the horn tu call 'em hum, Samwell? the' can't none on 'em in there blow nothin'—O, *Sam!*"

The tall form of her lover came out of the gloom, and the big sister was in the strong arms that had just brought home the little sister.

The search of the rescue party was prolonged a little before Sam's blasts on the conch shell were tossed far and wide from echoing mountain to echoing hill to call them home.

"Sam," said Huldah, half an hour later, "you haint never tol' me whether no you got that 'ere fox?"

"I haint never hed no chance!" he answered.

ROWLAND E. ROBINSON.

A COON HUNT.

I CAN scarcely recall in what year I became a member of Seneca Club. It was a long time ago, however, and as years press upon us, and the tell-tale gray hairs grow more and more numerous, we do not like to think of how many years ago, but rather remember the good times as if they were of yesterday. After all, "life is but a shadow," and when one who has enjoyed more than a fair share of the rational sports and pastimes that are vouchsafed to man in this beautiful world, the remembrance of them seems like a delightful dream. The old sportsman, who has killed ducks on the waters that have made the counties of Harford and Baltimore in Maryland famous for sport, can remember when the great tract, extending from Maxwell's to Carroll's Island, was owned by the Cadwallader family. As years passed away place after place was sold, until Maxwell's, with its grand old mansion and splendid shooting points, remained the only property of the General on these waters. On the south side of Grace's Quarter is the Saltpetre River, which flows into the Gunpowder at this point, and on the west bounding the same property is the Dundee. How well I remember, years ago, the myriads of canvasbacks and redheads that swarmed in these waters, to feed upon the delicate celery grass. It was indeed a sportsman's paradise.

On the upper Dundee, on a small farm, and a most excellent shooting point, lived a gentleman of the name of Watkins. He was of a Quaker family, but a thorough sportsman and an ardent hunter. He was fond of horses and dogs, and while he shot many ducks his favorite pastime was fox hunting; but the acme of his enjoyment was a real old-fashioned coon hunt. He was a very tall man, thin, wiry and muscular, and could probably take in more ground at a long step than any other man in the country. There was not a hole nor a hollow, a swamp, woods or brier patch for miles around that he was not perfectly familiar with; and he could thread the tangled woods or leap from tussock to tussock in the oozy swamp by night as well as by sunlight. The negroes the country round looked on him as a kind of oracle, and when Massa Watkins arrived every darky's face beamed with pleasure: and when a coon hunt was proposed the entire darky community went mad with joy. On these expeditions his retinue was generally a small army of darkies, each one of them armed either with an axe or a half-starved, ragged cur—"de best dog, sah, dat ebber treed a coon." Watkins always had a small pack of fine beagles, and two or three wonderful coon dogs. I can see now the flying clouds obscuring the light of the glorious moon, the vision of this tall, lanky figure, lantern in hand, striding through the tangled swamp as easily and certainly as though the hall of his house. His shouts, as he urged on his dogs, resounded in the air, and behind him trailed a line of negroes, floundering among the briers and mud, vainly endeavoring to keep up with the tall hunter, who moved like a spectre before them.

I do not remember how long ago I made my debut at Seneca, but the memory of the grand old times I have spent there with my friends, the collector of the port and the flour merchant, will linger with me, never to be forgotten. It seems to me it was in early November that I went for the first time to the club to have some duck shooting and meet my fellow members. After a good day's shooting, toward evening, we three started from the blind for the house, Joe bringing up the rear with a load of ducks on his back. As we reached the little clump of cedars, a faint sound of *h-o-nk! honk!* came to us on the wind.

"By gracious, George, here come some geese;" and the two veterans stood at a ready, awaiting the approach of the advancing line, which were now plainly visible. As they passed overhead the guns were fired, as it seemed to me, simultaneously, and down came, fluttering and stumbling over and over, a noble goose near the spot where we stood. Both parties, of course, claimed the prize. The Collector was "perfectly confident that it was the third goose from the end, and the identical one he fired at." George was equally confident that he had killed it, and to prove it had the goose firmly by the neck; and they walked toward the house discussing warmly the ownership of the property, which I made up my mind could only be settled by a "game of draw."

"Now, George," said the Collector, "it is perfectly absurd to suppose that you could have killed that goose at such a distance with that gun of yours. I saw him give way to my shot, and it is my goose." The Collector finished his glass of apple toddy and called lustily for Joe to come and clean his gun, preparatory to their start for home. Joe had been gone only a few minutes from the room, when he suddenly returned and inquired of the Collector, in the most innocent manner, "Massa B., shall I draw the loads from your gun?"

I saw a triumphant smile wreathe the countenance of the flour merchant.

"What the devil do you mean, Joe, by loads in my gun?"

"Why, Massa B., there are two loads in your gun; one of the barrels has snapped."

You should have heard the shout of laughter that broke from the flour merchant. B. was so confident that he had killed that goose that he would have sworn to it. I wonder if Bob H. and many other old friends do not still twit "the grand old man" about that goose. Years have passed away, and the Collector has become a little feeble by the wear and tear of ruthless time, but he is yet full of pluck, and the judges' stand knows him well, and Saratoga, Monmouth and Prospect Park would seem a blank without him. I trust that many years of happiness may yet be spared to my genial friends, the Collector and the flour merchant.

I waved them good-by as they whirled away up the road; they were soon lost in the deep shade of the woods, and I returned to the gun room to toast my feet and to read awhile to pass away the time. A friend had loaned me a book called "The Wildfowler;" it contained some weird stories of hunting, pirates and smugglers on the wild Irish coast. I became very lonesome, and I was very glad when Aunt Susan brought my candle and time had come for bed. I do not know why it is, but I am always restless the first night in a strange bed. And my rest was disturbed by unpleasant dreams of robbers and violent struggles. I was suddenly awakened by what seemed to me the most unearthly sounds; dogs barking and yelping, and muffled cries and imprecations. I sat upright in the bed and listened, and I could plainly hear the tumult near the house. I fancied at first that the house had been surrounded and I was to be robbed. I got out of bed and looked for the window. The clouds of the day had vanished, and the moon shone out gloriously. In front of the house stood a large oak tree, whose thick and scarred trunk had been rooted in the earth for centuries. Around this tree were prancing and bustling a half dozen figures, some with lanterns and others armed with queer, quaint weapons, and mixed up in the throng were half a dozen howling dogs. Both men and dogs seemed bent on tearing down the old oak. After tearing around for some time the uproar suddenly ceased and men and dogs formed in line, and much to my relief marched up the road and were lost in the gloom. I could not fancy what it all meant, and went back to bed, slept but little. I was greatly relieved when Joe came to my room and announced "five o'clock, sir," and I got up and dressed and came down for breakfast. Calling Joe into the room I inquired "what in the mischief was all that row and confusion in front of the house last night?" "Why, sir," said Joe, "dat was Massa Watkins coon hunting. They treed the old coon in the big oak, but he fooled them again and got away." My fears of robbers were groundless, and a coon hunt had been the cause of my tribulation.

Some weeks after this episode and after I had become more at home at Seneca, Joe came to me, after a fine day's shooting and inquired if I would like to go on a coon hunt that evening. A number of darky boys had prepared for a hunt that night and were to meet at the corner of the road, not far from our house. I consented to go, making up my mind to keep in the road and out of swamps and brier patches. There were five darkies in the party with their dogs—and such dogs; no two alike in color, size or breed, but each one pronounced by its owner "the greatest coon dog in the country." The dogs were hied out and after a time their yelping and barking and the activity of the hunters assured me that a coon had been started. From the numerous lights and shouts I became convinced that the party was much larger than before. I hurried up to the road again to intercept them. I was right, Watkins was out with his pack. The same coon had been got on by both and they now had him treed in a medium-sized chestnut just at the bend of the road, near where we had commenced operations. A wide deep ditch full of water was on the one side of the tree and the road on the other. It would be impossible to picture the scene presented on this spot, and even now I can scarcely write for laughing, at the remembrance of it. Watkins had two or three small darkies among his retinue, and these, together with the dogs, were prancing and tearing around the tree, the darkies hollering and the dogs yelping, each of the darkies giving orders, and all the dogs and darkies working every one on his own hook. Just as I arrived on the scene a small nigger had attempted to climb the tree and in his hurry lost his grip and tumbled to the ground. The dogs, eager for the fray, mistook him for the coon, and had pounced upon him in a bunch, and the men were kicking them off, while the little nigger with torn pants was crying at the top of his voice and the dogs were yelping as they scattered. The only serene individual in the crowd was a little ungainly cur of Dick Brown's. This dog had caused nearly all the trouble by his impetuosity, and his activity always kept him clear of well directed kicks that were certain to land on some one's shins or on some other innocent dog. This cur sat upright on his haunches at a safe distance, his ears cocked up and with one eye watching if any one was intent on kicking him, and the other on the lookout for a chance to create some excitement. He was a perfect picture, and while Dick considered him a prodigy, every one else looked upon him as a nuisance.

But now Watkins brought order out of chaos, and commenced to go at matters systematically. Owing to the flying clouds the night was not bright as it had been, and a pine torch took the place of the moonlight. By this flashing light I could see Mr. Coon as he sat curled up in the fork of a long branch, his eyes shining like two radiant coals. The first orders were to cut down the tree, but to this I immediately entered my protest, as lumber was much too scarce an article in that vicinity, and we could not afford to lose a fine tree. There was no other plan but for one of the smaller darkies to climb the tree and shake the coon off among the dogs. After much pushing, in which nearly all hands joined, the darky was raised high enough to obtain a "firm holt" and up he went. I wish you could have seen the circus below as that darky neared the branch on which the coon was sitting. Of course every fellow wanted "his dog" to have a "fair chance," and as every dog was on his hindlegs, jumping and yelping just under the coon, the darkies were busy among them to keep them at a fair distance when the coon should strike the ground. It so occurred that just as the darky up the tree was giving the branch a vigorous shake Dick was trying to keep off the dogs, and down came the coon, plump on Dick's head and shoulders. Down went Dick, out went the torch, and in an instant you could not tell which was Dick, the coon, or the dogs—all were mixed up in a cloud of dust and in most unutterable confusion. Rushing into the mêlée Watkins dropped his lantern and there was but faint light to show the scrimmage. There were snarls and spits from the coon, yelps from the dogs, cries and oaths from Dick. Then all was comparatively silent.

All this scene took but a very short time for its enactment, but I assure you I never witnessed such a sight and I nearly exploded with laughter. You never saw such a mixed up lot of dogs and niggers. But Watkins's lantern was soon lighted, and the torch blazed out again, when they began to hunt around for the remains of the coon. Mr. Coon was not to be found; in the muss he had slipped off into the ditch, and swimming down in the darkness, escaped. A few bunches of hair lying around bespoke his narrow escape. Dick was a picture of distress; his cap was torn to shreds, his coat about his shoulders gave evidence of the sharpness of the old coon's claws, the blood flowed freely from wounds on his head and neck. His dog, which had been among the first in the scrimmage, was limping away upon three legs, his other leg having suffered severely from the sharp teeth of the coon, as he endeavored to rescue his master.

All this row occupied but a few minutes, and as the coon was gone, the crowd marched away for new conquests. But I had experienced enough of coon hunting, and as I retraced my steps to the house, I had to lean on Joe to avoid falling to the ground for laughing. Of all the funny scenes that I ever beheld this was the most ludicrous. That dog of Dick's was the counterpart of many bustling fellows that are eternally getting themselves and other people into "hot water," and then calmly survey the scene from a safe distance. I understood that this same coon had evaded the vigilance of Watkins on two former occasions, and he vowed he would have him yet. And he kept his vow; the old coon had to come down, his scars showing of his many encounters and hair-breadth escapes. I threw myself into the rocking chair, and with a hot punch at my side and a good cigar, I revolved, for hours, the scenes of that coon hunt. And now, if I have imparted to you but a faint idea of its ludicrousness, I feel confident you will have a good laugh, and I am content. C.

NOTE AND COMMENT.

BEING EXTRACTS FROM A LETTER FILE.

IF the old man who first taught me to shoot was on earth yet, he should receive the same kindly greeting, but he has long ago been gathered to his fathers. He not only gave me instruction, but loaned me his old Queen's arm to hunt with, and I'll never forget that my first victim was a red squirrel, nor how, with the aid of a younger brother to head off and make him stand still, I brought to bag my first rabbit. Bless you, such a thing as shooting a rabbit on the run, or a bird on the wing, never entered my head in those days. That was way back in the forties. Nothing has given more delight than my first gun, made from a U. S. carbine barrel, stocked, mounted and trimmed by the local gunsmith in a far away down-east village. I have owned some pretty fair guns since that date, but none that I valued so highly. Boy and gun together were a pretty strong combination, and I am afraid sometimes for mischief—H.

I came out March 5. Was in the woods alone five months. Saw 27 caribou during that time, all in sight of camp. Shot two when I was standing in the camp doorway. I could probably have shot most of all those I saw, but I only wanted enough for my own use. I like to see them about and to study their ways. I started to come out to the settlement Feb. 17, and got only two miles when my lame legs failed, and I fell in the snow and lay there till next morning before I could stand. Got back to camp late next day. Had a slow fever ten days. It was the hardest time I ever experienced, and I nearly perished. No blanket, no fire and a cold storm driving. Two hunters came along March 4 on their way to the settlement, and I was recovered enough to start next day in their company; and by going slow and resting often I managed to snowshoe out. I am still suffering from the lying out but feel rather proud of pulling through, as at sixty years pluck is greater than vitality.—C.

There was a time when I intended to jot down many of the pleasant experiences I have had in years of sport in nearly all parts of this country and abroad. But I threw down the pen in despair, feeling that I was not equal to the occasion. How often I have wished that I possessed the wonderful power that centered in that man Herbert. I have read many sporting sketches and works, but I never met a writer who could describe a sporting scene like that man, or paint the beauties of nature with so vivid a pen. In "My Shooting Box" and "Warwick Woodlands," you can hear the locks click and the guns crack, and see the birds flutter on the ground. I knew him pretty well and met him often, as I roamed around Florida and Warwick in Orange county, N. Y., with my old friend K. on our shooting tramps; and I often wondered how so much intellect could be buried under so rough an exterior. He was a wonder. We shall never read such descriptions again.—C.

I wish you would, on your own hook, from time to time give the right names and classifications of our birds and beasts. Here in Virginia I believe that not more than one in ten of the men who pretend to study scientific subjects knows that a bat is not a bird, and all of them call the night hawk bull bat. Of course, a man who studies nothing but Greek and Latin is expected to be an ignoramus on all subjects of natural history, and that he doesn't know B. from a bull's foot surprises no one. I wish, also, you would publish a sportsman's grammar, giving the correct plural of our game birds, etc. I observe that many of your correspondents write of snipes, woodcocks, soras, etc.; and evidently the average American thinks that every noun in the plural number must have an s at the end of it, and I am afraid that we shall soon be hearing of flocks of sheeps.—W. A. W.

I think I may honestly claim to be an enthusiastic sportsman, and for some kinds of hunting I like the right kind of a dog and a shotgun; but there is the most real pleasure to me in hunting something that can be hunted with a rifle.—W.

Among all the good things that FOREST AND STREAM has done, there is nothing better than its taking out of field sports the everlasting swigging and boozing that seemed to be inseparable from fishing and shooting forty years ago, or from the reports of such outings then.—R.

FOR the small sum of $25 per year, the Travelers will insure you for $5,000 in case of death by Accident and $25 a week in case of disabling injury.—*Adv.*

Natural History.

BIRDS OF WOOD AND STREAM.

THERE are birds which cannot be termed "silent partners," though they are not singing birds. Among these is the "Kennedy bird," or "Old Tom Peabody." When you have been "thrashing" a salmon pool or trout stream for hours, on one of summer's hottest days, without any grand results, and you are disposed to find fault with yourself and all the world, the only sound to break the solemn silence is the buzz of the mosquito, or the gentle plash of the water against rock or river bank, until suddenly from the tree overhead is heard distinctly, in clear, unbroken notes, "Oh, poor Kennedy, Kennedy," as if in sympathy at your want of success. Nor does the chick-a-dee (blackcap titmouse) give you a very friendly reception to the river bank. The clear note from which his name is derived is thus curtly translated, "what do you want here?"

Then on Sunday morning, after a week's hard work with rod and gun, you "rest and are thankful," reclining on spruce bough couch, building castles in the air, and knocking them down again: then "all is still save the echoing sound" of the friendly woodpecker, who most surely and suddenly breaks the long silence by taps, sharp and loud, with his hard bill on the overhanging stump.

The partridge (ruffed grouse), though no songster, is not a silent bird. As you walk the woods and pick your steps with moccasined foot, following an ill-defined deer track on a fine October day, no leaf is moved nor twig snapped lest the quarry should be disturbed in perhaps his midday slumber on the sunny side of hill or bank—all at once there comes to your ears the drumming of the cock.

Mention must also be made of the shrill cry of the blue-jay, something like a kingfisher's well-known alarm. To hear this in perfection you should be swiftly paddling down stream in bark canoe, after the arduous task of poling up, on an autumnal day, when the foliage, having changed its coat of many colors for garb of more somber hue, is falling fast, all nature seems in mourning, the jay darts from the wooded bank and, with a series of shrill notes, "discordant heard alone," echoed from hillside to hillside, wends its way down stream till lost to eye or ear.

To the above (birds who "make noise" but don't sing) may be added, among others, the common forest (barred) owl, and the loon (great northern diver), both of which have their own peculiar weird sounds. The owl is best heard in the stillness of night when you camp in the deep forest. The shrill cry of the loon travels far across lake and through forest, and is heard with joy by those who make the portage from the headwaters of one river to those of another, since it is a sure indication of the approach to the lake whose outlet you seek.

John Burroughs suggests that "it is probably true that a dweller in England hears more bird music through the year than a dweller in this country, and that which is of a superior order. In the first place, there is not so much of it lost upon the desert air, upon the wild unlistening solitudes. The English birds are more domestic and familiar than ours, and are brought nearer together and nearer to man. Wood birds here are house and garden birds there. They find good pasturage and protection everywhere. A land of parks and gardens, and hedge rows and game preserves, and a climate free from violent extremes—what a stage for the birds and for enhancing the effect of their songs."

Notwithstanding all this and more than this that could be added, I know of no country in which singing birds are more appreciated than in eastern America. After the long winter, when all is silent in forest and on farm, save the sound of woodman's axe, merry sleigh bell, or of the few birds that are content to remain, in spite of frost and snow, in the forests. How eagerly one awaits the arrival of the first robin. Often he is, on first arrival, checked in his career of song by oft recurring spring snowstorms; on return of sunshine, however, he sings again with renewed vigor, until summer has fairly set in, when he and his mate have it all their own way, their "full concert" being only interrupted by attention to family duties.

Not far inferior in point of excellence as a singing bird is the song sparrow (*Melospiza melodia*). What a contrast is this melodious songster to the brilliantly clad and silent tropical birds who "love the garish day." What a contrast, too, to his cousin, the cheeky English house sparrow.

I know of no more enjoyable thing on a summer's day, as you wander dreamily through the woods or recline lazily on a river bank—having laid down rod and fishing, cried enough—than to compare the notes of the different birds of song—the rich melody of the red-eyed vireo (the most common and perhaps best-loved bird) with the laughing song of the well-known bobolink, the canary-like song of Canada's canary, the thistle bird, with that of his kinsman, the pine goldfinch, whom he is like in appearance, and of the different warblers (a large family) who seem to vie with each other in soft, trilling notes, without the variety of song you would expect.

It is not the general opinion that the moose bird, the Canada jay and the red crossbill, dwellers in the forest alike in winter and summer, and frequent visitors to the hunters' and lumbermen's camps, are singing birds. The moose bird is the most daring of birds, and will silently and stealthily visit your tent and light on the edge of the frying pan, which the cook has for a moment laid aside, and in the calmest manner fly to the branch of the nearest tree with the stolen piece of pork, soon to return for another issue of camp rations. But he will give no song in return for camp favors or camp food. The red crossbill, too, in winter is as silent as he is quiet in his movements. Both birds, however, in spring and early summer break forth in an unsuspected flow of song with which they have cheered the heart of the weary trapper, returned to camp from his long day's tramp visiting traps, or the lumbermen, in their brief moments of rest in spring's arduous and dangerous work, when the ice having departed the stream is swelling high with water from melting snow, and the logs are carried from point to point until the boom, or the saw mill, is reached. To men such as these, at times such as these, "how sweet the coming on of grateful evening mild; then silent night with this her solemn bird."

SINGING BIRD.

FREDERICTON, N. B.

STRIPED SQUIRREL'S NAME AND WAYS.

CHARLESTOWN, N. H., April 11.—Much as I admire the ingenious comparison by your esteemed correspondent, "Awahscose," of the jolly little rodent to "Friar Tuck" of immortal memory to all true lovers of the "greenwood," I yet imagine that he will have to come nearer home and to later days to find the origin and etymology of the name. I have always heard it said that it was the Indian name of the little fellow, and as corroborative evidence of the fact, when I lived in the good old town of Springfield, Mass., some thirty odd years ago, there was a locality in the northern part of the old town, on the Chicopee River, where the high sandy plains which stretch from the base of Mt. Holyoke southward to the border of Connecticut, drop down suddenly 100ft. or more to the level of the present meadows, the steep bluff fringed with oaks, nut trees and evergreens, which went among the older inhabitants by the name of "Skipmude," and was said to be so called from the number of these little animals found there by the early settlers.

I cannot say how the truth may be,
I but tell the tale as 'twas told to me.

On the edge of this steep bluff, in the heart of the present city, stands the United States Arsenal, overlooking the trees and the meadows on the opposite side of the river, and far up and down the river to the north and south, and affording one of the most beautiful prospects in the ever beautiful Connecticut Valley.

My pet red squirrel left his winter quarters in the attic yesterday, and was having a high frolic in the butternut opposite my window, and although I could not hear him, I could tell by the jerks and vibrations, which ran from the tip of his nose to the end of his tail, that he was welcoming the bright warm day in squirrel fashion to the best of his ability.

Like "Silas Wegg," I sometimes "drop into poetry," and the beautiful weather thawed my pen out, too, and I send you the result as my spring contribution to your ever welcome columns, which I hope to be able to follow up later with the records of my angling experiences, if I have any luck worth noting. At any rate I am getting rods and tackle in order for the middle or last of May, which is as soon as I expect to be able to use them in this latitude this year.

VON W.

The disposition which the ground squirrel makes of dirt from the burrow may serve two purposes, one being that absence of dirt from the mouth of the burrow renders the burrow less liable to be found by an enemy; the second, that the original burrow filled with the loosely packed dirt, serves as a drain to carry off any water that might find its way in. The burrow from which my opinions were formed was situated near the top of a gravely bank, its mouth being concealed by fallen brush, thus affording means of approach without leaving a direct trail to it. Digging down to the nest I found that the burrow leading to it extended down the bank for 6 or 8in., then turned to the right at an angle of about 60°, then extended 8 or 10in. further, ending in a space 4 or 5in. in width by 3 or 3in. in height, in which was placed the nest of grass, about as much as could be held in the hand. The top and upper sides of the cavity were hard and firm, but at the lowest side where the burrow entered it, the ground was soft as if it had been dug up before. This, I think, was the refilled burrow, which, being at the lowest point and leading to a still lower level, would answer as a drain to keep the nest dry. These are the opinions I formed after examination of the burrows. Perhaps some one can tell us if this is the general plan of construction.

INQUIRER

RANDOM BIRD NOTES.

DR. ABBOTT says that our woods, at least in midwinter, often contain as many birds as in midsummer, and almost equal the early spring. This may be true, in some instances, but as a general fact, winter bird life, at least in this locality, is very changeable. The coming and going of the birds is sometimes mysterious. For days we may see loose scattered flocks of various native species about our gardens and in the fields and waste-lands; then, again, some days may elapse before we note anything more than a few noisy crows or, perhaps, here and there a lisping chickadee.

The past winter, by the way, has been an open one—often mild springy weather, lasting for several days at a time, and with little snow. The only heavy fall of snow occurred about Nov. 12, and with only an occasional flurry, the ground has been bare the greater part of the winter, thus giving many birds a good chance to thrive.

Early in the season, from Nov. 14 to Dec. 30, the goldfinches, tree sparrows and snowbirds were fairly abundant about edges of woods and along country waysides, but during midsummer only small straggling flocks of the latter species made their appearance, and of the former I failed to note a single specimen. As spring advanced the snowbirds appeared in larger numbers.

Cedar birds have been more numerous during the past winter than in former seasons. A flock of about thirty visited our apple trees the 6th of February, but having a constant inclination to roam about, soon departed. I afterward noticed their appearance in larger numbers in various parts of the village. A few stragglers hung about our trees for more than a week, and during this stay their diet must have consisted entirely of the frozen apples that were still clinging to the branches. Even this meager fare, as I frequently observed, was begrudged the waxwings by the English sparrow, and caused quite a wrangling and chattering among them. Nevertheless, the cedar birds made pretty clean work of the frozen apples, as hardly anything was left but the cores, and these afterward helped to make a scanty meal for the early robin.

One of the most punctual winter visitors is the downy woodpecker, and it would seem very strange indeed if he did not make his appearance. Generally solitary stragglers have been seen and heard almost daily throughout the winter, and their brisk notes and loud tappings are always interesting winter sounds. A gnarly old apple tree near the house was visited nearly every morning last winter by a hairy woodpecker, and in a large, decayed stub jutting out from the bole I noticed several holes an inch deep which this industrious bird had excavated in his eagerness to get at the grubs. This bird is only an occasional visitor to our trees, but is more common in the woods. Last season I attracted the woodpecker by nailing pieces of fat on an apple tree. Five or six were punctually at hand every morning, and sometimes were even accompanied by a few nuthatches and chickadees, who also greedily joined in the fatty feast. I replenished the supply several times, but at last when this failed they were not so punctual in coming. In general the downy and hairy are the only woodpeckers that remain with us during the winter. The highhole is occasionally heard but seldom seen. While walking in a hemlock wood early in January I heard the otes of one, but I failed to find the bird that uttered them.

Three species of birds made their appearance here during the past season which I have never seen in this locality—the American pipit or titlark, the Carolina turtle dove and the horned lark. I first noted the appearance of a pair of the latter while crossing an upland stubble field some time in January and since then I have frequently noticed them in small flocks in the neighboring wheat fields and meadows. Early in the season I observed a solitary specimen of the titlark in a field near the woods, but failed to find another one during the winter. Several turtle doves have been seen at frequent intervals.

On the whole, chickadees are our prevailing winter residents, and, in their excursions to the orchards and gardens are very often accompanied by nuthatches, though in smaller numbers. Tiny kinglets are also frequently seen in company with these birds. It must be a cold day indeed when the chickadee, the "winter's own darling," is not abroad to cheer us with its happy ways. I hear its beautiful *phe-be* note now nearly every day.

Of the other winter birds which I have observed in my walks in field and wood and about the garden, I will mention several bluejays and robins, which were seen near the house early in the season; crows in small numbers, generally solitary or in pairs, and seven or eight partridges. I know of a small piece of woods, in which I very seldom fail to scare up one of these hardy birds and nearly always in the same place. I noticed the same last season.

Before concluding this random sketch allow me to say a word about the English sparrows, which are so numerous in this village. At the present time some of them seem to be busy building their nests—indeed, I noticed one building its nest on a maple tree early in February. All the cavities in the old apple trees which in former years were the chosen nesting places of the bluebirds, are eagerly taken up by these pugnacious little pests, and not a strange bird is allowed to come near them. Even the downy woodpecker who sometimes ventures too close to the cavities in search of his accustomed fare, is likely to be rudely disturbed, but he generally puts on a bold front. The timid, gentle bluebird submits to all the sparrow's persecutions. Early last spring a bluebird was seen to inspect a certain cavity and timidly enter, but it seems the usurper was at home, as hardly a second elapsed before he came forth again in great haste, closely pursued by a sparrow. After that incident the bluebirds were scarce in the vicinity of these trees.

A few springy days occurred the first week in March. On the 8th I noticed robins and bluebirds, and a few days later purple grackles and song sparrows made their appearance. On the 26th I heard the notes of a meadow lark. Another snowy owl was captured about a month ago in the woods near this village by some boys.

UNCAS.

IS THERE ANOTHER VARIETY OF QUAIL?

Editor Forest and Stream:

When acting as chairman of the committee on habits of species of the International Association for Protection of Fish and Game, which was organized by Mr. Hallock some years ago, I received a letter on habits of species, written by Dr. M. F. Taylor, of Amelia, Va., a very experienced and observant sportsman, from which I make the following extract. The letter is of date June 15, 1878: "The common field partridge requires no description. The other variety which frequents the shrub oak thickets is of a browner color, less in size and flies with great rapidity. When put to flight it usually rises above the tops of the trees which the common field partridge seldom does."

Out of my own experience I may add that when a youth my brother and myself kept field notes of our shooting, entering every breed of game killed and the number of shots fired each day out. Among the entries we kept two columns for partridges, one of which we headed "Gray partridges," to indicate a bird which we regarded as different from the common sort, being harder to kill and we believed better flavored.

The description by Dr. Taylor, given above, corresponds to my recollection of the description, resort and habits of what my brother and myself called "gray partridges." We generally found this variety feeding on small acorns. I have long been of the opinion that this is a rare variety. I am very sure that no professional ornithologist has examined this matter on the spot. I doubt whether a professional ornithologist has ever been in Loudoun county, and this lack of field work by scientists applies to nearly the whole of Virginia and other Southern States. Such a question as this cannot be decided upon such bird skins as may have found their way to the Smithsonian Institute.

Your journal has many readers in Virginia and other parts of the South who may throw light upon the matter and, perhaps, secure specimens of supposed variety. Or the new Sportsmen's Association of Virginia, of which my friend, Hon. Jno. G. Wise, is president, may solve the question if they have a committee on habits of species, as I suppose they have or will have.

M. G. ELLZEY, M.D.

WASHINGTON, D. C.

Editor Forest and Stream:

In your last issue you take issue with me on the two varieties of quail in Georgia, and offer to name one species for your correspondent if I show them up. I am not the discoverer of these two varieties, as they were here before I ever fired a gun at the noble game bird, but I will accept your offer, and send them next season, as our season was out on the 10th inst. I will endeavor to send you a pair each of the swamp and highland birds.

AUGUSTA, Ga.

J. M. W.

HAIRLESS SQUIRRELS.—I read with interest the remarks of the recent correspondents concerning the different degree of albinism, which their squirrel specimens have exhibited and now wish to claim the most perfect specimen

of all. As the pigment which determines the color of the squirrel is found in the hair, it follows that if a squirrel has no hair it is a perfect albino—there being of course an absence of coloring matter. On that basis I make my claim, as last fall two young red squirrels were raised in a tree just across the street that were totally deficient of hair except on the paws and head. I saw them once or twice and finally succeeded in capturing one in my hands for examination, as they were quite tame. Of course it looked something like a rat. I suggested to one of the ladies of a sewing society that a flannel jacket would be highly acceptable to the little fellows in view of he approaching winter, but I fear my suggestion was not acted upon. I hear a dog caught one of them soon after and I fear the other came to an untimely end. I had great hopes that the fashion would spread among the gray and black squirrel, as it would much facilitate their preparation for the table, and as long as they were killed in the fall before cold weather set in it could make no especial difference to the squirrel.—C.

THE SPRING MIGRANTS.—Albany, N. Y., April 5.—Birds appeared in this section, notwithstanding the severe weather, as early as Feb. 19, when several goldfinches flew through here. Following are the dates upon which various species were first observed: Goldfinches, Feb. 19; hawks (species undetermined), March 5; downy woodpeckers and a robin, March 12; song sparrows, March 13; hairy woodpeckers, a bluebird and one which I was unable to identify with certainty, but which was perhaps a shrike, March 19; red-winged blackbirds, March 21, and fox-colored sparrows and doves, March 26. During the past week the remaining early migrants have appeared in considerable numbers. The only birds that to my knowledge, and I searched diligently, wintered here, are owls, crows, chickadees, white-bellied nuthatches, English sparrows and partridges, all of which, excepting the first and last named, were abundant. Crows were as numerous as at any other time of year.—J. W. D.

SPRING AT WASHINGTON.—Washington, D. C., April 15.—Among the birds I noticed robins, bluebirds, crow blacks, redwings, phebes, wood pewee, barn, bank and white-bellied swallows, savanna and chipping sparrows, grasstinch, flicker, cedar birds and doves. Song sparrows are very plentiful and are building. *Passer domesticus* has built, and in some localities as many as a dozen nests with eggs may be seen. Robins are assiduously at work on their nests, although there are very few sitting birds.—F. L. J.

Camp-Fire Flickerings.

"That reminds me."

208.

LAST summer, while we were camping out, Bob, our captain, often amused us by relating stories of adventure, of which he had an inexhaustible fund. One night the talk turned upon snakes and their habits of prowling about at night. (This for the benefit of the timid member.) "That reminds me," said Bob, "of an old hunter who lived in Greene county years ago. He was a good hunter, but he used to tell some queer yarns about his exploits. He said that one day he was out deer hunting, and night found him a long way from home. It was dark as six black cats, so dark he couldn't see his hand before his face, and he went stumbling along over logs and everything he could run into. Suddenly he heard the sharp warning of a rattlesnake, but in which direction he did not know. Afraid to move, he was in a quandary what to do, when a happy thought struck him. Cocking both hammers, he fired one barrel of his gun in the air, and before the flash died away aimed and fired the other barrel, killing the snake." RAMBLER.

209.

"Yes," said M., "I can bear witness to the fact that imagination plays an important part in our lives. I remember a little incident that happened when I was a boy. Some one told me that mink skins were worth money, as I set out one day with the old dog to gather a few mink skins. I found a hole, and as the dog said game I went to work with a vim (and a spade), brought out the mink after hard digging, and started for home with my trophy. I noticed a rather strong smell about the mink, but was not affected by it, and thought all minks smelled that way. Slinging my prize over my shoulder I walked proudly along, and when I got in sight of the house mother came out into the lane and sung out, 'What have you there?' 'A mink,' said I; 'Hurrah! Ain't he pretty?' and I held him up at arm's length. 'Stop right where you are!' screamed my mother. 'Don't you come a step nearer! That is not a mink, it's a skunk!' And right there, the minute she uttered that last word, I turned deathly sick, and vomited and vomited till I could vomit no more, and I was the wretchedest boy you ever saw. My clothes had to be buried, and myself scrubbed and disinfected. So long as I had a mink in my hand there didnt seem to be anything wrong, but with its change of name everything seemed to come over me like a flash.

KANSAS. RAMBLER.

210.

Speaking of fish I send you a clipping from the country where I learned to cast a fly. It is from the Portland *Oregonian*. The old sturgeon man from Sauvies was having a little wa-wa with the boys. "And that puts me in mind," said he, "that I saw a sturgeon wearing a set of deer horns a few days ago."

"Now, old man, you're going to wander from the truth again, I fear," said Deputy Sheriff Witherell.

"Just wait till I tell you how it was. I was over on Big Sturgeon Lake looking for a duck or goose for dinner, when, just as I paddled my skiff around a point I saw a deer's horns sticking out of the water near the shore. I thought it was a deer swimming across the lake, and without stopping to look, blazed away. I heard some of my shot strike the horns, and then saw them go under. I thought that singular, but after awhile I saw them roll up again half a mile off. The idea of a deer swimming that far under water was a paralyzer. I rowed out cautiously to the horns, and found that they were sticking out of a sturgeon's mouth. He had swallowed the deer, but had not room for the horns, and was waiting till he should have digested the animal so he could spit out the horns. I recognized the sturgeon as old 'Gros Ventre,' a fish I had known ever since I took up my claim on the island. He was named by a priest who had been a missionary among the Indians in Montana. The fish recognized me, and his eyes twinkled as he rolled up to have a look at me, and his silvery sides sort of rippled, as he was trying to laugh. He evidently realized the ridiculousness of his situation, but he probably found it was uncomfortable swimming around with the horns under water, and so turned over to rest. Now, I did not like to see an old acquaintance in such a fix, so I just cut the horns off, and blessed if old 'Gros Ventre' didn't swim out a piece and rise up about 5ft. clean out of water and make me one of the gracefulest bows you ever saw, and then he leaped his whole length out of the water and came down with a splash which sent the ripples circling to the furthest shores of Big Sturgeon Lake. I reckon that fish weighed a ton at least."

While I was in Washington Territory a family was crossing the Shokomish River in an emigrant wagon. They were strangers, unwarned of the dangers of the place. When they were in the middle of the stream, a band of salmon rushed upon them from a pool, upturned the wagon and devoured all of the family except the eldest son. Even the horses fell a prey to the voracity of these fish. The Western editors, although fully acquainted with the details of this and similar incidents, give no publicity to such affairs, lest they should discourage immigration. The fact is no child is safe after dark on the banks of the Columbia, as the salmon patrol the shore and the neighboring woods in droves. They roar horribly. These facts have, I am told, received recognition in the Eastern press, although I have myself never seen them them published. WALL STREET.

211

It was once the fashion in Bangor, Me., for young men who wanted a good time fishing, to drive up to Lake Pushaw, in the town of Glenburn, and spend a day on its quiet bosom, trolling, or bottom-fishing for whatever the gods might send them. One day in '47 my running mate and I found ourselves there for the purpose named. Whether we caught one or ten fish I haven't the remotest idea, for what we saw completely sponged the slate of memory as to our own luck. In a batteau just opposite, across a small arm of the lake, were two persons; one a short and very stout man, the other a little chap, the very antipodes of the first; our attention was at first attracted by their uproarious laughter. We guessed the cause of it might be schnapps, or brandy, or whisky—at any rate some kind of a bottle imp. After some time the big one tried to get the anchor; it had probably caught in the roots at the bottom, for he tugged away in vain for some time. At last when it started, he lost his balance and went over to meet it. He soon came up spluttering and tried to get into the boat, but his avoirdupois or liquor was too much for him. His comrade in vain tried to hoist him, until at last a bright idea struck him, for, getting the anchor himself, he seized the coat collar of "Jumbo," and walking along to the stern coolly sat down in the sheets, put out an oar, and sculled the boat ashore, towing his friend all the way.

If any big bully thinks the little fellow's task was an easy one, just let him try it. I know a dozen fellows who would take the job of towing him ashore just for the fun of the thing! BEN TENUTO.

WORCESTER, MASS.

212.

Some years ago a party of us were gathered at Connecticut Lake, one windy day in March, to try the lakers through the ice. Under the direction of our host we set a dozen lines on an old fishing ground where he said we should get some big ones, and returned to the hotel. After breakfast the next morning the doctor went up with us to help us bring our fish to the hotel, for he said we were "just as likely to get some weighing 20lbs. or more as not." I reached our lines before any of the rest of the party, and hauling in the first line I came to I found that I had on quite a large fish. I was much elated to have caught the first "lunge," as the doctor called the lake trout. The rest of the party came along by this time, and I triumphantly hauled a large fish out on the ice. "Ha, ha, ha," laughed the doctor, and I didn't blame him for laughing, for such a looking fish I had never seen. It would weigh perhaps 8lbs., was about 2ft. long, with a head something like a catfish, and a tail like an eel. "What have I got, anyway," said I. "Oh, nothing; only a cusk-eel," laughed the doctor, "the lake is full of them; now see me catch a lunge;" and he ran to the next line, and after bobbing a minute gave a furious yank and commenced hauling in hand over hand, and an expression of great expectation came over his countenance. "I've got a snorter, 25lbs. if he's an ounce; see him pull!" and he let him have more line and the fish started for the bottom of the lake as if it meant business. "Now, I am going to take him out," said the doctor, and he began hauling in the line, and giving a final grand surge, landed an old anchor rope with a stone attached, weighing about 10lbs. You ought to have seen his expression change as we rolled on the ice and roared with laughter, while he returned to the hotel and didn't ask us to see him catch any more "lunge." S. J. G.

BOOKS RECEIVED.

A FRIEND IN NEED, A Household Guide in Health and Disease.—Under this title Dr. J. Frank Perry has given us an exceedingly interesting and useful book. In his introduction Dr. Perry says: "The leading design of this work, as implied in the title, is to place before the reader those established principles, a knowledge of which is essential to the preservation of health and to recovery when suffering from disease." The volume is divided into five "books," treating in order the subjects of Practical Hygiene, Mental Hygiene, The Sick Room, Principles of Medicine, The Practice of Medicine. Under Practical Hygiene most useful information will be found. What food to eat or avoid under different conditions of health, how and when to exercise, how to bathe, even to the selection of the kind of soap, how to care for the mouth, hair, hands, feet, and so on. The diseases in the latter portion of the work, while scientifically treated, are yet simplified sufficiently to make them entirely intelligible to the unprofessional mind. The book ends with an almost exhaustive list of those poisons which may cause trouble in a household. The symptoms and treatment are succinctly described. In glancing through the book, one is amazed at the vast array of facts that have been brought together in so small a space. The volume is beautifully printed, and would be ornamental on any book-shelf aside from its more solid character.

GAME IN THE PARK.

MAMMOTH HOT SPRINGS, Yellowstone National Park, April 7.—*Editor Forest and Stream:* The snow is from three to five feet deep and very solid, almost ice; people can move about the Park without snowshoes by selecting cold days or nights after the crust freezes. On March 18 the ice began to go out of the river between and above the falls of the Yellowstone. It did not break up and go at once, but went slowly; by the 28th all had disappeared but a bridge of ice at the brink of the great falls, and the 100ft. bridge under them; these must have fallen by this time. All the great cliffs on each side of the upper and lower falls, which were so beautifully ornamented by frozen spray during the winter months, are now free from ice. When it commenced to go, great masses would fall into the cañon with a sound like distant thunder, laying bare great patches of the highly colored rock. In ten days, from the 18th to the 28th, all the ice was gone but the bridges mentioned; now there is nothing but the usual summer appearance of the cañon to be seen.

Mr. Al. Thorne, who has been wintering at the falls and was one of the men who saved the band of elk from starvation mentioned in my report, crossed the river above the falls before the ice went out, and visited the open country on the east side. Here he saw a band of fifty-three elk—cows, spikes and yearlings. They were quite poor but would live, as the warm weather was uncovering a little feeding ground additional to that blown free from snow. Where the snow is of any depth the elk cannot paw through it now as it is so wet and heavy. Mr. Thorne came out of the Park on the first of April, walking on the crust from the falls to the springs via Norris. He saw no game after leaving the falls.

A few days ago Mr. T. W. Ingersoll, a St. Paul photographer, started out with a companion to take winter views of the Park. They got out as far as the open country beyond Golden Gate and in all some four miles from the Springs, when Mr. Ingersoll found he would not be able to stand the trip; so he wisely concluded to return to the Springs and home to St. Paul. If he had gone on he would have had his trip for nothing, as all the winter effects are gone; all that remains are the fields of ice and snow. The warm weather of the past twenty-five days has destroyed all the delicate frost formations.

The game has moved from the vicinity of the roads to Cooke City to the higher ground. Travelers on the road now see very little; occasionally a band of elk are seen. A band of blacktail deer have shown themselves in the Park; they are now returning from their winter range, working back into the mountains as fast as the snow will permit. No young of any game has yet been noticed.

The antelope and mountain sheep that wintered on the mountain east of the Gardiner River Cañon are occasionally seen. The tame band of sheep that wintered in the cañon have left for higer ground and better feed. Mountain sheep have not commenced to return; they are more like summer tourists, waiting for the snow to go. The hills around the Park that are free from snow are now looking quite green, the fresh grass having grown enough to show at a distance. E. H.

QUAIL IN CONFINEMENT.

A FEW years since the sportsmen of our State, owing to the scarcity of our quail, caused a law to be passed protecting the same for three years, anticipating a good time at the expiration of that term. But as is well known, they were grievously disappointed—the law off, the birds were likewise. Nor were any seen from that time until last fall, when a few fell victims to the skill of our resident sportsmen searching after woodcock. The discovery made that quail were about argued well for stocking the suburbs, and to that end arrangements were made. Having secured the birds for delivery in January, a place for keeping them through the winter was found in a large barn at Cape Elizabeth—a few miles out of the city—on the farm of that whole-souled sportsman George M. Stanwood, Esq. That the birds might not be injured in flying about, the barn was transformed into a miniature forest of pine, fir and birch trees placed rather closely to each other, and the windows screened with coarse bagging, letting in plenty of air and sun.

The first installment of birds—five dozen in all—arrived in January and were placed in the charge of genial Captain Minot, who cared for them so well that they soon became pets—even feeding out of his hands. But the birds did not thrive, in fact began to die off daily until finally all went the same way. Concluding that they were a poor lot we secured a fresh supply of twenty dozen and tried again. In a short time the birds began to drop off as before, and then we unmercifully arraigned the New York commission merchant for swindling—and right here we ask his forgiveness, subsequent events proving the fault to be wholly with ourselves. An examination of the dead birds was suggested by a disciple of Esculapius, which was done, and the mystery was out—we had stuffed the poor things to death, the dead ones showing a very bad case of inflammation of the crop. This was eleven weeks ago, when a new method of feeding was put in use, and up to yesterday, April 11, when all that was left (ten dozen) were liberated, not a bird died.

The secret of successfully keeping quail in confinement is to feed them sparingly, and it is our experience that the best feed is cracked corn, cracked oats and middlings mixed and cooked, with a couple of bunches of celery and a cabbage or two thrown into the barn daily.

Our experience is thus communicated to fellow sportsmen with the hope that some benefit may be gained from it. G. H. P.

PORTLAND, ME., April 12.

A DOUBLE MEASURE OF VENOM.—San Diego, Cal.—My friend, Mr. W. Francis, was once out about one mile back of the Florence Hotel quail shooting, and sent his fine setter to retrieve a quail, when he saw the dog jump to one side. Walking up to him he found that two rattle snakes had bitten him. He shot the snakes, and his dog died before he could get him into town. A man must "look a little out" when hunting in this section.—D. B. HINMAN

ON THE EAST FORK.

OUR party consisted of Ely Murray, of this place, his brother, Mr. Charles Murray, and Dr. Rippard, both of Wilkesbarre, Pa., and myself. Ely and his brother were old hunters and had slain many a deer, while the Doctor and myself were the "greenhorns" of the party. Our guns consisted of repeating rifles for the Murray brothers, and shotguns with buckshot for Rippard and myself.

We started from Athens, Pa., Nov. 2, and drove the entire distance, passing through Mansfield, Wellsboro and Gaines, and on the 6th reached the Sinnemehoning Valley, in Potter county, Pa. We found Fred Martin, who was to be our guide and cook, ready for us. He had a good cabin near the creek, well furnished with everything necessary for camp life. As soon as we had unpacked in the cabin we started out for Hammersley's Run for our first hunt. Martin knew the woods thoroughly, and placed us on runways. A doe ran near Ely; he fired twice at it and thought he hit it, but as no blood could be found on the leaves it was given up. A few days later, however, another hunter found it dead a short distance from where it had been fired at.

Nearly every day some one would start a deer, but the leaves being dry made still-hunting impossible, and in driving the game would inevitably take a runway where no one was placed, so night after night we returned empty-handed. But on waking one morning we found two inches of snow on the ground, and we began preparations for the day's hunt.

It was agreed that Fred should place Charles, the doctor and himself on runways, while Ely and I should make the drive. We let them get fifteen minutes start and then began our work; when part way through I started three deer which ran up over the hill and into the basin beyond. Ely was following a buck track to the right and so lost a shot as he crossed where he would have been. A short distance beyond he jumped a fine buck which ran through to Fred, who fired, killing it instantly. We soon had it dressed and hung up, and then started to drive the basin where the three deer had gone. Charles was placed on the ridge, Doc on the next lower bench, and I beyond him, while Fred went to the lower end. Ely did the driving and was gone but a short time when I heard two reports, and in a few seconds a double shot again. I expected every moment to see a deer come in sight, but none came, and after waiting a few minutes I went to where I heard the firing and there found the doctor somewhat excited. As I came up he pointed down at some drops of blood on the snow and said, "Look how I hit 'em." He said he was looking down the hill and saw two does coming up; they were looking around and as they got within 150yds. began to sniff the air. He supposed they had winded him, so he pulled up and fired, dropping one, while the other ran a few steps and stopped. He fired at this one and it ran off and then the doe on the ground got up just as he reloaded and started after the other, although he fired again. The doctor felt somewhat downhearted about his loss, but attributed it to the shotgun, for if he had had a rifle he could have killed both. We followed the deer some distance, but as they stopped bleeding and were making better time than we were, it was decided to return to camp, and we arrived at the edge of the woods in time to see a young fellow kill a nice buck which had run into the creek.

The next day we awoke to find the snow melting and it was decided to start as early as possible. Fred, Charles and Doc were to occupy runways, and Ely and I would make the first drive. The others had just gone and we were waiting to give them a a few minutes start, when we heard an awful yell, and then a great splash. I ran to the cabin door in time to see the jolly doctor splashing in the icy cold creek. As he was crossing the log which served as a foot bridge, he slipped and grabbed the railing, which gave away, precipitating him into the water seven feet below, and nearly six feet deep. We fished up his gun, and after helping him change his wet garments for dry ones, went on to meet the others. We started no deer on this drive, but saw plenty of tracks, as well as the trail of a big bear. On the next drive Charles had a shot at a buck, but he did not kill it as the brush was quite thick and he had only a glimpse of the game as it bounded past. During this drive Ely and myself became separated from the rest, and finding the fresh tracks of three deer, concluded to follow them up. We tracked them for some distance and found where they had been feeding and had gone over the dividing ridge.

After hunting rather carefully for a while, we heard several shots some distance off in the direction that we were going. Hurrying to the edge of the hill we stood looking around, when Ely said: "There's a deer," and looking in the direction I saw a doe making its way along unconscious of any danger. As I stood watching it another came in sight, and following them appeared a large buck with immense antlers. They were taking it leisurely, trotting along, nibbling moss off the logs, and before long had come nearly in front of us. What a sight it was! Within 150yds. were three unalarmed deer. Had my companion not been there to keep me cool I might have had a touch of buck fever, but just then he pulled up, and taking deliberate aim at the buck as he was walking, pulled the trigger. For some unknown reason the cartridge did not explode. At the snap all three started on a jump and I sent a load of buckshot at the buck, which caused him to stumble and fall, but regaining himself he started on, just as I gave him the other load. Ely had thrown more shells into his repeater, and had fired as they ran. When on the opposite side of the draft they all stopped; one poked its head from behind a tree, and as Ely fired again I saw the deer fall and the other two start on a jump. At the next shot I saw a leg hanging loose on the doe, but the two disappeared over the ridge. On dressing the deer we found that the bullet had gone in through one eye and out at the other.

Taking the tracks again we soon found where the doe had lain down and bled freely from a wound in the side, as well as from the broken leg, while the buck I had wounded was spurting blood at every jump and stopping every few yards. As it was growing late we thought best to find the doe first and the buck afterward. We had not far to go before we started the doe again, and as it passed me I fired a load of buckshot which dropped it. After dressing and hanging it up, we looked at our watches and found we would have to strike out for camp if we got in before dark. So marking the trees, we set out and struck Birch Run, which we followed nearly four miles to get out, and that was two miles below the cabin. It was a jolly party that night that sat down to a supper in Fred Martin's best style—broiled grouse, roast venison, baked potatoes, home-made bread, buckwheat cakes, delicious coffee. We hunted a few days more, and then, with many regrets, packed our traps and bade farewell to our guide, who had treated us so well and had done all he could to make our stay pleasant. We killed in all during the trip eight deer, which, with the pleasure and health derived, fully repaid us. A party of fishermen will start for this same region next summer after trout, which are very abundant in these streams. They will stay with Fred Martin, near Wilbur, and if they fail to have a good time and catch plenty of trout it will be their own fault.

W. K. P.

ATHENS, Pa.

NEW JERSEY SHOOTING NOTES.

THE famous woodcock cover around Dr. Roe's Island in the valley of the Pequest, Warren county, N. J., was partly destroyed by fire last winter. Since then the thicket and tall timber which fringed the upland to Money Island have been cut off. Henceforth onions instead of woodcock will be the crop of this once excellent shooting ground.

At one time prior to reclaiming the Great Meadows in Warren county by drainage, there was not a surer find for woodcock in the State of New Jersey. In those days it was shot over by Dr. Paul Mead, Humphrey Hartshorne and Bob Robinson, of Brooklyn; John C. White, William Dodd, Dr. Bowlby, Harry Durand and Chas. F. Murphy, of Newark. Since then the principal sportsmen who went there were Arthur Duane of Bergen Point, John E. I. Grainger, Arthur L. Sewell, Gilbert Spier, of this city, and F. Satterthwaite of Newark. The place was kept quiet and big bags were the result. Its glory, however, has gone forever; and those excellent sportsmen, Messrs. Beasley and Kelsey of Belvidere, will have to hunt up another spot.

The only swamp that is left, a tract of some 470 acres, has recently been leased by Franklin Satterthwaite. It is on the property of H. H. Van Deuser, it has been advertised and legally posted and will be thoroughly protected against the raids of the illegal market-hunters who infest the section. Last season the Quick brothers of Danville, and two companions killed over one hundred birds in this swamp early in June. If they attempt to repeat their dastardly work they will be prosecuted if it costs the lessee $1,000.

Five miles north of the Van Deuser tract is the magnificent game preserve of Mr. Rutherfurd Stuyvesant of this city. It is several miles in length and stretches across the wide valley at Allamuchy. Besides being well stocked with quail and ruffed grouse, the estate has some English snipe bogs and several strips of woodcock cover. A beautiful trout brook traverses the preserve, this was fished last week by Mr. Stuyvesant and his brothers, the Messrs. Rutherfurd, of fox-terrier fame. Some time since Mr. Stuyvesant introduced English pheasants and partridges on his place but they did not thrive. This is perhaps owing to the immense hordes of ground vermin and hawks and owls in the district.

Farmer Edward Fowler Bird of the Shades of Death, reports that while traveling his swamp after cattle a short time ago, he flushed a flock of Messina quail, some hundred in number. He says the birds were in the vicinity of Post's Island, and were the quail, no doubt, which Mr. Stuyvesant put out on his estate last autumn. There are several witnesses to prove that some Messina quail wintered in Warren county.

The grouse and quail wintered well in New Jersey. This was owing to the warm rains which succeeded every large fall of snow. It is a fact that there are more ruffed grouse in the mountains of the northern counties of the State at this time than for many years. When the crop is ripe, we will begin to hear of the partridge fly again.

Besides writing the Beggar's Opera, the poet Gay had something to say at one time or another about the woodcock:

> "He sung where woodcock in the summer feed,
> And in what climate they renew their breed,
> Some think to Northern coasts their flight they tend,
> Or, to the moon in midnight hours ascend."

If the poet had been standing below Sam Shelly's big spring on the Wallkill the other night he would have seen the "t'other dear charmer" get in her fine work to the most approved taste. A "spaking" cock and a twittering hen had come out to dance by the light of the moon, when along came another dame of the longbill persuasion, and setting her night-cap for the croaking gallant, had what appeared to be a pitched battle with the bird of her own sex. She finally drove her off the field up into a mountain swale, but where alas, the villain still pursued her.

It is not generally known that woodcock during the breeding season are apt to start their serenade early in the evening and keep the mill a-going until late in the night. This is only, however, when the moon is near or at the full. It is to be regretted that so many birds are shot by the country people, many of whom are ignorant enough not to know what they are shooting at. There was quite a rattling of guns at dusk last week along the Wallkill below Liberty Corner, and several woodcock were killed.

"Curly" McCracken, the champion trout fisherman of Hackettstown, who keeps the American Hotel, is too much crippled with rheumatism to fish this season. The more's the pity, for there are some good fish in the streams in the vicinity. Mr. Arthur Duane got 19 fine big ones there the other day. Col. Vallentine, a well-known shooting man of Hackettstown, recently died in Canada. Steve Pyles, who used to shoot more game in northern Jersey than any other man, has laid down the game bag and the gun and taken to chopping wood. So much for the march of improvement. Every one is trying to buy the latest improved breechloading doublebarrel gun, for $5 a piece at Newton.

The sportsmen who were tired of going snipe shooting and getting nothing, missed it this season in New Jersey, for there was quite a flight. This occurred late in March when everything was ice and slush. The Von Lengerke Brothers of Hoboken, as usual scooped in the cream of the shooting on the Hackensack meadows. There were some really very early birds in the lot. Pete Longstaff—it would be unintelligible to call him Peter—and his son Henry have shot over one hundred snipe on the Newark and Elizabethtown meadows. Frank Class of Pine Brook, got 18 snipe on Monday, April 11. This was the flight day of that section. Wm. Graham, the English pigeon shot, is residing near Pine Brook flats. He goes sniping every day. On the Troy meadows, the Hopping boys don't let a snipe light down. C. F. Hedden, of Newark, got 13 snipe one day last week on the Ford Island meadows. Henry Walker, of Hanover Neck, is prowling for snipe every day. R. H. Brientnall and O. Von Lengerke, of Newark, went to Pine Brook on April 12, one day after the fair. They heard some guns but did not kill anything. The Dukes boys, of East Newark, have been shooting a few snipe every morning at Dry Point, on the Hackensack meadows. Two snipe flew over Mr. George H. Raymond's head, at Morristown on Saturday last. Arthur Duane killed 17 snipe on April 9, in Warren county, and F. Satterthwaite shot 36 on Monday, the 11th. At Mantoloking there has been fairly good snipe shooting. The conductor of the morning train from this city, lays over there for two hours every day; he gets from 6 to 15 every time he goes out. Arthur L. Sewell shot 6 snipe on Rumsen Neck on April 4; and 10 at Point Pleasant on April 8. He found the corpse of an old snipe shooter lying on the meadows at the former place.

There was very poor snipe shooting last spring and autumn in the Western States. This spring owing to the drought and dry condition of the prairies, the birds have concentrated in vast numbers in certain localities. In Missouri, they are very numerous above St. Louis. In Southern Illinois an immense number of birds are being killed and shipped. For any Eastern sportsman fond of snipe shooting, this was the season to have gone West. It appears that the same dry conditions have extended throughout New Jersey and Delaware.

Mr. David Keeler, of Rumsen Neck, has just put out twenty pairs of English partridges. The quail which were planted in this section last autumn have done remarkably well. But few of them were shot last fall. Rumsen Neck is well preserved, and pot-hunters need not apply.

SCOLOPAX.

SPOTS IN BARRELS.

I HAVE had a good deal to do with guns in using and taking care of them, and under varied circumstances, for long periods of camp and boat life, and while lying in disuse. I have heard the putting away of guns uncleaned to prevent their rusting highly lauded. I have tried and been bitten by it, having had my guns several times severely rusted in consequence. When a gun is thus put away, if its place and surroundings do not favor rusting, it may not rust for a long time; but if place and surroundings do favor rusting, then the gun will rust, and often much more seriously, apparently, in consequence of the dirt. With fair trial I have failed to find in it any security against rusting upon which I could rely.

Some guns rust much more easily than others, some show little disposition to rust under even careless treatment, and there are guns which it is almost impossible to keep rid of rust, qualities doubtless due mostly to the kinds and condition of the metals from which they are made. Some regions of country, some periods of weather, moisture, and other subtle agencies, conduce strongly to the production of rust; and again, in localities where the danger usually is specially imminent, there will be considerable periods when there seems no tendency to rust and scarcely any care is required.

Warm and dry rooms and closets, and by preference upper rooms, are the best places to keep guns to avoid rust. As a rule, too, a gun is safer a few feet off from the floor. A gun shop or store, or jeweler's store, are about the best places in which to keep guns from rusting, the ever warm and dried air and equable temperature being favorable. I have had a breechloading shotgun, after being thoroughly cleaned and oiled, laid in its case on a shelf in a jewelry store for six months continuously without requiring anything to be done for it and keeping perfectly preserved, whereas if it had been kept in the room which I made my quarters, the gun would have required overhauling much oftener than once a month.

I have tried various brands of powder and qualities of them, as the Hazard, Oriental, Laflin & Rand and Dupont, all good powders, and have seen no reason to suspect one of conducing more to erosion of the gun than another. The dirt resulting from the exploded cap is undoubtedly specially deleterious and makes special care in cleaning the gun necessary.

I have tried for application to the inside of the gun the various oils, mercurial ointment, vaseline and various mixtures, and found none to be anything more than aids in protecting against rust—no one a specific against it so that you do not need to keep a lookout on your gun afterward. According to my experience, when a gun that has been shot is going to be put away for any length of time or even over night, if the weather is wet, it should be well wiped out and dried, carefully oiled and set in a dry, warm place. After the lapse of one to three days, depending on weather and surroundings, wipe and oil again, and after about the same interval repeat the process, after which the gun will be very much less likely to rust than if trusted to the single wiping, the reason being probably that the repeated wiping more completely removes the products of the burnt charges. One thorough application of water might do the same. After this thorough wiping or cleaning, look into your gun every week or oftener; you may need once in awhile to oil again. It is not the abundance of oil needed, but thorough application and good quality. The object of the oil of course is to protect the surface of the metal against the presence and action of the rust agent, oxygen, and whether freshly applied or dried it should form a continuous coating. On the whole I prefer the best sperm oil when I can be sure of obtaining it.

The moment that rust specks or a crop of them are discovered it is all important to break them up thoroughly at once and rub out their base, and watch the matter well afterward, else you will find the basis of chronic and increasing difficulty surely laid. The best way to accomplish this is to use the wire brush or fine emery, or wood ashes may be used. Western duck hunters use the last with much satisfaction. When the work of rust or the specks are well fixed, the emery lathe is the thing, but even this will not reach the bottom of old-time spots. When rust spots appear, rub out rust and base when practicable, or you will have the disease with you ever after. The gun will be kept well cased of course. While in tent and boat life wipe and oil the gun daily, and in damp weather if not shooting twice a day.

These specks or measles in guns are simply rust. Its

agent is ever present ready to act, and the subtle agencies which stimulate the process are ever lurking around, and if you desire to keep your gun in hand for instant work, there is no application known which is a certain security against the plague. You may neglect, take risks and by chance escape injury, and while some aids are better than others, there is no reliable security against the evil save wise and vigilant care. If the time ever comes when the interior of guns shall be made by any process rust defying, it will be a great relief to those who prize and use them. F. M. W.

Editor Forest and Stream:

Here is a little piece of my experience extending over the space of seventeen years on the sea coast of Texas.

By the closest attention to the inside of my gun barrels for the first eighteen months I was able to keep a pair of laminated steel barrels almost entirely clear of rust. This was by cleaning within an hour after use, wiping dry and covering with whatever lubricant was obtainable in camp, and on my return home cleaning with hot water and lubricating with a solution of mercurial ointment and sweet oil. I suppose any other oil would have answered just as well. At the end of the eighteen months, however, many little pits began to show on the polished surface, and I then attributed it to the mercury and have never used it since. My next new gun was carefully kept for the same length of time by treating in the same manner except that I used sperm or fish oil, refined by putting in it scraps of iron, and after a week or two carefully drawing off the top of the oil in a separate bottle; and so I gave the inside of the barrels four or five coats of pure oil instead of oil and mercurial ointment. This did not keep off the pitted appearance more than eighteen months.

My next gun I never cleaned after using, but oiling well the outside of the barrels set the gun away with the residue of burnt powder in it.

I found that after four or five days had elapsed this residuum changed its character and looked like wet ashes of a gray color instead of black.

But before two years had elapsed those miserable spots appeared, and I believe worse than in either of the other cases. I now have a gun which I have been using nearly three years and it looks as if the small-pox had paid it a visit. I have tried all kinds of patent rust preventives, but I cannot say much for any of them. None of my guns have had any red rust inside the barrels, and once I commenced the practice of varnishing the outside with a solution of gum tolu and alcohol. I have had no trouble with the outside. The locks are easily kept in order by cleaning and oiling after use. My own idea is that on a salt-water coast no amount of care will prevent a gun from pitting on the inside if it is used much. All of my guns have been shot from two to four thousand times during a winter, and perhaps one-half as many times for the balance of the year. I know of some guns that have been kept bright inside, but they are but very little used.

Bexar.

NEW ENGLAND GAME AND FISH.

THERE is nothing inspiriting in the weather to the sportsman with rod and line. Indeed the reports of ice and snowbanks chill even the enthusiast to the very bones, and his ardor for the rushing stream and green woods dies out with a shiver. It will take several weeks of warm weather to warm him up, to add even a spark to the enthusiasm of former seasons. There is something peculiar concerning the influence of the season on the sportsman; the weather warms him or makes his feelings cold, according to the season. If by some mysterious freak of nature—concerning which there is little danger—the ice should suddenly be removed, weeks of the trout and salmon season would go by with scarcely a votary of the rod and line hieing himself to the lake and the stream. Warm suns, bright skies and green grass are the influences that exercise their power upon us to be on the move to the favorite waters. The latest accounts from the Maine waters are not encouraging. A letter of April 15 from Richardson Lake, one of the Androscoggins, says that there are still 4ft. of snow on the ice and the ice itself is 30in. thick. This letter is from a lady, by the way, Mrs. Sessions, who, with her husband Pim., has spent more than half a dozen winters in care of Capt. A. J. Farrar's Lake View Cottage at the South Arm. All the sportsmen who have dined at the South Arm the past few years remember her. The curious point in her case is that she has not once been out to the settlement since she first came in, though it is but twelve and a half miles through the woods to Andover, her native town. Her letter further says that the winter has been the hardest she has ever experienced in that region. There has been but little hunting and fishing out of season, for the weather has been too severe the greater part of the time. This lady, though spending the majority of her time in the woods, is by no means a hermit, nor has she lost any of the refinement that might be said to belong to the settlement, or even the city. She surrounds herself with plants and flowers, so far as the severities of the climate, bringing frosts in every month in the year, will permit. She has house plants that she has carried through many winters. Her boat load of pansies and petunias were the delight of those visitors who saw it last season. An old boat was improvised and filled with earth, and into this the more hardy flowers were set. They had to be protected from frosty nights, but the sight was one to be remembered, as well as rare, in the woods. She is also interested in canaries, a large number of which birds are to be heard in her home.

There are good reasons to believe that the ruffed grouse in the woods of Maine have wintered well, though there are the usual stories of their destruction under the snow. But it must be borne in mind that there has been but very little snow crust, though the snows have been remarkably deep. A letter from one of the best woodsmen in the Androscoggin Lake region, who has been in the woods a good deal on snowshoes after gum the past winter, says that the partridges have wintered well. The deer have also fared well where they have been out of the reach of the lumbermen. This woodsman and guide is of the opinion that there are a good many deer in that region. But the lumbermen have been at work in some sections there, and from all that I can hear, there is to be a reckoning with these same lumbermen. That they have killed deer in the snow there is no doubt, and just so sure as their names and the particulars can be found out, they shall be called to an account in the Forest and Stream, if not to the law. Every sportsman in the land shall know the names of these lawbreakers, and if a rich lumberman is mean enough to slaughter deer in the snow in winter to save the cost of beef, why the public shall know it. The Commissioners have been crippled for want of means for a year or two past, but it is likely that another winter there will be detectives employed to visit the lumber camps. Deer killing in winter by the Maine lumbermen has got to be stopped, if there is any power in public sentiment.

The trout season promises to be very late this year, and likewise the season for salmon in the Penobscot, but there are some curious features in this matter. But very few Penobscot salmon have yet come into the markets, by reason of the backwardness of the season, and yet Mr. Fred Ayre, the noted Penobscot salmon fly-fisherman, of Bangor, was in Boston yesterday and left the news that the salmon were already leaping in the open rapid water below the dam, though the rest of the river is still encased in ice. This set some of our Boston sportsmen on the alert, and they will depart for that region as soon as the ice is out of the river. So far as the trout fishermen are concerned, it is altogether likely that there will be less of rushing away as soon as the ice is out of the Maine lakes this year than usual. The weather is too cold and the sportsmen are likely to be content to stay at home till June this year. Indeed present indications suggest that the ice will not be out of the great lakes much before that date.

The Phillips, Maine, *Phonograph* says that the decision of the Governor and Council, in the case of the charges preferred against the Fish and Game Commissioners, has not yet been made public. That is really very funny, but the reason is just the same as the reason why Jack didn't eat his supper. The people of North Franklin, if they read the *Phonograph* and no other paper, would be in danger of believing that they had actually made out charges against these same Commissioners, instead of being parties in the most peculiar farce ever brought before the government of a State. If its items indicate anything, that same paper is the poacher's friend, and has been for some years. One of its correspondents, in the last number, warns a game warden to "look out for his scalp." And again it is facetious over the silly assertion that a deer was seen playing with a dog, and later that the deer—in close time—was found with a bullet hole through him. The item winds up with: "Accidents will happen." Why has not the paper honor enough to state flatly that somebody has been hounding deer, that it is strictly against the law—a crime—under the statutes of the State? Then in warning Warden Huntoon to "look out for his scalp," does it mean to encourage another warden murder like that double one at Fletcher Brook last fall? Again its favorite item reads: "Mr. ——— and Mr. ——— are in the lake regions enjoying our magnificent hunting and fishing." It repeats this item, notwithstanding every species of game at the time one would stand the ghost of a chance of getting is under the protection of the law, and never once does it turn square in its track and say that there is such a thing as a close season. I can only say: Shame! shame on such a paper! But I can be truly thankful that its influence is even smaller than its circulation. Special.

PENETRATION TESTS.

Editor Forest and Stream:

Feb. 2 last I made a test for penetration, which was published in your paper, and I was requested by your correspondent "Von W." to make a different test, which I did to-day. The test on Feb. 2 was as follows:

2½ drs. powder, 5 thick wads, 1 oz. shot, 1 thin wad.... 50
2½ drs. powder, 4 thick wads, 1 oz. shot, 1 thin wad.....70
3 drs. powder, 3 thick wads, 1 oz. shot, 1 thin wad.... .... .85
3 drs. powder, 2 thick wads, 1⅛ oz. shot, 1 thin wad..... 75
3¼ drs. powder, 2 thick wads, 1⅛oz. shot, 1 thin wad.... 90
3½ drs. powder, 2 thick wads, 1⅛ oz. shot, 1 thick wad.....120

This test was made with Laflin & Rand Ducking powder, No. 3. The thick wad was U. M. C. black edge.

The second test, made this afternoon, is as follows:

2½ drs. powder, 1 thick, 1 felt wad, 1 oz. shot, 1 thin wad.....96
2½ drs. powder, 1 thin, 1 felt wad, 1 oz. shot, 1 thin wad.....65
3 drs. powder, 1 thin, 1 felt wad, 1 oz. shot, 1 thin wad.....87
3 drs. powder, 1 thin, 1 felt wad, 1⅛ oz. shot, 1 thin wad.....85
3¼ drs. powder, 1 thin, 1 felt wad, 1 oz. shot, 1 thin wad.....111
3¼ drs. powder, 1 thin, 1 felt wad, 1⅛ oz. shot, 1 thin wad.....90
3½ drs. powder, 1 thin, 1 felt wad, 1 oz. shot, 1 thin wad.....105
3½ drs. powder, 1 thin, 1 felt wad, 1⅛ oz. 1 thin wad.....82

The last test was made with Hazard Ducking No. 5 powder. The outside figure refers to the number of pages penetrated of a Government report. The gun used was 12-bore W. & C. Scott & Son, 7¼lbs. modified choke, at 30yds. The felt wad used was best quality U. M. C. ⅛in. thick, and the thin wad stiff cardboard. The shot in both tests was drop shot. J. M. W.

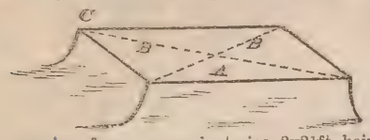
Augusta, Ga., April 13.

LEWIS WHITZEL'S GUN.

BEACH HILL, W. Va.—*Editor Forest and Stream:* I was at a local rifle shooting match a few weeks ago. The guns used were all very long and heavy muzzleloaders, with a shader over the entire top of the barrel. I was the only person that used a breechloading rifle, and my gun, by the way, was a curiosity to them all. A man has to do very close work at these matches to win, often cutting away the cross (X) no bigger than a gnat at 60yds., and then not winning. My attention was attracted to a young man approaching with one of these long rifles on his shoulder. "There comes Killnigger," came from a half dozen mouths at once. They referred to the rifle he carried. Most of these guns have a local or knickname. Mr. E. said, "There comes the Lewis Whitzel gun." I was not a little surprised to think that the historical rifle of that notorious "red skin" hunter was now before my eyes; in fact I could hardly believe it, and perhaps expressed myself that way. But I was answered, "We reckon that to be the gun that Lewis Whitzel used; but the barrel is the only original part, we think; it has been stocked one or more times and has been dressed out inside many times." The barrel is forty odd inches long and the rear sight has been in two other seats besides the one it now occupies. Guessing at the caliber I think it would run about seventy round balls to the pound. When I was a boy I used to read of the many exploits of Lewis Whitzel and this trusty rifle. J. H. W.

Missouri Ducking.—Duck shooters will find good shooting in season at Williamstown, Mo.—G. L. H.

A Moonlight Ride for Deer.—Bismarck, Dak.—It was an ideal night, with a snow of two inches, mild and clear and sparkling. The Indian ponies were brought out at about 6 o'clock in the evening. We had only five miles to go and were soon there, for these tough little fellows will go on a run for that distance. While on a fast lope my friend E. cried, "Hold! there is a deer," and looking to the left, there within fifty-two steps, as it afterward proved, stood a fine buck. I had my repeater ready, but E. having a shotgun had to load. Those were long moments till he said ready, but the deer stood tossing his beautiful head. We counted 1, 2, 3 and fired. The deer seemed to have got some of our excitement, for he bounded away at a fine gait. We had been running our ponies and they were breathing fast and hard, and the motion made it almost impossible to hit even a barn. We saw two more deer while sitting at a haystack, but the wind had come up a little and they scented us, and kept away about 150yds., so we could not get a sight on them. We started home, taking the loads out of our guns, and were in a place where we did not dream of seeing deer, when, all at once out went a big one almost from under the ponies' feet, and stopped within 10yds. of us. You can imagine the wild hurry of two fellows to get guns loaded. Well, we were ready just as we saw the white tail disappear behind some brush. We had not gone on 100yds., when looking up on the bluff, 75yds., there stood a handsome buck, so beautifully outlined between us and the sky. We were all nerves for the moment and went for our pockets, and I was ready in time, but E. said wait; we would have gotten the deer I am certain—no, I am not certain, as the sequel will prove. When E. was ready I saw him, instead of taking aim, sliding off his pony. Just at that moment the deer made a step and was behind the bluff. When I came to unload I found I had put in a blank cartridge. This is not so much of a disappointment to us as it would be to an Eastern hunter, for we can go out any day or night and see the same sight.—W.



Pumpers at Game.—Maj. H. W. Merrill sends us this extract from a letter received by him from a Montana correspondent: "There was a time when most all the game killed was within 100yds., as you say, for large, or 50yds. for small game. The time has passed in this country for that. One must make long shots as a rule. The large game is scarce and hard to find, still more difficult to approach. I have not myself to blame, as I never killed game that I did not want and never for hides alone. The hide hunters killed off most. I have before now wished there were nothing but muzzleloaders in the country. I once had out a party or 'tourist hunters' who kept shooting at a band of buffalo until I stopped them. The plan had been for each to select an old bull and kill it; I was to kill a cow for camp meat. After the shooting commenced I shot twice at my cow and saw her fall, and then watched the rest. I saw buffalo limping off in all directions, and directing my attention to the shooters I saw them aiming at the band of over two hundred animals and shooting as fast as possible. They had repeaters and were keeping the air full of bullets. I stopped them as soon as possible, begging them not to shoot at the band but put out of misery those wounded; this they did, but they had killed several more than were intended. How many wounded ones escaped I do not know. Since then I have disliked all magazine rifles in the hands of most tourists. They get wild as soon as they commence shooting, and as a rule end by shooting until every cartridge is out of their magazines. Often I have heard the click of the hammer on an empty chamber. Very few men will reserve their fire, as I have seen Col. Pickett do. After firing one shot (he is as careful as though he had a muzzleloader) he will load as soon as possible, but wait for results from his first shot. That is the reason he killed seventeen out of twenty-four bear with one shot each; most men would have been shooting as long as there were signs of life."—H.

Anent Big Bags.—The Monmouth *Gazette* tells of two citizens of that village who came home on Monday from a five weeks' hunt near New Boston, during which they killed over 2,000 ducks. During a given four days in March they killed 225 and a week ago to-day they killed eighty, all of which had to be thrown away the next day because of the warm weather. The *Gazette* says "they had a tip-top hunt." We heartily rejoice at the above. A very few such expeditions, if all our exchanges will be good enough to publish accounts of them, will suffice to put an end to spring shooting. Our sportsmen, and everybody else who knows enough to handle a gun, have been prodigal of our game fowl to an extent that is worse than reckless. Two thousand ducks killed in March or April is as good as ten thousand killed in November. How long will hunters need to kill these birds at the rate of eighty a day until the only specimens found in the whole Mississippi valley will be those that are mounted in glass cases? When this country of ours was new; when ducks and deer and chickens and quail and turkeys fairly swarmed about Burlington, and when the infernal shotgun and pot hunter were unknown, men took their rifles and killed what they needed for food and no more. Nowadays men kill, not to supply the needs, but to gratify their love of killing. It is time that an end was put to this wanton slaughter. If every hunter who goes out will come in with half a dozen ducks, as many as any man can want, the number of birds killed by spring shooting will not materially interfere with their perpetuation, but the killing of 2,000 birds in a month by two men who have nothing better to do than to turn their efforts to the destruction of the wildfowl of our country is inexcusable on any ground whatever. Monmouth is not alone in this matter. Burlington has men who would have done just as much of this work as any one else had they had opportunity, and so has every town on the Mississippi. They all need reining up.—*Burlington (Iowa) Hawkeye.*

Kentucky Quail.—In Madison and Lincoln counties, Ky., they shoot and trap quail in summer and at other times, without regard to season or reason. The Forest and Stream ought to do missionary service here.—G. L. H. (Stanford, Ky.).

Brass and Paper Shells.—I have noticed that the use of brass shells causes a gun to foul more than when paper shells are used. Is this a general rule?—G.

A SIMPLE STOVE.—As the season for pleasure camping will soon be upon us, a hint upon the subject of camp stoves may not come amiss. I have used the following "stove" with satisfaction, although it is not as convenient as some might wish. A is a piece of light sheet iron,

which may be of any convenient size, 2x2¼ft. being the dimensions of mine. The dotted lines B B are the cross pieces of ¼in. iron bars upon which the sheet iron rests, being held in place by small bolts, one in each corner as represented by C. The bars should be allowed to extend 10 or 12in. beyond the corners, that they may be bent down to serve as legs. Having no sides, the stove may easily be taken apart and made into a roll about as large as a section of stove pipe, in which may be packed provisions enough to last a man two or three days. Some may object to the smoke, but if one be careful to keep upon the windward side of the stove, I think he will have no trouble. Others may think the loss of heat too great to be of advantage, but if the fire is large there will be sufficient heat. Try it and report.—WATT.

BRITISH COLUMBIA GAME LAW.—The new law forbids killing hen pheasants at any time; deer, elk, reindeer, caribou, mountain goat, mountain sheep, hare, between Jan. 10 and Sept. 1; grouse, partridge, prairie fowl, California quail, Virginia quail, cock pheasant, robin, meadow lark, Feb. 1 and Sept, 1; wild duck, March 1 and July 12. Sale of pheasants forbidden. Sale or possession of game forbidden in close season, save first three days. Gulls may not be shot in the harbors. Snaring game forbidden. Deer may not be killed for hide alone. Deer may be killed if "depasturing within cultivated fields." Unlawful to kill or capture blackbird, linnet, thrush, chaffinch, skylark.

NORTH WILMURT, Herkimer County, N. Y., March 31.—We have had a very hard winter here. If all the snow that fell had remained we would have had 25 feet. It has been very bad for partridge, so much crust. Most of the time the deer have been able to run on the crust. Fishing will be very late this spring, for the ice is from 18 inches to two feet, and the snow is four feet deep; I don't think trout will take a fly until May 15 or 20.—FOREST PORT.

KANSAS.—Salina, April 12.—The Cheyenne bottoms are famous as the grounds used by the American Coursing Club for their meetings, and from the fact that the majority of the waterfowl that migrate across the State stop on the immense lake and feeding grounds. In season geese are there by the millions. To reach this go via Hoisington, which is situated at the east side of the bottoms.—KANSAS TRAMP.

THE CAPE COD DEER.—An attempt is being made to secure from the Massachusetts Legislature an open season for deer. They are now protected at all times. It is not probable that the committee on fisheries and game will listen to these petitioners. Another petition for liberty to snare grouse, Sept. 1 to Jan. 1, has been unsuccessful.

SILVER FOX.—Let no one sneer at shooting foxes. It may not be "English," but there is money in it if the prize happens to prove a silver fox. The Ferrisburgh, Vt., hunter, whose prize of a silver fox was reported in our columns last winter, has received for the skin $47.50 from a New York fur dealer.

HOW TO START A BALKY HORSE.—Erie, Pa., April 17.—Assistant Paymaster Joseph Frick, United States steamer Michigan, was mortally wounded to-day while out gunning. He used the butt of his gun to start up a balky horse. In the operation the horse kicked, discharging the weapon, shooting Frick's right arm off. The wound is fatal.

NEW YORK.—Bristol Center, April 11.—Grouse have wintered well in this vicinity; there are more birds in the woods than I have seen before for years.—L. J. R.

DUCK BOAT.—See description in yachting columns.

THE NEW YORK LAW.

Editor Forest and Stream:

"It is a fact, not disputed, that just so long as fish and game may be sold in this State, just so long will they be killed in violation of law, after the open season."—Extract from argument of John D. Collins before Assembly Game Committee, of New York.

"It is not disputed." The remedy is as plain as the fact—prohibit the sale. It may be added, and contradiction challenged, that the only efficient preventive against catching or killing in the close season has been under the provisions of law prohibiting possession, or sale, after the close seasons, making possession—in the few days permitted for handling after the season closes—*prima facie* evidence against the possessor, and putting upon him the burden of proving his possession to be of game lawfully killed.

"This is not disputed." It cannot be, truthfully. The marketmen make a provision allowing possession and sale after the close season, their sure reliance to keep their stalls replenished, and the distinctive earmark of every bill they thrust upon the Legislature, is a provision extending the time to have in possession, and to sell—the longer the better. They now ask an extension to the first of March.

Not so significant, this, as the influence and efforts backing such outrageous demands. Judge of the astonishment of the sportsmen of New York, aye, of a much wider territory, to hear that Mr. Roosevelt has advocated before the Assembly Committee on Game Laws the opening of the selling season all through the winter for venison; and the opening of July to woodcock shooting, and closing September against it.

Is there not ground for hope that Mr. Roosevelt is misrepresented? If not, we may be assured he is misinformed.

But the gravest charge against such efforts, as against the whole brood of bills and amendments with which the Legislature is flooded, is their certain tendency, if not their manifest purpose, to bring the present efficient game laws into disrepute, and game legislation, generally, into contempt. This will serve the marketmen most effectually.

Mr. Collins deserves, and will have, the cordial thanks of every sportsman, of every game protectionist in the State, for his exposure, before the Game Committee of the Assembly, of the pernicious measures thrust upon its attention.

But shall we sit quietly by with an expression of thanks merely? Do we not owe something to a great cause that will excite a telling effort in its behalf? We are recreant when we are not active in its interest. The general public sentiment is with us, but it will not follow a supine, inert attention on the part of its natural leaders.

Speak out loud, then.

ST. LAWRENCE, April 14, 1887. FORKS.

WENTWORTH ASSOCIATION.

HAMILTON, Ont. April 11.—*Editor Forest and Stream:* Inclosed you will find copies of the annual report of the Wentworth Fish and Game Association, which may interest you enough to publish. I send them to you as some time since you expressed a readiness to help us in any good work. I hope that the legislative wave against spring shooting, which started in Ontario last year and which has spread westward to Michigan and Minnesota will go outward in all directions. This year our society will move chiefly in the direction of stopping pike shooting in the marshes in the spring, better protection of the fish in our bay from netting, attempts to interest the county in preserving a large swamp in the neighborhood, the source of some considerable streams and numerous springs, and the removal of the sparrow in the interest of the songsters, from among the protected insectivorous birds.—A. E. M.

The report is as follows: Your committee in presenting their fifth annual report, congratulate the association on the good work that has been done during the past year. It is to be regretted, however, that its members are not so numerous as formerly, but this is accounted for by the fact that devoting itself exclusively to the protection of fish and game it has lost many of those who combined this interest with club shooting matches and social enjoyment. Two flourishing shooting clubs have been formed in the city whose members, while having their periodical shooting matches at clay pigeons, etc., have done their best to protect the game of this locality. It is to be hoped that all lovers of true sport will combine to form one strong association. Your executive have no doubt but that with such a union periodical shooting matches might be held and the protective interests looked after without any increased expense to the members. At the close of our last annual meeting at the suggestion of J. C. Goodenough, the association determined to make an effort to have the game laws amended, and that single-handed as it were, for your attempts to get combined action toward this end with other protective associations had failed. Though it seemed almost hopeless when begun, especially as the doing away with spring shooting as a whole was contemplated, a bill in complete harmony with the resolutions regarding close seasons, etc., which had been passed by you from time to time, was written out and handed to J. M. Gibson, M.P.P., who secured the able assistance of Wm. Caldwell, M.P.P. in bringing it before the legislature of Ontario.

The association is to be congratulated in having induced the legislative assembly to pass a bill, which, while not embodying all your views, is the best, as it is the most protective bill that has appeared in the Ontario statutes. It is needless to mention the changes effected, so well known to you all, but, briefly, all spring duck shooting has been abolished; plover of all descriptions, coots and rice hens have been included among the game birds; quail have been protected for three, and wild turkeys for four breeding seasons. It is to be regretted, however, that all spring shooting was not done away with, but it is to be honed that in time the eyes of the goose and black heart plover shooters, from whom the opposition came, will be opened, and that the principle of not killing the goose that lays the golden egg will move them to aid us in the future. We cannot help remarking on the silence with regard to this bill of the sporting papers in the United States; they have given little or no credit to Ontario for initiating such a good measure, but at the same time they are powerfully advising that bills to do away with spring shooting and to curtail the open seasons for game should be passed in the various States of the Union. The game bill has no clause preventing the shooting of game for exportation, and this may seem strange to some, but such a clause by the aid of a go-between or third party would be inoperative, as exportation can only be prevented by the action of the Dominion government. The Dominion government by orders to its custom house officers, have prevented or attempted to prevent, the exportation of all game except ducks and snipe, and the attention of the government has been directed to this apparent oversight by your executive. It seems strange that the most plentiful game birds of our Dominion should not have been included in their order. Why should the best ducks, say from the celebrated Long Point preserves, be permitted to pass over the border to Delmonico's and not be kept for Canadians? Let the rich Americans who spend weeks in shooting at these and other preserves, eagerly vieing to slaughter the most, pay a little more for their sport by being compelled to sell, as sell they do, in a smaller market. Why should ducks killed in Canadian territory be made dearer, comparatively, than other game to Canadians by this apparent oversight?

The association has been immediately interested in six trials for breaches of the game laws, one for selling ducks out of season, lost; one for hounding and killing deer in Beverly swamp, lost. In this case the deer was shot out of season, the hounds that had been running during the day were traced to their owners, but the magistrate was not fully satisfied that the hounds had been set on the deer. One for illegal netting in the tributaries of Burlington Bay, won; two for selling partridges out of season, won; and lastly, the case of pollution of the Twelve-Mile Creek with sawdust, won.

The association has been successful indirectly in a prosecution, as by inclosing to the Bay of Quinte Game Association a short article from the Hamilton *Spectator* copied from a Syracuse paper, relating the good time that some so-called sportsmen from the State of New York had had on the river Trent, they aided in securing the conviction of a Dr. Faulkner, a county councilor and a magistrate, and one Sanger Golding, for killing deer out of season. A case of illegal pot shooting of quail in the heart of the city came under the notice of your executive, but unfortunately too late to secure such proofs as would satisfy a magistrate.

It was hoped that the association would have been able to have imported live quail to distribute in the neighborhood of the city and throughout the country; but the funds required were insufficient. Numerous complaints were made last spring of nest-robbing of our songsters, but the public should remember that mere information without the necessary proof is not sufficient. In general this breach of the law is done thoughtlessly by boys who do not appreciate the mischief they are doing, and a word of warning and common sense in the interests of the Audubon Society from the teachers in our schools at the proper season would do more to protect our songsters than any number of prosecutions.

This winter the spearing of black bass through the ice, which is true and legitimate sport, was prohibited by the government local inspector of fisheries, J. W. Kerr, Esq., and it should be thoroughly understood that this prohibition did not emanate from any action of this association, though we have good reason to believe that a report to the contrary has been circulated. On this point, too, it should be remembered that when this association first petitioned the government to prevent netting in Burlington Bay and its inlets, the petition was so altered by the recommendation of the fishery overseer that it was made to include spearing as well, and it was only through the active exertions of this association on becoming acquainted with this fact that while netting was prohibited spearing was allowed. Your executive have found the greatest difficulty in getting the Dominion Government to listen to their appeals on the fishery interests of this neighborhood. In this connection we had proof last spring that in a schedule obtained from the Dominion Government with the names of those persons therein to whom the local fishery overseer, J. W. Kerr, had given permits for netting in some of the inlets of Burlington Bay, several names appeared of persons who had never received such permits, had never even asked for them, and who were totally opposed to spring netting. The thanks of the association are due to the Hon. James Turner, and to our late members, His Lordship Judge Robertson and F. E. Kilvert, Esq., for their endeavors on our behalf to place the true fishery interests of their neighborhood before the Dominion Government. From communications and from inferences arising in the course of conversation with them, it would appear that they equally, with your executive, had difficulty in getting a proper hearing from the deputy minister of fisheries.

Posters giving the open season for fish and game and a synopsis of the laws pertaining thereto were distributed and posted throughout the city and county.

W. D. Balfour, M. P. P., has now a bill before the Ontario Legislature to permit spearing of muskrats through their houses, and to allow of spring duck shooting, and it is to be feared that unless active measures against it are made throughout the length and breadth of the land it may become law. A deputation of this association should be appointed to combat any such retrograde movement, and correspondence entered upon at once with the various protective associations in the Province urging them to like action.

By removal from the city the association lost one of its most active and enthusiastic members in the person of our late secretary, F. L. Hooper, who has left to us our correspondence book a proof of his zeal and taste, and that he may find good sport and good friends in his new field of labor is the wish of all his old associates.

DIFFICULTY of breathing, a short, dry cough, a quick pulse and pain in the left side are symptoms of approaching consumption. Relieve the chest and cure the cough with Hale's Honey of Horehound and Tar. Sold by all druggists. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

ROD FISHING FOR HALIBUT.

SAN DIEGO, Cal.—I send you photograph of a halibut which I caught off the steamship dock in San Diego. My rod is a bamboo, 15ft. long, weight 29oz., hook baited with live bait. I used one of Chubb's click reels, and a light braided linen line 55ft. long. It took me full twenty minutes to land him. When he struck he took about 10ft. of line and went to the bottom. I immediately struck, and away he went, and when I attempted to check him I found I had my hands very full indeed. I worked

him toward the shore, 150yds. distant, as it was 6ft. to the top of the dock from the water. Three times he struck out into the bay, and as many times I recovered my line safely. Once he tried to run under the dock and around the huge piles, and I feared that he was lost, but by careful handling and a good rod I turned him and continued toward the shore. The fish twice sulked, ran his nose into the mud, and I could not budge him, but retreating I could then loosen him, and in that way I took him ashore. A gentleman placed the hook handle of his cane into his gills and pulled him in so that he could get his hand into his gills and pull him up on to the railroad track. I felt as if I had sawed and split a cord of hickory wood in twenty minutes, instead of taking in such a huge fish with such a tackle. The rod, reel and line in the picture are the ones I killed him with. I took him into the steamship office close by and weighed him, when he pulled down 41lbs. and measured 48in. long. It was the best fight I ever made, and I never expect to equal it again.

D. B. HINMAN.

CANADIAN SALMON STREAMS.

THE following notes, taken from the Report of the Commissioner of Crown Lands, gives information respecting some of the salmon streams in 1886. The names of lessees are given in parentheses:

Little Saguenay (N. P. Rogers). Salmon scarce at beginning of season, but as many observed on spawning grounds as in previous years. Trout in abundance.

St. Jean, Chicoutimi (Evan J. Price). About 100 salmon spawned in this river.

A. Mars (Evan J. Price). Number of salmon considerable diminished.

Ste. Marguerite, N. W. Branch, (Ste. Marguerite Salmon Club). Some 40 salmon were seen in this part of the river. Number of trout diminished.

Ste. Marguerite, N. E. Branch (Walter M. Brackett). Sixty fish seen on the spawning beds, none of more than 3 or 4lbs. Yearlings in considerable numbers.

Trinity (John D. Gilmour). Large numbers of salmon and sea trout frequent this river. The weight of the latter sometimes reaches 6lbs. The river also contains numbers of black and yellow eels, which do much harm to the young salmon. It is reported that salmon are taken by Indians every fall from spawning beds in the upper part of this river, some twenty or thirthy miles from the mouth.

Little Trinity (Henry T. Machin). It appears that numbers of salmon frequent this river. No trout in the upper part, as far as the guardian knows, but sea trout abound at the mouth.

Ste. Anna des Monts (Henry Hogan). This river is frequented by both salmon and trout. The principal run of salmon this year took place only in August and beginning of September, just before the spawning season. The spawning beds were then as well, if not better filled than in previous years. The catch of salmon was not as good as usual; on the other hand, trout fishing was better, these fish appearing in great abundance. The increase in the number of trout is becoming alarming, as it is now well established that they prey upon the salmon ova and even the young salmon. There are also large numbers of small trout in the lower part of the river. The people there take them with seines, to use them as bait in cod fishing.

Grand River (Col. John Walker). Salmon and trout in abundance.

Little Pabos (Louis Cabot). This river is well stocked with fish. At least four hundred salmon are understood to have run up to the spawning beds, as well as a considerable number of trout.

Grand Pabos, N. and W. Branches (Henry Hogan). West Branch.—About fifty salmon run up; not many trout. North Branch.—About two hundred salmon run up, and large numbers of trout; too many for the river. The value of the river depends greatly upon the protection given in the bay. The practice of flambeauing for eels, hitherto permitted, constitutes a permanent danger in regard to the salmon.

Little Cascapedia (L. J. Riopel). Not many salmon. Trout in abundance, besides other fish, such as eels, etc.

Nouvelle (John Maitland). The only fish frequenting this river are trout, which exist in large numbers.

Escumenac (John Maitland). The only fish found in this river are trout, which appear this year in larger numbers than usual.

Matapedia and tributaries (Sir George Stephen). Guardian Blais.—Frequented chiefly by salmon. Trout are so scarce that anglers do not take the trouble to fish for them. The increase in the number of salmon does not answer to the protection afforded. This is due to causes not clearly explained by the guardian, but which, in his opinion, might be remedied by the Federal and Provincial Governments, especially the former. This guardian is also of the opinion that the restocking of the Matapedia with young fry from the Restigouche hatchery

does not answer, as he believes that the young fish, after going to sea, invariably return to their own natural river. If Sir George Stephen establish a hatchery, as he has intended, at Casupscull, this opinion will then be confirmed. Sea trout run up this river in August, to about four miles above the Assametquagan. In August and September eels also make their appearance at the foot of the Little Falls, near the mouth of the Assametquagan. They are taken at night by flambeauing, sometimes in large numbers, but their season is short.

Fishery Guardian Mowat, of Campbellton, N. B.—(Verbatim report.)—I beg respectfully to inform your honor that I was in charge of the Matapedia River, P. Q., from May 1 to Nov. 1, 1886, under orders from Sir Geo. Stephen, as well as by your honor's appointment. The river was faithfully guarded by six men under my direction and very little illegal fishing was attempted. Two salmon nets were taken from parties attempting to fish illegally, identification being impossible, owing to the darkness and their running off on the approach of the guardians.

I am sorry to report a very small supply of salmon in this river, about seventy fish being taken by the lessee and his friends, while two thousand were caught by the rod in the main Restigouche River. This remarkable difference has been gradually increasing since 1880, every year the fish in the tributaries becoming fewer and the numbers increasing in the main stream. At one time, from 1870 to 1880, the rivers were nearly equally stocked, while the Metapedia was guarded quite as well, if not better than the others. Increase of nets in estuary and bay with all improved modes of fishing, traps of extreme lengths, and Sunday fishing can only serve to take a larger number of fish; but they cannot select the fish belonging to the tributaries and allow the main river fish to escape.

From my forty years' experience on those rivers, and among salmon, I assert, and it is generally admitted, that each salmon river has its own distinct species or variety of salmon, some large, some small, different in marking, color and flesh; if it were not so, as the salmon are only impelled to seek fresh water to spawn, some streams would get the whole, others none. Now our buyers and netters, who know well the branch to which each fish belongs, all concur in saying that the whole catch, for the last two or three years, has been main river fish; those formerly known as "Matapedia and Upsalquitch fish" have disappeared, and this state of matters has come about through the natural supply failing, owing to increased netting. "Pisciculture was adopted with the view and for the purpose of supplementing the natural supply, and preventing the fluctuations in the catch, or giving general good catches without the poor ones." This we find it has done in the Restigouche for the last four years. We know that some years the natural supply is totally destroyed by the ice and freshets, and we would not become aware of the loss until six or seven years after, when the last year's fish should have returned. It was also held as an axiom in pisciculture, that fry would return where planted, and that results would be shown in three or four years. This has proved a fallacy. A few, and very few, grilse may return in three years, but the great majority return as adults—witness this year's catch here—half a million pounds of them averaging twenty-three pounds.

As I had charge of the hatchery here for eight years, I gave the tributaries fully two-thirds of the whole hatch, the Matapedia the lion's share, fully expecting to make it the river *par excellence*. Instead of that the supply is and has gradually decreased, while the hatchery branch for the last four years has shown a most remarkable increase, as last year, after giving half a million pounds to the nets and forty-five thousand pounds to the anglers, it was never seen with such numbers of fish in it; in fact they were too numerous for breeding purposes, destroying each other's ova. The only conclusion possible to draw from this is that all the ova used were taken from the main river fish, and although placed in the other branches when they returned they went into their own natural stream.

I am not prepared to assert that if ova or eggs were carried and placed in rivers emptying into the sea, in the Atlantic, they would return to their native stream, but I do assert that all salmon rivers should be restocked from their own stock. This view was also taken, after years of observation, by Mr. Buckland, in England, and expressed by him to me in 1881.

I have advised Sir Geo. Stephen, if he wishes ever to see the Matapedia as it was once, to restock from its own supply. This, I believe, he intends to do.

The scarcity of the Matapedia salmon is shown by the fact that among some four hundred salmon, caught in tidal water, which the officer in charge had confined in a pond, for use in the hatchery, as parent fish, there were only four or five Matapedia fish.

I am compelled to say that many of our salmon rivers, once teeming with fish, are now nearly valueless, from want of guardianship, or from the guardians, where there are any, being nearly or quite worthless. On these the poacher plies his vocation in August and September, when protection is most necessary, and in many rivers he is assisted by flocks of shelldrakes, kingfishers and cormorants, which clean out the few smolts left in them. I sincerely hope your honor will be enabled to resuscitate our rivers, the most valuable in the world for salmon angling.

Lakes Whitefish, Green (H. H. Cameron).

Green Lake.—Perch, carp, salmon trout and lake trout in abundance.

Whitefish Lake.—No fish but salmon trout, and in less quantity than in Green Lake.

Lakes Charles, Russell, etc. (Ste. Marguerite Salmon Club). These lakes are fairly well stocked with trout.

Lakes Batchelor, Bramley, etc. (Mrs. E. M. Copeland). Well stocked with trout, the only valuable fish they contain. Plenty of smaller fish on which the trout feed.

Lakes Willy, Tonnerre, etc. (St. Bernard Club). Lakes Willy, Tonnere and St. Bernard are well stocked with small-sized trout, of from ¼ to ½lb.; the trout in Lake Saccacomi are much larger, reaching from 3 even fo 6lbs., but are not so plentiful as those in the other lakes, owing to the excessive fishing to which they have been subjected, winter and summer, for some years past. Doubtless Lake Saccacomi will soon recover its former condition, now that it is well protected.

Lakes Roberge, Masketsy (P. B. Vanasse). Lakes full of fish. (Report of P. P. V. Du Tremblay, P.L.S., Jan. 15, 1887.)

STATEMENT RESPECTING RIVERS OF THE PROVINCE OF QUEBEC, ANGLING SEASON OF 1886.

bass in the first eight casts. Those caught on the third cast were a four-pounder on the dropper and a two-pounder on the stretcher, both of which I secured by running ashore with them where I had the help of a friend. This was about 3 to 4 P. M., and before dark I had caught twenty-two as nice black bass as any one would care to catch. I fished for some twenty days, a few hours each day, and never failed to make a good string either day, when the wind and weather were favorable. I know of a party of three from Hagerstown, Md., who caught 375 good fish in three days with a fly having a yellow hackle, guinea fowl feathers dyed red for wings with tail of red and peacock feather. It was a perfect monstrosity, yet it proved killing.—E. D. BOWL.

SUGAR AND SULPHUR.—I have had fair sport with the bass on Sugar and Sulphur Creeks, near Athens, Ala.—HICKORY.

Fisheulture.

Address all communications to the Forest and Stream Pub. Co.

THAT NEW TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

Concerning the identity of this fish on which much has been written, I wish to say: It is well known that the embryos of all animals show relationships which are not visible in the adult, and that much value is placed upon embryonic characters in tracing lineage or the processes of evolution. This is shown in the embryo salmon, which has a heterocercal tail, a form found in fossil fishes and a few living ones such as the shark, sturgeon, etc., but which went out of fashion ages ago. When the young salmon absorbs the sac and assumes the form of the perfect fish, the tail is changed to the homocercal form, in which the vertebræ ends at the beginning of the caudal fin, and both lobes of the tail are equal or nearly so. Thus far for the rule, now for the application.

Two years ago Mr. Francis H. Weeks sent me some eggs of the blue-backed trout (*S. oquassa*) from Maine and I hatched them. The embryos were small and active, more lively than those of the brook trout at the same age, and the yolk sac was more or less globular, as seems to be the case with all of the *Salvelini*, but there was no distinctive mark which I made a note of. This winter, Col. E. B. Hodge, of the New Hampshire Commission, presented me with 10,000 eggs of what he was pleased to term the "Sunapee what-is-it," and the embryos are now in the troughs. Soon after hatching they massed, as is the nature of young salmon and trout, and with their heads hidden and tails elevated they presented a speckled appearance which looked like a fungoid growth, such as we see in troughs where trout have nibbled at their neighbors' tails. A brook trout which had arrived at the swimming stage was seen over them, and, as it had escaped from a trough above, was captured and replaced, and the Sunapee fry were more closely examined. Then it was noticed that the mottling of the mass was produced by a white line at the upper and lower edges of the caudal fin, a mark not remembered to have existed in the only lot of *S. oquassa* I ever hatched.* This same mark is seen in the German sailbling, *Salvelinus salvelinus*, now in our hatching troughs, but is not present in any other salmonoid embryo that I have met. If I am right in my observation of the *S. oquassa*, then there is no doubt of the latter being distinct from the large trout of Sunapee Lake.

FRED MATHER.

COLD SPRING HARBOR, N. Y., April 18.

*If Mr. E. M. Stilwell, of the Maine Commission, who furnished Mr. Weeks with the *oquassa* eggs sent me, has observed the white marking on the upper and lower rays of the caudal fin of the *oquassa*, I hope he will publish the fact and show that I overlooked this point, in which case my conclusions as to the distinctness of the two fishes are false.

FISHWAYS FOR THE HUDSON.—The bill authorizing the erection of a fishway in the State dam at Troy, N. Y., has passed both houses of the Legislature and is now in the hands of the Governor. A fishway at that point would let the salmon up as far as Mechanicsville, and with one at the latter place and Stillwater they could then go up to Fort Miller. The bill directs that the work be done under direction of the United States Fish Commissioner and Mr. Shanahan, Superintendent of Public Works. It is thought that the milling interests will oppose it, but the fact is that the salmon will all run up before the season of low water in August, and the fishway will not use as much water as the old chute now in the dam does. A clause in the bill prohibits taking salmon in nets in the upper Hudson.

A WOODSMAN'S RHYMES.

[*From the Philadelphia Record, April 13.*]

MR. George W. Sears, of Wellsboro, Pa., will doubtless be remembered by many whose "days are in the sere and yellow leaf" as, under the *nom de plume* of "Nessmuk," having been a frequent contributor to *Porter's Spirit of the Times*, and younger people will recognize him as having appeared in a like guise in FOREST AND STREAM. Like Nimrod, he was "a mighty hunter," and there was little that he did not know of woodcraft. Like many others, also, who have found a delight in wandering where the quiet soul of Mother Nature broods, he caught the spirit of poetry, and from many of his effusions he has selected a few which, under the title of "Forest Runes," have been published by the Forest and Stream Publishing Company, New York. In the preface to them he says: "I trust that the sparrow-hawks of criticism, who delight equally in eulogizing laureates and scalping linnets, will deal gently with an illiterate backwoodsman who ventures to plant his moccasins in the realms of rhyme." He need be under no apprehension on this point. His rhymes may not be polished and classical, but they have about them a rough vigor which atones for many imperfections of style. The subjects which he chooses for his verses are those which belong to nature, and he has caught much of the inspiration which comes from field and mountain, from forest and river. The summer camp, the hunt, trout fishing, and sunrise in the forest are each given their meed of praise in homely and yet musical language. His rhymes breathe a spirit of love for everything in nature; his pictures of woodland scenes are rich in natural color; no feeling of despondency ever touches him; his utterances have the true ring of manhood, and the lesson which they teach, in his own words, is that

> Nearer to Him of the lowly manger
> Is the sun-tanned forester, broad and free;
> And the rugged hills in their native grandeur
> Are nearer the hills of Galilee.

FIXTURES.

DOG SHOWS.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4968.**

PITTSBURGH DOG SHOW.

THE Western Pennsylvania Poultry Society's thirteenth annual exhibition closed last Friday night. There were 438 entries and the quality in several of the classes was quite up to the average. Last year the society got itself into bad repute with exhibitors by offering as special prizes zinc medals in place of silver ones, and it is to be congratulated on having to some extent removed the stigma surrounding it by securing entries from the kennels of such well-known exhibitors as Messrs. Thayer, Belmont, Hopf, Jarvis, Partridge, Chestnut Hill Kennels, Dole, Cryer, Lacy, Krueger, Chequasset Kennels and others. But there will have to be a change, and a great one, next year if entries are obtained from several of the owners just named.

One of the rules of the A. K. C. reads as follows: "Any person guilty of misconduct or who has been guilty of misconduct in any way in connection with dogs or field trials," etc., etc. With this rule before them the Pittsburgh show management actually accepted entries from persons who stand accused of attempted bribery and other offenses. Further than this, persons of very questionable repute were permitted to enter the building although they were more than once pointed out to the president. Fortunately the Mayor sent down a special staff of officers who kept a vigilant watch on members of the "long firm" and arrested and fined one of them for disorderly conduct. As stated in our despatch the attendance was fairly good, but the better class of people stayed away. Ladies were conspicuous by their absence and gentlemen were few and far between. It was a rough looking crowd and contrasted most unfavorably with the splendid gathering at Boston.

The benches were of the old-fashioned sort, and the dogs were well cared for by Superintendent Whitman, who certainly worked hard and was more courteous and obliging than some of his burly chiefs.

In regard to the judging, it was worse than anything we can recall to memory, and we have attended hundreds of dog shows. There was no pegging back of first-class pointers or English setters, as was the case last year, for there were none entered to put back, but there were blunders made which must be explained, blunders so glaring that ignorance will hardly be accepted in excuse for them. Mr. Goodman, the non-sporting judge, is not at home in the judges' ring. His way of handling a dog is enough to condemn him as a judge. For instance, when examining the mastiffs he touched them in all places but the right ones, and wound up by making some of the most unpardonable blunders we have ever seen. We feel certain he tried and tried hard to place the dogs correctly, and for this reason we are disposed to be lenient; but we should be sadly unmindful of our duty to exhibitors if we failed to protect their interests by not calling attention to blunders or in concealing facts. It is utterly impossible for any man who has not been in a good school for a number of years to successfully handle one-half of the classes Mr. Goodman undertook to pass on. He himself discovered this before he got through with his work, and asked us to help him out of the dilemma his lack of foresight had placed him in. Mr. Krueger went about his work in a business-like way, and evidently knows what he is about. He kept his eyes on the right end of the chain and judged the dogs.

MASTIFFS—(MR. GOODMAN).

The Eastern cracks were absent from the dog class, and Wacouta Nap, fully described in the Buffalo report, was much the best of the lot and won. Imogene was the judge's selection for second place, and he was just on the point of giving her the red ribbon when somebody informed him she was a bitch. Imogene was then transferred to the bitch class and second prize given to Bevis; skull lacking in volume, muzzle too long and pointed, ears rather large, the near one badly carried; color smutty, expression not correct, forelegs not quite straight, body fairly good, quarters light, not a big dog and not a good one. Cæsar II., the only other entry, was absent. There were six entries in the bitch class, and the judge fairly slaughtered it. Jessica, first prize, is not a show dog and should not have been noticed in such a class. She is a fawn with feet shaded white. Skull small, muzzle long and pointed, near ear badly carried, eyes moderate, expression not good, leggy, not straight in front, poor feet, light of bone, fair good tail, coat and color. Imogene, second prize, might have been commended for her size, straight limbs and good color; muzzle long and pointed, skull lacking in volume, eyes light, ears not well carried, much to leggy, shallow in body, very light of bone, fairly good loin and quarters, wrinkle poor, not a show bitch. Wacouta Rose, third prize, was fully described in our Buffalo report and in other reports copied from it. Mabel, vhc., is a long-headed animal with no pretension to show form. She was catalogued to be sold at $35, a very dear dog. The Lady Clare, hc. if put up at auction would bring more money than all the mastiffs in the show put together. The great English winner was in excellent condition, and is not a cent less valuable for being placed behind $35 dogs. Only one puppy was shown, a poor-headed specimen.

ST. BERNARDS—(MR. GOODMAN).

The Hospice Kennels made an excellent display in these classes and, considering the knocking about the dogs have had of late, their condition reflects credit on their owner and keeper. Otho, the magnificent fronted son of Rollo and Lady Abbess, had the class for champion rough-coated dogs to himself, and the good-bodied Beda represented the ladies. Both were in trim to compete for something more valuable than a Pittsburgh medal. Sir Charles, winner of first in the open class for dogs, did not arrive at the show until Tuesday, but was permitted to walk away with the prize. He is a big dog and has just a fair head. Back short but by no means strong; loin light; quarters light and straight; tail badly carried; chest narrow; forelegs not well placed and not straight; coat curly; an overrated dog and one that must have given "Barry" Smith some trouble before he was landed in the front van at the English shows. Hajar, second prize, Eiger, vhc. reserve, and Alvier, vhc., are all owned by the Hospice Kennels, and have been fully described in these columns. Meinrod, third prize, is a dog of fair size and correct markings. Cheeks rather full; muzzle rather long and lacking in volume; slightly underhung; ears and eyes fairly good; back rather slack and short; stifles very weak and straight; hocks weak and straight; good brush, carried too high; forelegs fairly strong, but not quite straight; good feet; colors light; moves badly. Not so typical as Eiger. First in bitches went to Orgar, good in coat, color, markings and feet, and of fair size. Skull too round; muzzle pointed; ears too large and not perfectly carried; eyes rather light fair good back and loin; quarters drooping more than we like; ribs too flat; forelegs not well placed and lacking in strength of bone. La Duchesse, second prize, and Tromba third prize, both from the Hospice Kennels, are well known. Five of the entries were absent and the class not a good one. Hector, the best smooth-coated dog before the public, scored another win for his popular owner in the champion class for smooth coats, the corresponding class for bitches being drawn blank. Mont Rose and Wotan, first and third in the open class for dogs, are also from the Hospice Kennels and are well known. The former keeps on improving. Perro, second prize, is a dog of fair size and is much better than the average in limbs, feet, coat and color; cheeks too full, muzzle not clean; back a trifle slack; good loin and quarters; markings not correct. The bitch class was wretchedly handled. Queen of Sheba, second prize, was away ahead of Kader, first prize; both are owned by the Hospice Kennels and are well known. Our opinion appears to be indorsed by the owners, who value Sheba at $500 and Kader at $200. Alpina, third prize, is not a show dog; skull small and round; muzzle snipy; stop not well defined; expression sheepish; small thin ears not well carried; back slack; stands low in front; fair good loin; stifles too much out; tail not well carried; forelegs not straight; limbs very light; feet not first rate; coat long and not straight. Puppies were a wretched lot and we hope they may deceive us by growing into good ones.

NEWFOUNDLANDS—(MR. GOODMAN).

Only two competed in the dog class and Dan O'Shea's well known Bruno was much too good for his long-faced and curly-coated opponent. Juno, first in the bitch class, while not a good one, scored an easy win over Diana. The former is faulty in head, carriage of ears and coat; chest, back and loin fair; good brush. Diana is deficient in head, eyes, ears, strength of limbs and coat; body, quarters; color and brush fairly good. Bruno II., the only puppy shown, is faulty at both ends.

GREAT DANES—(MR. GOODMAN).

There were five entries in the dog class but Don Cæsar and Cæsar fairly distanced the others. The former is now in good condition and won. He is better in head and on his limbs than Cæsar, and is stronger in back but has not so much bone. Nero, c., and Hodges's Cæsar, also c., are much too small to compete successfully with big dogs. Juno, described in the Buffalo report, was an easy winner in the bitch class, followed by Lady Gray, from the same kennel. Her ladyship is not a crack. Eyes too light; back slack; stands low in front; quarters light; stifles faulty; hocks straight and weak; short tail badly carried; neck not clean; forelegs not well set on and not quite straight; feet fairly good; not a big bitch; moves badly.

GREYHOUNDS—(MR. GOODMAN).

There were six entries in these classes and a worse lot of long tails we have never seen. General, the best of the dogs, was given second prize, and Fritz vhc. reserve. Seeing there was not another vhc. dog in the class, we don't quite see why "reserve" was necessary, unless the judge wants us to believe that commended and very highly commended are one and the same thing and so tacked on the "reserve" to make a distinction. General is faulty in eyes and before them; ears heavy; chest not deep enough; back too long; loin flat; quarters and hocks fairly good; tail coarse; shoulders heavy; forelegs lacking in strength; feet not first rate; coat fairly good. The balance of the class should not have been noticed—a lot of weeds. In the bitch class second prize was given to Bess of Braddock, so vastly superior to General that if he was worth second prize she certainly was worth first. Skull and muzzle fairly good; eyes rather full and ears a trifle heavy; fair good neck; ribs well sprung; loin flat and too light; rather straight behind; shoulders fair; limbs rather light; good feet. Blue Ruin, c., is faulty at almost every point.

DEERHOUNDS—(MR. GOODMAN).

Bran, Perth, Duncan, Bras, Thora and Berga, all from Mr. Thayer's kennel, had matters all to themselves. They are well known to your readers. The judge seemed ill at ease whenever he found two dogs in the same class, and evidently knows nothing of the breed. On one occasion he showed that he meant well by asking Mr. Thayer's man if both dogs were owned by the popular exhibitor from Lancaster. The veteran Heald replied "Yes, sir," and looked as though he might have a fit at any moment. Mr. Thayer's puppies were absent, and fortunately so for Custer, who was given first. "Whelped, etc., unknown. Not for sale."

POINTERS—(MAJOR J. M. TAYLOR).

The four champion classes did not bring out one entry, and the open classes were filled with the worst lot of dogs it has ever been our misfortune to comment on. When we say that Patti M., who is only a second rater, was away ahead of all others, the quality may be gauged to a nicety. First prize in the heavy weight dog class was given to the white, black and ticked Donald's Ranger, a very ordinary specimen. Cheeks too full, muzzle not square in profile, eyes too dark, showing white around them; ears placed too high and not very well carried, neck of fair length but not quite clean, chest not first rate, fore legs not well placed and not quite straight, feet turned outward, stifles and hocks faulty, tail would have been very long but for kindness of a friend, feet fairly good, lacks true pointer character. Young Meteor, second prize, has frequently been described a wonder. He is not a show dog, but is a better specimen than Donald's Ranger. Skull rather heavy, and not quite clean in cheek; faulty below the eyes and somewhat coarse in muzzle; eyes, very light; ears of good quality but placed too high; neck short, heavy and not clean; chest and back fairly good; loin flat; good tail carried too high; strong quarters; hocks and stifles too straight; shoulders not well laid on; too wide in front; legs not quite straight but strong; feet fair; lacks quality. Dick Swiveler, third prize, is not a show dog. Skull fairly good; muzzle not quite clean below the eyes; eyes light; ears of nice quality but not carried quite right; neck of good length but not clean; loin long and flat; quarters just fair; tail not straight and not well carried; forelegs, not well set on; fair good feet; light of bone; lathy and tucked up; coat and color

fairly good. Prince C., who ran so well at the Eastern Field Trials last fall, is not up to show form. A very weak class. There was only one entry in the corresponding bitch class, and she was awarded first. Skull fairly good, muzzle too pointed; eyes light; ears of good quality, but not well carried; neck of good length but very throaty; back hollow; loin flat; good shoulders and fairly good chest; stifles and hocks faulty; forelegs not quite straight and hardly strong enough; good feet; tail rather long; shows some character with all her faults. There were three entries in the light-weight dog class, and a poor lot they were. King, third prize, was best dog in the class. Skull and muzzle fairly good, ears of good quality, but placed rather high; fair good neck; ribs might be better sprung; loin fair; quarters rather light; tail too long and coarse; forelegs might be better placed; good legs and feet; rather light of bone; stands a trifle back at the knees. Hamlet Steaford, first prize, should have been second. Skull rather shallow and domed; muzzle lacking in depth and squareness; good eye; ears of nice quality; placed rather high; ribs not carried far enough back; stifles and hocks not quite right; shoulders not well placed; feet large, but fairly good; rather leggy and light of bone; tail might be better carried; coat and head color good; body color washy. Tamarack, second prize, should have been third. Skull too wide; muzzle not clean below the eyes and not square in outline; eyes light; ears badly carried; fair goed neck; ribs not well sprung; loin flat; stifles and hock straight; tail fairly good; forelegs not well placed and not quite straight; stands over at the knees; feet fairly good; coat and color will do. The bitches were a very seedy looking lot, with Patti M. well at the head of them. Skull rather wide and too shallow; muzzle not quite clean below the eyes and not deep or square; eyes light; ears placed too high and very badly carried; excellent neck; chest too round; fair good loin; stifles not quite right and hocks too straight; shoulders not well laid on; tail not carried straight; legs, feet, coat and color good; lacks character. Lady Trinket, second prize, is a very poor puppy, decidedly faulty in head, eyes, chest, loin and tail. Daisy Bravo II., e., while too weedy, is a better specimen, and is much better than Belle Bravo, who got vhc. Only two dog puppies were shown—a miserable brace—and the prizes were withheld; they should also have been withheld from the two bitch puppies. We hope we may never again be called upon to comment on such a wretched lot of dogs as were shown in these classes.

SETTERS—(MAJOR TAYLOR).

The champion classes for English setters were drawn blank, but the open class for dogs brought out twenty-four entries of inferior quality, and the judge fairly paralyzed the lookers on when he awarded first and second prizes to Goldstone and Keystone, exhibited by P. H. & D. Bryson. Had he been of a generous turn of mind he might have given Goldstone a hc. card for his passable head; but on no account could he fairly have noticed Keystone, who has not a show point about him. These decisions call for an explanation. They were not made in accordance with any recognized standard or with any standard that has ever been suggested, and consequently should be explained. The winner has a fairly good head, and little fault can be found with his eyes, ears and neck. His ribs are badly sprung, and he is flat-sided, hollow in back, and flat and light in loin; quarters very narrow, hocks and stifles straight, long ring-tail, shoulders moderate, forelegs not quite straight, feet fairly good, stands too low in front, small and weedy, not a show dog and not in show condition. Keystone, second prize, was probably the worst dog in the whole class, if not the worst setter in the show, and the awarding of second prize to such an animal naturally stirred up a very bitter feeling among the setter men. We do not believe any satisfactory explanation can be given why the prize was awarded to such an animal; we hope, however, that one may be forthcoming, and that we may soon be in a position to tell our readers by what standard the dogs were judged. Our notes on the dog in question are as follows: Skull wide, muzzle wide and not clean, ears wide at base, eyes light, expression sour; a very bad head; ribs not well sprung; flat sided; loin flat and long; quarters drooping and light; stifles and hocks straight; moves badly behind; straight shoulders; legs and feet fair; poor tail carried à la Pomeranian; not a show dog; condition bad; coat hard; color washy; small and weedy. Such is the new type of English setter. Royal Victor, not first class either in head or body, and not in first-rate condition, although much better than the winners in this respect, was the best dog in the class. Pride of Dixie and Mandan, by no means first-class specimens, are much better dogs than the first prize winner. Both are well known to our readers. The bitches were of poor quality, and again the blue ribbon was given to P. H. and D. Bryson, although their exhibit Lillian was all out of condition, and if in condition cannot beat Lady Rock, who took second. Lillian is fairly good in skull and muzzle; eyes light; ears rather short; back rather slack; ribs not well sprung; loin flat; quarters fairly good; hocks and stifles too straight; shoulders fairly good; good legs and feet; very poor tail; not in show form. Lady Rock was in elegant condition and should have been any easy winner. Skull rather heavy; not quite clean below the eyes; stop might be better defined; fair good eyes and ears; back a trifle hollow; ribs well sprung; good chest; strong loin; stifles fairly good; hocks rather straight; good flag; neck, shoulders and legs much above the average; coat rather short, but of nice quality; a fairly good bitch of nice size and showing quality. Glidalia, third prize, is not so good as her kennel companion. Cheeks rather full; stop not well defined; muzzle too pointed; ears fairly good, but might hang better; good neck and loin; back rather slack; quarters fairly good; tail too long, but well carried; chest rather round; legs of fair strength might be better set on; feet not first-rate; coat not quite straight. Dog puppies were about the worst lot we remember having seen. If second prize had been given to Westmoreland and the other awards withheld, nobody could have complained. The winner is a little, weedy, sour-headed dog, fairly good in shoulders, quarters, feet, coat and color. Blink Bonney, first in bitches, was away ahead of a poor lot. If her head could be made as good as her body she would take some beating. Pearl Mandan, vhc., is a better bitch than Rose Mandan, second prize. Gem and Nora were the entries in the champion classes for Gordons, and in the open class for dogs two Dans were first and second. The first prize winner is cheeky and somewhat tapered (*l. c.*, houndy) in muzzle and his head is too shallow; eyes fairly good; ears rather short, also neck; loin fairly good; stifles weak and hocks straight; tail not well carried; good legs and feet and nice color; coat flat but too short; not a good one; moves badly. The second prize winner is too wide and heavy in skull and coarse in muzzle; eyes small and light; ears wide and short; neck rather short and not clean; back rather hollow; chest not deep and loin flat; quarters light; fair good flag; forelegs not well placed; color rather light; coat flat but rather short; feather scanty; not a good one. This was a very poor class and the dogs were correctly placed. Bitches were a very seedy lot. Rose, described in our Buffalo report, was just about the best; she was second at Providence, first being withheld for want of merit, and third at Boston. Jess II. is not a show bitch, although she has a couple of first prizes to her credit. Skull fair; muzzle tapered; eyes of good color but rather small; chest round; good loin; long whip tail; shoulders not well laid on; out at elbows; legs not straight; stifles and hocks faulty, stands over at elbows, color fair, coat short but free of curl. The other three entries might have been left at home. Three puppies were entered in the two classes; they will not make future winners. Irish setters made by far the best showing of the setter classes. Elcho, Jr. and Zella Glenduff, both well known, represented champions, and Bruce scored an easy win in the open class for dogs. Mac was properly placed second, although he lacks the typical head of the winner. Skull too wide, muzzle fairly good, ears rather short and set on a trifle high, eyes and neck fairly good, stands over a trifle at knees, fair good feet, coat and color very nice, of useful size and a nice mover. Zero, third prize, was as good as any for third place. Skull too heavy and flat, muzzle rather pointed, eyes not quite right and expression poor, neck heavy, chest too round and back rather slack, loin and quarters fairly good, hocks faulty, tail not right, fore legs not straight, good feet, turned outward; shoulders rather heavy, coat not quite straight, color fair. The balance of the class was made up of workmanlike dogs. Only two bitches were shown and second prize was withheld, first being given to Laura B., who is not a first-class specimen. Cheeks too round and head rather heavy, muzzle not clean below the eyes, ears badly carried, eyes rather light, chest and back fairly good, loin, quarters and hocks better than average; tail not well carried, shoulders not very good—too far under the chest, legs to knees fairly good, pasterns light, feet too flat, coat and color fairly good. Beauty, hc., is not a show dog. Puppies were not good. Red Bob, second prize, is a better specimen than Modhra Rhu, placed first. Three bitch puppies were shown and they are very faulty—not show dogs.

SPANIELS—(MR. GOODMAN).

Three or four very nice Irish water spaniels were shown. In the dog class, Patsy O'Connor, better in head, ears and eyes than The O'Donoghue, but not so good in body, pressed him very closely for first place. The first prize bitch is out of coat at present, but she is about the best of her sex we have seen in this country. Mildred O'Donoghue, in the same kennel, and winning second prize, is away below her at almost all points. Head not first-class, eyes full, light and staring; ears and top-knot not first-rate, back slack, poor shoulders, out at elbows, legs not quite straight, good feet, body coat fair, feathers and leg coat scanty, tail long and not well carried. Only one puppy was shown, and it will never be up to the form of Chippewa Belle. The other spaniel classes were poorly represented, there being only fourteen entries in eleven classes, a poor compliment to the judge. Bob, Critic and Helen, owned by Mr. Partridge, are well known, as are also the other winners, Keno, Bene Silk and Peerless Gloss, Jr. Bella, first in the puppy class, is rather round in head, stop not well defined, muzzle pointed, body, loin and quarters fairly good, good legs and feet, light of bone, leggy, coat fairly good.

FOXHOUNDS—(MR. KRUEGER).

These classes were carefully and well handled, and the awards were well received. The immaculate Dan made his voice heard once in a while, but we failed to find any cause for complaint. Ranger and Roxy II. were alone in the champion classes, and in the open class for dogs the London kennel had to give way to Keyser. Skull wide and flat; muzzle not good; ears too short; chest lacking in depth; loin good; legs and feet fair; coat rather short. Vinegar II., well known, came next, and Forester, from the same kennel was third. Jumbo, first in the bitch class, is deficient in skull and not quite right in muzzle; coat and brush not first-rate; chest rather shallow. Rose, second prize, is faulty in skull and muzzle; not clean below the eyes; legs and body good; feet fair; coat and brush short; just a fair specimen. Bismarck—a queer name for a bitch—is snipy and flat in skull, light of bone and straight in stifles; body, coat and brush fair; tail badly carried.

FOX-TERRIERS—(MR. GOODMAN).

Belgrave Primrose, looking well, scored another win for his popular owner in the champion class for dogs, and then Richmond Olive and Safety, both good ones; met for the third time this spring, the result being as usual. We have recently been informed in a report supposed to have been written by "our special reporter" for a Western paper that "Richmond Olive won; this was wrong; Olive has gone to pieces and we were never so much struck with the truth of this as at Newark; she has put bosses of muscle on her cheeks and across her chest and entirely lost that fine outline which used to characterize her. Safety should have won with ease, for Olive beats her nowhere except in bone and set on of stern." If Mr. Hopkins and "our special reporter" will give themselves the trouble to examine Richmond Olive they will find that she beats Safety to death in feet as well as in legs, two of the most important points in a terrier. They will also find that Olive's cheek and skull have developed some with age and that Safety's are doing the same thing. There is a vast amount of difference between bone and muscle and a still greater difference between reliable criticism and prejudiced statement. In the open class for dogs Lucifer, long ago described in these columns as the best terrier in the country, and now wisely acknowledged as such in other quarters, scored an easy win over Raby Jack, who is badly beaten at almost every point by Mr. Belmont's crack. Only three bitches were shown, and Marguerite was much the best. It is a pity there isn't more of her. Puppies were a poor class. The special prize for best dog or bitch in these classes went to Richmond Olive, a decision we cannot indorse. Olive has the best of it in eyes, muzzle and perhaps in legs and feet, but in the two latter respects the difference, if any, is very slight, and Lucifer is decidedly superior in skull, back, loin, coat and size.

BEAGLES—(MR. KRUEGER).

Rattler and Bonnie had it all their own way in the champion classes, there being no competition. Tony Weller, winner in the open class for dogs, is also well known. He was lucky in not meeting better company. Adonis, second prize, and first in the puppy class, with the exception of head and ears, is a promising puppy with splendid coat and brush. Rover, given vhc. reserve, turned out to be a dog entered at Buffalo under the name of Tomboy. A protest was entered and the dog disqualified. Unless Mr. Dan O'Shea is careful he will be taken in hand by the A. K. C. Dale, hc., lacks substance, but has a fairly good head; coat and brush not good. The first prize bitch is only an average specimen. Pet, winner of second, is a better bitch than the winner of first, but she is all out of condition, which is no disgrace to her. Venus, vhc. reserve and first in the puppy class, is a sweet little bitch, rather deficient before the eyes, not first-rate in ears, and somewhat light throughout. Lot is a nice headed bitch not up to the standard in body or limbs. King Bon, Prince Gus, and Opal, are promising puppies sired by the judge's well known winner Cameron's Racket.

DACHSHUNDE—(MR. GOODMAN).

Prince, the only entry in the champion classes, is not a good one. Broad in skull, faulty in muzzle, ears short and not well carried, crook good, stands fairly well on his feet, ribs not well sprung, bone light. There was nothing first-rate in the open classes.

COLLIES—(MR. GOODMAN).

Roy Boy was the only champion shown, and Scotilla easily beat Clifton Hero in the open class for dogs. The Philadelphia crack outscores Hero at almost every point and especially in head. Nullamore, well-known, took the reserve, followed by Kenneth, who was third at Waverly last fall, and Bonnie Scotland, who is well-known. Luella was much the best of a poor lot of bitches. Puppies were a poor lot, and the winners will not be in the front van next year.

BULLDOGS—(MR. GOODMAN).

Mr. Thayer, as usual, made a clean sweep of the prizes, although his best dogs were not shown.

BULL-TERRIERS—(MR. GOODMAN).

Count, Maggie May, Young Count, Young Venom and Silver, all owned by Mr. Dole, walked off with the prizes offered for bull-terriers. Jack Napolean, second prize in the open class for dogs, is cheeky, faulty before the eyes, and coarse in tail. He has a record, but it is not a bench show one. Puppies were very poor.

OTHER TERRIERS—(MR. GOODMAN).

Mr. J. H. Naylor showed a nice team of Die-hards and a couple of fair Skyes, but we failed to find anything quite first-class. Lady Kate, winner of first at Newark and several other shows, was quite good enough for second in the class for Skye terrier bitches, but the judge withheld second money for want of merit. He "did not like her ears," which leads us to the conclusion that Lady Kate is the first drop-eared Skye he has seen. There was not a good black and tan terrier shown. King Dandy, equally second with Cricket is points the better dog. Dandies were not numerous, but the quality was above average. Greymount had the Irish terrier dog class to himself, and Arion—it was Nellie at Buffalo and Erin somewhere else—was alone in the bitch class. Yorkshires were a wretched lot of three. Two of them were given Pittsburgh medals—quite as much as they deserved.

TOY SPANIELS—(MR. GOODMAN).

Prince Albert had no competition in the Prince Charles class. He has a record of having won third at the Crystal Palace, but is not a first-class specimen. Skull not high enough; muzzle too long; coat inclined to be curly; too large. Blenheims were a poor lot, Little Banjo, the Buffalo winner, being the best of them. Jim has not the correct head markings; is too long in face, not first-class in coat, and is bad on his hindlegs.

ITALIAN GREYHOUNDS—(MR. GOODMAN).

Only two were shown. The winner, Dion, is large in ear; not deep enough in chest or quite right in quarters, and is pounds too heavy. He is good in color and picks his feet up in good style. Fannie, second prize, is a very poor specimen; decidedly faulty in head, tail, limbs and color. Not a show dog.

PUGS—(MR. GOODMAN).

Dr. Cryer made a clean sweep of the prizes in these classes. Max and Bessie were looking well, but Doctor and Vesta required attention. Pudgie, second to Doctor in the open class for dogs, is not first-class in face, has white toes and is too large. Othello, third prize, was the best headed pug in the show. If this dog does not transmit his smutty color he should make an excellent sire. There was nothing first rate in the puppy classes. The second prize dog, Bob, is a better one than Chequasset Diamond, placed first.

MISCELLANEOUS—(MR. GOODMAN).

The winner in this class is not a first-rate specimen, being flat and wide in skull and not quite right in muzzle. His ears are not well folded and his feet are not of the best, neither is his tail what it should be. He is fairly good in crook and length of body. Dame Hester and Bob, bobtailed sheep dogs, are quite as good as the Basset.

SPECIAL PRIZES.

King Dandy was best of the black and tan toys. Pansy, the best Dandie Dinmont, was in no condition to compete for the special prize, which should have gone to Bobbie Burns. The special for best "Irish hard-haired terrier" was won by Greymount. We are not aware that there is a breed of "soft-haired" Irish terriers. The special for best English setter bitch should have gone to Lady Rock instead of Lillian. King, third prize, was best pointer dog in the open class. We thought Maggie May entitled to the prize for best bull-terrier. The special for best English setter, open classes, should have gone to Lady Rock or to Royal Victor, who was highly commended in his class. The prize won by Wacouta Nap should be refused by the owners of that dog. It clearly belongs to Lady Clare, and on this question there can never be two opinions among mastiff men.

Following are corrections and additional

AWARDS.

In mastiff puppies P. Reymer's Don was first instead of Rena; in small pointer bitches Belle Bravo was very high com.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitch:* R. J. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, R. J. Sawyer's Sir Charles; 2d, reserve and very high com., Hospice Kennels' Hadjar, Eiger and Alvier; 3d, A. Stucke's Meinrod. *Bitches:* 1st, H. J. Morgan's Rose Mandan; kennel cocker spaniels, Lake Shore Kennels, white pug J. Myers's Lillie; brace black and tan terrier bitches, Miss Minnie Whitman's Nellie and Gypsie; Irish setter dog, Dr. Wm. Jarvis's Elcho Jr.

THE PHILADELPHIA SHOW.

THE dog show at Philadelphia is now being held, and promises to be very successful. The hall is excellently adapted for its purpose, and the management so far is all that could be desired. The committee and officials exert themselves to make things run smoothly, and are courteous and agreeable to all. The benching is admirable, and the dogs seem very comfortable. The quality in many of the classes is far above the average. The attendance so far has been very good, and it looks as if the show would be a success from a financial standpoint. The class of people present is very good, in striking contrast to what was seen at Pittsburgh. Following is the list of

AWARDS.

MASTIFFS.—CHAMPION—No entries. OPEN—*Dogs:* 1st, D. C. Snooner's Lion II.; 2d, T. S. Armstrong's Brother; 3d, Waconta Kennels' Wacouta Nap. High com., M. Lawler's Gilliard. *Bitches:* 1st, G. & H. B. CLUMBER SPANIELS.—1st and 2d, Mercier & Hill's Johnny and Drake. High com., C. Bohler's John Halifax II.

FIELD SPANIELS.—CHAMPION—W. O. Partridge's Rob.—OPEN—*Dogs:* equal 1st, A. C. Wilmerding's Newton Abbot and W. O. Partridge's Rob. High com., Associated Fanciers' Bonanza. *Bitches:* 1st, W. O. Partridge's Critic; 2d, E. M. Oldham's Lady Abbot.

COCKER SPANIELS.—CHAMPION—C. M. Nelles's Brant.—OPEN—*Dogs:* 1st, Fay & Baxter's Ned Obo; 2d, A. Laidlaw's Little Red Rover. *Bitches:* 1st and special, C. M. Nelles's Juno W. *Puppies:* 1st, C. W. Wilson's Midnight II.

FOXHOUNDS.—*Dogs:* Withheld. *Bitches:* 1st, Black Thorn Kennels' Gypsey.

BEAGLES.—CHAMPION—*Dog:* Woodbrook Kennels' Rattler III. *Bitch:* Woodbrook Kennels' Myrtle.—OPEN—*Dogs:* 1st and special, Woodbrook Kennels' Chimer; 2d, W. H. Child's Tony Weller; 3d, H. F. Schellhass's Trailer. Very high com., G. Laick's Rattler. *Bitches:* 1st and special, Woodbrook Kennels' Lou; 2d, withheld; 3d, Associated Fanciers' Stovella. *Puppies:* 1st, Woodbrook Kennels' Rowdy.—UNDER 12IN.—CHAMPION—W. F. Streeter's March Boy II.

BASSET HOUNDS.—Associated Fanciers' Ele.

DACHSHUNDE.—1st and 2d, F. Haupt's Gretchen and Flirt. Very high com., Black Thorn Kennels' Ruby.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Tippoo. *Bitch:* J. E. Thayer's Rhodora.—OPEN—*Dogs:* 1st, J. E. Thayer's Hillside; 2d, J. H. Sanderson's Gimlet. Reserve, H. E. Gemrig's Sandy. Very high com., G. D. Wetherill's Sunday. High com., M. Brown's Major. *Bitches:* 1st and 2d, J. E. Thayer's Carmen and Josephine. Very high com., J. H. Sanderson's Bonnie Duchess.

BULL-TERRIERS.—CHAMPION—Absent. OPEN—*Dogs:* 1st, W. W. Silvey's The Baron; 2d, F. M. Chase's Mark-Eyed Victor. Com., Associated Fanciers' Saxon. *Bitches:* 1st, G. D. Woodhill's Modjeska; equal 2d, T. C. Harris's White Violet, and H. W. Holmes's Bess.

BLACK AND TAN TERRIERS.—Prizes withheld.

FOX-TERRIERS.—CHAMPION—*Dog* (and special): Blemton Kennels' Lucifer. *Bitch:* Blemton Kennels' Safety. OPEN—*Dogs:* 1st, Blemton Kennels' Bacchanal; 2d and 3d, J. E. Thayer's Raby Jack and Raby Mixer. *Bitches:* 1st, Blemton Kennels' Diadem; 2d, J. E. Thayer's Richmond Myrtle. PUPPIES—*Dogs:* 1st, J. E. Thayer's Shameless Mixture; 2d, withheld. *Bitches:* 1st, B. F. Perry Jr.'s Lady Warren Mixture; 2d, T. J. Tyrrel's Dewdrop. Very high com., W. B. Henry's Freshness. High com., W. T. McAlee's Temptation.

IRISH AND ROUGH-HAIRED TERRIERS.—1st, C. T. Thompson's Grescia; 2d, G. D. Fowle's Greymount. Very high com. and high com., J. F. McFadden's Jilt and Spider. High com., H. Kuhn, Jr.'s Paddy.

SKYE TERRIERS.—1st and 2d, W. P. Sanderson's Jim and Lass O' Gowrie. Very high com., C. A. Shinn's Lady Kate. High com., S. Barr's Daisy. Com., N. V. Ketchum's Teddie.

YORKSHIRE TERRIERS.—1st and very high com., J. Donovan's Daisy and Lady; 2d, Mrs. Ann Lawler's Jennie. Com., Associated Fanciers's Charlie.

TOY TERRIERS.—1st, W. F. Deakyne's unnamed; 2d, W. N. Pierce's Queenie.

PUGS.—CHAMPION—Dr. M. H. Cryer's Max.—OPEN—*Dogs:* 1st, 3d and very high com., Dr. M. H. Cryer's Doctor, Buff and Othello; 2d, F. Green's Duke. *Bitches:* 1st, 2d and com., Dr. M. H. Cryer's Daisy, Vesta and Dolly; 3d and high com., Mrs. C. Wheatleigh's Yuma Yuma and Yum Yum. *Puppies:* 1st, Dr. M. H. Cryer's Psyche.

TOY SPANIELS.—1st, Miss Lillie Hart's Banjo.

ITALIAN GREYHOUNDS.—1st and very high com., Mrs. A. M. Kramer's Lillie and Don; 2d, A. L. Belleville's Tiney.

POODLES.—Withheld.

GREAT DANES.—*Dogs:* 1st, Osceola Kennels' Dan Cæsar; 2d, Associated Fanciers' Leo. *Bitches:* 1st, Wolverine Kennels' Juno; 2d, Associated Fanciers' Fraulein.

MISCELLANEOUS.—1st, W. Hazleton's Waldo; 2d, G. Kerr's Don.

THE DOG IT WAS THAT DIED.—Died suddenly of a broken heart after hearing sundry criticisms, Dr. J. S. Niven's field spaniel Darkey.—R. I. P. (London, Ont., March 30).

THE NEW YORK DOG SHOW.—Just as we go to press we are informed by Mr. Mortimer that there are close to 900 entries for the New York dog show, and that many more are expected by mail.

EASTERN FIELD TRIALS CLUB.

RUNNING RULES.

FOLLOWING are the running rules of the Eastern Field Trials Club as revised for the trials of 1887:

RULE 1. The management of the meetings for the Annual Field Trials shall be intrusted to the Governors of the Club, and with them lies the interpretation of the rules. They shall decide upon all matters not provided for in these rules.

RULE 2. The judge, or judges, shall be selected by the Governors, and their names shall be publicly announced as soon as possible after their selection. When a judge is prevented from attending a meeting or finishing it, the Governors shall appoint a substitute.

RULE 3. For all stakes, the names, pedigrees, ages, colors, and distinguishing marks of the dogs shall be detailed in writing to the Secretary of the Club, to be filled at time of making entry or entries. Any dog's age, markings or pedigree which shall be proved not to correspond with the entry shall be disqualified, and all such dog's stakes or winnings shall be forfeited.

RULE 4. The forfeit money must accompany every nomination, and the balance of the entrance fee must be paid before the drawing.

RULE 5. The Governors may refuse any entry they may think proper to exclude; and no person who has been found, to the satisfaction of the Governors to have misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the Club, shall be allowed to compete in any trials that may be held under the auspices of the Eastern Field Trials Club.

RULE 6. Any objections to an entry must be made in writing addressed to the Secretary of the Club, and will be acted on by the Governors, whose decision shall be final.

RULE 7. Immediately before the dogs are drawn at any meeting the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place.

RULE 8. All stakes shall be run in the order of the programme when possible. Should, however, the competitors or their representatives in the various stakes agree otherwise, the order may, with consent of the Governors, be changed.

RULE 9. Dogs shall be drawn by lot, and numbered in the order drawn. Each dog shall run in the first series as a brace with the next available dog in that order, and the winners run in heats again in the order so obtained, except as hereinafter provided. Any dog absent during the first series for more than twenty minutes after his number is called shall be disqualified from further competition.

RULE 10. If two dogs owned and handled by the same person should come together in the first or any succeeding series, the second dog so owned or handled shall change places with the first dog not so owned or handled. This change shall be effected in the order of running if possible; if not possible, then in the reverse order of running. If such separation is found to be impracticable, or without benefit, the running together of two such dogs may be permitted.

RULE 11. If in any series of heats there should be a natural bye, such bye shall run with the winner of the first heat of the previous series as the first brace of the next series.

RULE 12. Each dog must be brought up in its proper turn without delay; if absent more than twenty minutes, its opponent shall be entitled to the heat, subject to Rule 9.

RULE 13. An owner, his handler or his deputy may hunt a dog, but it must be one or the other; and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt him. In members' stakes every member must handle his own dog.

RULE 14. The person handling and hunting a dog may speak, whistle to and work him by hand as he may deem proper, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct; and if after being cautioned he persists in such noise or disorderly conduct, they shall order the dog to be taken up and adjudged out of the stake. An opponent's dog must not be interfered with or excited. In such case an appeal should be made to the judges.

RULE 15. If an opponent's dog points game, the dog must not be drawn across him to take the point, but if not backing of his own accord he must be brought around behind the pointing dog. Dogs must be hunted together, and their handlers must walk within a reasonable distance of one another.

RULE 16. If a dog be withdrawn, with the consent of the Governing Committee on the ground, from a stake on the field or at any time during the holding of a trial, its owner or his deputy having authority, shall notify in writing, with his name attached, the Secretary or one of the Governors of the Club. If the dog belongs to either or any of those officials, the notice must be handed to one of the others. When a winner of one or more heats is drawn for any reason other than defeat, the dog or dogs previously beaten by him shall not be deprived of competing for second or third prize, if, in the opinion of the judges, they have a chance to win. No owner or handler shall be permitted to withdraw his dog or dogs from a stake on the field or at any time during the progress of a trial after such dog or dogs have been allotted a position in any heat or race, without the consent of the Governing Committee on the grounds; any such owner or handler withdrawing his dog or dogs, without the consent of the Governing Committee on the grounds, may be debarred from any future trials, or be penalized at the discretion of the Club.

RULE 17. If any person openly impugns the actions or decisions of the judge or judges, or otherwise annoys them during the progress of a trial, he may be debarred from future participation in the trials, and ordered off the grounds.

RULE 18. No person other than the judge, judges or reporters will be permitted to accompany the handlers of dogs competing in any heat, except owners of such dogs running in charge of a handler or deputy, and they shall be permitted to accompany the stewards until the finish of such heat, when they shall retire until their dogs again come into competition. Two persons are prohibited from working one dog. If from any cause the handler of a running dog is disabled to such an extent that he cannot shoot, upon his request to the judge or judges, he may select some person to shoot for him, and the judges may in any case require handlers running dogs to go through minutely the evolution of shooting either a blank or shotted cartridge over any or every established point, upon being ordered to flush a bird. The handlers of the two dogs shall go together as if it were a brace of dogs and hunt said brace or braces in the trials as in ordinary shooting, so that the dogs shall be on an equality as to ground, opportunities for finding, etc. Spectators shall not be allowed nearer the handlers of dogs running than seventy-five yards at the rear.

The privilege is granted handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such questions the dogs shall not be under judgment. Dogs afflicted with any contagious disease, or bitches in season, or unduly attracting the attention of the competing dog, will not be permitted on the grounds. Handlers shall not load their guns until a point be established.

RULE 19. When two dogs, the property of the same owner, or of confederates, shall remain in for the deciding

trial, the judges may determine which is the better, either by prior performance or by further running as they may order.

Should the owner of a dog or his representative induce the owner or representative of another dog to withdraw such dog for consideration or bribe of any nature whatsoever, all prizes won by either shall be forfeited upon the facts being satisfactorily proved to the Governors. If, however, either dog be withdrawn without consideration, from lameness, injuries, or from any cause clearly affecting his chances of winning, the other dog may be declared the winner, on the facts of the case being clearly proved to the satisfaction of the judge or judges.

When more than two dogs remain at the end of a stake, which is not run out, the stakes shall be divided; and in case of a division between three or more dogs, of which two or more belong to the same owner, these latter shall be held to take equal shares of the total amount won by their owners, and in the division the terms of any arrangement to divide winnings must be declared to the Secretary.

RULE 20. The last dog beaten by the winner of the first prize shall compete for the second prize with the best of those dogs previously beaten by the winner of the first prize. The winner of this heat shall be declared the winner of the second prize. The discretion is given to the judges of deciding which is the best of these beaten dogs in the competition for second, by selection, or by running extra heats between them. After the first and second winners are ascertained, the judges may select the winners of any other prize from any of the dogs in the stake, without further running.

RULE 21. The dog last beaten by the winner of the first prize shall not be obliged to run more than two heats on the same day, but at the option of his handler, may run the final heat for second place on the following day.

RULE 22. All protests, except as hereinbefore provided, must be made and delivered to the Secretary of the Club, or in case of his absence, to the President of the Club, or in case of his absence, to a member of the Governing Committee at or before midnight of the date of running of final heat.

INSTRUCTIONS TO JUDGES.

The judges shall order up the dogs as soon as they have determined which is the better. Unless a dog shows such lack of merit that in the opinion of the judges he cannot be placed, all dogs shall, if time permit, have at least two chances to show their behavior on birds. Either or both dogs of a brace may be ordered up by the judges for want of merit.

Pointing fur, feather, reptile or scent of game birds, if the judges deem the same excusable, shall not be considered a false point.

The judges shall give a dog ample opportunity to discover whether he is on a true point.

No assistance shall be given by the handler to enable a dog to discover whether he is on a false point.

Judges are requested to avoid as far as possible holding a dog so long on a point, for the purpose of securing a back or otherwise, as to enable the birds to run. Dogs should be brought up to back only when opportunity offers, without interfering with the pointing dog, and a dog drawing on or pointing game shall be afforded ample opportunity to locate the game, it being left to the discretion of the judges to direct the opposing dog to be held in check.

Should a dog be held an unreasonable time upon a point, he should not be penalized for a resultant fault.

The number of times a dog points, backs, etc., shall not necessarily give him the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

BACKING.—The judges are requested to give no credit for backing unless it appears to be voluntary. Any assistance from the handler shall deprive the dog of credit for his performance.

RANGING.—The judges are requested to give greater credit to the dog that maintains the most killing range throughout, viz., wide or close, as the necessity of the case requires.

OBEDIENCE AND DISPOSITION.—The judges are requested to give greater credit to the dog that works promptly, without noise or severity, and is obedient, prompt, cheerful and easily handled.

The rules are based upon the principle that each heat is a complete race, and the winner of the trial is the unbeaten dog who has directly or indirectly beaten every other dog in the stake.

The judges are requested to observe that the scale of points below given are set forth only as the view of the Club as to the comparative value of the various attributes or performances referred to. But the judges shall not, except in the case of absolute equality between the dogs, deem it necessary to keep any score whatever.

MERIT.

Pointing.	Nose.....25	35	...40	75
	Staunchness....10			
	Style in Pointing.....5			
Ranging.....15				100
Pace.....10		...30	...35	
Quartering.....5				
Style in same.....5				
Obedience and disposition.....10			25	
Backing.....10				
Retrieving.....5				

DEMERIT.—False pointing, breaking in, breaking shot, chasing. These faults shall be gauged by the judges in their discretion. The second chase, however, loses the heat.

DEFINITIONS.—Breaking in is where a dog, through imperfect breaking, or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to chase, but stops within a few feet from where he started, of his own accord or by command. Breaking shot is where a dog runs in, when a shot is fired, with the intention of getting to the bird, and does not stop promptly at command. Chasing is where a dog follows the birds, either when a gun is fired or not, to any extent to be beyond the control of his handlers for the time being.

DEATH OF THE CLUMBER SPANIEL BEN.—*Editor Forest and Stream:* I regret to announce to you that the clumber spaniel Ben, imported into Canada by Mr. Lindsay Russell (ex-Surveyor-General) and owned latterly by Mr. A. Z. Palmer, of Ottawa, died on the 31st ult. He was fully fifteen years old at the time of his death, but to within a year ago was used in the field, where he excelled, although latterly very deaf. Ben was of direct Clumber House descent, and an extremely fine dog. He won first and special the only time shown, but it was at the stud that he showed his worth, getting champion Newcastle, Johnny, Drake and Tyne in one litter out of Joan, who was the only bitch he ever served, as for many years he was the only thoroughbred clumber in this part of the country. For the last six months he was a burden to himself and to his owner, so death was but a release.—CLUMBER.

DENVER KENNEL AND COURSING CLUB.—Following is the list of officers of the Denver Kennel and Coursing Club for the ensuing year: President, Dr. J. M. Norman; Vice-President, Gen. G. H. Pierce; Secretary, L. H. Gilmore; Treasurer, A. C. Lighthall; Executive Committee, Messrs. G. G. Liebhardt, Dr. Q. Van Hummel and L. H. Gilmore.

WEIGHT OF SPANIELS.—Salmon Falls, N.H., April 18. *Editor Forest and Stream:* I would like space in your paper to make a few explanations about the entries of Miss Newton Obo and Black Pete, at the Boston show. Miss Newton Obo was entered in the open bitch class for field spaniels. I understand that on the last day of the show she was weighed, and found to weigh 26¾lbs. at one time and 27¼lbs. at another. This bitch and another entry, Zeppo, came home to my kennel the following day badly physicked, and all out of condition, so much so that Zeppo died within two days. Miss Newton Obo was entered at Newark and Providence, and there was no question of her weight at those shows, as she certainly weighed over 29lbs. when she left Salmon Falls for Newark. She was shipped from Providence to Boston, Saturday morning, April 2, and being on the road; at express office, and in the basement of the show building in Boston till the following Tuesday, without food, was undoubtedly too much for a young bitch only 10 months old, and I have no doubt she was under weight at the time she was weighed. With this explanation I leave Miss Newton Obo, and those interested can, if they choose, enter a protest and strip her of her honors. In regard to Black Pete, I frankly say that he is a long low dog and carries about all the pounds the cocker standard allows, yet he is well under the 28lbs. limit. Boston has been his only show this season. When I carried him in Tuesday morning, Mr. Chas. Davol, of Warren, R. I., asked me how much he weighed, and if he was over 28lbs. As I was busy I asked Mr. Davol to weigh him, which he did, and informed me that he weighed just 27lbs. This was just before the classes were judged. When Black Pete got home he was in good health, pot-bellied, and filled out in great shape, and in such condition he might have weighed 29lbs. Had Miss Newton Obo come back in the same condition as Black Pete she would certainly have weighed 30lbs. Now a word in regard to the judges. If any wrong has been done I am wholly to blame. At Providence Miss Newton Obo was well filled out, and there was no question regarding her weight. At Boston Mr. Wilmerding asked me in regard to weights. I told him that Black Pete had just been weighed, and gave it to him as it had been given to me, 27lbs., and that I had not weighed Miss Newton Obo, but thought she was all right. If any person thinks I have, by false entries, or by any other foul means, in these two or any other entries, got what properly belonged to them, I shall most willingly give it up to them. My reputation is somewhat at stake in this matter, and I wish to set myself squarely before the public.—J. P. WILLEY.

BUFFALO KENNEL CLUB.—Buffalo, N. Y., April 10.—*Editor Forest and Stream:* I was very much surprised to find in your edition of the 7th inst. the letter from Mr. Fellows. I regret that Mr. Fellows has been so misled as to believe what he has written; the letter should properly have come from Mr. Chadeayne, I think. Now, as for my communication being "far from the truth," I will reiterate every word in it, and they cannot be disproved. At the present time there is only one kennel club in this city, that being the one of which I am the secretary. Our minutes show that the organization meeting was held at the Stafford House, Feb. 18, 1887, with seventeen members present. The club was properly organized, the constitution and by-laws of the New Jersey Kennel Club being adopted. A committee was appointed to meet Mr. Chadeayne and see if we could not make some arrangements so that the bench show could be given under the auspices of the B. K. C. No such arrangement could be made, but he agreed to discontinue the use of the name "Buffalo Kennel Club," and until the prizes were given he did so. At our second meeting, I think it was, a reporter came into the room with the constitution of Mr. Chadeayne's "kennel club," and imagine our surprise to find that A. W. Smith, one of our governors, was president, and our president, J. G. Burns, was one of the board of directors. These gentlemen received this information for the first time at the meeting of which I write. When and by whom were these two gentlemen elected, and if there was a meeting, why were they not notified of it? Can Mr. Fellows show that he was employed by any one other than Mr. Chadeayne, and that any of the profits of the recent show went to any one except the self-elected secretary and treasurer? The Buffalo Kennel Club is seventy members strong, and has some of the most prominent of our citizens; our papers of incorporation have been filed at the county clerk's office.—CHAS. B. COOK, Secretary Buffalo Kennel Club.

WACOUTA NAP.—Hulton, Pa.—There were two mistakes in the entries of this dog at Newark and Providence; both my fault, as I sent the entries. At Newark his date of birth is given as September, 1885, and at Providence as Aug. 25, 1886. The correct date is Aug. 25, 1884, as given by his breeder, Richard Morgan. The 1886 is a shocking clerical error, if I so wrote it. The date of September, 1885, is taken from the last Birmingham show, where the dog was entered a year too old, and correcting this, makes the date as I have given. The name of the sire of the Albert Victor mastiffs is sometimes given as Wallace (same as his grandsire) and sometimes as Lion; I believe the latter is correct. This very shortness of pedigree adds greatly to the value of the blood, in my eyes, for the strain has produced no dogs destitute of some merit, and is entirely fresh, without a known cross of modern show blood, and is therefore just the thing to invigorate the intensely inbred blood so prevalent in the mastiffs of to-day.—W. WADE. *Editor Forest and Stream:* Several discrepancies are to be seen in the catalogues of the recent shows regarding the entries of Wacouta Nap, the date of birth not always appearing the same. These differences may be typographical errors, or may be due to the fact that some of the entries were made for me by Mr. Wade and some by myself. As I am a great stickler for correctness in all matters pertaining to pedigrees, will you please state that the correct date of Wacouta Nap's birth is Aug. 25, 1884? Nap is younger brother to the famous English prize winner, Albert Victor, the largest dog ever known of any breed.—R. A. CRAIG (Wacouta Kennels, St. Paul, Minn.).

THE COURSING CLUB OF CALIFORNIA.—A number of gentlemen appreciating the importance of a coursing club with a membership extending all over the coast, recently met and perfected such an organization under the name of the Occidental Coursing Club of California. The objects, as expressed in its constitution, are as follows: First—To promote, encourage and improve the breeding of a superior class of greyhounds, and protect the interests of coursing. Second—To elevate coursing to the position it occupies in other countries; namely, the grandest sport of the world. Third—To hold at least two coursing meetings every year. The admission fee is one dollar ($1), and the monthly dues are 50 cents, payable quarterly in advance. Each application must be accompanied by the admission fee. The officers of the club are as follows: Col. Stuart Taylor, President; J. F. Carroll, Vice-President; Col. S. O. Gregory, Vice-President; Henry Wormington, Vice-President; Thos. J. O'Keefe, Vice-President; H. Boyd, Secretary; S. L. Abbot, Jr., Treasurer. Executive Committee—J. J. Murphy, A. A. Boutan, H. H. Briggs, F. P. Callundan, H. E. Deane.

COLLIE SWEEPSTAKES.—Entries for the first semi-annual collie sweepstakes of the Collie Club, of America, close May 1. The address of the secretary is Geo. A. Smith, 321 Walnut street, Philadelphia, Pa.

CURRENT NOTES.—Memphis, Tenn., has a pack of hounds employed to catch runaway convicts. It is said that these hounds are rough on leg-bail fugitives....The Denver Kennel and Coursing Club propose holding a dog show at Denver, Col., next winter....The entries for the Derby of the Pacific Coast Field Trials Club close on May 1....The Wisconsin Kennel Club, the Michigan Kennel Club and the St. Paul and Minnesota Kennel Club have been admitted as members of the American Kennel Club....Captain C. E. McMurdo, of Charlottesville, Va., sailed for England last week. We understand that he will bring home a few pointers if he finds the right sort....The Pacific Kennel Club will hold a dog show in San Francisco next September. Liberal prizes will be offered and there will be some valuable specials for Eastern dogs....The Buffalo Kennel Club are considering the advisability of holding a dog show in Buffalo shortly. ....The annual meeting of the American Kennel Club will be held at the Hoffman House, New York, May 4.....The man who read to his sick wife from Chronicles, "And the sons of Ram, the first-born of Jerahmeel, were Maaz, and Jamin and Eker. And the sons of Onam were Shammai and Jada," and so on to the end of the chapter, chose a pretty barren passage, yet we are told that the wife was comforted. No one would dream that there was much cheer for a sick man in the FOREST AND STREAM'S Kennel Notes, but that there is is attested by the compositor to whose careful typesetting has been due, in large degree, their freedom from error; and who now, while laid by with a broken leg, goes through them every week to find in their perusal forgetfulness of pain and splintered bones.

NEW ENGLAND KENNEL CLUB.—At the annual meeting of the New England Kennel Club, held at Boston, April 8, the following officers were elected for the ensuing year: President, John E. Thayer; Vice-President, F. Blackwood Fay; Secretary, J. W. Newman; Treasurer, W. O. Partridge; Executive Committee, Messrs. Thayer, Fay, Newman, Grosvenor and Moore; Finance Committee, Messrs. Fay, Newman and Bailey; Membership Committee, Messrs. Grosvenor, Werner and Fletcher.

RHODE ISLAND KENNEL CLUB.—Providence, R. I., April 12.—*Editor Forest and Stream:* At the annual meeting of this club, held April 9, the following officers were elected: W. J. Comstock, President; J. C. Dyer, Vice-President; Nathaniel Seabury, Secretary; Andrew Winsor, Treasurer; Governing Committee, C. Fred Crawford, C. C. Gray, Samuel Scranton, and the four officers above named.—NATHANIEL SEABURY, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Napoleon. By Miss Lilian Adams, New York city, for tawny and white rough St. Bernard dog, whelped May 28, 1886, by Pontiff (A.K.R. 792) out of Satellite (Monk II.—Sheila).

Patti. By J. Fred Richardson, Portland, Me., for liver and white pointer bitch, whelped Aug. 14, 1886, by Croxteth (Young Bang—Jane) out of Van (A.K.R. 1356).

Gipsy C. By Wm. F. Woods, Portland, Me., for liver and white pointer bitch, whelped Aug. 14, 1886, by Croxteth (Young Bang—Jane) out of Van (A.K.R. 1356).

Glenarm. By R. G. Hall, Portland, Me., for liver and white pointer dog, whelped Aug. 14, 1886, by Croxteth (Young Bang—Jane) out of Van (A.K.R. 1356).

Pansy S. By Dr. C. E. Stanley, Middletown, Conn., for blue belton English setter bitch, whelped Sept. 3, 1885, by Robin Hood (A.K.R. 1461) out of Countess H. (Warwick—Belle).

Iris, Pet Obo and Black Jock By C. E. Gilchrist, Charlestown, Mass., for two cocker spaniel bitches and one dog, whelped Feb. 13, 1887, by Shady (Obo II.—Darkie) out of Edith (Brush II.—Olivia).

Maz. By W. D. Ferrin, Hinsdale, N. H., for red Irish setter dog, whelped Aug. 28, 1885, by Nimrod (A.K.R. 631) out of Bizorah (A.K.R. 1388).

Jeanie By C. W. Horne, Norway, Me., for black cocker spaniel bitch, whelped Feb. 5, 1887, by Hornell Silk (Farrow's Obo—Chloe II.) out of Black Pearl (Obo II.—Critic).

Nick. By J. A. Nickerson, Boston, Mass., for cream cocker spaniel dog, whelped Feb. 5, 1885, by Hornell Silk (Farrow's Obo—Chloe II.) out of Black Pearl (Obo II.—Critic).

Duke of Morris. By Harry B. Green, Morristown, N. J., for white and black English setter dog, whelped April 24, 1886, by Pride of the Plains (Roderick Dhu—Rose) out of Fanny (Captain—Flossy).

The Kennel. By R. D. Locke, Chicago, Ill., for his kennel of mastiffs.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

DEATHS.

Patience. Black, white and tan English setter bitch, whelped April 13, 1886 (Foreman—Passion), owned by Blackstone Kennels, April 6, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. T. W.—The trouble was a local one and your treatment correct.

J. S., Cincinnati.—Irish setters have lump on necks, which seem larger every day. Dogs are 3 mos. old. Ans. Give a half teaspoonful of syrup of buckthorn every other day to each of the puppies.

A. Q., Stillwater, Minn.—Ans. See answer to G. M. in this issue of the paper. If fever is still present give four drops of the tincture of aconite every three hours until the fever abates. By sponging the parts and applying a little balsam of Peru ointment (balsam of Peru and vaseline), you can cure the eruption.

LEARNER.—Your dog has a tape worm. The pieces you notice are only segments of a long worm. Diet your dog for 24 to 26 hours, giving nothing but milk. Then you may give either the turpentine or areca nut. If you give areca nut, give a full teaspoonful of the powder. You can make a large pill or bolus with lard. After 4 or 6 hours purge thoroughly with castor oil and give no solid food for some days afterward.

J. A. K., Lindsay.—Cocker pup, 6 mos. old, has twitching and jerking of one hind leg; sometimes she drags it after her, otherwise she is in good health.—Ans. The probabilities are that your puppy has worms. If you can make sure of this by examining the stools, give 30 grains (half a teaspoonful) of powdered areca nut made into a pill with lard. Put this into the throat as far as your finger will reach. An assistant can hold the dog while you press down the base of the tongue with the forefinger of the left hand and administer the pill with the right. Follow this with a castor oil purge in three or four hours, giving two teaspoonsful.

G. M., Rockport.—Dog had distemper short time ago; limbs jerk, and body jerks to a certain extent; he seems to be restless all the time. Ans. The nervous symptoms you mention are often noticed after distemper. Exercise, diet and perhaps some medicine will cure him in time. Keep his bowels regular with syrup of buckthorn in teaspoonful doses. Add five drops of Fowler's solution of arsenic to his food each day. Get the following:

℞ Ferri et strychnin. citrat.....grs X L
Fit pil No. XX.
Sig. One pill night and morning.
Feed little meat and what is given should be cooked.

G. G. H., California.—One of my Chesapeake Bay dogs has moist blotches which appear on different parts of his body which cause him to scratch incessantly. The hair does not come off badly. In a day or two they dry up, leaving the skin scarfy. Also he has enlargement of glands of throat, for which I have been giving him 10gr. doses of iodide of potassium, which I noticed in one of the last papers. The dog's general health is very good, and he has plenty of exercise swimming. Ans. Stop the iodide of potash. Apply the following ointment:

℞ Ung. Diachylon.
Ung. Zinci oxid.....aa ʒi
Mix. Sig. External, twice daily.
Give 5 drops of Fowler's solution of arsenic twice daily in food.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

BOSTON, April 16.—The rainy day disappointed the shooters at Walnut Hill to-day, but in the afternoon the attendance was good and several fair scores were made. The standing of the competitors in matches B and G, which will close at Walnut Hill April 30, is as follows:

PEEKSKILL, N. Y. April 12.—The best rifle match ever shot in Westchester county was witnessed here to-day, the contest being at 200yds. for the silver cup now held by the Peekskill Rifle Club. The cup must be won three times to entitle the holder to permanent possession. To-day's scores were as follows:

Peekskill Rifle Club.—F. Cent 45, O. Loder, 40, F. Hodkins 44, A Durring 41; E. Halsey 43, and George Dowen 42. Total, 255 points; possible score 300.

Central Valley Club, of Central Valley, N. Y.—L. Hawes 41, H. L. Leonard 43, R. Ficken 41, E. F. Paine 41, A. D. Leonard 37, H. Hawes 46. Total, 249 points.

Tappan Zee Rifle Club of Nyack.—John Lydecker 42, M. G. Barrett 39, Charles Christie 40, A. M. Voorhis 42, Dr. L. B. Couch 45, J. O. Davidson 43. Total, 251 points.

At the close of the club contest an individual match, off-hand, 200yds., was shot and won by Captain J. O. Davidson, of the Nyack team, by a score of 5, 5, 4, 5, 5—24, out of a possible 25.

WILMINGTON, Del.—Owing to the failure of a sufficient number of members to attend on Monday, the Wilmington Rifle Club was obliged to again postpone its "telegraph" match with the Williamsport club. The scores are as follows:

First Match—250yds.

U Fuller	7 8 7 5 4 4 8 8 9 5—65
J Scott	10 3 3 3 4 5 6 5 6 6—51
H Simpson	5 4 4 2 3 5 7 3 7 6—51
W A Bacon	4 3 5 2 6 8 5 6 5 2—46
H A Heinel	2 3 5 4 8 6 5 5 4 3—46
J Francis	5 3 4 4 8 4 9 3 2 3—45
W A Ruthven	3 1 1 3 2 4 6 1 2 5—28

Second Match—200yds.

H A Heinel	4 5 6 10 5 8 7 5 8 7—65
J Scott	3 8 9 7 7 8 4 5 7 6—64
U Fuller	3 6 4 5 6 6 4 4 4 9—51
H Simpson	4 3 4 4 3 4 6 5 6 2—41
J Francis	3 3 6 R 1 6 5 1 2 9—36
W A Ruthven	3 2 4 2 7 1 2 6 3 3—33

Third Match—100yds.

J Francis	10 5 6 9 9 10 9 8 7 10—83
U Fuller	8 6 9 9 7 6 10 8 7 9—80
W A Ruthven	10 10 9 7 6 3 9 7 7 7—80
J Scott	9 7 7 5 5 7 9 10 10 7—76
H Simpson	9 5 9 7 6 6 6 6 10 8—72
W A Bacon	7 7 5 6 6 8 7 9 5 10—70

At a meeting of the club held in the evening officers were elected to serve one year: President, Charles Heinel, Sr.; Vice-President, Henry B. Seeds; Secretary and Treasurer, Howard Simpson; Firing Captain, James E. Newman.

WYOMING, Del.—Kent County Rifle Club, regular weekly practice, military rifle, peep and bead sights, standard target, off-hand:

First Match, 200yds.

S H Thomas	5 9 6 7 7 5 9 5 4 8—65
F H Thomas	5 9 9 5 7 5 7 6 4 7—64
M A Jones	4 9 1 3 5 7 9 1 7 4—50

SYRACUSE, N. Y.—The third annual shoot of the Onondaga Rifle Club will be held at their range here on Wednesday and Thursday, April 27 and 28. The shoot will be open to all comers governed by the following rules: Position, standing, off-hand, 200yds., American Standard Target, no restrictions as to weight of gun, open or globe sights only; five shots will constitute a score; re-entries allowed, but only one to count. In case of ties the last highest shot in the score will decide the value; in case of a tie score it shall be decided by three shots for each contestant. Entrance fee, $1; re-entering, 50 cents. On Thursday, the second day, the club will offer a prize of $50.

RIFLE SHOOTING ON THE FLY.—Mr. Joseph L. Raub, the Raub target trap manufacturer, advises us that Miss Annie Oakley recommends his trap as a device for beginners who wish to perfect themselves in rifle shooting at flying targets.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ST. PAUL, Minn., April 8.—Score of St. Paul Gun Club, at first regular weekly shoot, possible 20 birds: McComber 15, Paul 15, Kennedy 14, Pfister 16, Anderson 10, McKusick 15, Cummings 13, Griggs 16, Hilliard 10, Thompson 8, Boyd 16, Blakely 10, Wheaton 12, Richeson 12.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y.city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

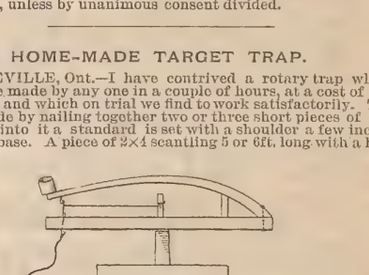
Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.



Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

HOME-MADE TARGET TRAP.

CENTREVILLE, Ont.—I have contrived a rotary trap which can be made by any one in a couple of hours, at a cost of say fifty cents, and which on trial we find to work satisfactorily. The base is made by nailing together two or three short pieces of 2in. plank and into it a standard is set with a shoulder a few inches above the base. A piece of 2×4 scantling 5 or 6ft. long with a hole

in the center, is placed on the standard. A stout spring of hickory or ironwood is fastened firmly to one end of the scantling and a short distance from the same end a block is placed, over which to bend the spring. To the other end of the spring is fastened by screws an empty fruit can. The spring is held in a bent condition by a hook fastened to the scantling, and to this hook is attached a string with a nail tied to the other end, which may be stuck in any of several holes bored in the upper part of the standard. On the bottom of one end of the scantling is another hook, to which is attached a ring tied to the end of a cord 20 or 30yds. long. A jerk on this cord starts the upper part revolving, and when the string winds around the standard it forces the spring and throws the target (a bottle, potato, etc.,) in the air. By changing the nail in the standard it will not be known in what direction the object will fly. M. I. B.

THE WELLINGTON TOURNAMENT.

THE arrangements for the world's trap shooting carnival, to be held on the Wellington grounds May 30 and 31 and June 1, 2, 3 and 4, under the auspices of the New England Shooting Tournament Association, are rapidly approaching completion. A meeting of the executive committee was held a few days ago, and the various prizes donated to be shot for by sportsmen of the world were designated in order of award. The prizes received by the Association are as follows:

One shotgun from L. C. Smith, Syracuse, N. Y., said to be the finest gun ever made in this country, worth $450.

One gun from W. & C. Scott, London, Eng., value $200.

One shotgun from Parker Bros. Meriden, Conn., value $150.

One shotgun from Lefever Arms Company, Syracuse, N. Y., value $100.

One shotgun from N. R. Davis & Son, value $100.

One shotgun from Forehand & Wadsworth, Worcester, Mass., value $75.

One shotgun presented by the donor through William R. Schaefer & Sons, value $75.

One repeating shotgun, from Winchester Repeating Arms Company of New Haven, Conn., value $50.

One English field gun, donated by Lockport Target Company value $65.

One rifle, donated by the Massachusetts Arms Company, value $75.

One rifle, donated by J. Stevens & Co., value $50.

Special prize, for amateurs only, an elegant oil painting (sporting scene), by A. F. Tait, of New York, value $1,000.

Special prize, open to all, a silver cup of elegant design, donated by the Ligowsky Clay-Pigeon Company.

It has been decided to divide these different prizes into two classes, one for experts and the other for amateurs. This is done so that four or five men may not have a monopoly of the best trophies.

There will be no charge for competition, only the cost of birds. The conditions will give all a chance to win a prize. Each competitor will shoot at 20 birds on each of the five days of the tournament, the scores made to go on record, and the best average for the five days to win the first prize; second best average the second prize, and so on each class, the prizes in the order above given being the rank in which they will be awarded. All ties must be shot off, and there will be no division of prizes. All shooting will be at 18yds. except the ties, which will be at 21yds. There will be two sets of five-gun traps each, and three of three-gun traps each, and extra "sweeps" will be in progress all the time. Only one "bird" of a kind will be shot at each day, and the classification will be as follows: Monday, Ligowsky day; Tuesday, American day; Wednesday, Blue-rock day; Friday, Bat day; Saturday, an extra day, all targets will be used. The Wellington Gun Club grounds, on which the shooting is to take place, are on the Boston and Maine railroad, and the shooting grounds are directly at the station. The secretary is Mr. C. B. Sanborn, 29 North Market street.

N. G. A. RULES.—Jamestown, N. Y., April 11.—At the last monthly meeting of the Jamestown Shooting Club the Secretary was instructed to request the National Gun Association (under whose rules we shoot) to amend the rules so as to have no restrictions on the position of the gun while at the score, *i. e.*, allowing a man to hold the gun to his shoulder or put it in his pocket; and to make no restrictions on the weight of guns, but to allow all 12-gauge guns an advantage of 2yds. over all 10-gauge guns. We think such rules might do away with very many of the disputes which come up under those two rules as they now stand.—ZERO.

WORCESTER, Mass., April 15.—At this week's meet of the Worcester Sportsmen's Club at Coal Mine Brook Range, the principal event was the match in the club series. In the classification score, out of a possible 36, the result was as follows:

Class A.

	Pigeons.	Blue Rocks.	Pigeons.	
J B Tougas	1110111111— 9	1111110111—9	1101010101—6	—24
C W Russell	0111011111— 8	1111001101—7	1011111011—8	—23
A B Franklin	1001110100— 5	1111011111—9	1111111110—9	—23
E T Smith	0111111110—8	1111111110—9	0011110100—5	—22
A Houghton	1111111001— 9	1100110101—6	1001101111—7	—22
N D Gilman	0110011111— 7	1111000110—6	0111011111—8	—20
W S Davis	1101111110— 9	1110110010—6	1111101000—6	—21
G J Rugg	1010011111— 7	1111110011—7	1110100011—5	—21
E F Swan	1111111001—8	1111111000—8	1001010001—5	—20
A R Bowdish	0101011111— 7	0110010111—6	1110100111—7	—20
W S Perry	1111011100—7	1015100011—5	1011110101—7	—17
Chas Howe	0101011010— 5	1111001111—8	1011101001—6	—19
Jewett	0101100011— 5	1011110111—8	1010001111—6	—19
S R Hudson	1111111111—10	1111100001—6	0000010010—2	—18

Class B.

C S Day	1101101010—7	1100110111—7	0001110000—3	—17
W R Dean	1000001110—4	1001100011—6	0111011110—7	—17
J B Garland	0016011110—5	1000111110—6	1100111000—5	—16
J B Goodell	0100011100—5	1010101010—5	1110101100—6	—16
V D Kennison	0000010111—4	1000111111—7	1000010011—4	—15
Killrain	0001100101—4	0110001000—3	0111100000—4	—11

The contest to decide who should have the prizes was as follows:

Class A.

L R Hudson	1111111—7	A R Bowdish	0011111—5
E T Smith	0111111—6	J B Tougas	0101011—4
M D Gilman	1110110—6	E F Swan	0101101—4
G W Russel	0111111—6	Chas Howe	1101010—4
W S Perry	0110111—5	A B Franklin	0101011—4
A Houghton	1011110—5	G F Rugg	1010000—2
W L Davis	1111010—5		

Ties for second divided; Bowdish won tie for third.

Class B.

V D Kennerson	1111111—7	W R Dean	1011001—4
J B Garland	0111110—5	J B Goodell	0110110—4
C S Day	0101101—4		

Day won tie for third. In the sweepstakes there were nine events, aggregating over 130 entries. In these contests J. B. Tougas secured three first prizes, A. B. Franklin two, E. T. Smith four, W. L. Davis two, G. W. Russel, A. Houghton and W. R. Dean each one.

ELIZABETH, April 15.—There was a large attendance of shooting men at Elizabeth this afternoon to witness the team shoot between the South Side Gun Club, of Newark, and the home organization. Thirteen men showed up on each side, each man shooting at 20 clay-pigeons at 18yds. rise. Out of a possible 260 the South Side team killed 195 and the Elizabeth Gun Club 186. The day was dark and wet, but in spite of the rain the general shooting was very good. The scores read:

South Side Gun Club.		Elizabeth Gun Club.	
Hunt	14	W Parker	15
Hedden	9	Dacherman	16
Von Lengerke	16	Lawrence	17
Whitehead	16	Burton	14
E Phillips	17	Courtney	11
McFadden	8	Williams	16
L Thomas	16	Sayre	11
T Dukes	17	Burns	16
King	17	Miller	18
J Terrill	13	Conover	15
Wheaton	13	Haynes	15
Heritage	13	Tyson	11
Brientnall	16—195	Newbeck	11—186

HAMILTON, Ont., April 8.—The Wildfowlers held their quarterly shoot at Dundurn Park, the following scores were made. Match at 8 Hamilton blackbirds, 2 traps, 18yds. rise; ties divided:

J Jones	1101011—6	Hunt	0001010—3
Brant	1011110—5	A Smyth	1100110—5
Griffith	0100110—4	Hipkins	1101010—4
Bowron	1111000—4	J Smyth	1100110—5
Cline	1101110—6	Waper	1111101—7

Second sweep; ties divided.

Jones	0011111—6	Hipkins	1001001—4
Brant	0101010—6	J Smyth	1101111—7
Griffith	1010111—4	Waper	1101111—7
Bowron	1111000—4	Campbell	1010010—4
Cline	0101111—5	B Stroud	1111101—7
Hunt	0011000—3	McLeane	1100010—3
A Smyth	1001010—3		

Third sweep; ties divided.

Jones	1101001—6	Stephens	0011101—5
Waper	1111101—7	Bowron	1010101—5
Hipkins	1010100—4	Griffith	1111010—6
Petter	1010010—4	Cline	0101010—4

Waper first, Jones and Griffith divided second and third.

Fourth sweep, ties divided.

Griffith	1001010—4	R Stroud	0111011—6
Ham	0010000—1	Petter	0000100—2
Jones	0110111—6	Hunt	1100011—5
Cline	1101110—6	Crooks	0001000—2
Bowron	1010100—3	D Stroud	0101010—4
Stephens	1011101—6		

Jones, Cline, Stephens and Stroud divided.

Fifteen Hamilton blackbirds, 18yds. rise; ties divided.

Jones	1100100110110001— 8	Waper	1111111110111—14
Petter	1110111000000000— 6	Hunter	0111011001000— 7
Stephens	1110110011001000— 9	A Smyth	0100101111000111— 7
Bowron	0011111010010— 9	J Cline	1110001111011— 11
Spencer	0100011000001100— 5	Hipkins	1011101000011001— 9
Hunt	1100001110100100— 7	Graham	1100111001111— 10
Brant	0011100010010— 5	J Smyth	1111101100010— 8
Griffith	0110110111111— 9	Campbell	0111001010111— 9
D Stroud	1111010111010100—10	C Forsyth	0100011001w — 4
Jones	1110100010011000— 7	A Stroud	1111001111111100—11

NEW DORP, N. Y., April 14.—Emerald Gun Club, match at live pigeons, ground trap, 21 and 25yds. rise, 80yds. boundary, shot under club rules, four prizes:

J Maesel (21yds)	1111111111—10	J W Godfrey (21)	1101111111— 9
J Sidley (21)	0111110111— 8	L C Gehering (21)	1111111111—10
P J Keenan (21)	1110011110— 7	A McHale (21)	1001010101— 5
T Codey (21)	1101111111— 9	J Mackin (21)	1111110100— 7
G V Hudson (21)	1111111110— 9	W Dyer (21)	1111111111—10
H Rubino (21)	1101110101— 7	J H Voss (25)	1111111111—10
N Maesel (21)	1111110111— 9	P Butz (21)	1111011111— 9
Schermerhorn (21)	0111111111— 9	T Mackenna (21)	1111111111—10
G Remsen (21)	1011111101— 8	F Schroder (21)	1111111110— 9
M W Murphy (21)	1001011110— 6	J Fisher (21)	1111111111—10

Ties for first, miss and out, use of second barrel to score ½, Voss 30yds., rest 25yds.: J. Maesel 0, Gehering 2, Dyer 2½ and won, Voss ½, Mackenna 1½, Fisher ½. Ties for second, 29yds.: Codey 2½, Hudson 1½, N. Maesel 1½, Schermerhorn 0, Godfrey 0, Butz 0, Schroder 3 and won. Ties on third, 21yds.: Remsen 0, Sidley 1 and won. Ties on fourth or Oiockie trophy, 21yds.: Keenan 1, Rubino 0, Mackin ½.—THOS. CODEY, Rec. Sec.

NATIONAL SWEEPSTAKES AND DIAMOND BADGE.—The Atlantic Ammunition Company offers a diamond badge costing $200 for the highest authentic individual score, made with Chamberlin cartridges, at 100 bluerocks thrown from a bluerock trap. Open to members of any shooting club in the United States regularly organized previous to Aug. 1, 1887, who have not a record higher than 90 out of 100. Scores may be shot any time before Sept. 15, 1887, wherever may be most convenient to the shooter, under same restrictions as in the Chamberlin Co.'s tournament. Entry fee $2. All money obtained from entries will be divided—20 per cent. to the winner of the badge, 50 per cent. to the second highest, and 30 per cent. to third highest score. All ties must be shot off at same number of birds, under same conditions, upon such ground as we may designate, within easy reach of New York city, commencing Oct. 3 and continuing to the finish. All scores must be in and entries closed by Sept. 17. We reserve to ourselves the right to judge and determine upon any score bearing evidence of fraud, excluding all such. It is intended that all shooting off of ties for our various prizes shall be done during the week Oct. 3 to 8, at the grounds of the Middlesex Gun Club, Dunellen, N. J., and a large tournament at artificial targets will be given at the same time under the auspices of the Middlesex Club, programmes of which will be issued in due time. A good list of prizes will be offered, as well as general sweepstake shooting. We hope to make it one of the greatest events of the season.—THE ATLANTIC AMMUNITION CO. (Limited), 201 Broadway, New York, April 15, 1887.

TUXEDO PARK, April 16.—Sixteen members of the club were present at the pigeon grounds to-day engaged in the regular contest for silver trophies. The silver handicap cup for members only was won by C. F. Watson, handicap 31yds., with a score of ten birds straight. The free-for-all handicap cup was borne off by J. Scaver Page with the same score, his distance being 30yds. The birds were fast and the sportsmen had a fine day of it altogether, the average scores being high.

BROOKLYN, April 14.—The Unknown Gun Club held its regular monthly shoot to-day at Dexter's Park. The shooting was very good, only one barrel being allowed, and the birds furnished by Chris Durler were fast flyers and hard to hit. Eighteen members went to the trap:

Link, 22yds	1000110—3	Martin, 23	1000110—3
Rathjen, 24	1111111—7	Doyle, 21	1001100—3
Rankin, 21	0110001—3	Knebel, Jr., 28	1011101—5
Houseman, 25	1001101—4	Pope, 24	1100111—5
Stillwell, 22	1101001—4	Von Staden, 23	1110110—5
Brown, 25	0111111—6	Gilman, 24	1000010—2
Collins, 21	1000111—4	Haas, 23	1111111—7
Blohm, 22	0011010—3	Vroom, 24	0011111—5
Monsees, 24	1111101—6	Moller, 23	0011101—4

Ties for first prize and badge, Rathjen 2, Haas 1. Ties for third prize, Knebel 0, Pope 3, Von Staden 1, Vroom 2. Score of sweepstakes:

Rathjen, 25yds	011—2	Houseman, 25	110—2
Haas, 25	011—2	Pope, 25	111—3
Knebel, Jr., 25	011—2	Stillwell, 25	110—2
Brown, 25	011—2		

Brown won second. Referee, H. Stillwell; scorer, W. Jones.

HUDSON, Wis., April 8.—Hudson Rod and Gun Club match at Peoria blackbirds, 15 single and 5 pair, 18yds. rise. Shot under National rules for club badge:

Reid	1010110010101001— 8	10	00	10	10	11—5
Balsom	0111110101111111—12	10	10	00	11	10—5
Baker	1010011010110011— 9	00	10	10	10	10—4
Goss	0101100111011000— 8	10	11	10	10	10—6
Hosford	1111100011010111—12	00	10	11	11	10—6

Peoria blackbirds, 15 single and 5 pair, 18 and 15yds. Shot under National rules. Gold badge prize.

Geo Hosford	0100111111110110—10	01	11	11	11	01—8
Johnson	1010110010101011— 8	11	10	00	11	00—5
Smith	0000110111000110— 7	00	10	00	11	10—4
J P Balsom	0111100111111011—11	01	10	11	11	10—7

Ties on 18, for badge, 5 birds, 18yds.

Hosford		11110	10111	11011
Balsom		01010	00111	10111 01011

Hosford won the badge. BEAUTIFUL.

BROOKLYN, April 13.—The members of the Coney Island Rod and Gun Club had a good day's sport to-day at Parkville. The birds were good and a fair score was made in the club shoot, in which ten members competed for the usual monthly prizes as follows:

F Lanzer (21yds.)	1	1	1	1	1	1	0—6
R Graves (27)	1	1	0	1	1	1	1—6
J Simpson (28)	1	1	1	1	1	1	1—6
J Lake (21)	1	1	1	1	0	1	½—5½
A Schwartz (27)	0	½	1	1	1	1	1—5½
C Jones (30)	1	1	1	1	0	1	0—5
R Monsees (27)	1	0	1	1	½	0	1—4½
H McLaughlin (25)	0	1	1	1	1	½	0—4½
G Hayes (24)	1	½	½	1	½	0	0—3½
H Bennett (21)	0	1	0	0	½	0	0—1½

On shoot off Simpson won first, Lake second. Referee, R. Hagan; scorer, C. Dellar.

PHILADELPHIA, Pa., April 16.—Wayne Gun Club, strong wind across the field, Ligowsky clay-pigeon, one screened trap, 18yds. rise:

T Scargle	0001100000—2	A Ulary	1111000101—6
J W Sidle	0000001010—2	J Sparks	0100000101—3
H Kane	0001011011—5	C Scargle	1011110001—6
S Davis	1101111000—6	A Wartenby	1010110111—7
Graham	0111010100—5	G Hessler	1110111111—9
I Jackson	1010111101—7	W Ulary	1101101111—8
P F Yost	0111101111—8		

TORONTO, April 14.—The West Toronto Junction Gun Club had another shoot at Canadian blackbirds for the President's medal at D. Blea's to-day. Considering the heavy wind which was blowing at the time, the scores made were exceptionally good, W. A. Clark killing 14 and W. Wakefield 13 out of 15. The former has made good scores in all the previous contests, and this being the third time he has won the trophy, it becomes his property.... In July next the Owl Gun Club will give a tournament, open to all, at Peoria blackbirds for prizes amounting to $300 in gold.... The Oshawa Gun Club has been organized with the following officers: President, W. H. Holland; Vice-President, R. T. Kirkpatrick; Secretary, George Rice. Committee—Ira Hall, A. R. Andrews and William Deans. The club proposes to do all it can to enforce the game laws.... A new gun club, bearing the name of the Beaver Gun Club, was organized last week in the northwest portion of the city, and starts out with good prospects. Its membership consists of fifteen promising young shooters, and under the guidance of the old veteran sportsman, Mr. G. Bunker, they expect to be heard from. The officers of the new club are as follows: George Bunker, president; T. Drynan, vice-president; D. Beaty, secretary and treasurer. A committee was also appointed to procure traps and other necessaries for the use of the club.

ST. LOUIS GUN CLUBS.—The Real Estate Gun Club started out last year without any flourish of trumpets, but determined to see that the members enjoyed gentlemanly sport and social meetings every Saturday. The club has already acquired a large membership, and is pushing to make itself the best shooting aggregation in the West End. Its first shoot of the season took place on the 16th. The Real Estates are enlisting with the especial view of furnishing a good team for the State shoot at Palmyra next month. ....At the meeting of the Excelsiors on the 13th, it was decided to form another organization, and as a result the Missouri Gun Club of St. Louis was launched, with Theodore Brockman of the Chapin Agnus Company as president; Theodore Rick, treasurer, and Henry Driesdieck, secretary. Mr. Brockman very naturally selected cardinal for the club's colors. The special object of the new association, whose shooting ground will be at Rinkel's, is the placing of an extra team in the field at the State shoot at Palmyra.... The first monthly medal shoot of the Excelsiors was held last Thursday afternoon at Rinkel's. The trophy is at present held by J. G. Schaaf, who also permanently wears the Trescher gold medal of last season.

MILFORD, Mass., April 15.—The Milford Sportsmen's Club have elected their officers as follows: President, Chas. B. Fletcher; Vice-President, G. W. Whitney; Secretary, J. W. Jones; Treasurer, C. B. Fletcher; Executive Committee, G. A. P. Hancock, Orrin Joslyn and I. W. Bass. The club have voted to rebuild their club house at once. At the opening recently of the range, thirty-five sportsmen were present. Among their visitors were guests from Woonsocket, R. I., Upton, Mendon, Bellingham, Holliston, Ashland, Grafton and Uxbridge. During the day there were 13 events, aggregating 139 entries.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. N. W., Baltimore, Md.—The lines of the Pilgrim will appear shortly.

FOREST PORT.—For Florida maps send to Horace Drew, Jacksonville, Fla.

D. H., Thompsonville, Conn.—Coast Survey and other charts may be had of D. Egert, 76 Wall street, New York.

C. G., Racine, Wis.—Either Sunbeam or Lassie, the former for a large man, the latter for a light-weight, are good sailers.

E. E. M., Kansas City, Mo.—The largest catch of mackerel we ever knew of was 600 barrels. We never knew or heard of a net capable of taking even 1,000 barrels. Your friend's contention that 2,000 barrels have been taken in one net at a haul is erroneous.

DAKOTA DICTIONARY.—Your correspondent can obtain information in regard to "Riggs's Dictionary of the Dakota Language," and probably obtain a copy, by addressing Rev. Dr. Stephen R. Riggs, Beloit, Wis., the author, or Rev. Henry M. Riggs, Santee Agency, Dakota, or Mrs. Martha R. Morris, Sisseton Agency, Dakota.—G. E. N.

C. H. P., Calais, Me.—Foreign built yachts have been classed with carriages and vehicles of wood, the duty being about 35 per cent. They are allowed by courtesy to carry the American flag, and by filing the bill of sale at a Custom House they are granted the protection of the United States, if used for pleasure only, but they cannot receive an American registry.

F. S. K., Elkhart, Ind.—1. Is "Birds and Their Haunts" an American publication on American birds? 2. Who is its author? 3. Does it cover a wide or narrow field? 4. Does it describe the birds it mentions with sufficient minuteness to enable a person to identify them? Ans. 1. Yes. 2. J. H. Langille. 3. Treats of birds of the East chiefly; as far west as Great Lakes. 4. Yes.

J. B. M., Palestine, Texas.—Does a large ball with the proper charge of powder travel faster than a small ball with the proper charge of powder, or does a .22 long travel the 100ft. faster than a .22 short? Ans. The velocity of a bullet, other things being equal, depends upon the proportion of powder to ball. This is the principle upon which the express bullet system is founded.

G. W. J., Tenant's Harbor, Me.—A caribou head was skinned with horns and part of skull on; dried, put away and moth-eaten to some extent. I put it into a tub, sprinkled two handfuls of fine salt over it, covered it with warm water, and put a lump of alum into water about size of hen's egg. Head looks all right now. Will it keep? Ans. A bath of salt and alum is the ordinary preparation to keep the hair from falling out. You have not near alum enough in your pickle, and the head will very likely spoil.

G. W. R., New Haven, Conn.—Will some of your readers inform me through your columns of a quiet place, out of the line of regular travel, in Maine, New Brunswick or Nova Scotia, where I can find, during the summer months, good trout fishing, and also, if possible, bird shooting in September? Could the accounts of fishing resorts given in Hallock's fishing guide book, which was published in 1877, be regarded now as reliable, or is it probable that the character of resorts, especially in the places I have mentioned, has changed more or less in the last ten years? Ans. Many of the conditions have so changed that the Gazetteer resorts are not in all cases correctly described.

R. M. M., Flushing, N. Y.—1. Can as fine short-range shooting be done with a rifle using .40-85 everlasting cartridges, full charge, as one using .40-70? 2. Is it necessary in an everlasting shell that the bullet extend beyond the mouth far enough to enter the grooves, or in a light charge can it be entirely with the shell? 3. Can nearly as fine shooting and as great range be obtained with a .40-85-560 32in. 10½lb. gun as with a Creedmoor .45-100-550 34in. 10lb. gun, supposing both to be sighted alike and to be made with equal care? 4. What is the most deadly cartridge I can use in a Marlin .45-cal. repeater? Ans. 1. Yes. 2. It may be left in shell, with tapering grooving. 3. The Creedmoor rifle with the heavier charge should have greater range. 4. Use an Express bullet and full charge.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

JULY.

18-31. W. C. A. Meet, Ballast Island.

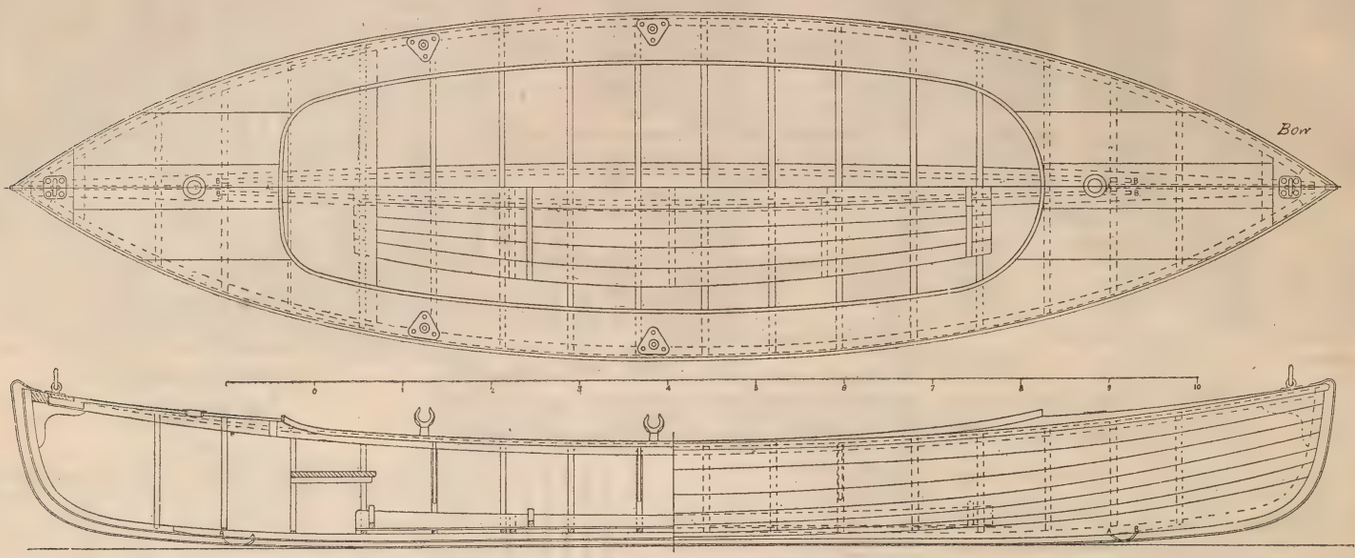
Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

THE DELAWARE RIVER DUCKER.

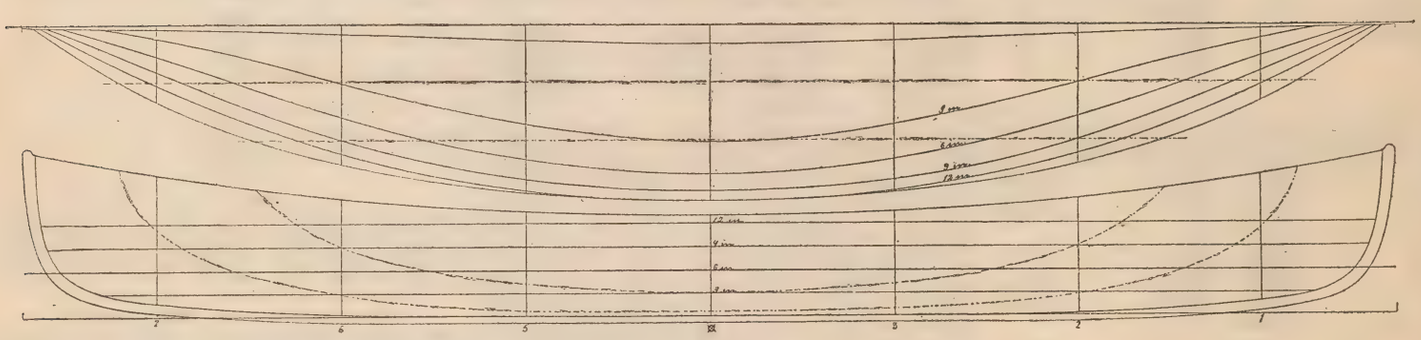
THE accompanying drawings of a Delaware River "Ducker," were sent to us by Mr. Edgar L. Street, of Johnstown, Pa., and show all the details of these popular craft. Along the Delaware they are much used for rowing and sailing, general gunning and fishing, but specially for reedbird shooting in the marshes below Philadelphia. The flat floor allows them to be poled far up on the marshes where there is more mud than water, and they are often propelled by a long pole with three prongs on the lower end, for poling on muddy bottoms. There is no fixed thwart but a movable box is used, so that the gunner may sit in the fore end and his assistant may use the pole in the after end; the latter may sit forward and row while the gunner occupies the after seat; or the boat may be backed down by the oarsman in the after seat, the gunner sitting on the box in the bow. Both ends of the boat are exactly alike, the only difference being in the seat, rowlocks and coaming.

The dimensions are: Length, 15ft.; beam, 3ft. 10in.; depth, 13in.; sheer, 8in. The stem and stern are sided 1½in., keel sided 6in. amidships and moulded 1in.; planking, ⅜in.; timbers, ¾x5-16in.; deck, ⅜in.; flooring, ½in.



Along the bottom of keel are two wooden runners, A A, ¾×⅝in. and shod with half-round iron. It will be noticed that the stem and stern each project the same distance below the planking, and the runners shown by dotted lines in the breadth plan project forward of the stem and aft of the stern, as at A A, B B. The floor boards are screwed to two battens, which are on top of them, so as to allow the boards to lie close to the bottom of the boat. They form one piece only, that may be easily lifted out. The brass rowlocks are accurately turned and fitted, with long shanks, so as to be nearly noiseless. The side decks are supported by three iron knees on each side. The table of offsets is as follows:

Stations.	Deck Height.	Half-Breadths. Deck.	12in.	9in.	6in.	3in.
1	21²	0²				
2	18⁴	10	7⁸	6¹	4²	1⁴
3	15²	18²	16⁸	15	12	7⁵
4	13⁸	22	21⁵	20	17⁴	13
⊠	13	23	23	21⁶	19¹	15³
6	13⁸	22	21⁵	20	17⁴	13
7	15²	18²	16⁸	15	12	7⁵
8	18⁴	10	7⁸	6¹	4²	1⁶
9	21²	0²				



The stations are spaced 2ft. apart, measuring each way from midship section, and the waterlines are 3in. apart.

CANOE BUILDING AT CHARLOTTE.—Capt. Ruggles has now on the stocks a racing canoe for Mr. W. A. Leys, of Toronto, from a design by W. P. Stephens. She is to be 16ft. long, 30in. beam, and to weigh 75lbs. She is nearly planked. The captain expects a fast boat, but says it will take a gymnast to sail her, as her bottom is very round, but she is a beauty. He has shipped a beautiful sailing canoe to C. C. Knitzer, of Newaygo, Mich., which he built this winter. Reade W. Bailey, of Pittsburg, Pa., has sent in an order for another canoe. This makes the second one for Mr. Bailey, as Capt. Ruggles built the Delight last season. This one is an improvement on the Delight, which came in sixth in the international races at Grindstone last summer. He has another order from Prof. Mellen of the Rochester Club, for an 80lb. racer, with a bulkhead. She is to be 16ft. long, 30in. beam. This is the professor's third canoe by Ruggles. He has finished for F. F. Andrews a 25lb. canoe, 11ft. long, 26in. beam, and has another on the stocks which is to weigh 28lbs. and to be 12ft. long, 26in. beam. He has also an order for a skiff of cedar, 16ft. long, 3ft. 3in. beam, and to weigh 90lbs., for Chas. Bruff.—A. B.

BROOKLYN C. C. RACES.—*Editor Forest and Stream:* As it is always annoying to have paddling and sailing races on the same day, the Brooklyn C. C. has decided to hold a sailing regatta on June 18 and a paddling regatta in the fall. The programme for the former is as follows: 11 A. M., sailing, three miles, no limit to rig or ballast and open only to members of the B. C. C. who have never won a club or A. C. A. sailing race. 2 P. M., sailing, four and a half miles or more, no limit to rig or ballast, open to all members of any regularly organized club. 5 P. M., combined paddling and sailing, three miles, start paddling and finish sailing, no restrictions and open to all, as above. A. C. A. rules and regulations to govern all races. The regatta committee reserve the right to name the course on the day of the races. An effort will be made to secure a large entry and make the open to all sailing race of special interest.—570.

THE FORBES REEFING GEAR.—Greenwich, Conn., April 28.—*Editor Forest and Stream:* If "Raven" will refer to *Scientific American Supplement*, No. 133, he will find the full account and plans to scale of the Forbes reef gear. The peculiar cat rig to which it is fitted may also be useful to him. Regarding the reef gear of Sassacus, he may possibly get information from her builders, Higgins & Gifford, of Gloucester Mass. "Raven" refers to the Forbes reef as a patented one. The designer's letter does not so state or imply, but indicates that Mr. F. exists in a state of chronic philanthropy, and gives his invention freely to all.—F. D. G.

A CANOE AGAINST SAILING BOATS.—In the race of the Thames Sailing Club at Kingston on April 2, the canoe Pearl, sailed by Mr. E. B. Tredwen, won first prize from a fleet of seven sailing boats, all of much larger size, the Pearl rating at 0.5 tons and the sailing boats from 1 to 2 tons. The canoe, of course, had a large allowance, being 8 min. behind the first boat in, but considering the greater power of the large, well-ballasted sailing boats, her victory was most creditable.

VESPER BOAT CLUB.—At the last meeting 42 members were elected.

Yachting.

MAYFLOWER AND ARROW.

THE open challenge issued by Mr. Tankerville Chamberlayne over a year ago, on behalf of his cutter Arrow, has resulted in a rather inglorious fizzle; as, now that it has been taken up by an American yacht, it has been hampered with such unfair conditions that the race has been abandoned. In answer to the conditions published last week Mr. Burgess sent the following message: "Restrictions on centerboard of Mayflower are inadmissible." The reply was: "Clevedon, April 19, 1887.—Very sorry. Arrow cannot possibly concede great advantage of unrestricted centerboard.—Chamberlayne." This, in all probability, closes the negotiations, as Mayflower will not race under any but equal conditions.

The most important event as yet on the yachting calendar for the year is the visit of Mayflower to England and the races which she will sail there, and there will be a general feeling of disappointment that the present programme is disarranged by a failure to agree on the conditions on which she may enter the races. As to the principal one of these conditions, the use of her centerboard, there is but one opinion among American yachtsmen, both cutter and sloop men, that she must be allowed to use her board entirely as she pleases and without any restrictions. From the conditions laid down for the match which he crosses specially for, and which we published last week, it appears that the owner of Arrow is of a very different opinion, his stipulations being as follows: "The Mayflower's centerboard, shifting keel or plate shall be so stopped or bolted that it may not be lifted above the maximum draft of the Arrow, but it may be lowered to its full depth, and as compensation for this, 10 per cent. shall be added to her rating."

The first clause really amounts to little, as, with Mayflower's draft of nearly 10ft. she would need to keep down but 18in. of her board, which would not be of the least detriment to her; but there is no reason why this limitation should be considered necessary. British yachtsmen have, since the first races for the America's Cup, very properly objected to inside courses for such important races between large craft, and the same complaint has been made over every race on the New York Y. C. course. Now when a race is to be sailed in British waters, a similar course is selected, inside the Isle of Wight, and special legislation is deemed necessary to prevent the centerboard from obtaining any advantage. Surely there must be some open water courses about the south coast of England where such an important match can be settled on its merits and without the chances of mishaps and mistakes which attend most inside courses. The first essential for a fair race, and we presume no one desires to see anything else, is a course that shall offer equal opportunities to both, where the winds, tides and channels are the same for both, and where no advantage can be taken through a difference in draft. It certainly would not be fair to ask Mayflower to sail in water of Arrow's draft only, as she draws 20ft. to Arrow's 11½ft.; nor is it fair, on the other hand, to allow her, if free, to lift her board and make a short cut that her rival cannot follow; but this matter must be settled, not by restrictions on either boat, but by adopting an open course with ample depth from start to finish.

Even though Mayflower might submit to this restriction without serious detriment, there is a principle involved which will prevent her owner from agreeing to any such condition. The centerboard is a legitimate mechanical device for obtaining certain advantages, and its use is just as permissible as a housing topmast or a running bowsprit, and until something more has been proved against it than is now known, there can be no grounds for discrimination in favor of the keel.

The principal point, however, of Mr. Chamberlayne's conditions lies in the last part of the one quoted above—the demand for a handicap of 10 per cent. from the centerboard. Certainly there can be no glory in beating a crippled boat, as Mayflower would be without her board, nor would the case be bettered if she were compelled to give a heavy allowance to her adversary in return for the privilege of using it. The cutter men of America are not yet ready to concede that the centerboard is better than the keel to any extent, and it will be a surprise to them that the confession should be so openly made by a British yachtsman. Keel boats in America ask no allowance from the centerboard craft; from the very first, when they were few in number, poor in model, and not understood by the men who sailed them, they have asked nothing more than a fair course and a working breeze; but now, when the first race of the kind is to be sailed in British waters, an allowance is asked from the centerboard boat. Madge asked for nothing. Oriva won her victories flat; Bedouin wants no time from any centerboard of her length, Clara is not afraid to tackle the class above her; but Arrow's owner concedes that his boat is inferior to Mayflower before they meet.

It is a fact that Arrow is an old boat, smaller, far less powerful and inferior to Mayflower in every way, and if her owner asked an allowance on account of the age and condition of his boat it would be another matter; but nothing of this kind appears. The centerboard is the sticking point; the races of Galatea and Genesta seem to have started a sort of a panic, and now the first keel boat that is to race must be protected by a handicap.

Do British yachtsmen accept this action as their own; if so, where is all the boasted fair play and bulldog pluck that never measures the size of an enemy, that asks no odds and that fights to the end regardless of everything but honor? The *Field* has spoken in favor of equal terms for centerboards, but this is not enough. Every British yachtsman should enter his protest against this surrender and in favor of a fair fight with no odds on either side. Let the faint-hearted ones pluck up their courage for a little time, the case is not so desperate, these terrible Yankee centerboards may not be so bad as a few have represented, the keel cause is not entirely lost.

The opportunity is now at hand for the most valuable tests that have ever been made by yachtsmen, and the greatest possible good may accrue to both nations if they are properly carried out. If Mayflower is a better boat than the British cutters, this season will show it; but the results must not be impaired by any false tests. If she can beat Irex, Arrow and the others she will meet, or if they can beat her, then some valuable knowledge has been obtained; but if they succeed only in holding their cups by means of handicaps and restrictions on the challenging boat, the season will be worse than wasted. It is not now a question of keeping or winning cups, but of earning an unquestionable victory before the yachting world that is looking on anxiously to learn from these great races. On this side of the Atlantic a match of equal importance is to be sailed, and as far as can be determined, under conditions that will be the same for both. To go into the details of Mayflower and Arrow, their rating would be approximately 129 and 87 sail tons, Y. R. A., and the latter would receive 9¼m. over a 50-mile course. Now the owner asks that this be increased by 10 per cent. because he has no centerboard.

This same question of the centerboard comes in again wherever Mayflower may want to sail, except for the Cape May and Brenton's Reef cups, and the matter of admitting her is now before several English clubs. It has been the rule heretofore to exclude centerboard vessels entirely from all races of the Y. R. A. by a positive enactment, but this year, in honor of the Queen's jubilee, some clubs have changed this by offering to admit centerboards on terms that would make their defeat an absolute certainty, thus accomplishing the same end as before, but with a show of generosity that is likely to deceive no one.

There are but two ways of dealing with centerboard boats, either to disbar them positively, or to admit them without any restrictions on the use of the board, and there is one club, the Royal Portsmouth Corinthian, which has the spirit and pluck to do this, giving an open invitation to all centerboard yachts. The English sailing men are in favor of a free use of the centerboards, and the *Field* says:

"There is no further doubt that the Mayflower will pay us a visit in June. Possibly some American centerboard schooner will do so also. Under these circumstances the centerboard question is likely to cause a difficulty. But if the clubs are wise they will smooth the way for a settlement of the question before the yacht arrives. It is worse than useless framing conditions which would practically destroy all the chance of the centerboarder winning. It would be far better to fall back on the Yacht Racing Association rule and decline to allow them to enter into any club regattas."

The *Observer* continues in the same strain:

"We have always taken the line that American boats should be allowed to make the most of their peculiarities of construction, so that we may see the battle of types fairly fought out. But several English clubs, with strange want of confidence in the English type of boat, persist in forcing on Americans conditions which practically assimilate their type to ours. The American craft, as everybody knows, have movable keels or centerboards, which can be raised or let down at will, whereas the deep keels of English boats are fixed. Obviously, centerboards can pass over shoal water where English craft could not follow them. The proposal is that for this advantage of the centerboard American craft shall have ten per cent. added to their rating and their keels fixed so that they shall not be hoisted above the maximum draft of the English craft. It does not seem fair to make American craft pay in rating for their centerboards and then compel them to convert their centerboards into fixed keels so that they can get no advantage from them."

The London *Times*, however, takes a less liberal view, commenting on the conditions as follows:

"They have been drawn on thoroughly fair and equitable lines. There should be no difficulty in arranging the proposed international contests. The penalty imposed on centerboard yachts is by no means unreasonable, as it would be manifestly unfair to allow a craft of that type the advantage of working over hollow ground in shack water with her centerboard hauled up, while the fixed keel boat, by reason of her greater draft of water, would have to keep in the tideway. This clause may, however, be taken exception to by those identified with the Mayflower. Yet it is hardly likely to bring about a breakup of negotiations."

The objections to the centerboard seem to be based on two points—the advantange that may be gained by cutting across lots where the keels cannot follow and of working short tacks in shore, and again, the gain which results from the reduction of immersed surface when off the wind. In regard to the first point it is, in practice, of little importance and may be removed entirely, as far as the large yachts and international racing are concerned, by the selection of open, deep-water courses, such as are suitable in all respects for boats of such size and races of more than usual importance. No trouble is found in America in selecting such courses, where the centerboard boat has room to use her fin as she pleases, and yet at the same time she can gain nothing by housing it and cutting off corners. The New York Y. C. course, it is true, is not of this character, but the British have protested too long and too earnestly against racing over it for them now to select similar courses. Outside Sandy Hook, at Newport and at Marblehead, there are deep-water courses for any yachts yet built. In actual practice, however, the advantage of the board in racing is very slight in the large boats, as it must be kept down for a greater part of the time, and if raised the boat is useless unless before the wind. True, some risks may be taken in making close shaves in shoal water that a keel boat would not care to take, but these risks involve serious danger to an essential and necessarily delicate portion of the boat's mechanism, as the board may be easily injured by grounding, thus disabling the boat as far as racing is concerned. Besides, the keel boat with a draft of 12ft. is a far more efficient instrument to work to windward than a centerboard boat drawing 15 or 16, and from her more solid construction is far better able to take the ground with no worse injury than a loss of time than the other is to touch and go clear, but with fatal damage to her board. The great advantages of the centerboard are that the yacht can enter shoal harbors, can take the ground more easily and can be sailed in shoal waters at the expense of speed and not, as seems to be the idea abroad, that she can sail a race successfully in shoal water, while her rival must have half as much depth again to compete with her.

As regards the immersed surface the experience in this country, where centerboards and keels are in constant competition, shows all one way; that the difference between the two classes is about the same on the wind as free, and that if the cutter beats the sloop to windward she is likely to do just as well with her when sheets are lifted. It is a very pretty idea that the reduction of surface by a couple of hundred square feet makes the boat go faster, but the facts do not bear it out, and in this case theories and scientific reasoning must take a back seat before the actual facts. In England the matter has not been tested, and all statements concerning it are simply speculation. The *Field* is responsible for much of the misapprehension that exists on the subject, as it has always taught that the reduction of immersed surface was of substantial benefit. Only a few weeks since it spoke as follows: "Mayflower will still have some advantage by the reduction her immersed surface can be made to undergo when her board is lifted some three or four feet. The main advantage of the centerboard is, that it can be housed when sailing on a broad reach or down the wind. In all the Cambria and Livonia races in America this advantage was the most striking. The Cambria, for instance, in a wholesail breeze, could hold her own to windward with any of the centerboarders, but the latter would take seven or eight minutes off her in a twenty-mile dead run. So far as this aspect of the case goes it would be perfectly fair to deprive the centerboard of her advantages, but the point is that by doing so she will be practically barred from sailing over many of our courses." As ancient history this is very interesting, but it is of very little value to-day. The centerboard schooners of twenty-five years since were distinguished for their speed down wind and were far less able to windward, but the boats of to-day are more equally balanced in all around qualities, and are fully as good to windward as free.

In his paper on "Fifty Years of Yacht Building," lately read before the Institution of Naval Architects, Mr. Dixon Kemp repeats the same views, as follows:

"So far as sailing by the wind is concerned the board does not appear to hold the yacht to more advantage than a fixed keel does a modern yacht with a deep cross section, and often, if, as the Americans say, the centerboard is outpointing the keel yacht, the feat is probably more attributable to the sit and trim of the sails than to the board, unless, of course, the keel yacht has a deficient area of longitudinal vertical section. Where the centerboard has the advantage is in lifting the board for sailing off the wind. By housing the board in a yacht like the Mayflower, a reduction of 10 per cent. is at once made in the area of the immersed surface, and the effect of this is always manifest, especially in light winds or low speeds."

This is directly contradicted by the Cup races of '85 and '86, as all know who saw Puritan and Mayflower walk away to windward of their rivals in light winds as in the first race in '85, outside the Hook, and in the race over the club course in '86; and on the other hand, in the last race of each year, when the cutters did well on the run to leeward, but were beaten to windward. The speed of the deep keel boat down wind has been repeatedly proved to be equal to the shoal centerboarder with board housed, and even if it were otherwise it is not shown why the advantage, if it exists, is not a perfectly legitimate one, or why it should be penalized.

It is the intention of the owner of Arrow to make the Queen's Cup, which he has long held, a perpetual challenge cup, and to this end he has framed the conditions given last week, but it will be noticed that they are less liberal than those of the America's Cup. In place of being open to the world and to vessels of any rig, the races are limited to British and American cutters and sloops; the penalty on centerboards is imposed, and the races must be sailed under Y. R. A. rules, while the America's Cup is sailed for under the rules of the holder for the time being. Further than this, the owner of the Arrow reserves the right, in the races with Mayflower, to decide on the morning of the race, which way each shall be started, a small matter, but one that is contrary to the obvious requirement in such cases that each yacht must have exactly the same chances.

The FOREST AND STREAM has long contended for more liberal and sportsmanlike conditions on the part of the holders of the America's Cup, not from the desire to make its conquest easier to foreign yachts, but because the conditions first laid down were not such as would guarantee to all challengers a fair race in which they could win or lose on their merits. Certain conditions will occur to all as absolutely essential to fair play in such contests, and these apply as well to the Arrow's Cup as to the America's. The course should be such that neither boat can gain any advantage from peculiarities of construction or model; they should be on such deep and open water as boats of 50 to 100ft. are fitted to sail in; all conditions as to courses, starting and sailing should be fixed and known to both competitors in good season, and both boat and course should be selected in advance as equalizing the chances of wind and weather; no limitations should be placed on any legitimate part of the boat, hull or equipment, and while special appliances of an unseaworthy character should be debarred, their status must be proved first.

As matters now stand it rests with the Arrow's owner whether Mayflower is seen in British waters this season, as her owner will not send her across if the match with Arrow falls through, nor will he put her in that or any other race except on perfectly fair and equal terms. The benefits that must come from a thorough test of her capabilities as compared with the best British yachts will be fully as valuable to the other side as to Americans, and it will be a serious loss if the races do not take place.

THE SECOND CRUISE OF THE PILGRIM.

PART VI.

A FINE breeze from the northwest was rippling the bay and we hastened aboard and got underway that we might reach the drawbridge upon the top of the tide. The wind proved light and baffling, several legs were made across Frenchman's Bay that gave us opportunities to see the pretty shores and summer cottages, and we finally worked into the long reach north of the island and lost sight of the mountains. Here both shores were laid out in farms of gently undulating land; the buildings all had a comfortable appearance; several wharves and fish weirs projected into the tides, and there was a calm, peaceful aspect of the landscape in great contrast to the southern side of the island. We were in Eden township and near Eden.

The water shoaled rapidly near the bridge and an ugly ledge extended from the mainland. The horn was sounded and two men came out, opened the draw and motioned to keep more to starboard. We laid out a few lines, got the fenders handy, and sailed right into the gap. In a moment way was lost and we were floated right astern again by a strong current running to the eastward. We had reached the bridge half an hour too late. The men upon the bridge pulled by the rigging aloft, and Charles and I pushed by the piers, but we could only keep in the draw and swing the bow from side to side to the imminent danger of the tophamper catching upon the drawbridge, which was elevated half upon each side at an angle of 45°. Finally, a line was taken out ahead and the boat warped through by great exertion and with much difficulty. Once fairly through the bridge, the wind upon the starboard beam filled the sails. We thanked the bridgemen, who certainly were very kind, and proceeded slowly down Union Hill Bay. There is a bare ledge for a mile or more between Mt. Desert and the main land, and one cannot anchor by the bridge and wait for high tide, but must begin to approach it as the water rises, and go through at the top. Then, it would be easy for a small craft to sail through with a favorable wind, but I think it would be better not to take the risk, but to down all sail and warp through, and this would be a necessity with a yacht over 40ft.

The stretch of shore and water along Mt. Desert and the mainland to the west is lonely, wild and rough. There are not a dozen houses to be seen in twenty miles. The land is not cultivated to any extent, and the unpainted cottages and tumble-down barns are indications of poverty and lack of thrift. Bartlett's Island is covered with primeval forest; Long Island is a rocky highland of blueberry bushes and stunted spruces, with a fish house and wharf at the lower end; Hardwood and Tinker's are masses of evergreen, and the western shores of the mainland are flat pasture lands of no interest. Wherever we sailed, Mt. Desert still loomed high above the islands, and the hotel upon Green Mountain could not be escaped from. A long point off Newbury Neck was covered with gulls, feeding and performing toilet duties, but they were too wary to let us get within gunshot, though the water was smooth and the breeze sent us along quietly.

The tide was out, and it was impossible to run up Union River on account of its many shoals and tortuous channel. Indeed, there is no water of any account at Ellsworth during low tide, and as the sun was getting down, and I had no harbor at Blue Hill Village, though the chart showed a narrow and dangerous channel. Blue Hill seemed almost upon the shore; the entrance was picturesque and the water deep enough. I steered by the compass and kept Charles upon the lookout for rocks. The wind blew right off the mountain and right ahead as we approached the entrance, which enabled us to creep in by keeping the sails shaking; and the point once astern, we entered one of the prettiest little landlocked bays imaginable.

The land rises abruptly from the eastern shore in wooded ridges and ledges; the little mountain, Blue Hill, that looks blue from miles away, always a conspicuous object from Belfast, was now green and forest clad to the very summit. To the left of it was a modest farmhouse, and from the bank near it ran out an irregular wall of knobbed boulders 8 to 10ft. above the tide, which seemed to block the passage further in and extended across to the right bank, where a cottage was peeping through the trees that covered the level point, and several shapely boats were lying upon the rocks. Just as the anchor was dropped in 10ft. of water near the farmhouse shore, a heavy report broke the stillness and echoes like the discharge of a whole broadside rolled around the shore. It was a heavy blast in the granite quarry of the hillside that had unwittingly fired our salute. We took the boat after supper and pulled and poled in the shallow water toward the village, but we struck in numerous places, and in the darkness could not see any way to reach a landing, and therefore came aboard again with our empty oil can and sugar box. It blew hard from the mountain side all night, but we lay snugly and veered cable as the tide arose. The boulders in the bay are a singular freak of nature. They must have been dropped there by some vagrant glacier. They are arranged with some degree of order in

westers ranged themselves along between the bulwarks and the cabin to look at us. I lifted my cap and said, "I am sorry to beat you, Captain."

The crew moved a little forward and a fine looking man of thirty came to the side, lifted his sou'wester and said, "That's all right. We are willing to be beaten by such a pretty craft."

"Where are you from?" I asked.

"From the Banks."

"You have a full fare of fish, I suppose?"

"Yes, full to the hatches. Been out since the 5th of May, more than four months."

"I suppose you have had some letters and newspapers?"

"Haven't had either, nor a word of news since we sailed. Who's governor?"

"Governor Bodwell was elected, and the State went Republican by over 6,000 majority."

Then the crew yelled themselves hoarse with hurrahs, the captain got out a musket and fired a salute, the cook threw his hat up several times until at last it blew overboard, and shouts and laughter rewarded him for his loss. There was no doubt which side that crew of hardy fishermen favored.

We went on ahead, but the captain's remark went through my mind, "Haven't had either, nor a word of news since we sailed." I sent Charles below for newspapers; he brought up a Boston *Herald* two days old and the week's *Republican Journal*, of Belfast, saturated with kerosene. I rolled them up, tied them with a string, turned the yacht about, ran back and threw them aboard, saying, "Captain, here are a couple of late papers; one is pretty full of kerosene, but you'll get a report of the election and the great earthquake at Charleston." The captain caught the roll, said "Thank you, the oil wouldn't hurt the news any," spread the papers out upon the house and proceeded to read to the crew that had gathered around. It was a democratic scene upon a republican vessel, and I have felt repaid a thousand times by the reflection that my thoughtfulness gave that storm-tossed crew a little news of the land they loved so well. I know how much they appreciated it, for I have been there myself.

We left the schooner behind, rounded Cape Rosier easily, had a good run to our anchorage in Belfast Bay, and I saw the homeward bound schooner creep up past Castine and point fairly up the Penobscot River, where loved ones were waiting. How I wished she could have a wind to take her to Orlando before dark, but the tide was running out, the wind became light, and she did not reach home until the next morning.

We had left our anchorage in Belfast Monday, at 2:30 P. M., and returned and dropped anchor in the same place Thursday at 3 P. M., having circumnavigated Mt. Desert Island. The Pilgrim sailed more than 140 miles in 28 hours; the remainder of the three days she was at anchor in the several harbors visited. She had to beat from Castine around Cape Rosier against a rapid tide and rough sea and through the eastern end of Eggemoggin Reach and towed her 12ft. tender all the time, and of course was much hindered by it. I was much pleased at the performance because it is the rarest thing for any vessel in those parts to go completely around the island, and people who saw us set sail could hardly believe we had done it, but the item put in the Bar Harbor journal was copied into the Belfast paper and the doubting Thomases were silenced.

It was the last of September, the weather was becoming stormy and cold, my finger ends were worn and sore from handling the canvas and my joints had occasional twinges of rheumatism. The season of pleasure and play was drawing to a close and arrangements were made to haul out and cover for the winter. My last night aboard had arrived and Charles had gone ashore for letters. I lay back upon the cushions smoking and fell to musing. What a satisfaction it is after the ropes are all hauled taut and coiled down and the lamps lighted to think over the events of a cruise in a homey cabin with the stars shining through the open skylight. There to starboard above my feet are the marine glasses hanging in their leather case, the barometer marking 30.3, the fog horn, charts and signals peeping out of a locker. Upon the port side the thermometer is at 65°, the guns lie snugly in their locker, the jibtopsail and life preservers are half hidden by the bed quilts and blankets and the gafftopsail is hung up beneath the carlins. Behind me a yacht cap hangs over a calendar that shows the time of sunrise and sunset and high tide, a compass is upon a shelf with toilet articles and a revolver. The lamp burns brightly and its light is reflected by tins and dishes on the shelves forward of the mast, and the faithful oil stove is seen closed in its box beneath the little hatch. The potato bin, the canned goods bright with pictures, the ice-box and water spiggot with its handy tin cup, all proclaim the cruiser and make me feel "at home" to all the world.

How sweet is rest to tired muscles, how grateful surcease of city noise to the overtaxed nervous system! The bright sunshine, salt air and bold breezes of the rough old coast of Maine furnish medicine for the weary and worn, more potent for good than the best of the pharmacopœa. And so much cheaper, too.

"There is no price set on the lavish summer,
And June can be had by the poorest comer."

Amateur yachting, when done in a proper manner, is glorious. It is spiced with adventure and daring; it draws the bad out like a plaster; it drives pure oxygen into the torpid cells of the animal economy and expels peccant humors; it reanimates, revivifies and restores the fainting invalid, and makes the sound man a very Hercules. In my cosy little cabin, my cigar has burned to ashes, my cruise is ended, and, while I feel sad at the limitations of tobacco and time, the nicotic fancies of one and the precious memories of the other are blended in a dream. CARESWELL.

NOTES.—Lillie, sloop of Dorchester, has had an iron keel added.... Merle.—The new sloop for Mr. Ames, of Oswego, will be named Merle. She will sail from Boston to Lake Ontario via Hudson River and Erie Canal.... Bonito will be the name of the sloop building at Nyack for Judge C. F. Brown, of Newburg, N. Y.... Thistle, sloop, Mr. Wm. Zeigler, has been lengthened amidship, her trunk and mast moved forward, and her lead, 17 tons in all, will be put in her keel.... Mr. Burgess has designed a catboat 20ft. 10½in. over all, and 18ft. l.w.l., for a member of the Greenwich Y. C., and Wallin & Gorman will build her.

GREAT HEAD Y. C.—The full programme of the Great Head Y. C. for the season, is as follows: May 30—Monday, 3:30 P. M. Trophy prize. June 11—Saturday, 2 P. M. Open race; particulars to be announced. June 28—Tuesday, 3:30 P. M. Pennant. July 5—Tuesday, 8 P. M. Moonlight sail. July 9—Saturday, 2 P. M. First championship. July 13—Wednesday, 3:30 P. M. Cash prizes. July 27—Wednesday, 3:30 P. M. Second championship. August 2—Tuesday, 8 P. M. Moonlight sail. August 6—Saturday, 1 P. M. Cash prizes. August 13—Thursday, 3:30 P. M. Third Championship. August 25—Thursday, 3:30 P. M. Cash prizes. August 27—Saturday, 4 P. M. Fourth championship. September 1—Thursday, 8 P. M. Moonlight sail. September 10—Saturday, 3:30 P. M. Cash prizes. September 24—Saturday, 3:30 P. M. Cash prizes. There will be four championship races, and any yacht belonging to the club shall be allowed to enter the four. The yacht winning the greatest number is entitled to the championship cup. Any ties occurring, a sail off will be appointed by the judges. Classification—First class, over 21ft.; second class, 17 and less than 21ft.; third class, all under 17ft. Measurement—On waterline, with one-fifth the after overhang. Sails—First class, no restrictions; second class, sloops, mainsail and jib, catboats may carry main sail and jib; third class, mainsail only. Entries—Any yacht enrolled in the club may enter for club races by giving notice to chairman of regatta committee, which shall be for entire season. Regatta committee: S. A. Freeman, Ed Dixon, H. Hutchinson, J. S. Cushing, Fred Melvin.

HELL GATE PILOTAGE.—Mr. John O'Brien, Hell Gate pilot, furnishes the following information relating to the recently located ledge near Sunken Meadow: "I never take a heavy draught vessel (15 to 18 feet) through the channel S. of the Middle ground buoy; if fact, nothing more than 15 feet, and then I keep close to the Long Island side of the channel. The best water is carried through the S. channel, about 100 yards from extension of Woolsey's dock. A shoal spot, with 9 feet of water, is found on the Middle ground shoal, in range of Woolsey's dock, keeping it end on. I always give the buoy on the Middle ground a good berth when taking either channel. I used to run through the channel to the N. of the buoy, by keeping the Church steeple, in Astoria, on a line with the liberty pole on Ward's Island. This pole was blown down last winter, and should be replaced." Mr. Arcularius, Hell Gate pilot, adds that he has always given the Middle ground buoy a wide berth when passing to the N. or S. When piloting vessels through the channel to the S., he favors the Long Island shore, keeping clear of ledge off Woolsey's dock. The U. S. sailing directions for this locality state "that the Middle ground buoy can be passed on either side at a distance of 100 yards." This he considers is misleading, and is of the opinion that a vessel would strike if the directions were followed; in fact, he states that the Middle ground buoy is of no use except to keep well away from, and he never regards it except for that purpose. He claims that schooners drawing 9 feet have struck on the Middle ground, and that the newly-located ledge is but a part of the main shoal, which he has known for years and allowed for.—*Marine Journal.*

NOTES FROM ROCHESTER.—Capt. Doyle, of the Life Saving Station, has now on the stocks two steam launches, one 40ft. over all and to make 13 knots an hour; the other is over 30ft. Both are for Rochester parties. The Florence, sloop, has been painted and will float next week, when she will have a new cabin put on and be thoroughly overhauled inside. The Mary E., sloop, will be rigged in a few days. She is having a new gunwale. The Armida, cutter, is being thoroughly overhauled and will have her sails increased. The boom will be lengthened 5ft. and the jib 6ft. on the foot. Sam Hingston is building a cutter for Rochester parties, which is nearly planked. The cutter building by E. L. Williams, of Boston, for Rochester parties, is expected in about a month. Lady Eva, Fannie F., Madge, Greyhound, Ripple, Nokomis, Emily and several other boats have not yet been touched, but the boys say they will be ready for the first race, which is to take place on May 15, for a prize pennant held by the Nokomis. An anchorage has been secured at Charlotte by the Rochester Y. C. There is another scheme on foot to build a number of houses on the Summerville side for the small steam launches, and to have one man to care for the boats. This is an improvement upon last season, and will be likely to call a number of recruits into the ranks. Williams & Jeffreys have now on hand several new steam launches for Rochester parties, with their new engines, which burn either coal, wood or oil. They appear to be much more solid than the Shipman engine used in nearly all the boats about here.—B.

NEW JERSEY Y. C.—Com., Henry F. Ogden, catamaran Duplex; Vice-Com., Edwin A. Stevens, cutter Isis; Recording Secretary, William Storie; Corresponding Secretary, George E. Gartland; Financial Secretary, John D. Goetschius; Treasurer, Charles I. Rogers; Measurer, John Ortley. Regatta Committee—Edward W. Ketcham, John Curtin and M. V. B. Evesson. Trustees—Edward W. Ketcham, Theophilus Butts, Edwin A. Stevens, William Letts and James A. Reed. Among the members elected were Mr. W. D. Anderson, of Orange, N. J., who has recently purchased from Mr. J. Borden, Jr., the cutter Mermaid, the plans of which cutter appeared in the FOREST AND STREAM of March 4 and 17, 1886; Messrs. F. S. Doremus and R. Outwater, owners of yacht Sirene, were also elected members. The sixteenth annual club regatta will be held over the regular course of the club in New York Bay, on Thursday, June 16.

CLEVELAND YACHTING ASSOCIATION.—Com., Hon. Geo W. Gardner; Vice-Com., Percy W. Rice; Rear-Com., Charles W. Kelly; Secretary, J. Geo. Downie; Treasurer, G. W. Luetkemeyer; Measurer, Charles Richter; Assistant Measurer, Edward Overbecke; Surveyor, H. G. Phelps; Director to I. L. Y. A., Charles W. Kelly; Fleet Surgeon, Dr. C. C. Arms; Collector, Edward Saxe. Executive Committee—P. A. Mettling, Chairman; C. Krause, H. D. Moran, Henry Richter and S. Law. The club rented some very fine rooms last fall, and during the winter the attendance has been better than for a number of years. There will be four or five new boats added to the fleet this season, and the outlook is a very busy one.

THISTLE.—Saturday was set for the launch of the Thistle at Henderson's yard, at Partick. She will not be launched in usual way, but will be slid on to a float, which will be lowered in a dry dock and anchored fast, the water being then admitted until the yacht floats clear. It is reported by young Captain Chas. Barr, of the Shona, that Thistle's mainsail will be laced.

JUBILEE DINNERS TO SEAMEN.—The Portsmouth Corinthian Y. C. has arranged to give a dinner each Saturday to thirty of the old seamen of Portsmouth, of whom a number are very poor and unable to work. Each Saturday the dinner is cooked at the club house, some 64 lbs. of beef, 5 gals. of potatoes, two dozen cabbages, 30 lbs. of plum duff, and 9 gals. of beer being used. The dinner is served in an old building now used as a storehouse. At its conclusion a pipe and 1¾ oz. of tobacco are served out to each man, while those having families are given in addition ¼ lb. of tea and 1 lb. of sugar. Mr. R. H. Baillie of the Marionette, cutter, and Mr. C. H. McCheane, Kate, cutter, Hon. Secty. of the club, have been the leaders in organizing this worthy charity, and do the honors at each dinner.

CRUISING MATCHES.—The season promises to be marked by an unusual number of private matches on both sides of the Atlantic. The match between Bedouin and Titania for a silver pint pot filled with gold is confirmed, and the date is set for June. The value of the gold will be about $3,200. A race between the schooners Sachem and Julia is also reported, over a 40-mile course outside of Sandy Hook, for a $1,000 cup.

A BRITISH VIEW.—It may be said that the Coronet and Dauntless are good sea-going yachts, but they are not, in our opinion, to be classed in the category of fast vessels. The Coronet, when in English waters last summer, could not make a fair show against even a moderate craft, and the exhibition the Dauntless made against the Florinda, at Nice, and the Genesta, in America, is fresh in memory.—*Land and Water.*

SEAWANHAKA C. Y. C.—The new constitution of the club has been printed and distributed to members, and will be acted upon at the next meeting, April 25, at Delmonico's. The club sloop Venture will be in commission by the opening of the season, with a new suit of sails. The date for the annual race is fixed for June 11. The club has taken possession of its new house, No. 7 East Thirty-second street, and the work of fitting it up is progressing.

CHANGES OF OWNERSHIP.—Mr. Wm. Zeigler has sold his steam yacht, Gem, to Mr. C. E. Billings, Newton, Mass.... Nora, cutter, Mr. J. Leslie Cotton, has been sold to Mr. W. Butler Duncan, Jr.... Resolute, schooner, Mr. John Brooks, has been sold to Mr. Postley, who will lengthen her bow and refit her throughout. .... Waterwitch—Mr. Chas. Mallory has sold the schooner Waterwitch to Mr. Philip Armour, of Chicago.... Siren, schooner, has been sold by Mr. E. R. Washburn to Mr. Frank Lawrence.

THE BOOT ON THE OTHER LEG.—By the way, why not hurry up and have a clause inserted in the America Cup conditions, compelling the Thistle to "add 10 per cent. to her rating?" She can carry her ballast 4ft. lower than General Paine's new sloop, and therefore carry more sail on the same dimensions. The absurdity of such a condition will appear to every American at a glance, yet it is not a bit more absurd than the English tax on centerboards. —*Boston Globe.*

ANACONDA.—A centerboard sloop with this alarming name is now building by Poillons for Mr. J. G. Prague, from a model by Mr. Philip Ellsworth. She will be 60 ft. over all, 52 ft. l. w. l., 18 ft. 4in. extreme beam, 18 ft. beam at l. w. l., draft about 5 ft., and 18 tons of lead more or less inside. Poillons are also busy with another Ellsworth model for Com. Pierson of the Jersey City Y. C. Her length over all is 40 ft., l. w. l. 33 ft., beam 14 ft. 2 in., draft 3 ft. 9 in.

ANOTHER JUBILEE RACE.—The Royal Portsmouth Corinthian Y. C. has issued an invitation to American yachts to compete in a race next August from Spithead, through the Needles, round the Shambles Lightship off Portland, thence round the east end of the Isle of Wight, and to finish at Portsmouth. No restrictions of any kind will be placed upon the centerboards.

SHONA.—Captain Chas. Barr, brother of Clara's skipper, and Mate John Barr, Jr., son of the latter, arrived in New York last week, and left for Boston to put Shona in commission.

CORONET.—Messrs. Winslow and King, who were on the Coronet in the race, returned to New York last week on the Britannic.

CYTHERA.—M. A. W. Stewart has left in his yawl Cythera for a cruise in southern waters.

GALATEA.—Capt. Bradford and his crew arrived with Capt. Barr on the Devonia.

MAN AND OTHER ANIMALS.

CHATTANOOGA, Tenn., March 23.—A bill has been prepared to bring before Congress one of the most important movements ever inaugurated in the history of the American people, so far as it relates to the commemoration of events. It is to provide for the purchase by Congress of the battlefields of Lookout Mountain, Moccasin Bend, Chickamauga and Mission Ridge for the purpose of establishing and maintaining a national park, preserving so far as possible the outlines of the battlefields, and erecting monuments to the memory of the fallen men, with statues of the leading Generals of the Union and Confederate armies alike. The National Government has but one park, and that is situated at the extreme northern boundary of the United States, and a portion of it is on British soil and inaccessible to all except Government officials, as it is hundreds of miles from any extensive settlements. The proposed park would be easily accessible, would surpass the Yellowstone in beauty, if not in grandeur, and would serve as a perpetual and appropriate memento of the great conflict of the rebellion, appreciated by the Northern and Southern people alike, truly national in its character.

A WORD IN SEASON.

Readers old and new of the Forest and Stream may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the Forest and Stream as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the Forest and Stream nothing to offend good taste.

The Forest and Stream will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the Forest and Stream.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the Forest and Stream are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the Forest and Stream before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the Forest and Stream in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the Forest and Stream canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the Forest and Stream is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

For Sale.

CANADA.

PROVINCE OF NEW BRUNSWICK.

FIVE AND TEN YEARS'

Fishing Leases.

CROWN LAND OFFICE, Fredericton, N. B.,

ANSWERS TO CORRESPONDENTS.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

OVER THE SNOW.

OUR readers who have followed with so much interest the story of our special explorer over the snowdrifts of the Yellowstone Park will welcome the map of his route which we publish to-day. On this map is shown Mr. Hofer's trail, and on it all the points are noted where game was seen by him. It will be remembered that from the Mammoth Hot Springs to the Upper Geyser Basin our correspondent's route followed the road. From the Upper Basin he struck off across the Divide, as told in the portion of the report published to-day, camping on Pacific waters, reached Shoshone Lake, and after traveling some distance on the ice, recrossed the range and marched on the ice of Yellowstone Lake down to the outlet. His route is indicated on the map by the double dotted and crossed line which runs from the Upper Basin to the outlet of the lake. From this latter point the road was followed to the Falls, and from there the trail leads over the mountains between Mts. Dunraven and Washburne to Yancey's. After leaving Yancey's the Cooke City road was followed down to its junction with the road from Gardiner to the Hot Springs.

The localities where he saw game are plainly shown on our map, and in this way a very clear idea is given of the winter range of game in that portion of the Park traversed by our correspondent. It will be observed that elk were seen in the Swan Lake Basin and along the Yellowstone River from the lake down; that buffalo were noticed on Specimen Ridge and to the east of the Yellowstone, and that antelope were seen about Mt. Evarts. No deer were observed, for these animals all leave the Park in winter, returning very early in the spring.

The map is reproduced for the benefit of our readers from the new map of the U. S. Geological Survey just published, and contains the latest and most accurate information about the Park.

In our next issue the concluding instalment of our correspondent's report will be published, and the story of the two hundred miles of travel over the snow will be told. The concluding letter will deal principally with the game seen, and will emphasize and confirm the position which FOREST AND STREAM has always taken with regard to the danger which would ensue to game from the building of a railroad up the Yellowstone River to Cooke City.

All our information from the Park points to abundance of large game there, and the good results of two years of protection are now being seen. Early in April John Yancey came into Gardiner, Montana, from his place in Pleasant Valley, in the Yellowstone Park near Lost Creek. He reported that he saw on the hills toward the Yellowstone, north of the Cooke City road near the mouth of Geode Creek (Little Blacktail) a band of about 500 elk. John Yancey is an old hunter, and a man who does not get excited when he sees a band of elk and "guess" that there are twice as many as there really are. We believe that the day is not distant when game will be so abundant on the reservation that even the tourists who go through the Park on the traveled roads will be able to see it now and then from their stage coach seats.

SNAP SHOTS.

MANY wails are heard in lament of diminishing game grounds and restriction of shooting territory open to the public; but your true sportsman of the red aboriginal descent is the one who has a real grievance in the matter. The limitless hunting grounds of his ancestors have disappeared before the westward progress of civilization and the wire fence man. His wide rolling prairies have been given over for pent reservations. The vast herds of antelope and buffalo, the noble game which fell to the arrow of his hardy sires, have been exchanged for tame cows and spiritless steers, doled out by a patriarchal government to be shot with civilized rifles. The buffalo hunt of other times may not have been entirely devoid of brutality, yet was there about it a certain excitement and picturesqueness which one looks for in vain in the corraled cow hunts of to-day. It would be difficult, too, to find in a Sioux beef issue any of the romance which, however mistakenly none the less actually, is credited to Indian hunting, as it was conducted in the buffalo days. The degenerate savage doubtless enjoys the "sport" so kindly provided for him by the Indian Bureau, and for that matter it is enjoyed by the women who are sent out to teach the Indians, but described in cold type it is a sorry style of amusement and very poor way to butcher beef.

Elsewhere is printed an account of a beef issue on a Western Indian reservation. The cattle are turned loose and the Indians chase them on horseback and shoot them with repeating rifles. Mr. Harrison rightly characterizes the proceeding as a "brutal and brutalizing spectacle." It is almost incredible that the authorities at Washington should countenance such atrocities as those described in this account. The chapter is taken from a little volume entitled "The Latest Studies on Indian Reservations," written by Mr. J. B. Harrison, and sent to us by the Indian Rights Association, of Philadelphia. It is intelligently written and contains a store of solid truth.

Among persistent superstitions is the belief in the death-foreboding significance of a dog's howl at night in the neighborhood of a sick chamber. The mental strength of rugged health may scoff at the notion and pooh-pooh it as fit for fools, but when days and nights of sickness have weakened body and nerves and brain, when weird imaginings and eerie notions supplant dethroned common sense, signs and tokens of evil import find all too ready acceptance, and a dog's mournful midnight wail brings terror and apprehension. Just now the New York Board of Health is concerned with providing relief for hospital patients who are distressed by dogs howling at night. The dog pound, where hundreds of waifs and strays and stolen dogs are huddled, pending consignment to death in the flood of the East River, is between two hospitals in close proximity to it. The hospital physicians say that most of their patients are very superstitious, and the continuous howling of the dogs has a decidedly injurious effect on them. Aside from the superstitious notions, the racket is most trying to the nerves, and the piteous wailing of a cage full of dogs as they are run down to the river to drown is enough to drive a sick man frantic. It is proposed to remove the pound to a distant wharf. While they are about it the authorities might, with great credit to themselves, devise some more humane system of destruction than the crate drowning.

A bill has recently passed the New York Legislature by which a number of gentleman, among them Mr. Dana of the *Sun* and Mr. Ottendorfer of the *Staats Zeitung* are authorized to form a corporation to carry on a zoological garden in this city. The lack of an institution of this kind has long been a disgrace to the largest city of the Union, and we hope that the present proposed organization may succeed in accomplishing the object it has in view. Those who remember the number of previous schemes of this character, which have been ushered in with a tremendous flourish of trumpets, and have then promptly perished in the quietest and most unobtrusive way, will be disposed to pause a little before offering their congratulation to the new company. New York ought to have such a garden. Its influence as a public educator can scarcely be over-estimated, and that it would be a source of constant pleasure to the people is shown by the crowds that flock to Central Park to inspect the few beasts that are exhibited there.

We are informed that the young salmon planted by the United States Fish Commission in a stream about North Creek, Warren county, N. Y., have been captured by trout fishers. Our correspondent says: "I was told recently that a number of salmon were caught from Balm of Gilead Brook last year and were not put back in the water. We ought to have the six-inch law again, and I hope we will." As these fish are not found in the brooks after they have grown to a length exceeding six or eight inches it is wrong to kill them. All right-minded anglers will at once return small salmon to the water if they are hooked while trout fishing. The people who live near the brooks which have been stocked by the Fish Commission at considerable expense should interest themselves to protect those fish.

We have examined with interest and pleasure a series of winter views of the Park, taken by Mr. F. Jay Haynes, of Fargo, Dakota, during his recent snowshoe trip in the Yellowstone Park. It will be remembered that Mr. Haynes started with Schwatka, and when the latter's expedition gave out, Mr. Haynes pluckily kept on, visited the Geyser Basins and the Falls and returned by the way of Mount Washburne and Yancey's to Gardiner. The views secured are artistically beautiful and represent wonderful examples of nature's handiwork. To those who have read Mr. Hofer's story of his journey through the Park they will have a double interest.

The Westminster Kennel Club's bench show at the Madison Square Garden this year, will be notable as the final exhibition of the kind given in that building, which is to be torn down to make room for a larger and more elaborate structure. The garden will always have a prominent place in American dog show history, for it was here that the first impetus was given to bench shows in this country. The Westminster Kennel Club show of 1877 was not the first held in this country, but it was the one from which dates the beginning of the annually increasing list.

That the supply of fish in angling waters must be maintained by artificial stocking is rapidly coming to be an economic tenet of general acceptance. Even some of the Adirondack hotel men and guides—a class of men not blessed with a too liberal supply of gumption and forethought—have come to see this and have undertaken to restock their lakes and streams. The Fulton chain of lakes have been stocked year after year, and the supply has been maintained, while the Raquette waters, in default of such attention, are now nearly depleted.

It is estimated that an Algerian lion kills $2,000 worth of cattle per annum; and Achmed-ben-Amar, a mighty hunter, having slain 200 lions, is credited with saving his grateful countrymen a vast sum of money. He has received the order of the Legion of Honor, and doubtless deserved it as fully as some others of the order whose decoration has been won by feats of killing their fellow men.

The New York game law bill, known as the Roosevelt bill, has been withdrawn because of the opposition it excited, and the promoters now propose to begin earlier next year and secure the coöperation of other societies.

Germany will soon celebrate the centenary of Baron Munchausen. The event will be one in which, of course, anglers will take a lively interest the world over.

The Sportsman Tourist.

WINTER IN WONDERLAND.—IV.

THROUGH THE YELLOWSTONE PARK ON SNOWSHOES.

ON the morning of the 23d, with our packs on our backs and a lunch tied to our belts, we bade our kind friends good-bye. The sky was somewhat cloudy with indications of a storm in the southwest. We followed the trail made on our return yesterday to a little beyond Kepler's Falls; from there we turned off east and south. Soon after leaving the Fire Hole River it began to snow, hiding the sun, so that we had to travel by guess work, as all signs of a trail and most of the land marks were hid. Our route was through timber all the way to Heron Creek. Keeping our course as near as possible, taking advantage of all the more open timber, I made out to see the gap in the rocky ridge through which the trail passes. Just before reaching the gap we came to Heron Creek waters, and crossed on to the Pacific slope. Climbing through the gap we soon came out on to a ridge, from which we got a glimpse of Shoshone Lake through the falling snow. From here we had a run down of over five hundred feet to Heron Creek and its open bottom which extends to the lake. Our run down hill was through timber, preventing one's going very fast, as there was danger of running into a tree. We soon came out on the open country and again we got a view of part of the lake. It was one field of white, hard to distinguish from the rest of the open country; we had been traveling very slowly.

It was now almost 4 o'clock, and going down toward the lake we soon turned aside, and selected a place for our camp, in a sheltered gulch with heavy timber all around us. Cutting some green logs about 4ft. long we bedded them in the snow for a fireplace, and building a fire on this we melted snow in our cups, putting in the tea and the sugar as soon as the water was hot and adding snow until the cup was full. We returned the cup to the fire as often as we drank the tea, adding snow, tea or sugar as the tea got low, weak or wanted sweetening. We made a hearty meal. After eating dinner we cut lodge poles, and tying four together about 10ft. 8in. from the butts we set these up over our fireplace; four other poles were placed around in the crotches formed by the first four and throwing the lodge around the poles so as to bring the back of it to the wind, we tied it at the bottom of the wings, then taking two small poles 15ft. long, the small end was placed in the pockets on the wings, the butts of the poles to the back of the lodge. Pushing up on these poles we soon had the lodge in place, and going inside we spaced the poles in a circle the size of the lodge, pushing the ends down a few inches in the snow so that they would stand firmly. Now with small wooden pins we pegged the cloth down by the loops around the bottom, pushing the pins well into the snow. Kicking a little snow over the edge we banked it up to keep out the wind. Now we spread enough spruce boughs in the back of the lodge for a good bed and cut enough dry wood to keep the fire up all night if we wished it. This was piled on each side of the entrance. Going inside we tied up the lodge and were as comfortable in our "tepee" as it was possible to be, camping out on 7ft. of snow. We next spread the sleeping bag on the boughs, and taking off our damp or wet garments, leggings and overshoes, dried them on a line stretched over the fire. Replacing them when thoroughly dry, we got into the sleeping bag and were soon asleep.

By 4 A. M. the green logs used for our fireplace had burned in two, letting our fire down into a hole in the snow. I was first up, and, repairing the fireplace, I soon had a fire going. This filled the lodge with smoke, but going outside I corrected the draft by swinging the wings around, as the wind had changed in the night. A fine snow was falling, with a gale blowing outside from the southwest. After breakfast we packed up what we could inside the lodge, then dried that over the fire, making up our packs on the bough bed. By 6 A. M. we were off, traveling down Heron Creek with the wind in our faces until we came out on Shoshone Lake. Over this we went, for it was frozen over everywhere; not a drop of open water did we see on it. The snow on the ice was from one to two feet deep. After reaching the lake we traveled southeast. This brought the storm to our right, making it less uncomfortable to travel against. We had started in the dark. It was daylight before we got to the lake, but nothing of the surrounding country could be seen only the shore and hills on our left. Every little while I would try the snow with my pole, striking dry, solid ice every time. Once I cleaned off a place with the intention of cutting a hole to measure the thickness of the ice, but from the appearance of the ice I saw this would be a long job, and besides the wind filled the hole fast with drifting snow, so I gave it up. I think the ice was about three feet thick. Had it been less, with the strong wind blowing, I think there would have been some movement of the ice, but not the least was noticed.

Keeping well out on the lake we followed the shore about four miles to the point where we were to leave the lake. Not a sign of game was to be seen, nothing but white rabbits and now and then a squirrel track. The snow was drifted into the timber along shore in immense piles, fifteen and twenty feet deep.

Leaving the lake we went into a grove of timber, made a fire and lunched. The snow here was very deep. I could not reach bottom with my 7-foot pole. The absence of all game, the impossibility of seeing anything—for the falling snow shut out the mountains—made this a very desolate country. Shouldering our packs we struck out in an easterly direction, until we found a water course which I wished to follow up to the summit of the divide. At length we reached the top—a high country, somewhat level with groves and openings. Here for the first time I had to use the compass; the wind and snow came from so many ways at once. I could have gone through without the compass, but believed it was best to be sure of our course, for I wished to strike the head of Sand Creek, which empties its waters into the west arm of the lake a mile above and south of the "Lake Shore Geysers," and a place known as "Warm Spring Camp." We traveled on for a while, and now and then I saw a grove that looked familiar, though I had been through here but once, in 1884. The storm increased every hour, and by 2 o'clock Jack wished to camp. I wanted to get to the Yellowstone Lake before dark, but I saw it was impossible, as we were not making over a mile and a quarter in an hour. Selecting a well-sheltered place in a grove, a short distance over on the Atlantic slope, we soon had the lodge up. This time we made a better fireplace, and cutting boughs we were soon comfortable in our "tepee," although it was snowing and blowing furiously outside all the time.

This night we concluded to keep up the fire, and take turns sleeping two hours each. This we did, though I think I slept most when it was my turn to keep up the fire, which was not neglected at all.

We were up by 5:30. The lodge was covered with snow and ice, and would weigh 201bs. unless I could get it dry. How to do this with the snow falling fast I could not tell, but after breakfast the storm ended, and we soon had everything in shape and were on the road again. Getting out of the timber we found the sky clearing, and saw Mt. Sheridan close at hand. It looked but a mile or two off, the air was so clear. We could not see any other mountain peaks from here. Keeping our course I soon saw familiar ground, and descending a sharp pitch we were on the head of Sand Creek. This we followed to the Yellowstone Lake. On our way we saw a very few rabbit trails, and one or two lynx sign. As we came out to the lake we found it frozen over and covered with snow. Again we saw Mt. Sheridan, and the mountains on the south and east side of the lake, all under snow, their white peaks far above the dark green forest, and all white except where the wind had swept the snow off their rocky ridges.

Following the shore of the lake for a mile we came to Warm Spring Camp and the Lake Shore Geysers. Along here there was a little open water, but in no place did it extend over 50ft. from the shore, and that only in one place, where a hot spring comes up out of the

THE LODGE.

bed of the lake. At this place we lunched, mixing some of our condensed soup or extract of meat with the hot geyser water, we had hot soup or beef tea to order, and that without a fire. Here the water in the lake was at least a foot lower than I had ever seen it before.

After resting we traveled along the lake shore past the Paint Pots and many interesting springs and geysers. At one place where the steam from a great white pool drifted to a grove of trees, we saw two women standing on a white mound, one looking into the pool, the other out on the lake, their backs to each other. From their position and attitude they had been quarreling, for they had gathered their dresses away from each other. They were very life-like even when we passed close by. Bidding them good day we traveled on land until we had passed the Hot Springs. I did not like to trust myself out on the lake along here. I tried twice as we went along shore; would find a little ice under the snow, then again the pole would go through into the water. As soon as I found enough ice to support us we struck out for Bluff Point. The wind had been increasing all the morning, and was now blowing a gale from the west-southwest. As this was offshore, we did not feel it until well out on the lake. Clouds of snow were flying in the air and along the surface of the ice. We could see only a short distance ahead in a horizontal line, but looking up we could see the bluffs and timber for some distance. We had as yet seen no game on the lake shore, except a few ducks in the warm water. After passing Bluff Point we saw what we at first took to be animals. They were 250yds. from the shore, and the flying clouds of snow would make them come and go, appear and disappear as though they were running around. We soon found they were stumps of upturned trees on a little rocky island. Owing to the storm and the flying *poudre*, everything we saw changed thus. We would see a point ahead, then it would be entirely hid for a long time, then would suddenly show up again now near, and then would move off until out of sight again. From Bluff Point we struck across the bay for some heavy timber on a point about due east. This brought the wind more behind us, and proved an assistance. Some blasts were strong enough to move us ahead a little, so that at every step we could gain a little extra distance by the aid of the wind. Every few rods I sounded the depth of snow, which was from 8in. to 2ft. When far out from shore I once ran the pole into 6in. of water under 8in. of dry snow. Going on further I struck more water. I had not felt the ice under the water and did not like to stop until I was off this kind of ground, so next time I tried the snow I used considerable force and pushed the small end of the pole through a foot of dry snow and a foot of water and snow down to solid ice. This was all I cared for. I did not mind the water on the ice as long as there was dry snow enough to keep my shoes out of it. Jack was some distance behind me and had been watching my movements, and was naturally somewhat interested. He would try every hole I did with like results, and he said his hair stood up when I did not strike ice through the water. Soon the ice was again dry under the snow, then it became again wet. When we wanted a drink of water all we had to do was to feel down until we found it on the ice, then clear a place away and dip it up. I think the ice was broken into great cakes, the weight of snow sinking the cakes in places enough to have the water come on top. Before reaching shore I thought I noticed a motion to the ice under me rising and falling, but concluded it was the waves of snow where it was deep or shallow on the ice.

We made across the bay and to the timber by 4 o'clock, and selecting a camp, we were soon busy getting things in shape for the night. At this camp we broke a great piece out of our axe, taking over an inch out of the blade, besides several smaller pieces. This was owing to the frost in the axe and frozen timber. The accident made it difficult to get our camp in shape for the night, but a little after dark we had everything snug, and passed a comfortable night. We both went to sleep in the bag, letting the fire take care of itself.

Next morning, Feb. 26, we started soon after daylight. A gale was still blowing, but more from the southwest. We made directly for the lake, as that was the best traveling. Along the shore for over a mile, there were long, narrow, open places made by hot springs, and all along this open water we saw wild ducks. We soon rounded this point, which I called Hot Spring Point, and then turned north-northeast until we came to Rock Point, where were a great many mounds of ice above the surface of the lake. There I took to the rocks, over which the water dashed and froze before the lake itself froze up.

In all the open water I had been watching for fish, intending to catch some, if possible, to see if they were as wormy in the winter as in summer, but I did not see one fish. In summer I have seen thousands of fish around the hot springs on the shore of the lake, yet this trip I saw none. I do not know where they are, unless out in the deep water.

We soon came to Sand Point, and here the wind quieted down a little, so that we could see Stevenson Island and the Elephant's Back. Our course was to leave the first to our right and the latter a little to our left. Had the weather been clear we could have seen Mt. Washburne, almost due north. On the east we could now just see the tops of the high peaks across the lake, and the Hot Springs on Sulphur Hill to the northeast. Soon after leaving this point we were out on the lake again, and exposed once more to the gale. As we had changed our course, we had the wind more to our left, receiving no help from it, as we had after leaving Hot Spring Point on to Sand Point. We soon found that Stevenson's Island was all we could see, and often that would be hidden by the flying snow. Pushing on, we passed it, going over a long, narrow point on the north end, then turning for the outlet of the lake. Soon we were out in the main part of the lake once more. Again I felt the raising and falling I noticed on the west arm; the further out we went the more I noticed it. I stopped and waited until Jack came up, and asked him if he noticed the motion. He said he did, but at first thought it was something wrong with himself. Before getting to the outlet I found the undulations increased still more. I expected to hear some noise as the ice rose and fell, but the wind drowned it if there was any. By 2 o'clock we were at the old cabin at the outlet. This was filled with snow and almost out of sight under high drifts. Crossing the little creek back of the cabin, where there was a little open water, we followed the wagon road. On a hill to our left was the grave of a man struck by lightning while out on the lake in a boat. He was connected with the Geological Survey. The wind had drifted the snow away from the grave, leaving it in plain sight. We followed the road for a while longer, then turned aside and camped in some sheltered timber, about two miles below the outlet.

We broke camp next morning at 6:45 A. M. Traveling slowly, I soon noticed more life. Besides ducks we began to see more birds, and I heard one little fellow singing as though it were spring. At the Mud Geysers we lunched; there was little here more interesting than in summer. As I expected to find game ahead I hurried on to a high point overlooking the Alum Creek country, or Hayden Valley. Far off I saw a few objects that I thought were buffalo, but they were so distant that I was not sure. Before reaching Trout Creek I saw a small band of elk on the east side of the Yellowstone River—14 cows and calves. At Trout Creek I saw a fresh trail of a large animal and, following this up, I first noticed coyote tracks both sides, and a lynx track. Soon I saw the latter going over a hill ahead, and 200yds. further on the trail, I saw a large six-point bull elk. He was less than 100yds. off; he was lying down and did not notice us for a moment or two. Not wishing to disturb him I turned off and crossed the creek. When he first saw us he did not get up at once, for he was evidently very much surprised to see such looking things out there, our packs and snowshoes making it very difficult for him to make us out. At last he got up, satisfied we were his old enemies, men. He was quite poor, and when going through the snow-drifts would sink in very deep, struggling through and stopping to rest every little way. The ridges and sidehills to the west were blown free from snow, giving game a chance to get plenty of feed. The elk soon disappeared over a hill. I saw 8 ravens in one flock. As they are never far from game I was sure there was more in the country. As I came in sight of the Crater Hills I surprised two coyotes in a little draw. I got within 50yds. of them before they saw me; they were a dog and bitch. They ran off behind a hill, but came up on top to have another look at me. I had left Jack some distance behind me, and seeing him they sneaked off. Crater Hill was as interesting as usual, almost free from snow, its yellow sulphur vents very bright, filled with perfect crystals of pure sulphur all fresh and undisturbed by the "specimen fiend." As I was now getting into a game country I did not care to linger where there was no frost work noticeable.

Alum Creek we crossed on the ice. Some distance ahead I noticed the snow looked rough, as though horses had been pawing it over, and going to the place saw that a large band of elk had been feeding here. From the trail made there must have been over 60 in the band. The sign was from ten days to two weeks old. These elk had gone up Alum Creek to the high ridges there, where there is more feed. I regretted that I could not follow them and learn how many there was in this section of the country. Following the river down we entered the timber below Alum Creek; here was more lynx sign; they had run all over the country. I could see where they evidently had their quarters, as, from under overturned trees and other places, on the steep sidehills their trails lead, the snow all patted down around them. These lynxes are large enough to kill a young elk, which I am quite sure they do, as there is a great number of them.

AN OUTING IN CANADA.

"COMMODORE," said a friend to me in January last, when I was in New York, "Where can I go next summer for a few days' fishing? I want it to be within a reasonable distance from New York; I don't feel well and need a change."

Such questions are often asked by professional men and others, slaves to their daily occupations, who have exhausted all the well known bitters, pills and powders in hope, by such assistance, of becoming well and hearty again. You will hear one of them say that he has just discovered the very remedy he has long been in need of, that he feels like a new man since taking such and such a drug. Later, on your meeting him again, you cannot help remarking, "Why, what is the matter with you, old boy? you appear all broken up; I thought that new remedy had worked wonders with you, and that you were getting along splendidly?" "I thought so, too, for a time," he answers, "but I am now more miserable than ever." You suggest an outing, fresh air, wild scenery—to give up, for a short time, city life, luxuries, impure air, and everything belonging to such a life, assuring him that he will not feel like the same man if he does so. You add: "Did you ever meet in the cars or on the boats men returning from such an excursion, if so, you must have found them brimful of life and vigor. They were coming back from the forests and streams where they had spent the most pleasant days of their lives; happiness and health pervading their entire system. Old men are boys again after such outings; and around the camp fire none are more boisterous than these very old fellows whose faces usually wore a worried look, and the woods ring with their shouts of delight." Try it, ye city slaves! It costs very much less than you spend about town, and is not the free life of a sportsman jolly! I will tell you what you had better do.

Next summer get a good-sized waterproof bag, pack it with old clothes, consisting of a couple of dark flannel shirts with turn-down collars of same material; an old cast-off coat with as many pockets as possible, they are always handy to stow away odds and ends; an easy pair of old pants, never mind how worn they are below the knees, for they will be tucked into the legs of what the Canadians call beef moccasin boots; a well broken-down old felt hat, with a blue flannel ribbon around it to hold flies, which are easily fastened to or extracted from the soft and yielding texture, and a rubber coat and leggings for use in case of heavy rain. This is all the clothing you need to leave home with, besides your ordinary traveling suit. Bring your reel and line and a 10½ft. plain rod, either all greenheart, or ash and hickory and lancewood, with two extra tips, the tips to splice, for a rod broken at the ferrule is difficult to repair in the woods, while a new splice can be made with a knife anywhere. Of course, if you have a fancy rod bring it. Have your rods strapped on a grooved board, that each length may be protected against injury in traveling. Provide yourself also with a well-stocked fly-book, with some of Abbey & Imbrie's standards, a landing net and few of the same firm's excellent leaders, and you are ready for a start.

Before bidding good-by to your family and friends, who have not the same good luck that you have to get away, tell them to note the color of your eyes, complexion and general appearance, and compare them with your appearance when you return, and then take the first train for Quebec. If you leave New York at 4:30 P. M., on the following day at noon you will be in this ancient capital and quaint old city so entirely different from any other in America. Here you can procure suitable food for your party. Call upon any of our first-class grocers (some of them are noted fishermen) and they will supply you with all you require. See that you have plenty of good salt pork and bacon, sea biscuit baked purposely for sportsmen, tea and coffee, preserved milk, some meal in which to roll fish before frying, salt, pepper and sugar, and do not forget a pot or two of orange marmalade, which is capital on sea biscuit (softened in water then fried in fat). Bring as few articles of luxury as you can possibly do with; you will be greatly benefited in digestion, and consequently in health by entirely setting aside such trash. What you require is what the sailors call "hard tack," but rather more softened than they get. Do not forget to procure from Mr. Roderick McLeod, druggist, a phial of his mosquito oil and preparation to allay the stings of these pests. When you have all your traps together, you will naturally say, "Where am I now to go?" as good guides and canoes can be easily procured anywhere.

The choice of the many places will be the subject for discussion. Much will depend upon how long you can remain away from home or business. Would you like to fish for winninish or landlocked salmon? Can you spare ten or fifteen days? If so, this true little salmon, running up to 5 and 6lbs. in weight, is abundant, and is the most gamy fish in our waters, and will afford you all the sport your heart can desire. They readily take to the fly, and also the small-sized trolling spoon. If you are moving about in a canoe at the foot of the rapids of the great discharge of Lake St. John, where you must go for this fish, you will often see them show their dorsal fins while looking for insects in the froth around the eddies. Just cast your fly 3 or 4ft. ahead of where you saw the fin disappear, and nine times out of ten you will be rewarded with a sudden tug at your line, and your reel will be set spinning. Watch him well for he is a hard puller and tugs desperately, but hold him tight with just enough tension to feel him. The line slackens, reel in quickly, lower your tips; out he shoots 4ft. into the air; off he dashes again, out he leaps, down he rushes for the bottom, not an instant does he stop there, up he comes again, another leap and a dash for the other side of the pool; instantly back he turns, out of the water again and again, until he becomes so exhausted that he can be reeled in and is picked up with the landing net. Look at your fly—it is all right. What fly did he take? It is an ordinary red-hackle, and not injured. Two more casts and another is fast. What pretty fish! They are perfect dwarf salmon of the true *Salmo salar* type. The best season for this fishing is from July 10 to Sept. 1. Try it and I will guarantee you will thoroughly enjoy it and come again.

Will trout of from ¼ to 1, 2, or 3lbs., and occasionally 4, 5 or 6lbs. suit you? Such *Salmo fontinalis* we have in all our lakes and rivers within two hours ride of the city, and also further off. East, west, north and south, are lakes innumberable, while there are several excellent rivers all surrounded by grand scenery.

Of course all fishing is subject to vicissitudes. Some days fish will rise splendidly, at other times it requires the most patient whipping of both stream and lake to coax a trout to rise; or, during a portion of the day the fishing may be very good and suddenly stop. I believe our lakes and rivers possess as ravenous fish as any in the world, and one is pretty sure of a fair catch if he goes out at the right time, and knows how to handle a rod.

A capital plan to fish some of our best rivers not far from Quebec is to put your canoe and provisions on a haycart and send your guide with the driver as far as the nearest road to the river will allow them to haul it. When you think they have had a sufficient start, follow them in a caleche or on a buckboard until you overtake them at the end of their journey. As the road usually terminates at the last house or some lumbering shanty, you may have to drag your canoe some distance to the river. This is easily managed through some old pathway, and you will have your two drivers to help you. Once on the water you can pole or paddle up the river as far as you wish to go, making a cast here and there on the way. When you have decided to turn back and quietly float down the stream, fish every rapid, pool and eddy you come to. When you reach a small stream of cold spring water emptying into the river, here on a hot day, you are sure to find plenty of fish congregated, enjoying a cold bath; fish it carefully. Now drop a fly into that froth collected near some corner or old log. You have him and a beauty. There are more, try again and again; at every cast a fish rises. Do you see that alder or willow, bent over toward the pool; reel in some of your line; now it is just long enough, try and cast your line well in under the bush; take care not to touch the branches. All right; capitally done! You may be sure there is a big fellow lurking there, well in the shade, ready to seize any poor insect which may fall from the branches or fly down for a dip in the cool water. Try again. Take care not to hook that limb. All right. Now bring your fly over that old log you see lying on the bottom. Well done, old boy; you have him! Be careful or he may carry your line around that projecting limb. That is right. He is now in clear water. How he struggles! Reel him in. Take care not to give him any slack of the line or he may make a sudden dash and part your leader. He is safe now. Bring him to the surface and let us look at him. There he is! See how broad his back is! Now work him this way and I will sink the landing net; bring him over it; I have him. And there he lies in the bottom of the canoe, a beauty of 4lbs. weight—and so this often turns out to be.

Just look at that city man! Who would fancy him the same New Yorker! Did you ever see more health and happiness depicted in a countenance than that which shines in his? See that manly chest and throat laid bare to the balmy breeze—no choking, stiff, fashionable collar and starched shirt front, nor stiff linen cuffs, but every limb and muscle free. Ask him the simple question, "How do you feel now, old boy?" He turns upon you his bright clear eyes and smiling face beaming with happiness, and answers: "Feel, did you ask? why, I feel glorious, and oh, so hungry! Commodore, have I had anything to eat since last week?" "Yes," answers his companion, "you had a hearty breakfast not three hours ago." "I can't believe it," he says, "I am ravenous."

"Hallo, there, Baptiste! *Allons à terre preparer le manger, ou creve de faim;*" and the angler claps his hand over his stomach and tries to make Baptiste understand that it is a vast empty cavern. The good-natured guide bestirs himself, and while making the fire quietly says: "*Monsieur a toujours faim.*"

The kettle is boiling, and another fire is made upon which Baptiste places the frying-pan well covered with slices of nice white pork that soon begin to fizz. Meanwhile the cook is at the river side cleaning and preparing slices of trout, which, after being rolled in meal, are to be fried in the boiling hot fat. Oh, just smell that! Did ever anything so savory hover around you! Now the pork, crisp and delicious, is removed from the pan, and the hot fat is bubbling up ready to receive the soft tea biscuit which has been, for some time, soaking in water. Baptiste carefully drops it, piece by piece, into the boiling fat, where it remains until browned, and then takes it out and puts it on a plate; a slight coating of marmalade covers it. The guide brushes off the top of a large flat rock which serves for a table. Baptiste whispers, "*Regardez donc, Monsieur!*" You turn round to find your friend with his pocket knife whittling a stick to a point; he quietly steps up to the dish and harpoons a large piece of fried fish, gives a yell and disappears behind a tree where he is found devouring the prize. "I couldn't help it, old fellow," he cries, "I never was so hungry in all my life, and I had to steal or die, and never did I taste anything half so good." Yet it was scarcely more than three hours since he had eaten a breakfast consisting of as much food as would have satisfied a small family. You are soon seated on stones rolled up for the occasion close to the rocky table, and set to with a will.

After a hearty meal, with a cup of delicious tea black as ink, you leave the table, fill your pipes, find a shady nook where Baptiste has arranged some balsam boughs, and lie down to rest.

The first words your New York friend will say, "Oh, how I wish my wife and children could see me now, or that they were here to enjoy this! Is it not glorious? I feel like a new man! This is real enjoyment of life! I would not change this hour for that being spent by the richest man in New York city. How I would like to feel in body and mind as I do now when I get back to the city!"

Such are the feelings one enjoys on an outing; and when one returns home, those who noticed the sallow complexion and fatigued appearance a few days before will ask, "Why, where have you come from? You look full of health and strength; your trip has done you ever so much good; you must have had a capital time." The answer is, "I should say I had, and now know where to rush to when fagged out with work." And so can any man enjoy the same happiness if he will make up his mind to take an occasional outing. I do not mean going to some fashionable watering place, or other locality where there is a swell hotel filled with people who must have the richest food and wine at every meal, and where men spend their nights at the card table and the ladies in stifling ball rooms, but I mean the real outdoor life, sleeping under a tent on a bed of fragrant balsam boughs, wearing loose old clothes, breathing pure, balmy air, and living on plain, wholesome food.

You will naturally ask, When should one undertake such a trip? I answer, come to Quebec any time between the months of June and October, for fishing, and remain or come later on if you want shooting. You will find plenty of sportsmen ready and happy to give you their advice and direct you where to go. Bring on your families. Our hotels are not of the most stylish, but the food is excellent, and there are several good boarding houses, where for a moderate price home comforts may be had; and if you choose to live a time in some of the country villages, you will find the people honest, obliging and very interesting, and the charges so moderate as to be hardly believed. Our new railroad to Lake St. John's has opened out a country abounding in lakes and rivers and teeming with trout.

Although our American cousins are not allowed to fish inside of certain limits in our salt waters, they will find us most happy to see them and assist them to enjoy the sport in our fresh waters, and none more so than the writer.

J. U. GREGORY.

QUEBEC, Canada.

THE KIND OF A CHAP HE WAS.

IT has been a pleasure to me for some years to read the FOREST AND STREAM, and I have, while sitting at ease, followed your many contributors, in mind and spirit at least, all over our own continent and in foreign lands. I enjoy all sporting anecdotes, and especially those descriptive of shooting and fishing excursions. Having walked many, many miles and spent many pleasurable days with rod and gun, I think I may, with propriety, claim to be an "ardent sportsman" in the general sense implied by that term. But there are sportsmen and others. The FOREST AND STREAM tells us all about game of all kinds, where it is found, how it is killed or taken, its haunts and habits—in fact all about everything, it seems to me, that can be comprehended in its field of action, except, perhaps, the sportsman himself. Of course much is said of sportsmen, too, and much more can be gleaned from the sportsmen themselves, your contributors, from which we learn something of their general characteristics and natures. There are, however, so many varieties of this animal, that it seems to me that a great deal more could be said and written concerning him than is, and I am sure it would be hard to select a more interesting subject or fruitful field for discussion.

I sometimes think that after all we only get one side of the stories of forest and stream, and wish we could occasionally hear from Bob White, Br'r Rabbit, The Buck and the Big Trout, and get their version of affairs. As we cannot hear from these worthy gentlemen, however, we must make due allowance for human nature in general, and remember that in all probability much remains unwritten and unsaid.

Perhaps I am becoming somewhat too sentimental, but of late I have enjoyed those hunting and fishing yarns the most which have been the least successful. Somehow I feel a thrill of joy when quail do not lie well, when the trout do not rise and when the big buck escapes. A story of empty creels and gamebags gives me the most enjoyment. Perhaps these sentiments have been created by recalling to mind my own personal experiences and by having seen many kinds of sportsmen and varieties of sportsmanship.

Perhaps they come from my having seen the last poor stragglers of many coveys hunted out of existence completely in localities I might name; perhaps, because I have seen a few scattered waterfowl, flying wildly over the accustomed haunts of thousands, looking in vain for a place to alight and feed in peace and finding no sanctuary; or because the last gray squirrel has disappeared from a wood, leaving his little store of nuts and acorns undisturbed and untasted save by mice or woodpeckers; or, it may be, because I have seen the last persecuted deer of a county limp off to die in his vacant hills. The destructive gun and the death-dealing rifle, in hands too eager and expert, to say the least, have been indeed deadly. Sometimes I could feel content to have my guns stand in their corners and rust, empty and undisturbed; when visiting a trout stream, once swarming with its gamy tribe, to see only a tiny fingerling come to the surface, and then dart away with instinctive dread—I could snap my rod, almost condemn the shade of immortal Ike himself and all his tribe, myself included.

One is inclined to think sometimes that anglers and sportsmen are rather a bad lot anyway. But, after all, I knew one once, and believe there are ideal sportsmen extant; may they never, like the American buffalo, become extinct.

He was a singular chap. I knew him to hunt industriously for a week, kill nothing and then say he had enjoyed himself. The next day he had a splendid chance at a buck, but his gun snapped, and upon examining it he found that it had been unloaded all the time; he was a man who had killed deer in many countries, too. In this instance, although he did not kill the big buck, he saw him and appreciated even that as something. He ascertained where the buck fed, what he ate, where he watered; knew his age and the exact measurement of his longest leaps. He even noticed that a tine was broken from one of the deer's antlers, and remained quietly conjecturing the cause of this, when he might have followed and killed the splendid animal. He was a queer specimen sportsman, indeed. He owned a prize bird dog, but he kept that valuable animal so fat and lazy that the dog didn't care much whether he found all the birds for his master to shoot or not; when he did find them, and they were well put up and all, his master did remarkably bad shooting somehow—for most of them whirred away with every feather intact; yet he was the best and quickest shot in the State. O, he was an odd fish. He often allowed the last few birds of a brood to escape, even when he had them marked down and could have bagged them as well as not.

Sometimes he watched a rabbit break for cover and reach it in safety, when he might have stayed its frantic little leaps forever. He could see a deer, even a big buck—horns and all—and yet refrain from shooting it out of season. I never could teach him to carry his gun cocked all the time and thus be prepared to kill or wound any living thing that appeared in range. He was very headstrong in this respect, and he would always observe game laws when he could have violated them to advantage and escaped the penalties easily. He was a case. He was forever prowling around flushing game and coolly watching it get away alive and uninjured instead of attending strictly to business, killing it, or at least "getting

blood" anyway. Then he was careless about fishing also; he was among the first out during the season, walked further, stayed longer and caught fewer fish than any one; somehow his were always beauties, though, and he had the finest tackle to be found anywhere, knew just the kind of flies to use. I often thought he could have taken many more fish than he had use for if he would only attend strictly to business and not experiment so much with turtles, water-dogs and snakes; and quit staring at the mountains, the clouds, the trees and everything else, as though he had never seen anything in his life. But that was the kind of a chap he was. Somehow, he was a pretty good fellow, however. Taken all in all, I rather liked his style, and I sometimes wonder where he went, how he fares, and if I shall "see his like again."

NEW MEXICAN BIRD NOTES.—II.

FORT WINGATE, New Mexico, April 17, 1887.—Three or four days ago a good honest six inches of snow covered the rugged hills and broad valleys of this region, and for all I know to the contrary, the country for many miles about. On the night following this storm, standing water froze to the extent of nearly half an inch, and a pair of mountain bluebirds (*Sialia arctica*), which the day before had been hard at work building their nest in between the adobe bricks and the window frame of a small house not twenty feet from my study window, looked rather dubiously on the scene next morning, and the male (the bluest of all bluebirds that I know anything about) glanced rather quizically, I thought, at his mate, as much as to say, "Look here, don't you think we began just a little too early this year?" (I say this year because to my knowledge this identical pair of birds have built in the same little crevice for two consecutive seasons.)

On the 14th, however, a warm spring sun vanquished our six inches of snow in just twice that number of hours, as completely as though the heated breath of Sahara had swept across the country, leaving the earth of the plains dry and powdery again, with only a snowy souvenir here and there in the shadiest nooks on the mountain sides, as a reminder of this second edition of winter.

When Saturday came around (the 16th) my time allowed me to take a short ramble in the adjacent pine woods, where I hoped to increase my list of spring arrivals among the birds for the "Report" from this locality, but no, my most careful scrutiny permits me to record the arrival of eight species thus far only. Say's flycatcher is here now, the first one having been observed on the 11th ult., while five days thereafter I shot my first pair of lead-colored bush-tits (*P. plumbeus*). Then the killdeers came on the 18th, and on April 4, seventeen days afterward, I first saw the rock swifts (*M. melanoleucus*)—my old friends. A dozen days more went by before I noticed the next arrival, the first warbler (*D. auduboni*), and it was followed to-day by a pipit (*A. pensilvanicus*), with the Brewer's blackbirds and rusty grackles (*S. carolinus* and *cyanocephalus*). So you see the vernal migration is extremely backward here, for I know full well that even the latitude of Boston can beat this, as I saw in FOREST AND STREAM that the bluebirds arrived there fully a month ago.

But as I was saying, yesterday I was out in the pine woods with my two youngsters, equipped for collecting and making notes. The piñon jays were keeping up a continual racket all about us in the low pines and cedars that covered the hillsides, while in the valley far below loose flocks of western bluebirds (*S. mexicana*) were on the move. I notice that the note of this lovely species is much louder and stronger than our eastern representative of the genus, but to me not nearly so plaintive nor so winning, but home associations may have something to do with that.

As we passed through the piñons along the crest of a magnificent rocky gorge, my attention was suddenly arrested by a fluttering in a tree close at my hand, and upon looking into it, to my surprise there sat perched upon one of the limbs a young piñon jay (*C. cyanocephalus*), apparently just out of its nest. He made an attempt to fly, but soon struck the ground, where he was speedily captured. This was a prize for me indeed, for I had long promised one to the authorities at the Zoölogical Gardens in London, and if this, his lordship, can be reared, there is where he will eventually go. From this I should say that these birds must breed very early in this region, and perhaps rear two broods each season.

My captive is a handsome fellow for a youngling, and he has a call like the old birds, only not so loud nor so prolonged. His plumage might be described as being of an entire blue-slate gray, darkest on the head and shading lighter as the lower parts are arrived at, being about five shades paler in the region of the ventral space. The inner webs of the primaries are of a deep plumbeous shade, almost black, while the secondaries, and the distal moieties of the rectrices, which latter portions have alone ruptured from their pin-sheaths, are of the same color as the feathers of the back. The legs are a leaden hue, as is the bill; the latter is rather darker, however, and the base of the lower mandible is flesh color for its proximal half. Irides are of a warm brown, and the claws of the feet are blackish lead color. In behavior he (for I think it is a male bird) is spirited, and evinces no little confidence in his power to look out for himself. Thus far I have fed him on cracked wheat and little chips of raw meat.

On our way home I started a small, dark-colored owl from out of a cedar tree as I brushed past it. He flew about in a startled manner for a moment, and then suddenly bounced into an oak tree of no small size, about 30ft. from where I first started him. I carefully scouted around the tree for several minutes, when I discovered he had entered a hole near the top, and my youngest son, climbing up there in a moment, found that we could not possibly reach him, as the excavation was more than a yard deep and the entrance very small. So plugging up this door of his domicile with a couple of stones, we returned to the Fort.

This afternoon we were over there again early, with a good axe and a shotgun, in case he had gotten out past the stones. But no, everything was just as we had left it the day before, and removing my coat, in twenty minutes I sent the old oak tree over and some little distance down the mountain side from where it grew. Climbing down to it and removing the plugs from the entrance, we found at once two owl's eggs that appeared as though they were nearly ready to hatch. Even now we could not reach the bird, and I soon had to chop through the trunk lower down, when upon peering into this new opening, I saw a pair of bright eyes blinking at me in the most defiant manner possible. Our luck was better than we first supposed, however, for upon baring my arm, I not only secured one owl but another egg, unbroken, and the female bird besides. Her breast was quite bare of feathers, and she had evidently been incubating some time, and as I say, the eggs had all the appearance of being far advanced toward hatching. But it seems to me that three eggs is rather a small complement for *Megascops*, and Coues says (second edition "Key") that they have "five or six" to the set.

Improvising a nest by tying together the four corners of my handkerchief and filling in with some dry leaves, we put our three eggs therein, with both owls, their legs having been tied too on top of them. Thus they were safely carried to my quarters and the eggs kept warm in the meantime. As to the particular geographical race to which this pair of screech owls belong I am unable to say, not having any skins of *Megascops* at hand that I might compare them with, and I find mere descriptions for such species highly unsatisfactory. They are both in the gray phase with the markings unusually black and very distinct, with the dashes and dapplings carried beneath clear to include the under tail coverts, with scarcely any white showing. The toes are feathered to the claws and quite thickly, the size, however, is really what is most puzzling about them, for even the female is under 8in. in length and the male barely reaches 7¼in. When I first took them the thought immediately arose in my mind, Why, what small and what dark-colored specimens of *Megascops asio!*

To-day, if possible, I will devote an hour to making a photograph of the pair, as well as one of the young *cyanocephalus*.

R. W. SHUFELDT.

MY LAST MEETING WITH BUCKLAND.

ONE of my first acquaintances in my early visits to London was Frank Buckland. I frequently met him at the Zoological Garden, the *Land and Water* office, the Aquarium and at his house in Albany street; but never at Jamrach's, one of his favorite haunts, until a short time before his death.

I had spent a very pleasant hour, one afternoon, in looking over Mr. Jamrach's enormous collection of bric-à-brac, a business which he combines with his well-known animal trade, and accepted, as a souvenir, a rattan cane with a grotesquely carved head, evidently the work of some Chinese artist. On returning to the office, in leaning my cane against the desk preparatory to settling an account, I found that it rested against a second one, the head of which far exceeded mine in its singular carving. I suggested an exchange, but Jamrach refused, saying that he had used it for some time and would not part with it. Just then the door opened and Frank appeared, who stared at me as if I were the first specimen of "a live Yankee" he had ever seen. Knowing his propensity for practical joking, I returned the stare, when Jamrach sprang and introduced us. After a few commonplace remarks, Frank coolly seated himself with his back toward me and leaned over a tub containing some half-dozen specimens of that curious-looking reptile, the stumptailed lizard (*Trachydosaurus rugosus*), while I went on figuring up the account with Jamrach. In a few moments I felt Frank's elbow against my ribs, and cautiously glancing over my shoulder, he signaled me to cover him. Hitching my chair so that my body would screen him, I saw one of the lizards lifted from the tub and instantly passed into one of the capacious pockets of his loose sack coat. Turning my attention to Jamrach in order to keep him fully occupied, we went on with the account, when I suddenly received a second signal from Frank. On again looking over my shoulder, I found that the lizard was half its length out of the pocket and making a desperate struggle to rejoin its comrades in the tub, while Frank's face was a study, as he was energetically fighting against any such proceeding. Placing my right hand on the account, and forcing Jamrach's attention to a pretended error, with the left I drew a couple of pins from a cushion on the desk and secretly passed them to Frank. In a few moments a long-drawn sigh of relief informed me that the mouth of the pocket had been securely fastened, and I felt Frank slowly turning around in order to get the remaining pocket ready for a second capture. This was effected without any mishap, as the pins were passed him beforehand. Frank was now in a hurry to be off, and on his rising to start, I protested, and rather bluntly informed him that if he did not remain until I had finished with Mr. Jamrach, so that our newly-formed acquaintance could be cemented in American style, with a drink, I should feel aggrieved. He reseated himself with a curt reply, which was so different from his usual manner, that Jamrach seemed somewhat startled at his behavior.

After badgering him as long as I dare, by finding fault with Jamrach's account, we finally started for the street, and in so doing I telegraphed the cane to Frank, who shook his head, placed a hand on each pocket, and hurried out. On getting outside I remarked:

"By George! I've forgotten my cane."

With a broad grin Frank answered:

"Hurry back and get it, and you will find us in the beer shop."

Returning to the office I picked up Jamrach's cane and caught the party just in time to cement the newly-formed acquaintance, the expense of which Jamrach persisted in paying. Frank pleaded an engagement, started for the sidewalk, and in bidding me good-bye, said:

"As I understand you frequently visit London I look forward with great pleasure in often meeting you, particularly in the company of my old friend Jamrach."

"I can assure you that the wish is mutual, and I shall take the earliest opportunity of again mixing with London thieves."

Frank took the opportunity of darting up the street before Jamrach could recover from his astonishment, while I sprang into a waiting cab and was rapidly driven to the London & Southwestern R. R. station, to catch a train for Southampton.

On my next visit to London Jamrach acknowledged that he did not get at the true meaning of my seemingly insulting remark until the next morning, when he found that he had been robbed of a favorite cane and two rare lizards.

FRANK J. THOMPSON.

AN OWL IN THE CITY.—New York.—A common screech owl put in his appearance a few days ago in the City Hall Park, and being spied by the keen-eyed (and evil-eyed) wielders of blacking brushes, was so pestered and driven about by them from bush to tree and branch to branch, that life must have seemed utterly miserable. A moment after his discovery the air was full of snow balls, stones, old hats snatched from each other's heads, and, in fact, everything that could be thrown, the individual aim being of little importance in the excitement of the moment. It was growing warm for his owlship when down swooped one or two policemen, and the bird—doubtless an eagle, at least, in the eyes of the urchins, who seldom see any feathered thing larger than a sparrow—was safe for the time. Was he a child of nature seeing the elephant, or had he escaped from some sanctum?—F'LIN.

WOODCOCK AND TELEGRAPH WIRES.—An object was seen by several persons to fall to the ground on Glen street, Tuesday evening, and when picked up by George Orton it was found to be a woodcock in the last throes of death. The bird was fat and apparently in a healthy condition, and it is supposed it struck in its flight one of the many electric light or telegraph wires with such force as to cause its death. There are different theories advanced for the presence of the bird in this village, one of which is that it was attracted thither by the electric light. —*Glens Falls (N. Y.) Republican, April 19.*

SPRING MIGRANTS.—Bridgton, Cumberland county, Me. —Crow, March 10; black snowbird, April 5; robin, 10th; song sparrow, 10th; grass finch, 13th; pewee, 14th; white-bellied swallow, 21st; kingfisher, 22d; great northern diver, 22d; red-winged blackbird, 23d; white-throated sparrow, 23d; fish hawk, 23d.—BLACK SPOT.

Game Bag and Gun.

YELLOWSTONE PARK REGULATIONS.

RULES AND REGULATIONS OF THE YELLOWSTONE NATIONAL PARK.

DEPARTMENT OF THE INTERIOR,
WASHINGTON, April 4, 1887.

1. It is forbidden to remove or injure the sediments or incrustations around the geysers, hot springs, or steam vents; or to deface the same by written inscriptions or otherwise; or to throw any substance into the springs or geyser vents; or to injure or disturb, in any manner, any of the mineral deposits, natural curiosities, or wonders within the Park.

2. It is forbidden to ride or drive upon any of the geyser or hot spring formations or to turn loose stock to graze in their vicinity.

3. It is forbidden to cut or injure any growing timber. Camping parties will be allowed to use dead or fallen timber for fuel.

4. Fires shall be lighted only when necessary and completely extinguished when not longer required. The utmost care should be exercised at all times to avoid setting fire to the timber and grass.

5. Hunting, capturing, injuring, or killing any bird or animal within the Park is prohibited. The outfits of persons found hunting or in possession of game killed in the Park will be subject to seizure and confiscation.

6. Fishing with nets, seines, traps, or by the use of drugs or explosives, or in any other way than with hook and line is prohibited. Fishing for purposes of merchandise or profit is forbidden by law.

7. No person will be permitted to reside permanently or to engage in any business in the Park without permission, in writing, from the Department of the Interior. The Superintendent may grant authority to competent persons to act as guides and revoke the same in his discretion.

8. No drinking saloon or barroom will be permitted within the limits of the Park.

9. Private notices or advertisements shall not be posted or displayed within the Park, except such as may be necessary for the convenience and guidance of the public, upon buildings on leased ground.

10. Persons who render themselves obnoxious by disorderly conduct or bad behavior, or who violate any of the foregoing rules, will be summarily removed from the Park under authority of the statute setting apart the Park "as a pleasuring ground for the people," and providing that it "shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be to make and publish such rules and regulations as he shall deem necessary or proper," and who "generally shall be authorized to take all such measures as shall be necessary or proper to fully carry out the object and purposes of this act."

L. Q. C. LAMAR,
Secretary of the Interior.

SUMMER WOODCOCK.—Worcester, April 17.—I quote the following from Stearns's "New England Bird Life:" "Domestic concerns occupy the birds in the rest of May and in June, after which, with the celebration of the American political idea—now old enough to be less barbaric in its methods of self glorification—the woodcock season begins; that is to say, a considerable proportion of the young birds are grown strong enough to fly in order to be shot. It is a twin relic of barbarism that allows them to be killed at this tender age; the close time should not cease before September, in which month, as well as the succeeding one, the best sport may be had. But whether or not July shooting be permissible, woodcock should be let alone in August, when they are moulting and poorly able to take care of themselves."—PEMIGEWASSET.

IN THE BEAR RIVER COUNTRY.

WE were in camp in Egeria Park, just at the foot of the Gore range, in Colorado. Early in the morning we were about starting out on our hunt when there came along a supply wagon bound for a large surveying party in which I had a brother and several friends, at work in the vicinity of Bear River. Taking my rifle I clambered into the "prairie schooner" and was soon *en route* for Bear River, which was reached at about 2 P. M. of that day. One thing very noticeable to me at the camp was the absence of fresh meat of any kind at table. Andy, one of the cooks, said there were plenty of deer in the vicinity, but the men had been unable for several days to get any, although they had spent a portion of each day in hunting them.

After dinner I proposed to Andy that we should go out and get some fresh meat for the boys' supper; he readily assented and we were soon upon our way.

Going up the Bear River cañon, on as nice and level a piece of meadow land as one can find anywhere, we soon saw signs of deer, and then we concluded to take different courses; he to take the sidehill to the left and I the bottom and wooded banks of the river. In this way we had gone for perhaps a half mile, being at this time about 100yds. apart, each closely scanning his hunting ground, when upon looking on his side I saw a fine buck directly facing me and standing broadside to Andy. I knew my companion saw the deer, for that moment he threw up his rifle and commenced to aim. I expected every moment to hear his rifle crack, but no crack came, and as I looked at the marksman I saw him wiggle, and his rifle sway around, so I knew that if he killed that buck it would be by wonderful chance. Still he aimed, and although fully 200yds. away from the game, I aimed also. There we stood, it seemed fully three minutes, although I presume it was not more than a fourth of that time, for in such suspense time seems much lengthened. Still no shot was heard. It was a scene long to be remembered, my companion standing there with his rifle to his face, a big buck directly broadside to him and not more than 110yds. away, still he didn't shoot. I couldn't figure it out in any other way than that he had buck ague mingled with presence of mind enough to try and see both sights and the game at the same time; and knowing the probabilities were in favor of our losing the game if some one didn't shoot some time that day, I determined to drop hunting etiquette, drew my bead directly in the center of the deer's chest and fired. There was a simultaneous report, for at the moment I fired Andy imagined he was ready and both rifles cracked at the same instant. The fun of it was that he did not know that I had fired, for I did not come within his line of vision while he was aiming; and he supposed, of course, as the game fell that his was the bullet that did the work. When he saw the deer drop he jumped up and shouted: "I've got him, I've got him sure!" and started on a double quick, jerking out his hunting knife as he ran. When I came up to where the deer lay, Andy had his head nearly severed with his frantic slashes with the hunting knife. I noticed also that my bullet was where I meant it for, but said nothing at the time, hoping to have a little sport should things take the right turn.

The operation of bleeding the animal being finally accomplished to his satisfaction, he next turned his attention to his rifle, which was a harmless musket with an iron rod beneath the barrel. The shell that he had just fired stuck, and he was doing his best in his great excitement to enter the rod at the muzzle to drive the shell from the chamber. He was as white as a sheet and it seemed to be an impossible task for him to get that rod into the barrel, but after some fumbling he succeeded; the shell was driven out and a charge put in, and then we turned our attention to our game. After a little Andy said: "I wonder where I hit him to kill him so quickly?" I made no reply to this and he turned the game over and examined the sides, but no bullet hole could be found. I made the suggestion that perhaps he had mesmerized him by shaking his rifle at him in such a tragic manner. This allusion to his buck ague seemed to nettle the young hunter, and he retorted that shake or no shake he had the first game, and he thought that if I had a little touch of fever that I might do something better than stand there laughing at him, to which he indignantly replied, "that of course he did, he was facing the north with his right side toward me." I then told him to look on that side more carefully; but he did not seem to think it necessary to look very closely for a .45-cal. ball hole, and apparently began to think then that something was in the wind and that I was still poking fun at him. Finally, turning to me, he asked if I knew what killed that deer, to which I replied that from the slight incision of about twelve inches in the animal's neck I should judge that he had bled to death. He then asked me if I saw the deer before he shot. I could not well evade the question, and answered yes. "Did you see him drop?" "Yes." "Well, I don't understand it. There is no bullet hole in either side that I can find, and my .45 always tears fearfully, especially where it comes out, but I can't find even a scratch, and therefore give up that I must have missed him entirely; but that doesn't explain the cause of his falling the instant I fired." He then turned to me and asked, "Do you understand this business?" I had to admit then that I was thoroughly acquainted with the mystery, and of course had to explain. I showed him my ball hole, which was partially closed up, also where his bullet had just singed the hair on the animal's flank. "Yes, that's so," he said, "for I couldn't have hit the chest from where I stood, nor you the flank from your position." The deer was then hung up, and we proceeded on our course, each keeping to his own ground. I have had "the fever" myself, and witnessed it in others, but never in so violent a form as this took with him.

I soon came to a little knoll that shut the river bank from view, and thinking, perhaps at random, perhaps by intuition, that there might be deer on the other side, I carefully made my way to the top, and raising myself with rifle in position to shoot I saw a sight to gladden the heart of any sportsman. There were five splendid deer quietly feeding near the river, all unconscious of the approach of danger. Taking quick aim at the head of the family, a noble old fellow, I shot and followed with another and another, as quickly as possible, until I had fired four times and had the satisfaction of hanging up four blacktail deer as fine as ever made venison. This was with a singleshot breechloader, so the conclusion may readily be drawn that deer are not so shy and wary in these remote regions as in the foothills, where they are hunted much, for there a man would be in the best of luck to get even a decent shot at a band, no matter how expert he might be or careful his approach. After hanging up my game I proceeded to camp and sent back pack mules for the meat, which was duly appreciated by the surveyors. It was astonishing to see the juicy steaks disappear before the twenty-five or thirty hungry fellows.

I spent a very pleasant evening chatting with the boys. I was the first person that they had seen from home for months, and was very welcome as I brought letters to them from the post-office on Rock Creek, some twenty miles from camp. The post-office system as conducted in this sparsely settled country in this way: Small cabins are erected along a certain route, and a runner or carrier is hired to go over it once or twice a week, and the mail for parties that he he knows to be in that vicinity is left in a little box nailed up in one corner of the cabin. There is no lock on cabin or box, and when a person wants his mail he goes there, looks the mail over, takes his share, puts anything in the box that he wants to mail, and leaves. There is no postmaster, and sometimes for weeks no two persons meet at the office. The mail is carried in summer on horse, and during the winter on snowshoes. This is very primitive indeed, but it is much better than no way at all, as I found once when near one of these stations with a broken king-bolt. I tied a note to the bolt, directed to the carrier, telling him to take the iron to Hot Sulphur Springs and have it mended; this I mailed, and upon going to the station a few days after found my bolt welded and a bill of $1.75. I put the money in the box in an envelope, and found out afterward that the carrier got it all right. I have never heard of a letter being stolen, although such might easily be the case. But to my story.

Next morning at the surveyor's camp found us all stirring early, and as soon as breakfast was dispatched, I started out alone with the intention of looking around a little before starting on my trip to my own camp. Going up the cañon on the opposite side of the river from that taken the previous day, I traveled on for a little way and finally sat down behind a little ledge of rocks upon the hillside. From here I looked down toward the river and saw a picture that I would give much to possess as I then looked upon it. To where I was then looking, perhaps 125yds., was nearly a straight line of quaking asp bushes about 10ft. high, and right in the center, standing in clear outline against the deep green of the leaves, were the heads of three deer nearly touching each other; to the right stood the old patriarch and on the left the doe, while between them was a beautiful fawn nearly grown. What a picture! O, that I were an artist! I would have it if I never painted another. There the three stood, the bushes hiding all but the graceful heads. I would have given nearly anything then if I could have had my telescope on my rifle at that moment, not to shoot with; I knew full well that it would be an easy task to put a ball between that buck's eyes; but nothing was further from my mind at that time; I wanted the telescope to get right up to them to see their faces and expression as they appear when in their wild and native state, unscared by man and confident that no foe is about to harm them. But being no artist and having no telescope, I content myself by doing the next best thing, namely, let them alone; and this I do with a hearty good will for two reasons—we have plenty of meat at camp and I haven't the heart to shoot. I think that if all game were presented to me as this trio was, something more than mere sport would be the cause of my shooting them. I took up my line of march toward camp, leaving my picture in peace to go at will, and soon I found myself at camp, where I got a little food for my walk of twenty-four miles to my own tent. The day was pleasant, the walking good, and I really enjoyed myself in watching the sage hens, jack rabbits and antelope as they flew and scampered from my way. Noon finds me at a little creek, with several bush huts along its banks made by the Indians. One of the huts had a good matting of pine boughs for a floor. This one I appropriated for a time in which to eat my lunch and take a nap, etc. After sleeping a short time I made another start for camp, and at 6 P. M. was with my own party again, listening to their adventures and relating my own. MAYNARD.

SPOTS IN BARRELS.

EASTON, Md., April 24.—*Editor Forest and Stream:* I see in last week's issue two of your correspondents have been having trouble with their guns specking and rusting. I have been there too, and I do not really believe there is any cure, or rather prevention for the evil. If a man shoots a great deal his barrels are bound to speck more or less, according to the kind of metal. The very best thing I know of to keep guns in order with, either while in use or between seasons, is chicken oil. It beats sperm, cosmoline and all the rest of the so-called rust preventers. Get a pair of fat chickens, put them in a pot to boil; when the oil rises to the top carefully skim it off, bottle and cork. This receipt is not original, but after several years trial I can say it is the best thing I ever tried. Living as we do on the salt water, and spending a good portion of the shooting season from October to April on our yacht, we have been greatly troubled to keep our numerous guns and rifles free from rust, and never had anything to do it save this chicken oil. Let some of the fraternity give it a trial. SANGWILLAH.

CLEVELAND, April 23.—*Editor Forest and Stream:* Much has been said in FOREST AND STREAM relating to rust in gun barrels, but no method so far seems to have given entire satisfaction. I never had any trouble with rust in barrels after I hit upon this process: Heat the barrels so as to feel quite hot to the bare hands. Fill both with a solution of gum shellac in alcohol; after a moment or so pour it out; enough will adhere to coat them well. To clean them, warm the barrels and swab out with alcohol. A gun treated in this manner I once put aside for four years without finding a single "spot" after cleaning. Collodion will also answer the same purpose, when more convenient. For outside work dip the metal in nitric acid and then wash off with olive oil. This is a splendid rust preventive, though it gives the iron, or steel, the appearance of "case hardening," which is permanent. DR. E. STERLING.

THREE DAYS ON GREAT SOUTH BAY.

ALTHOUGH many readers of FOREST AND STREAM will consider this tale insignificant compared with the stories of canvasbacks and redheads that are shot on the Chesapeake by hundreds, yet will I dare to tell of the good time we had in three days on the Great South. There were four of us—Cib, Bob, the Captain and the writer.

Bob and I started from Long Island City one afternoon, and were met at Amityville by Cib and the Captain, who had got everything all ready, and were there to help us with our traps to the boat. It was a good three miles from the depot to the boat house, but it did not take us very long to "git thar." Arriving at the boat house, we put our guns and luggage into the two dinghies, and getting in ourselves, started down the "crick," propelled by Cib and the Captain.

We soon arrived at the sloop, and without waiting at all, we made sail and started east with a light northwesterly wind astern. When we were fairly under way, I went down into the cabin and started up a fire to boil some coffee.

"You'll find the mugs hangin' up right at the side, there," said Cib, as he poked his head in at the hatch. "The spoons is in that box, right there by the stove, and the sugar's in that tin pail, hangin' there by the cupboard."

It took quite a long while to get the fire started and the coffee ready, and by the time both were done we were almost to our anchorage.

"You fellers ready for your coffee?"

"In a minute; we're goin' to anchor about quarter of a mile east," replied the captain, "and then we'll be ready for your coffee."

"And some grub, too!" chimed in Cib, who was up in the bow getting the anchor ready.

In a few minutes we were fast, and then they all came down into the cabin.

"Have some, Bob? There, I swow, that coffee's pooty stout. Sugar? By thunder, I forgot all about the milk! Well, I guess we can get along 'thout it it," said Cib, as he helped all hands to the steaming coffee.

How much better it tastes aboard your boat, out in the bay, without any milk, than it does in the city here, at breakfast, with all the requisites.

"Cut off some of that bread, Cap," said Bob. "There's a piece of corned beef in the basket, and we want some of that too."

Supper was soon over and the things put away, and we settled down for a talk about the birds and the weather. We had been occupied thus for about an hour, when Cib arose, saying, "I guess I'll take a look at the weather, boys," and suiting the action to the word, he went up on deck.

He soon came back and said, "The wind 's pretty high up to the nor'ard, but 't look to me 's though it might haul round more t' the east before mornin' and give us some shootin'. Go and take an observation, Cap, and give us your opinion."

The Captain went up on deck, and I followed. It was a beautiful night. The moon had just risen, and the wind, which blew gently from the north, made her reflection gather and ravel in the most fantastic shapes on the surface of the Bay. Far off to the east Fire Island Light twinkled its silent warning to mariners, across the water, and now and then the scared "quack! quack!" of a black duck would reach our ears from the meadows.

"Well, what do you think of it, Cap?" said I.

"Well, it's pooty hard t' tell; the wind 's so shifty at this season. I think, though," he continued, "that it 'll haul round a little, as Cib says, and be nearer east, afore mornin'."

Then we went below, and talked a little longer, but after a while the conversation flagged, and pretty soon a little wheeze from the Captain reminded us that we'd better "turn in."

"Say, Cap, we'd better get this mattress into some kind o' shape," said Cib, sleepily.

"Yes—d'ye think so? 'twould be a—good—idea"—wheeze, and the Captain was off again.

Nobody took the trouble to awake him, because everybody was almost asleep; in fact we were asleep.

I don't know how long we had been so, but I was awakened by the Captain, who said, "What's the time, Jack?" I was the only one who had brought a watch. I struck a match, and looked. "Ten minutes of two."

"Well, we'd better be makin' some coffee. Here, Cib, wake up, it's time we were stirring, we've got to get that battery out, and the stools, and you fellers have got to get a place at the medder (meadow) bank."

The Camp was soon lighted, and the fire also, and in the course of half an hour we had some coffee ready.

When the coffee was dispatched, together with a few pieces of bread and a boiled egg, we were ready for business.

"Now, you and Bob stay here, and me and the Cap'n 'll git the battery out; you can help us a little with the stools. I'll call you when I want you," said Cib, as he climbed up on deck, followed by the Captain. In a few minutes Cib called us and said, "Now, you fellers hand out the stools to me and the Cap'n. We want brant and sheldrake, with a broadbill."

Soon the dinghies were loaded, and we put the decoys all around the battery and then went back to the sloop. Cib and Bob took their dinghy and started for the "medder bank," leaving the Captain and myself on board. As it would not be light for an hour or more I decided to take a little nap, and so I went below. The Captain wakened me in a very short time, it seemed to me, and told me to get my gun and cartridges ready, because daylight had shown itself. I took my Parker and a bag of cartridges and was soon in the battery. Now, I am not a very heavy person, and the consequence was that the Captain had to make two or three trips to the sloop to get weights for the battery. Finally all was ready and he left me. Gradually the daylight grew, until—

> "The sun returning,
> Built a tower of gold along the ocean floor,"

or in this case, the bay floor. Whish-b-b—bang!—by Jove—lost him. That broadbill was too quick for me. I had to keep a sharp look out now, for the sun was fairly up and the birds were beginning to fly. Whish—bang—splash—that sheldrake didn't get away so easily as the broadbill. Steady, here comes a flock of brant.

Krr—krr—krr—now they see the stools—they fall off a

little, but only for a moment; they won't stop this morning.

More sheldrakes. Flying close te the water they come in, with their necks outstretched, as if to question their silent images. Bang—bang, followed by two splashes, tells the story.

Bim! Bim! came from Bob and Cib at the meadow bank, and I looked around for a second, but long enough to miss a very pretty shot at a broadbill.

Flocks of brant would go by within about 300yds., but for some unknown reason would not stool.

A few more sheldrakes came in to the stools, and then the morning flight was over.

The shooting was so poor in the battery that the Captain and I decided to "take up" and go to the meadow, where many guns had been fired. We did so, and in a little over an hour were with Bob and Cib, who had shot seven sheldrakes. We stayed at that place during the afternoon, while the other fellows went to another part of the meadow. Shooting was dull (as indeed it was during the entire length of our stay), and we shot only three sheldrakes that afternoon. About 5 o'clock clouds began to gather in the northwest, and as it looked very threatening, we went back to the sloop, and were soon followed by Cib and Bob, whose bag for the afternoon amounted to one solitary sheldrake.

The wind braced up steadily, and, as it looked as if it would blow even harder before morning, we put out both anchors, and then went down into the cabin and had supper, and turned in comparatively early.

The next morning we all went to the meadow, Bob and Cib fixing at a bend in one of the "cricks" that led in from the bay, where the birds would be sure to trade if they flew at all. The Captain and I went further toward the beach and fixed. Cib and Bob "got the bulge on us" that morning, for almost every flock of birds that came along went to their stools. We lay there until I was quite impatient, and, turning to the Captain, I said: "Cap, don't you think we'd better take up and go a little further east? There are no birds here."

"Well, let's wait round here a little while longer, and see how things is going to sashay about this medder, and if we don't kill no birds I'll take ye to a place where you'll have a shot inside o' twenty minutes."

We waited, but things didn't "sashay" for a cent, and so we "took up" and went a little further east and fixed at another meadow bank, and, sure enough, in about ten minutes up came an old "pied" sheldrake, gentle as a chicken, and flopped over among the stools at the report of my gun.

"Didn't I tell ye so?" said the Captain.

Although he had told me so, not another bird came in to our stools that day, and soon we went back to Bob and Cib, to find that they had killed six more birds. We decided to "go west," and after taking up the stools we poled over to the sloop, hoisted sail, and started westward, arriving off Amityville at about 5:30 in the afternoon. Right at the mouth of the "crick" where we anchored we found Capt. Cortright's catboat; he had been out on the bay to take in his eel pots, of which he had a great number, and, as he had been successful, he offered us a nice mess of eels, and we accepted them with alacrity, as our larder had run pretty low. O, how good those eels tasted. We thought that there was no lard, but I suddenly remembered that I had brought some down to grease my gun with, and this was immediately appropriated and served its purpose admirably. After supper Capt. Cortright and Bill Birch came over to see us, and we spent a very pleasant evening in the cabin, telling big bird stories and other tales.

The next morning we were up at daybreak and poled across the bay to a thatch bed which had been rigged there, and "fixed out," having a show of about seventy-five brant stool and twenty-five or thirty shelldrakes. The brant came from the east in large bunches, but would not stool at all. They all settled away down to the southwest and commenced feeding, and we could hear the *krr, krr, krr*, of the trading birds, as they flew past us and settled with the big flock. We stayed in the thatch bed a few hours longer and shot a few sheldrake and then we decided to go back and prepare to start homeward.

"I don't see what ails them brant," said Cib, as he began taking up the stools.

"If the bed was a little further north it might be better, the way they're flyin' this mornin'," said the Captain. "Steady," he continued, "I believe that sheldrake 'll come near enough for a shot."

Nearer and nearer came the unwily bird, until the Captain's gun spoke, and down he came with a splash, killed at a distance of fifteen rods at least.

"What make is that gun, Cap?" I asked.

"Dunno; I've had her for a good many years; she was bought for a ten, but she's been shot out to about nine bore, now," he replied, as he drew his ramrod from the thimbles and shoved down a couple of wads on the powder.

"She knows how to kill."

"Bet yer life!" was the laconic reply.

The decoys were soon in and we started across the bay toward the sloop.

When we arrived on board, we stowed away the stools and packed our traps and were ready to be off. We sailed up the "crick" a little distance and came to a standstill beside the meadow, where we got off and walked back to the road, where a team was kindly offered us and all hands got in and drove down to the depot.

The result of our three days' shoot was just twenty-two sheldrake, which, although not the best of game, well repaid us for our trip.

"Well, good-bye, fellers, said Cib," and he shook hands with us, "come down again soon and we'll try and do better."

"Yes," chimed in the Captain, "them brant acted in the durndest queer way; I never see 'em do so before. Good-bye," and with a clang of the bell we were off.

J. Wendell, Jr.

Where Shall They Go? A party of four amateur sportsmen intend camping out for two weeks next September, and not having been out before we are somewhat stuck for a place to go to. Would like to know if you could tell us of a good place for fishing and hunting, as our means are limited, and we do not care to go any further than we can help.—T. T. (Fall River, Mass.)

THE BEEF ISSUE.

[From J. B. Harrison's "Latest Studies on Indian Reservations."]

INDIAN AGENCY, Great Sioux Reservation, July 1, 1886.—"It is a beautiful morning; let us go out and kill something." "Oh, it's going to be a lovely day for the beef issue. I'm so glad," said a young lady at the breakfast table. Every one is animated and expectant. For several days visitors at the agency, besides the usual hospitable welcome, have been greeted with the exclamation: "You are just in time; you must stay to the beef issue!" All through the day before and far into the moonlit night long processions of Indian wagons have been coming across the hills, and their occupants have gone into camp on the high slopes all around. At an early hour of the morning the whole landscape is full of life and movement. The Indians are decked out in their gayest attire, and some of their costumes are pictorial enough. Most of them still wear the native dress, but some have on a combination of Indian and civilized garb, which is uglier than either alone. Nearly all are bareheaded and their long black hair, parted in the middle, falls back over their shoulders. Their faces are painted in various bright colors and in all kinds of grotesque figures. The Sioux men are very fond of wearing tails, and when on foot like to have a strip of bright-colored cloth dangling at their heels or dragging along on the ground behind them. They nearly all wear blankets, which at this time of the year are, most of them, sheets of dirty gray looking muslin or sheeting. These they wrap closely around them, often covering the head and face, all but the eyes.

As we look about us after breakfast we see the Indian women and girls harnessing their horses. Carriages are brought to the door for guests and we are soon all on our way to the Government corral. Everybody is going; residents about the agency, young ladies who are teaching in the schools in the distant camps and others who are visitors from Eastern cities. All are in high spirits. Acquaintances exchange greetings. Indian wagons filled with women and children are moving over the plain from all directions. There are hundreds of young Indian men and women on horseback. They go curveting and racing about the plain. The Indians never look well on horseback, but they manage to stay on. Their ponies are slight and ugly-looking, but tough and enduring. They are the most useful and respectable denizens of the Indian country and are about the only creatures here who earn their rations. The girls sit astride the same as the men. Some of the belles are in costly apparel, I count more than fifty elk teeth on a large cape worn by a rare and radiant brown maiden. As each elk has just two teeth, a whole herd must have been slaughtered to furnish the bravery of her attire. She reminds me of New York Fifth avenue belles with dead birds on their heads, but the elks were really killed for food.

The corral is a large stockade in the middle of a plain, which slopes upward to low hill all around. Here are many hundreds of cattle awaiting slaughter to furnish rations for the noble red men, their wives and children, "the wards of the nation." There are about two thousand Indians present. A large proportion of the men are armed with carbines or improved rifles. There is an army officer here from the nearest fort, to represent the Government on the occasion. A brass band has come out from some some railroad town to compliment the ladies and frighten the already distracted cattle with the blare of their music. The entertainment opens with a popular air. The ladies applaud delicately, and the musicians bow their acknowledgments. Mounted cowboys enter the corral, spur their horses among the cattle, and drive groups of them, with shouts, yells and blows, toward the chute leading to the scales, where they are weighed, a dozen at a time. After leaving the scales, in a narrow part of the chute, each animal is branded with a hot iron and passes on into another division or apartment of the corral. This first brand shows that the animal has been received from the contractor. After all passed through this experience they are again driven into the chute, with the same accompaniment of yells and blows, and receive another brand. This is to identify the hide after it has been taken off.

All this is but overture and prelude, but the curtain will soon rise and the play begin. Ladies and visitors are assigned the best points of view for the coming spectacle. The Indian wagons with the women and children, and the dusky equestriennes, press close together around the walls of the corral. The Indian horsemen are drawn up in two long lines, forming a lane from the gate of egress, far out on the plain. Their carbines gleam in the sunlight. I turn and note the sweetness of the June morning, the beauty of the circling hills, the flag of our country floating above the Government buildings, and in the momentary hush, the gushing song of a meadow lark, far off across the grass. Hundreds of Indian dogs troop about, hungry, watchful and expectant. A tall Indian, with a voice like that of an exhorter at an Arkansas camp meeting, climbs up to the top of the gate and shouts the names of the men who are to receive the cattle, as, one after another, they are released to their doom. The gate opens, and a gigantic steer leaps out, frightened and wild-eyed. He trots uncertainly down the lane of horsemen. The dogs fly at him and he sets off in a gallop. Two Indians gallop after him, and everybody looks that way. But by this time another is out, and soon half a dozen are racing away in different directions, each closely followed by two or three mounted Indians. Soon a shot is heard, and then another, and the ladies strain their eyes to see, but the steer gallops on. The ladies look a little disappointed. "They are going out of sight. Is this all it's going to be?" But wait. More shots, and more; and now they come faster, like the ominous, irregular but increasing skirmish firing before a battle. Five or six of the cattle go off together, with a dozen men pressing behind and at the side of the fleeing group. A horseman fires and a steer drops, so sudddnly, head first, that he turns a complete somerset, and the pony just behind, unable to stop, repeats the movement, tumbling over the prostrate beast, and dismounts his rider. Some of the cattle are, at first, only slightly wounded, others are crippled so that they cannot run, but several shots are required to dispatch them. Now and then one turns in fury upon his pursuers, and the ponies swerve aside to avoid his charge. The ladies turn quickly from side to side, to note the most interesting occurrences. The dying animals lie all about the plain. Some struggle long, getting up and falling again, and the Indians wait warily till it seems safe to approach, for a mortally wounded beast will sometimes make a plunge at his tormentor.

Now a hunted brute dashes madly among the crowd around the corral, the horses start and rear and the brown maidens scramble hastily on to the wagons. A large cow, shot through and through, comes staggering up to the very walls of "the grand stand." The Indians try to drive her away, but she no longer heeds their yells and blows. She reels, braces herself, turns her great beseeching eyes up to the women above her, and falls at their very feet. The Indian butcher appears, throws off his leggings, and bestrides her with naked brown legs and thighs. He opens her throat with a short knife and cuts out the tongue. He pierces no artery or large vein, and the poor, tongueless beast dies slowly. She lifts up her head, stares around again, and tosses about wearily in mute agony. The half-naked slaughterer goes on with his work, and the cow is partly skinned before she dies. It is all so near that the ladies have an excellent opportunity to see every step of the process.

As the carcasses all about the plain are opened the work of the Indian women begins. They attend to the "fifth quarter" of the beef, the entrails. They remind me of the witches in "Macbeth." As we drive out homeward, threading our way between the bloody groups around the flayed and dismembered beasts, many Indians are already beginning their feast. They are seated on the ground, eating the raw, blood-hot liver. Our host stops and buys a piece of liver from an Indian for our next morning's breakfast. As we go on again, a young lady to whom I had been introduced at the grand stand asks me, "How did you enjoy the beef issue?" The next day, at the great Government boarding school, the principal told us that his boys and girls had behaved so well all through the term that he meant to take them out in a body to see the next beef issue as a reward for their good conduct.

It is a brutal and brutalizing spectacle.

HUNTING RIFLE SIGHTS.

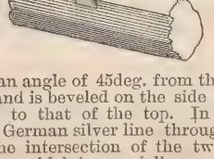
THE question has often been asked, what is the best sight for a hunting rifle? The answers to this, from the continuing inquiries, seem to be unsatisfactory, and it probably never will be answered to every person's satisfaction.

It may be of interest to the general reader to briefly discuss the various kinds of sights now in use, briefly pointing out the merits and defects of the different patterns.

The factory sights sent out with the rifles by the different gun dealers (who probably have never shot at moving game), sold to the novice as just the thing, are to the practical hunter confusing and bungling pieces of metal that are at once thrown aside as useless.

If these factory sights are of so little value, what is the best sight for general use?

The best sight for a hunting rifle is one that enables the hunter to catch aim in the shortest possible space of time; that shows as much of the animal, whether standing or running, as will assist in locating the spot aimed at with reference to the rest of the body of the object; that aids in firing shots at running game in rapid succession; that shows plainly in the sun, in the shade, or in both combined, and that is clearly discernible at night.



There are three distinct kinds of rear sights now in use.

First is the old-fashioned deep-notched sight known, among other names, as the clover leaf, prong-horn, etc. This sight has all the faults that a sight can very well have and still be called a sight, viz., it takes up time in catching aim, it covers all the object aimed at except the space between the prongs, it retards catching aim in running shooting, and is confusing in dull and hazy weather and useless at night.

Second is the Lyman sight, which overcomes the objections of the first in that it shows the greater part of the object aimed at, aids in running shooting if the range of the sights is kept by the hunter. The objections to it are that it is confusing in catching the range of the sights, *i. e.*, the front through the rear sight. This is owing to the position of the sight on the stock of the gun, leaving too great a distance between the front and rear sights. Then, too, its folding down on to the stock is a serious objection. In crawling through tangled brush it is very often knocked down, and if game comes in view at such a time a shot is lost or a miss made because the precious second is lost in readjusting the sight. This has been my practical experience with the Lyman sight, and the same is true of several persons who were previously advocates of that sight.

Third is the sight given us by T. S. Van Dyke in his chapter on the subject in his admirable work the "Still Hunter." For two years I used the sights recommended by him and found them suitable except in two respects: the eye will not always catch the true center of the barrel; this is due oftentimes to the haste in which the gun is thrown to the shoulder, and it fails for night shooting.

The sight that answers every purpose is one which has been extensively used by some South African hunters. It is slightly beveled on the top (one sixteenth of an inch), as shown in the accompanying cut.

It slopes at an angle of 45deg. from the top to the base of the sight, and is beveled on the side toward the butt to correspond to that of the top. In addition to this there is a fine German silver line through the center of the sight at the intersection of the two planes on the beveled surface, which is especially serviceable at night. This answers every one of the requirements above mentioned, and so far as my experience goes, it has no disadvantage.

For a front sight the plain ivory sight as described by Van Dyke, is certainly the best.

If this short discussion will be of value to only one of the many who are seeking for the best sight for a hunting rifle, it will have fulfilled its mission.

Munsungun.

ON THE KANKAKEE.

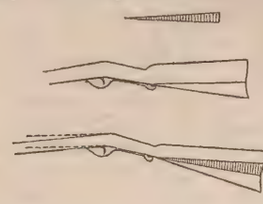
WE reached St. Mary's, Iroquois county, Ill., March 17, loaded our outfit on a wagon, and set out for the swamps, eight miles away. My comrades were Mr. Shepherd, who had come with me from Indianapolis, and my friend Mr. Rock, an old hunter and trapper of St. Mary's. In a few hours we had found the place for our camp, and very soon the tent was in position and a comfortable little home fixed up. There had been only one shot fired on the way out, and that brought down a hawk measuring 5ft. from tip to tip of wings.

The next morning we turned out early, each one of the party anxious for a shot at goose, brant or duck, and still more anxious to make a record. I waded out in the marsh some distance before daybreak, and tried to make a sneak on some ducks, but they were too wild, and after two or three hours I returned for breakfast somewhat disgusted, having shot three or four times only to miss. Sitting down by the tent to wait for my companions, I discovered a fine flight of brant heading directly for me. I grabbed my gun that was sitting near by, and fired both barrels loaded with No. 5 shot, but no game fell. I quickly loaded with No. 1, and had barely time to fire the left barrel, which brought down a nine-pounder. This might have been a scratch, but I was happy all the same. After breakfast Mr. Rock and myself started for a marsh about two miles distant, where once, in times past, we had been favored with good shooting; but on this occasion we only succeeded in bagging thirteen mallards; and by one misstep I succeeded in getting wet to my armpits, so the first day's shooting only scored us one brant and seventeen ducks, "Shep" having killed four in our absence.

The next day we moved our tent, and after a good deal of fixing, and preliminaries generally, started out for the afternoon and evening shooting. Little game was flying, so it was only by the hardest kind of work that we succeeded in bagging three or four mallards and a pair of sprigtails, or pintails as they are called here. Just as we were starting to camp out came a flock of geese, flying very low, and going right over the head of Shep. He fired into them, killing one outright, and could easily have killed the second, but was too much excited to shoot the other barrel; we abused him not a little for his stupidity, but he said one goose was enough for him, and if we wanted any large game to follow his example and go kill it. Getting enough glory out of this incident for one day we retraced our steps to camp, and after a hearty meal, a pleasant smoke, and many a merry laugh, we turned in for the night.

The next morning was hazy, and every surrounding plainly indicated that there was trouble brewing in the elements; and indeed it did not take long for it to materialize into a big blow that tried every fibre of our tent to the utmost. The thunder seemed only just above our heads, and the flashes of lightning were really alarming; but soon the rain began to fall in torrents and continued until too late to make any more effort for game than we had already, Mr. Rock having killed a goose, and I a pair of mallards. The wind having changed to the north, had not yet spent its fury; snow and ice were falling thick, driven by a stiff breeze which made our small party only too glad to find shelter. The tent now seemed a godsend against the storm that was so hard to face when once outside our den. But our wood was scarce, and we were forced to make a supply from the very small black oak hat grow thick on the sandhill about camp.

Monday morning found the marshes frozen with a thick scum ice, but the sun shone warm, and by noon there were openings in places that made us hopeful for some good afternoon shooting. Dick Yarno, a young Frenchman who had come out from town in forenoon, and myself found a good location on a small grass mound, a kind of peninsula that run out in the marsh. We spent about an hour pulling grass by which to cover ourselves from the view of the ducks. The fowl were by this time beginning to come in, and our concealment completed, we lay flat on our backs, covered ourselves with the grass and waited. Our position was anything but pleasant, but soon the sport commenced. For two or three hours they kept coming, in fact, until it got so dark that we were forced to gather in our beauties and start for camp. We filled a two-bushel grain bag as full of mallards as they could be stowed in, and had besides many in our game coats.



When we reached camp both were about fagged out. This was the first real fine sport since our outing had begun, and indeed it reminded one of the good old times of years ago, when we could stand and shoot to our hearts' content and even refuse to waste ammunition on the smaller birds, shooting only at mallards. But those days are past. The State ditches are telling on the swampy lowlands; and even now, where a few years ago there was good shooting, to-day is found instead good pasture land and meadows were a large hay crop is mowed annually and shipped to Chicago. So it is plain to be seen that in a few more years the marsh shooting of the Kankakee will be reckoned with the by-gones and the wildfowler will have to find new fields for his sport.

The remainder of our stay through Tuesday and Wednesday was favorable as to weather, the wind having again changed, and a brisk southwest breeze seemed to whisper game, but there was no flight of ducks and we only succeeded in bagging about fifteen or twenty, mostly mallards, and I had the good luck to add one more brant to the score. Our stay being out, with some regret we packed our baggage and started for home. Although in the week we had only killed five dozen ducks, two geese and two brant, we considered our outing a success, and had all the true sport we could desire or expect.

DRAPE.

INDIANAPOLIS, Ind.

ALTERING GUN STOCK DROP.—Glastonbury, Conn., April 29.—I stocked pistols in Colt's factory, Hartford, Conn., in '59, and since at my own place of business. I have fixed five single and three double guns for drop, and all gave the best of satisfaction. I like a stock with 4in. drop. I find that there are hardly two men alike in measure from the eyes to the shoulder. To drop a stock by steaming the small of stock weakens it, especially if it is cut across the grain. My way avoids that, for the small is not disturburbed, and a fair workman, if he be careful, can make a neat job of it. In the first place I find out what more drop I want, and get out a wedge-shaped piece of wood as near the grain of stock as possible: then take guard and heel-plate off from stock, mark up both sides, large of stock running almost out beneath at and cut of under small piece. Now saw to mark alternately from both sides carefully: then try the wedge and see that pieces come good. Glue the wedge piece to

stock and secure with finishing nails; then glue on the lower part of stock, putting a good screw through that and the wedge into stock well down in bed of guard. After the glue has well set, fit the guard back in its place. Take off from top of stock almost the amount of wedge, then recut and fit the heel plate with the end screws to go into the original parts of stock. Now file and finish the stock down to plate with oil or polish finish; and you will be pleased with the way the gun comes up to shoulder without disturbing your vision. If the stock is pistol-grip, saw only to butt of grip; don't disturb the grip. I have brought down ducks with the old gun when I could not see the sight, it was so dark. I think you will understand my principle of getting the drop for gun stocks.—COUNTRY.

MAINE DEER AND MOOSE.

THAT the game of northern and eastern New England and the near British provinces has wintered well, there is no doubt. That this report from the game is true, is confirmed somewhat by the absence of reports. There is not one report of crusted-under partridges this spring where there were a dozen a year ago, while the severity of the winter, and above all, the great depth of the snow, has kept the crust-hunters and the winter market-gunners out of the woods. During the months of February and March and well into April, the hunters have been glad to remain at home. They have not been tempted to make any extensive excursions in the woods by either mild weather or strong snow crusts; and hence the game has escaped. But under the fact of increasing deer and their nearness to the settlements, a curious form of hunting has developed itself—a form not altogether unknown last year and the year before, in the Maine woods particularly, but one that has increased in a ratio that threatens to become alarming, and one that will evidently require something of a change in the excellent game laws of that State. It is also understood that the same difficulty exists in New Hampshire. This new form of hunting is that of taking deer and even moose alive. The Maine papers have contained a good many accounts of deer taken alive; the remarkably deep snows and the great numbers of deer rendering such capture possible, and indeed not very difficult where there happened to be a lumber road within a reasonable distance of the deer yards. Some of these papers have given out these items—often concerning the local sportsmen or even the boys of the town—published them with no desire to either evade or make light of the game laws. Indeed, the statute provides that no moose, deer or caribou shall be had between the first day of January and the first day of October following, "except alive," and on this exception, the right to take moose and deer alive in the woods of Maine has come up in the imagination of the hunter. But by the Commissioners of that State such hunting and taking of deer is regarded as exceedingly dangerous to the game and demoralizing to the hunter, and they immediately turn to another form of the statute where it provides that no person shall in any manner "pursue, hunt or kill" such game in the close season. They claim that it is not possible to take either a moose or a deer alive without "hunting," and hence that such hunting is in violation of the statute. Some weeks ago they commenced active operations in this direction, and I have it from perfectly reliable authority that they have, through their wardens, already caused the liberation of between twenty and thirty deer that had been caught alive. In two cases moose have also been caught, and in one of these cases a cry of commiseration has gone up from the friends of "the poor hunter who might have got $200 for his live moose, but the Commissioners wouldn't let him."

Well, these game laws will have to be made plain on the question of taking moose and deer alive. It is understood that the Commissioners have generally given directions for the liberation of the captive moose and deer, without prosecution of those who have taken them. But just think of it, fellow sportsmen! Are not more than twenty far too many to be taken out of the stock the law is trying to save in one season's close time? What a sermon on the value of game protection might be preached from the text that there is a possibility of taking more than twenty deer and two moose alive now, when a few years ago these animals were almost extinct. The idea that such game is plenty enough that the law must prevent its capture alive in the winter season. In consideration of such facts, was it any wonder that twenty-five or thirty years ago, under free hunting for moose and deer all through the winter—just for their hides—that such noble game was almost driven to extermination? If it is possible to secure more than twenty deer in one winter without killing them, how many could be butchered by an enterprising party of skin-hunters in the same length of time? Then, if a band of loggers happen to camp in the vicinity of a deer or moose yard, and they wish for fresh venison, how many shall be taken and how many shall be left? Deliver Adirondack and New England deer from all the danger from deep snow and and dog hunting, and they will increase to plentifulness. Even the lordly moose would again flourish under immunity from crust and dog hunters, with a law that should protect the cow moose. Yet we are regaled by those Solons at Albany with the idea of "hounding deer to make them shy" so that the still-hunter and wolves cannot destroy them. But the last argument I have heard that touches me to the quick is one that comes from a Maine lumberman. He claims that it "is absolutely necessary to kill off some of the older and stronger deer, in order that they do not eat up all the browse around the winter yards, and thus cause the weaker ones to starve." He is of the opinion that the law should allow the lumbermen to kill off a part of these larger and stronger deer; and the FOREST AND STREAM has his word for it that there wood be more deer in the woods the next season if such were the case.

SPECIAL.

MISSOURI STATE ASSOCIATION—Office Missouri State Sportsman's Association, Palmyra, Mo., April 19.—The issue of the programme of the annual meeting of the State Sportsman's Association offers a favorable opportunity for drawing attention to the apathy of the sportsmen of Missouri to the action and intentions of the National Association for the protection of game, birds and fish. This organization was commenced at an annual convention of Missouri sportsmen and was perfected in St. Louis, and yet only one club of Missouri sportsmen (that at Jefferson City) has, outside of St. Louis, joined it. The objects of the association are known to all our sportsmen, and if they treat its existence with indifference it is natural to expect that other States will do the same. Individuals can join as well as clubs. Dues are as follows: Clubs of between five and twenty members, $5; clubs of over twenty members, $10; individual membership, $2. Capt. H. C. West, the secretary, (post-office box 699, St. Louis), will be glad to register memberships on receipt of dues. The national convention assembles at the Palmer House, Chicago, on June 22, and, of all the States in the Union, Missouri, the parent of the association, should be best represented. This cannot be the case unless many State clubs join it immediately.—JOHN W. LEMMONS, President; FRANK W. SMITH, Secretary.

EXPRESS BULLETS FOR LARGE GAME.—*Editor Forest and Stream:* I was greatly interested in "Bear Stalking in Canada." The rifle test given in the second paper recalls an experience of my own the past winter in shooting caribou. I put seven balls from a single shot Winchester .45-60-300, entirely through a large bull before he gave in; two through the shoulder before he fell as he stood broadside. He immediately regained his front feet with his head from me, and five more balls struck the small of his back, passing out at brisket and shoulders. In another case a cow that went down with a broadside shot just back of shoulder, falling quartering head toward me, and got two through the head and another in center of heart. Of those through the head, one entered the eye passing out at the base of the ear on the opposite side; the other struck 3in. below the same eye, passing out 3in. back of the same ear. To my mind either of the last three shots should have at once proved fatal, but doubtless the one through the heart was the one that did the business, and was the last shot; and I have arrived at the same conclusion as the writer of the article referred to as to the superiority of an express bullet; *i. e.*, hollow pointed. Can any rifle shooter tell me where to obtain fixed ammunition with such a bullet to fit my rifle?—WARFIELD.

MAINE GAME.—Indian Rock, Me., April 20.—I am very much interested in the Yellowstone Park, and have perused with pleasure "Winter in Wonderland." Mr. Hofer's description of the lynx catching rabbits, corresponds almost precisely with what I have seen in the northern part of Maine; they are called *loup cervier* in this section, and were quite plenty here twenty-five years ago, but the trappers have exterminated them. In 1861 there were no deer in Franklin and Oxford counties, at present there are hundreds. There was seldom any sign of beaver seen in 1861; they are fairly plenty now. Sable have been fairly plenty the fall and winter past, having been caught nearer the settlements than for several years. Caribou appear to be drifting toward the northeastern part of the State. Moose are not plenty; there is but small chance for them unless the Canadian French and lumbermen stop slaughtering them.—O.T.R.

NEW YORK GAME BILLS.

NOW that the Legislature is drawing to an end it will be of interest to any who have watched the progress of legislation, and more so to those who have not, to scan the roster of bills and see just exactly where they are to-day. The following is a complete list of both the Senate and Assembly bills, the introductory number being given because some of the bills are not printed and hence have no other number than the one given:

SENATE BILLS.

85. Coggeshall, amending 437 of 1886 so as to prohibit the catching of brook trout less than 6in. long. In committee of the whole.

91. Coggeshall, amending 533 of 1879 and subsequent amendments so as to make season for woodcock, partridges and squirrels Sept. 1 to Dec. 1, and relating to snared birds, etc. In committee of the whole.

269. Wemple, establishing a fish hatchery in the Adirondack wilderness. In the Assembly.

318. Comstock, including set lines among prohibited devices, unless by permission of the Fish Commissioners. In the committee on game laws.

411. Pierce, making the quail and rabbit season on Long Island Nov. 15 to Dec. 31.

456. McMillan, exempting from 437 of 1886 salmon caught in the Great Lakes. In the Assembly.

465. Fagan, to protect the planting of oysters in the town of Jamaica and Hempstead. A law, Chap. 182.

484. Comstock, amending 534 of 1879 and subsequent acts so as to prohibit set lines. In the Assembly.

490. Comstock, providing for a fishway in the State dam at Troy. In the Assembly.

533. Dunham. In committee of the whole.

565. Daly, a general codification. In committee of the whole.

597. Hoysradt, forbidding Sunday fishing for shad in the Hudson. In the committee on game laws.

600. Vedder, making quail season Nov. 1 to Jan. 1, and hare season Nov. to Jan 1. In committee of the whole.

ASSEMBLY BILLS.

154. Reeves, to permit sailing for wildfowl in Gardiner's and Peconic bays. On third reading.

178. Reeves, amending the law of 1879 so as to post notices of trespass every half mile along the highways. In game laws committee.

301. Fitch, providing $5,000 for the erection of a fish hatchery at Cold Spring Harbor. On third reading.

433. Bulkley, forbidding the use of nets in certain parts of Jefferson county. On third reading.

454. Erwin, amending the song bird law of 1886, so as to allow shooting for crows, hawks and blackbirds. On third reading.

477. Cornwall, limiting mesh of net to be used for minnow fishing in Keuka Lake and permitting fishing through the ice in Seneca and Canandaigua lakes. On third reading.

501. Hamilton, amending the prescribed methods of posting of game preserves and the laws relating to trespass. On third reading.

503. Davies, providing a special commissioner to aid the Commissioners of Fisheries in preparing a general game bill. In game laws committee.

525. Sime, amending the law of 1880 for the appointment of fish protectors relative to the auditing of account. On third reading.

508. Moore, amending the song bird act so that scientifically-inclined persons may collect birds, eggs, etc., for the purpose of science only. On third reading.

710. Thompson, amending the Jefferson county act of 1886. On third reading.

797. Speet, permitting netting and fyke fishing for eels, suckers

and bullheads in certain parts of Cayuga Lake. In game laws committee.

880. Reeves, amending 534 of 1879, relative to game preserves and trespass. In game laws committee.

881. Reeves, making the season for wild duck, goose and brant from Sept. 1 to May 1. In game laws committee.

858. Giese, prohibiting fishing for black bass in Lake Erie or the Niagara River, above the falls, between Jan. 1 and July 1. On third reading.

947. Fort, forbidding the possession of snares, etc., on waters inhabited by salmon, lake trout, etc., in close season. On third reading.

901. Winne, transferring the game protectors to the control of the Forestry Commissioners. In ways and means committee.

881. Curtis, allowing the catching of bass in Black Lake, St. Lawrence county, the same as in the St. Lawrence River. In the Senate.

985. Sheehan, Senator McMillan's bill, No. 456, above, substituted. On third reading.

1014. Frost, relating to quail season and hare season (same bill as Senator Vedder's, No. 606). In Game Laws.

1017. Hogeboom, making certain exemptions of forest lands to those who occupy summer homes. In Ways and Means.

1062. Hines (same as Senator Fagan's bill, No. 465). Now a law, Chap. 1827.

1068. Collins, making the season for salmon from the 1st of March to the 15th of August, and placing special penalties upon fishing in the Hudson River. On third reading.

1113. Hadley, a general codification of the game laws. On third reading.

1114. Hadley, enabling the Forest Commissioners to sell or exchange portions of the State lands. In the Senate.

1129. White, prohibiting the shooting of wild ducks between Jan. 1 and Sept. 1. In Game Laws Committee.

1148. Langbein, a general codification of the game laws (the Roosevelt bill). In Game Laws Committee.

1160. Ainsworth, extending the time for hunting deer from Nov. 1 to Dec. 15; for having in possession from Nov. 15 to Dec. 1; for selling, from Nov. 1 to Dec. 1, and for transportation from Nov. 15 to Dec. 1. In Game Laws Committee.

1177. Hadley, appropriation for Adirondack survey. On third reading.

1194. Leete, forbidding fishing in Oneida Lake in April and May. In Game Laws Committee.

1219. Brundage, forbidding the catching of trout in Steuben county except in May, June and July, and forbidding the spearing of fish in the Cohocton River in April, May and June. On third reading.

1222. Reeves, amending 34 of 1879 so as to forbid unlawful devices for taking shellfish. In Game Laws.

1225. Winne, providing for a partial restoration of the Catskill reservation. In the Senate.

1251. C. Smith, amending the song bird act so as to allow the killing of birds for plumage. On third reading.

1261. Hogeboom (the Hudson Sunday shad fishing bill introduced by Senator Hoysradt, No. 697). In Committee of the Whole.

297. Finn, repealing 282 of 1880 for the preservation of lobsters. Sent to the Governor.

344. Committee on Game Laws, for the protection of oyster planters. In the Senate.

395. Reeves, providing a patrol steamer and an oyster protector. In Committee of the Whole.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

ON MOOSEHEAD WATERS.

NORTHWEST of Moosehead Lake, in Maine, lies a tract of country well suited to the production of trout and game. It has not the great extent of uninhabited forest found further east in the Aroostook country, but the trout average larger, and in some sections the larger game is, perhaps, as likely to be seen as in any part of the State.

It was the fortune of the writer to spend two weeks of summer in canoe and camp in this region. Although I had caught thousands of trout in Connecticut, during more than twenty-five years of fishing experience, I had never been into the wilderness to leave all other affairs and betake myself wholly to sport and recuperation. The friend who induced me to take the trip had been in this country many times, and was almost as familiar with its lakes and streams as the guides. Leaving Boston at 8 o'clock, Friday morning, July 2, we were at Skowhegan, Maine, at 6 o'clock in the evening. Here we hired a livery team, and the next night were at the forks of the Kennebec, forty-six miles away. The road follows the Kennebec River all the way, is in good condition and affords a very pleasant drive. There are comfortable hotels every ten or fifteen miles. A stage runs each way between the Forks and Skowhegan every week day. At a farmhouse about fifteen miles below the Forks we saw a young yellow and white "coon cat." The large bushy tail was ringed with alternate yellow and white bands. We stopped and tried to effect a purchase, but the lady of the house told us there was "not money enough in the county to buy him." She said this cat was sent to her from Fairfield, Me., when a kitten.

We found that our guides, who had previously been engaged by letter, had everything in readiness, and at an early hour Monday morning we bade farewell to the last settlement and, by the silent and steady strokes of the paddle, were borne away to find what of interest the forests, lakes and streams might afford.

We spent an active week, and although we caught only a moderate number of trout and no large ones, we were very fortunate in seeing an unusual number of the wild life of the wilderness. There were seen one caribou, five deer, including two fawns, five beavers and three otters, all in six days. We had all the trout we needed and our guides salted and brought in perhaps 20lbs. The largest trout taken weighed 2lbs. Our guides took us to a lake which they had discovered the year before, and which they believed was rarely visited. The canoes had to be carried a considerable distance through the forest to the lake. This genuine lake of the woods covers seven or eight acres, and is mostly shallow and overgrown with lily pads. At one end there is an old beaver house, and around this some clear water of considerable depth, and here the trout lie. In three hours' fishing we took 15½lbs. of dressed trout. The largest weighed 22oz. according to my friend's estimate, which he backed up by his pocket scales; and at this and other times during the week he gained great respect from me by the accuracy with which he could name at sight the weight of a trout. The scales never failed by a single ounce to agree with his estimate. I, however, learned later that these were peculiar scales. They would make a trout weigh anywhere from ¼lb. to 1½lbs. at the will of the manipulator. The mountains rise abrupt and rugged from two sides of the lake, and all its shores are covered with the primeval forest. A small family of beavers live in a house at the mouth of the little stream that feeds the lake. Tracks of caribou and deer were numerous, and a moose had worn almost a path where he came to the water. Three otters were fishing and came within three or four rods of our canoes.

One night we camped in a hunter's lodge on a little island in a lake near the Canada line. While it was yet daylight a doe and fawn came out on the sandy heath opposite our camp. The fawn was in the red coat mostly, and was as playful as a lamb. We watched the antics of this little fellow a long time, till he followed his dam into the woods again. Along this same beach we saw traces of a moose. He had walked along the sand for half a mile. Setting out from the shore is a great rock known to the woodsmen as Gull Rock. Here there can each year be found a gull's nest. Some gulls were circling above the lake. We climbed the rock and found a deserted nest only.

Shortly before our trip two woodsmen going over this route had the fortune to get from one tree an old she bear and three yearling cubs. We found the tree, which was a good-sized pine, well scratched with the claws of bears. The partly devoured body of a deer, upon which the bears had been feeding, lay under the tree, and near by were the carcasses of three of the bears. In the soft banks of the adjacent stream were the fresh tracks of a very large bear, doubtless the father of this unfortunate bear family. The old fellow was seen at the time the others were killed, but kept himself out of danger.

Of grouse we saw very few; they seem to have disappeared from this region, where I am told they were very numerous a few years since. At one place we went ashore to see the work of bank beavers, and saw many stumps a feet or more in diameter from which the beavers had felled the trees. Our guide told of having measured one stump 22in. in diameter.

As our trip was in July we found black flies, mingies and mosquitoes. As a protection against the former I carried a "fly cream" that is freely advertised. I gave it a trial all the first day, applying it with a liberal hand and was slow to believe there was no protection in an article so confidently puffed and backed by testimonials. By night I was so bitten by black flies as to show the marks a month afterward. Had there been no other fly repellant in the party I should certainly have been driven out of the woods; fortunately there was plenty of a mixture of sweet oil and tar, and this really gives protection and comfort. This, however, fails as a protection against the mosquitoes at night. We had two covers of cheese strainer cotton arranged to go over the head and arms and kept away from the face by hoops. But the nights were hot, and the heated breath being thrown back in the face by the too heavy cloth, made the arrangement intolerable. Then I had a canvas hat arranged with veil; this I could fasten over my head, and by putting in some twigs to keep the veiling away from my face so the mosquitoes could not reach me, found protection. The hat was too warm. Arranging this headgear with care and covering hands and feet with the blanket, I listened to the buzz of the baffled insects with serenity and soon fell asleep. After an hour or two I would awake to find I had in sleep thrown off the covering, so as to expose my face, or the twigs had become displaced so as so let the veiling fall on an ear or nose and the exposed member was being worked by as many mosquitoes as could find room. When I go to the woods again I shall have a covering of silk veil arranged over hoops and long enough to tie under the arms. With an arrangement of that kind for protection at night and plenty of tar and oil for use by day I shall have no fear of insets. My companion said there was not one black fly this year where sometimes there were a million, but even his pocket scales won't back that statement.

The second week we camped in a "head-works" on Long Pond, fifteen miles above Moosehead Lake. A head-works is a small shanty built on a raft, and is used by the lumbermen in the spring when they are engaged in rafting logs across the ponds by means of a windlass. Here we found a stove, a good protection from the rain, and there were very few flies or mosquitoes. Fires had run through the timber along the shores and there seemed to be no large game in the vicinity. We saw one otter, and making an excursion up one of the streams flowing into the pond found a beaver dam about 30ft. long and 3ft. high, setting back the water for over a mile. Our guides cut a path through the brush till they could get their canoes in the still water above the beaver dam. Working the canoes noiselessly up the stream we soon heard the loud reports, such as are made by a beaver as he strikes the water with his tail in diving, and coming around a point saw a very large beaver playing in the water. He would swim a little way, then dive, striking the water with his tail in such a way as to make a report like a pistol, and throwing the water several feet in the air. Our canoes drifted within perhaps 30ft. of him before he took alarm and disappeared. The trout were very numerous in this beaver pond. The largest we took weighed a pound, but most of them were from 3 to 5oz. Our best fishing from this camp was at the mouths of streams flowing into Long Pond, and this sport grew better as the water became warmer. One night we built a fire on a point of rocks near camp and fished for eels, baiting with pieces of chub. No eels were caught, but a fine trout of 1½lbs. came almost ashore in front of the fire to take the bait. He was taken about 9 o'clock and after the last of twilight was gone.

Our custom here was to start out about 8 o'clock in the morning and paddle up some stream or to a place in the lake where the entrance of a stream attracted the trout. We took with us a broiling iron, tea pail, some coffee, bread and bacon. After catching a supply of trout, we started a fire, made some coffee, broiled some trout and bacon, took our dinner leisurely, and perhaps by 2 o'clock launched our canoes again for exploring or fishing, or more likely both, and by 5 or 6 o'clock were back in camp.

Here we just rested and grew fat and rugged every hour. None of our friends knew where we were and no telegram nor letter could be sent to us. That is the way to throw off all business. Get where no reports, either good or bad, can come, and if your business place burns up you won't know it till you get out of the woods. My mind was here as free from every care as that of a child.

We captured a young loon about as big as a goose egg. He was a sleek little fellow and was caught in a landing net after being tired out by continued chasing. He would dive as an old one, only he could not stay under so long nor go far. When released he went under and only showed his head at intervals till a long way from our boats. Then we secured two young black ducks. These would weigh about a pound each. They could not fly, and when we gave chase in a canoe they ran ashore and hid in the grass and bushes where we caught them. As they were well matched and seemed able to make a race on their merits, we decided they should have a swimming match. Placed side by side in the water, the birds at the word were released. No sooner were the ducks at liberty than they went down like loons. One we never saw again, and the other showed his bill and the top of his head only, at intervals of two or three rods, till beyond our sight.

The second day of our rest on Long Pond, we met near the foot of the pond two young men, with a birch bark canoe. They evidently looked on us as at least doubtful characters and did not want much to do with us. Our canvas suits did not look particularly clean nor nobby; we had not been shaved for ten days, and the frequent and free application of tar and oil with plenty of sun, gave no doubt some grounds for their evident suspicion. By persistent questioning we learned they were part of a company of four from West Newton, Mass., and were camped in a log-drivers' camp at the foot of the rapids about a mile below, and had a canvas canoe at their camp. We did not wait for any invitation, but having caught trout enough for all, we went to their camp, turned in our fish and had dinner with them. They had hired their canoes at Moosehead Lake and had come up without guides. The birch canoe they had carried a mile through the woods to avoid the swift and broken water, but on the advice of our guides decided to try running the canvas up the river. Taking a part of their luggage we pushed on ahead. After catching as many trout as were needed for supper and breakfast for our whole party, and waiting their appearance until we grew uneasy for their safety, we sent our men back in one canoe to learn the cause of the delay. In about an hour our guides returned with the young men and their canoe. At the first quick water the Massachusetts men attempted to run, their canoe tipped over throwing two of their number into deep water. Everything they had in the canoe was soaked—blankets, provisions, and extra clothing. The party had one good fly-rod and that was lost, also a knapsack containing all their flies, maps, and many little articles the loss of which was an inconvenience. We piloted them to our camp, where there was room enough for all, and did what we could to make them comfortable. They were with us as long as we remained in the woods, and retained possession of the camp a week after we left. I learned by a letter received from one of the party after their return, that the men who guided us ran their canoes back to Moosehead for them, and in an eddy below the rapids where their canoe was capsized, found the fly-rod and most of the other property which had beed lost in the catastrophe.

I think it a mistake for inexperienced men to try to canoe without guides through waters with which they are not familiar. These young men when we met them had not been able to catch many trout, and were very short of provisions. They had nearly half a barrel of hard tack, which was spoiled by the upsetting of their canoe, and that is about all they did have. They would have been forced to make a few meals of hard tack only before they could get to where they could replenish their supplies, if we had not succored them.

One little stream flowing into Long Pond was completely covered up with bushes, but by running a canoe up the stream a little way some short casts could be made under the overhanging brush. The water was clear and shallow, and from his position in the canoe the caster could see the movements of every fish. Usually a dozen or more trout lay just where the flies could be dropped over them. Sometimes twenty casts would be made before a trout would take any notice of the flies, then a trout of a quarter or half a pound weight would come up as if that particular fly was what he had been looking for for a long time. In this way a half dozen or more would be caught, after which no more could be coaxed to rise. Off the mouth of another stream I hooked a trout showing such energy and strength as to convince me I had the largest fish of the trip. The canoe was run away from the weeds and grass into the deeper water where the trout was hooked, and the 6oz. rod bent nearly double as it checked the rushes of the gamy fish. When this trout was netted he weighed only a pound, but the cause of his apparent strength was manifest. He was hooked through the back in such a way as to give full play to all his strength.

At an early hour on the Friday morning of our second week in the woods, we packed our camp duffle and turned our faces homeward. That night we were at the hotel at the Forks. The next day Skowhegan was made in time for an early supper, and Waterville, eighteen miles further, in time to take the night train for Boston, which was reached at 6 o'clock Sunday morning.

I had seen a bit of wild nature, and although the 3 and 4lb. trout I hoped and expected to see did not show themselves, I was satisfied with the trip. The experience of the friend who took me to his favorite outing place served to make sure a reasonable degree of sport, and the kindness and generosity that are as natural to him as the love of the woods made him the king of camp companions. I shall not soon forget the special care he took that I might not, by my inexperience, lose any of the sport or fail to see everything of interest. Our guides were skillful canoemen, cheerful, tireless, uncomplaining workers and pleasant companions. They did all they could to make pleasant our vacation, and more than earned the moderate wages they asked. A canoe trip is free from the fatigue of tramping; and never being tired, the canoeist is always in condition to enjoy all the pleasures of the wilderness.

The trip of which I have written occupied sixteen days from Boston. The cost was about $75 apiece exclusive of money spent for tackle, etc., before starting. In a trip of this kind one learns much about the lumber business and the mode of life of the people engaged in it. Another summer I hope to start again, rod in hand, for the Maine woods.

T.

Providence, R. I.

Our New Alaska.—The large sale of Mr. Charles Hallock's book shows that this great northwestern possession is attracting the eyes of the world. Besides giving a vast amount of information about Alaska and its resources, the graphic pen pictures of the country, the people and their ways, and the ways of Alaskan tourists, help to make this volume natable among all books relating to the subject.

TO THE MEMORY OF ANGLING WRITERS.

OUR English angling friends are to be commended for the interest which they manifest in doing honor to those of the craft whose writings have been serviceable and who have passed away. A short time ago we printed an appeal for subscriptions to place a memorial tablet in Winchester Cathedral to the memory of Izaak Walton, and now a similar appeal is made to honor the memory of Francis Francis, the subscriptions being limited to one guinea. No similar movement has ever been made in America, although we have had a Norris, a Bethune, a Dawson and a Scott, each of them revered by our literary anglers, and well worthy of being remembered in marble as they are in the hearts of those who knew them, either personally or by their writings. In our bustling American life we are too prone to neglect these honors to those who have instructed and interested us in the gentle art. In England the memories of such men are kept green by the angling clubs, which, by the way, are more social in their nature than our own, but if the proposition to make the Rod and Reel Association something more than a mere organization for holding an annual fly and bait-casting contest is carried out, we hope that in time some steps may be taken to do public honor to the famous native anglers who have passed away.

At the late annual dinner of the London Fly Fishers' Club, Mr. William Senior, well-known under his *nom de plume* of "Red Spinner" rose to propose the memory of Francis Francis, "and observed that, even upon festive occasions like this, it was necessary sometimes to take cognizance of the cloud as well as the sunshine. It was the first time in the history of the club that they had been called upon to drink a toast in silence, and he hoped it would be a long time before they were called upon again; but the committee had decided, and he believed rightly, that a tribute ought to be paid to the memory of Mr. Francis Francis. (Hear, hear.) It was unnecessary to say who Francis Francis was. (Hear, hear.) Many present had taken their earliest lessons in the 'gentle craft' from him, and the older members had followed with the greatest interest his name and writings during the past thirty years—first in the sporting newspapers, next in the magazines, then in the more solid literature of the publisher's printing press. The amount of pleasure and instruction which his works imparted, and the influence which they exerted, could hardly be estimated or described. For Mr. Francis was essentially a full man, who had a thorough knowledge of his subject, gained in the best of all schools—experience. He had, too, a vigorous style, and was fearless to the backbone; and he always aimed at the very highest standard. (Hear, hear.) There was a desire to perpetuate his memory by a tablet in Winchester Cathedral, where Izaak Walton was buried, and Mr. R. B. Marston, who was secretary for the good work, had already received the sanction of the Dean. (Hear, hear.) As Mr. Francis was a Hampshire man, and was a good deal about Winchester—the trout knew that pretty well—and as the name of Izaak Walton was also associated with the place, the committee thought that they could not do better than carry out a representative memorial in that way. (Hear, hear.) * * * * There was an obvious thought connected with this toast. Sooner or later the day must come when the names of all present would be a memory too; when they would have ceased their pleasant wanderings by lake and stream, among all the sweet surroundings of nature, which they loved so dearly, and when they must leave their rods and creels behind them. But whatever cause else they might have for regret, the sport to which they were all so devoted would surely be a subject for nothing but the most pleasant recollections. (Hear, hear.) Their friend, Francis Francis, must have had a good slice of enjoyment during his career, thanks to his rod and line; and it was a comfortable reflection that they could refer to the source of that enjoyment without the shadow of apology, and with clear consciences. And so, believing they were all in full accord as to the great talents and the manly straightforward character of the master whose loss they deplored, he asked them to drink to the memory of Francis Francis."

The circular from which we have taken the above says that subscriptions to the Francis Francis memorial fund may be sent to F. M. Halford, treasurer of the fund, 35 Inverness Terrace, Hyde Park, London.

KILL FISH WHEN CAUGHT.

Editor Forest and Stream:

The first time Adam went fishing in the brooks of Eden (I assume they were trout brooks), he must have caught a "big lot," and, of course, Eve experimented in cooking them. But I venture to assert that poor Adam ate a barrel-full of half raw fish before she discovered the grand secret—known even now to but few—namely: to cook them, and cook them, and cook them! There's another thing I am sure Eve did—and all other old bachelors will join me in the opinion—namely, she gave Adam a terrific curtain lecture on his needless cruelty to the poor fish, in twisting and pulling the hook out of their gills, and then allowing them to smother—to die by slow degrees. And an old maid friend suggests that no doubt the wily Adam arose and smote his breast and swore a big oath, he'd never, never do it again—but went on just the same as before, next day! Be that as it may, the modern Adam needs a lecture badly, and as the self-constituted but humble representative of all the modern Eves, I propose to read him one.

In Russia and Japan fish are injured as little as possible, for they are usually preserved alive in a tank until wanted for the table; then, if it be in a hotel, they are exhibited alive to the guests and instantly killed. In some parts of our own country this matter is equally well understood. For instance, in Annapolis, Md., no housekeeper will buy fish that are not alive and active, and hence the market dealers keep them in large tanks until wanted. As for the cooking there, I cannot speak with great certainty, for my experience in several visits has been limited to rockfish and sundry toothsome crabs (for which latter that city is justly famous).

On a yachting cruise off the eastern end of Long Island I learned how to treat and cook a fish. Our captain instantly killed the first bluefish caught, dressed it, cut it into broad strips crosswise, salted them and then dropped them into boiling fat; then he let them boil à la doughnuts, say half an hour, until the expectant guests howled with impatient longing and stomachic pain. The result was a fish meal that seemed a new revelation, for I never ate such fish before. It was brown and crisp and done all through—that's the secret. Upon returning home I reformed the raw-fish-loving sable cook, but somehow the taste of that bluefish didn't materialize. At first, I attributed it all to fresh sea air, etc., but finally, by experiment, I found that fish allowed to die slowly deteriorate more than those killed speedily, and then the bluefish came again in almost his original toothsomeness.

Thus much for the case, viewed from a purely selfish standpoint. Is there no other reason for not torturing a fish in extracting the hook, and also for killing him at once? Let us reason together. Has a fish no feeling we are bound to respect? Putting ourselves in the place of a fish, how would we like to have a huge barbed hook turned and twisted in, and finally pulled out of our lungs, throat, eyes, etc.? Fish have not our highly-developed nervous system, but we should remember that wherever red blood is there is sensitiveness, and in general the degree of sensitiveness corresponds with the quantity of blood in a given area or quantity of tissue or flesh. Now, a fish's throat and its surrounding parts are full of red blood, and it ought to be clear to any one, from that fact alone, that the pain following a piercing, rupture, or tearing of these tissues or blood vessels must cause pain or even agony to a fish.

I lately discovered a work entitled, "The Art of Fishing, etc.," by Oliver Raymond, L.L.B., printed in London by the Queen's printers, which treats of cruelty to fish in this wise:

"Kill the fish directly you shall have caught him. By killing the fish at once, you not only curtail his suffering but you secure to yourself a better fish. For, fish killed on the instant they are caught, eat finer than when left to die a lingering death. Should you wish to know why, I will tell you, and may the information work on the feelings of those merciless fishermen who leave their fish, when caught, to die by slow degrees, either half smother in their panniers, or strung on a stick, with their torn and bleeding gills hanging down their tormentor's sides. A fish which dies by degrees, wastes itself, and why? From pain and suffering! If you observe them, they seem to sigh, their flesh becomes flabby—so much so that when they are dressed they have lost, in a measure, that firmness which a sudden death like that I have mentioned, would have spread over the whole fish. Thus there are two reasons why the fish, captured whether by net or hook, should be killed immediately—the more important of the two that he suffers no unnecessary pain; the other, less important, that he will eat the better." To kill fish quickly the author recommends this plan: "Be provided with a staff about a foot long, which you can carry in your side pocket; with this give the fish a smart blow on the back of the head, close to the neck, and he will be dead in an instant. You may then take the hook out of his mouth, but not before if you would follow my merciful directions."

So much for Mr. Raymond, but whenever his plan is inconvenient I would suggest this substitute, namely, put a forefinger in the fish's mouth and the thumb just behind his head, then give a sudden bend backward, which will snap his backbone and instantly end his sufferings.

Another noted authority, Col. E. Z. Judson, better known by his *nom de plume*, "Ned Buntline," wrote from his forest home in the Adirondacks, that "Playing a trout for the mere fun of the thing is unnecessary torture, besides," he added, "you frighten more fish than you secure by the process."

Many will not eat the flesh of a bullock killed by accident, and few or none will eat that of a bullock which has been smothered. Yet, by a sort of inconsistency, the eating of smothered fish is the universal practice; for a fish taken from his native element, dies for want of air—from inability to absorb oxygen; and a man plunged into water dies for the same reason—by smothering, as Desdemona did.

It is needless to carry the argument further. Enough has been said to show that the subject commends itself to us, not only from humane considerations which all fishermen should gladly, even zealously regard, but from the purely selfish standpoint of improvement in the quality, palatableness and healthfulness of one of our principal articles of food. POTOMAC.

THE CLICK AND DRAG ON REELS.—Vermont, April 22.—In regard to click and drag being placed on the left hand side of reel, we suppose that "Jo" wishes them so placed that he can work the click and drag when the spool is revolving. This is a good idea and one that I have wished for myself and that wish is about to be gratified, as I have one ordered that has these essential points. We were shown a few days ago a new model of the Henshall-Van Antwerp. In this new model the click and drag were worked from the edge or rim of the plate, and are so placed so as not to spoil the beauty of the reel and not to interfere with the free running of the line, and both click and drag can be operated while the handle is turning and the spool is revolving, no matter how rapidly. The old unsightly "knobs," by which the click and drag were formerly operated on handle side, are discarded. We understand that this model has been sent to the Patent Office and as soon as protected by patents the manufacturer of them in this form will commence and we hope to have one to try the first day of June, which is the opening day for black bass fishing in this State, and is fifteen days earlier than last season. The snow is yet deep on the hills and the streams are full of snow water, and I am afraid that no trout will rise to my flies the first day of May; but the fishing fever is running pretty high. —OMPOMPANOOSUC.

THE COMING TOURNAMENT.—The annual tournament of the National Rod and Reel Association will take place on Harlem Mere, Central Park, New York city, on Wednesday and Thursday, May 25 and 26. The prize list should soon be made out and the score books issued, so that they can be sent out at least a week before the meeting. This has never been done; in fact, on one or two occasions the score books were delivered by the printer on the grounds on the morning of the opening day. This delay was caused by holding the prize list open too long before arranging the classes and sending the score book to the printer. A goodly number of prizes have been offered, and we look for an interesting tournament.

MESSRS. ABBEY & IMBRIE send us a new price list of the thousand and one angler's appurtenances, necessities and luxuries, manufactured by them. They also issue a 1400-pictured illustrated catalogue of their goods.

PICKEREL PROTECTION.—There may be, and probably are, waters in which it is desirable to protect the pickerel, *Esox reticulatus* and *E. lucius*, but there is no good reason for their protection in the Northern and Eastern States, where better fish, such as trout, salmon, etc., abound. In New York they are protected in Lake George from Feb. 15 to June 15, and receive protection in some other States where there are better fish for them to destroy. These species are well known to make a diet of fish almost exclusively, the few frogs which they swallow being an unimportant item in their diet, and their destructiveness is out of all proportion to their value as either food or game. It seems that their protection is being agitated in Maine, and the Augusta *Journal* very sensibly protests against it. In a recent article it says: "It was only the other day that Mr. Hiram Robinson, of Sebec village, fishing with a hook and line near the mouth of Bear Brook, on the north side of the lake, caught a pickerel. Seeing what appeared to be the extremity of a fish's tail in its mouth he drew from its stomach the partially digested body of a landlocked salmon 15in. long, which must have weighed quite 1¼lbs. when taken in. After the removal the pickerel weighed 3¾lbs."

HE DOES NOT HIE.—With the coming of the first days in April I found myself oppressed with a yearning after a shadowy something which, as the thermometer expanded his chest in his endeavors to enjoy all the warm fragrance of the sunny days, gradually assumed body and outline; and I thought of the time when I should hie (any other method of locomotion being too prosaic for a fisherman) to the green pastures, pluck a mustard can full of early worms, and with great expectations and expectorations (for I am a fisherman of the old school), wander beside the croaking creeklets in search of my mighty foe—the chub. Alas, my lot! The snow falls, carrying with it my dreams, and changing into waterfalls. My enthusiasm drifts beyond reach. I wander in mind instead of in green fields; I select a dark spot under my desk as a target instead of the mustard-canned worm mentioned above; the steady flowing of my fountain pen is all that reminds me of the creek's croak; no "rise" ripples the surface of my slough of despond, not even in salary, so "striking" is useless.—F'LIN.

"NESSMUK'S" POEMS.

He writes with ease and often with elegance, and has a keen sense of humor.—*New York Sun, April 3.*

Those of our readers who love sport with rod and gun, and there are not a few of them, will be very much pleased with a handsome volume of poems by "Nessmuk," the veteran contributor to FOREST AND STREAM, which has been issued under the title of "Forest Runes." They will bring to mind visions of camps and hunts gone by, and whet the appetite for the next venture, and are altogether well worthy of purchase.—*Dundas (Ont.) True Banner.*

Of these verses, now gathered into this book, the best are, of course, those which refer to woodcraft, to fishing, to hunting, and to the description of landscapes. Here and there there are crude lines, but the genuine poetry is there, nevertheless. When he goes to other themes "Nessmuk" becomes less poetic, but some of his fun is very good. Any one who loves outdoor life, and who has sympathy with the simplicity of nature, will heartily enjoy occasional dippings into these modest pages of "Nessmuk's" "Forest Runes." In some moods we have found them soothing balm in Gilead.—*Denver Evening Times, April 13.*

A GOLDFISH POND.

THOUSANDS of people who annually retire from the city to the country during the warmer months of every year, invest and have invested in suburban lots and dwellings; large sums of money are lavished by many of them upon objects which really bring them little or no satisfaction in the beginning or the end, while the one feature of a handsome country place, which, when well undertaken, affords the most rational enjoyment, is seldom or never thought of. This is a goldfish pond.

The establishment of a successful goldfish pond is not difficult, and it is attended with a mere trifling expenditure of money, if sensibly conducted from the start. There is nothing difficult or mysterious in its management. If it is properly excavated and planted with appropriate trees and shrubbery on its banks, it will never call upon its owner for a single dollar's outlay, further than the first cost of that digging and planting. A small pond involves an expenditure of $50 to $100; a larger reservoir between 150 and 200ft. in length and 40 to 50ft. in width should not cost more than $250, and can be well established even for $150.

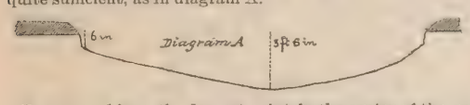
Nothing alone and of itself on a country place begins to afford the entertainment and pleasure with which a handsome goldfish pond rewards its owners. The older members of the family as well as the children love to chase around its grassed banks and recline beneath its shady points while following the movements and play of brilliant color which a fleet of goldfish always afford when the hot sun of July and August shines upon it.

After an experience of sixteen years, the writer feels warranted in calling the attention of his fellow men, who may, like himself, delight in a well ordered country home, but who very likely have not given the subject of a goldfish pond any serious consideration, simply because it is generally believed to involve a large expenditure of money to establish and to keep up.

SECTIONAL VIEW OF POND.

WHERE TO PLACE THE POND.—Locate your pond as near to your residence as the configuration of the lot and its landscaping will allow. It should be placed so in order that the

stir and animation around the dwelling may aid in causing herons, kingfishers, serpents and muskrats to avoid it. It should be so placed as to receive all that rain water, which runs in the gutters of your driveway and your footpaths; this rain water affords the goldfish their richest and most acceptable food.



Never locate the pond so that a brook or stream of any size, no matter how small, flows into it. If you do, then the sudden cloud bursts of June and July will cause inundations, and again the water co rses always lead an endless string of natural enemies into the ponds. Goldfish thrive better in still water; they prefer the rain water to spring water.

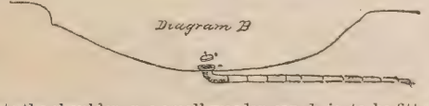
HOW TO MAKE THE POND.—The site of your pond being located, then mark out on the surface of the earth its exact superficial proportions; make it in some agreeable outline of curves and points and not a common square or oval hole (which has a most painful artificial look). The pattern of the writer's pond is herewith given to illustrate his meaning, the constriction in the center is not accidental, but it is purposely made, since it creates a current or constant circulation of the water; for when the sun shines it alternately heats the water in the two extremities of the pond as it passes over during the day, owing to the shading of the trees planted on its banks for that object. At this narrow center of the pond a current is always setting up or down, as the water is heated by the sun at either end. In this current young goldfish love to exercise, swimming against it and feeding as they do so.

If you have room, make the ground covered by your pond at least 100ft. in its greatest length, but even a short one of 50 will be large enough to afford very great satisfaction. It is not advisable to make it over 150ft, even where you have the requisite space beyond that limit.

Two able-bodied men with spades and a horse hitched to a light single wagon arranged with "dump" boards, represent all the machinery required for excavating the pond; the first or upper 6in. of soil should be taken off at the start and laid back over the surface of the banks surrounding, evenly distributed, except at four or five intervals where it can be heaped so as to be available for that rock-work planting, which is to be undertaken after the digging is completed.

The men should dig gently sloping in from the edges to that point of greatest depth in the middle of the pond, which in the best ponds should never exceed 4ft., while 3ft. 6in. is quite sufficient, as in diagram A.

Be sure and keep the deepest point in the center of the excavation; it thus enables the fish to retire wholly from the jar and danger from the close proximity of the banks to a safe and quiet retreat at any time in the day, and at night they will always settle there and be thus beyond the reach of wading night herons.



The best soil in which such a pond can be made is blue or yellow clay, for it holds the water as though a coat of water lime were placed on the bottom; but any soil can be successfully employed as a good reservoir that is not gravelly. A bed of gravel will not do, and it is idle to concrete. Even if water liming were practicable, a covering of five or six inches of gravel soil would be required for the bottom thus treated, in order that the many small forms of life which supply fish food might generate therein.

When your excavation is completed, put your level on the banks and see that they nowhere are over a foot or eighteen inches above the low water level of the pond for a distance of at least fifteen or twenty feet back from the edges. This is necessary to discourage the burrowing of muskrats.

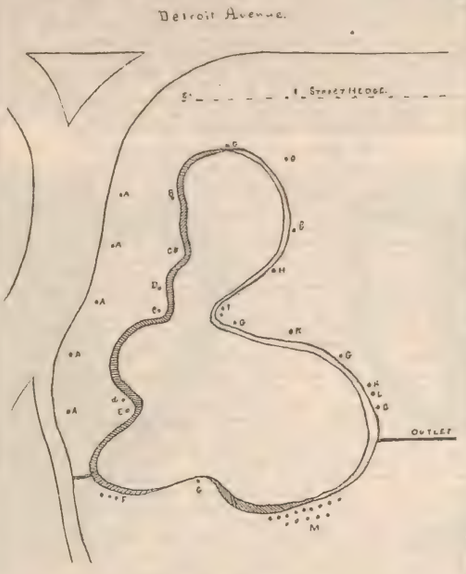
In order that the rainwater that runs in from your driveway and footpaths may enter the pond neatly, get a few joints of common 6in. tiling pipe and lay them in connection with the road gutters, and let the outlet pipe, also of 6 or 8in. tiling, be laid so that it keeps the water at just that level on the banks which you desire. This tiling can be procured for a mere song, only three or four cents a foot. Both the inlet and outlet pipes should be so laid as to be empty when the water is at the right or established level. This prevents bursting, caused by freezing in the winter.

Over the mouth of the outlet pipe a wire netting must be placed with a mesh not larger than 1-6in., or much smaller. This prevents the wholesale departure of the young fish when a shower or rainstorm causes a full overflow to boom through the pipes. Great attention must be paid to the screen, and care taken to observe often that it is not misplaced or rusted out. A piece of wire cloth will last several consecutive years if it is well painted, and if not, must be renewed every summer. A whole yard of the wire netting, enough to last twenty years' renewal, costs only seven or eight cents.

If your pond is so located as to be easily drained from the bottom, then a deep tiling should be laid with its head in the lowest depression of the excavation and graded so that the "fall" will be good and uninterrupted. This head of the drain should have a shoulder and be in the shape as shown in Diagram B.

Into the shoulder, *a*, a small wooden cap, *b*, is to be fitted snugly, with a spike driven into its center. This cap prevents the overflow of the water, and it can be easily found when the pond is full, and lifted by the spike handle whenever it may be necessary to draw the water off. Then stop up the other end of the drain pipe—it will only be filled with silt or else frozen and bursted.

If your pond is located so low in comparison with the surrounding country that this drainage is not practicable, or in other words, involves the digging of a long and costly tile drain ditch, then it is best not to do anything of the kind, for it will not be difficult to empty your pond with a good force pump wherever the rare intervals arise in which it is necessary; the writer's pond has been drained only once in sixteen years, and that because he had to take carp and sunfish out and clean the pond for goldfish exclusively.



HOW TO PLANT THE BANKS.—The digging thus completed and the inlet and outlet tiling laid, the next and the most important step to be taken in order is that of properly setting trees and shrubbery around the borders of your pond; these trees are to grow so as to shade the waters of the pond in sections, as the sun passes over it, and that shading rests and animates the fish as well as creates that circulation already spoken of; the leaves, as they fall from the trees every autumn, settle to the bottom of the pond and create warmth there during the winter, and in settling from hundreds of extemporaneous grottoes in which the fish love to play and secrete themselves when disturbed; these leaves also play another very important part; they, in settling upon the bottom, form a mat which smothers all water weeds and grasses, and thus keeps the pond clear absolutely from these nuisances which choke up the water and offend the eye, unless they are frequently removed from those ponds where no such tree planting has been made.

The roots of the willow and spruce grow out from the banks into the water as a mat of thousands upon thousands of fine delicate tendrils interlocked and spreading in the water for several feet; in this growth the happiest shelter for the spawn and young fish is afforded, and thus all necessity for having those disagreeable water weeds in the pond as a means of enabling the fish to successfully spawn, is done away with, and the water kept clean and sightly.

The general location of these trees suitable for planting around the ponds is defined in the accompanying plan of excavation; the evergreens make an exceedingly agreeable contrast in winter, and are not less so in summer. The several points where rockwork and shrubbery are indicated require but little heaping of soil, rather use broken stones and boulders freely since the temptation for the muskrat to burrow will be greatly lessened. The "Balm of Gilead" poplar trees grow to a great height and do not cast a dense dark shade, while their long roots coil and bind around the banks to the very best advantage. In ten years these trees will have grown so as to present a most pleasing picture, setting the pond off as with a handsome frame. The shade is grateful both to those who stroll around the pond or sit for hours watching the sporting fish, and also to this life under the water.

These trees can be found in any nursery with the possible exception of the Balm of Gilead—that can be procured at any of the large nurseries. All the planting should be done in the spring time, just as soon as the frost comes out of the ground. It is wisest to get small trees rather than large ones—those of two and three years growth make the most successful transplanting. In five years time they will have made handsome growths, and by the lapse of ten years be perfect in shading and beauty.

HOW TO STOCK THE POND.—After the pond has been completed, as above indicated, the next step in order is to carefully rake over the soil surrounding it, and seed it down with blue grass and a little white clover mixed together, then after the water has become fairly settled to put a dozen or two adult goldfish into it, not later than the 15th or 20th of May; out of this number of goldfish at least two or three will be of the opposite sex. It then becomes necessary to afford these fish suitable spawning facilities, since the new pond is entirely bare of vegetable growths. In any low or swampy spot you can take up bunches of rushes and sedge

PLAN OF TREE PLANTING.

A. Cherry. B. Willow. b. Willow, American. C. Maple. D. Norway fir. d. Balsam. E. Arbor vitæ. F. Hemlock. G. Balm of Gilead. H. Quince. I. Rockwork with honeysuckle. K. Norway spruce. L. English privet. M. Rockwork grotto, mountain ash, hemlock and tree honeysuckle.

grasses by the roots, earth and all; set these down in the water of the pond at the edges so that they can be reached at any time without difficulty; these transplanted grasses and rushes will grow well, and the fish will freely spawn among them, the eggs adhering.

TIME OF SPAWNING.—Several days before the female goldfish is ready or ripe for the extrusion of her eggs, she will be observed to swim in restless rapid rotation around and through the water plants; one or two or more males will be closely following her; they are apparently insensible to all danger, and must be carefully guarded from kingfishers and herons at this period, which lasts several days, perhaps a week. As soon as the eggs are deposited, the fish become very quiet and retire to the depth of the pond, where they apparently go to rest.

In two days time, if the sun shines brightly on the water, after the eggs are dropped, they hatch; if it is a cloudy spell then a week or even ten days will elapse before hatching; the eggs of the goldfish are no larger than the heads to a paper of medium-sized pins, white and translucent; they fall and adhere firmly to whatever they touch. When first hatched, the young fish as soon as it absorbs the tiny yolk bag which belongs to it, begins to bodly swim out into the pond and greedily feeds upon the microscopic animalculæ that warm rainwater ponds afford in abundance.

The growth of these little fish is exceedingly rapid, so that by the lapse of three weeks they make a very prominent feature all by themselves in the pond as they dart actively hither and thither in feeding. Goldfish hatched in a rainwater pond like that of the writer, reach the length of 4 to 6in. in a single season; they do not, as a rule, show much color until the beginning of the second year of their lives; then the variation observed in a fleet of several thousand makes a most beautiful picture of graceful extremes in color between the olive green of immaturity and the rich, "old golden" carmine of adolescence.

From this time on the goldfish will require no further attention; they will grow, multiply and increase to countless numbers, and if the rainwater supply is enough to keep the pond well filled they seem to always have enough to eat; at least they refuse all artificial food which is thrown into them—the same which they so greedily eat when in aquaria.

THE ENEMIES OF THE GOLDFISH POND.—The habit of the goldfish which makes it so attractive in the water is also that habit which makes it so liable to destruction from natural enemies, that habit is the one which orders its graceful and prominent swimming at the surface of the water, where its luminous back is almost raised into the air; this exposure of its person attracts the kingfisher and all the herons. These birds once drawn to your well-stocked pond will never leave it alive as long as a fish remains in it. They must be watched and shot. Every morning early for a few weeks in May and June, the pond should be cautiously surveyed and every one of these birds, which will be apprehended in greater or less number, should be shot. Again, in September, as these waterfowl go South, they are likely to drop down upon the pond; they are the very worst and most destructive agencies that the goldfish are exposed to.

If the banks of the pond are properly kept, the grass will always be cut short and the edges of the same neatly trimmed right down to the water; this renders all danger of lurking water snakes out of the question, since such serpents will never remain around or in a pond where they cannot crawl into concealment.

Carefully avoid the introduction of any other small fishes, minnows and the like—they will most likely develop into something carnivorous, and render the troublesome task of drawing off the pond necessary in order to get rid of them. Any turtle, soft shell or snapping, must be removed, as they are expert fishermen. A turtle will lay at the surface of the water, and as the young fish swim around they come in reach of the long neck and wide jaws of the reptile, which are darted out with inconceivable rapidity from the shell at them, seldom failing to catch the particular fish aimed at.

The nuisance of muskrats is one which the owner of a gold fish pond must encounter sooner or later. The use of a common steel trap will run them out. The traps are best set in the water, directly at the submarine entrance of the rats' burrow. These water rodents soon learn that they are being followed up and suddenly decamp. They forget, however, and will return in a few weeks or months if not again trapped. They do not attempt to catch fish when they are able to roam around and thus secure vegetable food; but when the depth of winter deprives them of that opportunity to a very great extent, if not entirely, then the fish will surely suffer, inasmuch as the chill water renders them stupid and sluggish.

A great deal has been said about tadpoles, about frogs and the larvæ of certain water bugs and the bugs themselves as all being very active and destructive enemies of the goldfish. They are not; they certainly destroy eggs and the young fry to a small extent, but at the same time they afford food that the goldfish thrives upon, which more than offsets their capacity for evil. Watersnails, *physa, linnea* and *paludina*, are always abundant in a good pond; they may also destroy a few eggs, but they are the scavengers of the pond, eating all decaying vegetable matter as well as animal, in which service they are assisted by the tadpoles; they keep the water pure, especially during warm weather.

Such, in brief, is the simple plan and methods required for the establishment of a successful goldfish pond, which is of all the surroundings of the author's country home the most enjoyable single feature on the place. After the trees have become nicely grown and the sod well established, the banks of such a pond are not only attractive as a landscaping study, but are the most agreeable benches on which to loll during the heated summer solstice. HENRY C. ELLIOTT.

ROCKPORT COTTAGE, Cleveland, O.

NEW YORK LEGISLATION.

ALBANY, April 26.—Assemblyman Fitch deserves great credit for his efforts to advance the bill to provide for the erection of a fish hatchery at Cold Spring Harbor and making an appropriation therefor. He has had his resolution in his hand almost every day for the past three weeks waiting for a chance to order the bill to a third reading. In its present shape, in the committee of the whole or "general orders," as it is called, he does not stand the slightest chance of having it passed unless the session of the Legislature should be unduly prolonged. Mr. Fitch has not been able to advance the bill because the moment he proposed to do this somebody else wanted his own bill to be advanced too; and so it was impossible to carry out his wishes.

The Legislature has done very little during the past week in the way of advancing bills. The Assembly Game Committee has ordered to a third reading Giese's bill exempting the Niagara River from the law of 1879; and also Sheehan's bill in regard to salmon in the Great Lakes.

The first bill to become a law was the one (to protect the planting of oysters on Long Island) introduced by Senator Fagan and submitted for one already introduced in the Assembly.

The Assembly has finally passed the bill introduced by its game committee to promote and protect the cultivation of shellfish within the State waters of the State of New York and to raise revenues. The bill was originally introduced by Assemblyman Reeves. Then it was taken in charge by the game committee, who gave several hearings upon the same. Finally the committee drew an amended bill, creating a commission consisting of Commissioner Blackford and two commissioners to be appointed by the Government (one of whom shall be an engineer), who are to have charge and control of lands under water belonging to the State, suitable for oyster planting, and shall be empowered to lease the same at nominal price per acre, not more than 250 acres to be so leased to any one person. The bill was strongly antagonized, and efforts made to exempt all the counties which would be affected. The only amendment adopted was that offered by Mr. Haggerty, exempting Kings county from the operation of the act, there being very few oyster lands in that county.

Mr. Hadley said that the act was not experimental. Rhode Island and Connecticut had had such a law in operation for six years, and oyster production had been quadrupled. Other oyster producing States are about to enact a similar law.

Mr. Fitch said that the House had already set its face against any new commissions. The bill would not only take away the public lands from the little oystermen, but would place in the control of a commission not elected by the people, responsible to nobody, and under no bonds, thousands of acres of land under water now controlled by the State, and from which any citizen can now gather oysters. This bill will create and foster an immense monopoly.

Mr. Erwin declared that its effect would be exactly the reverse of a monopoly. The bill provided against that. Its effect would be to bring into the State treasury half a million dollars. Mr. Erwin's opinion of the oystermen was not very high. "Why, they would steal the whole State of New York, New Jersey and Connecticut if you let them," said Mr. Erwin. "They came very near getting away with the whole ways and means committee, body, soul and clothing."

The bill was passed; ayes 80, noes 17. Pending further amendments that are likely to be made in the Senate, the correspondent of the FOREST AND STREAM will hold the bill until there is no chance of its being changed from its present condition.

AMERICAN FISHERIES SOCIETY.

THE executive committee have made a change in the date of the next annual meeting of the Society, to be held at Washington. At the last meeting the dates fixed, on motion of Mr. W. L. May, vice-president of the Society, were the 12th, 13th and 14th days of May, 1887. It was the intention of that gentleman, and others, to have the meeting held on Tuesday, Wednesday and Thursday of some week in May, and a member produced a calender showing that these days fell on the dates named, but it must have been a calendar for some other year. On discovering this Mr. May wrote to the recording secretary, and as the date of meeting was close at hand, and no preparation had been made for notification of members or a request for papers sent out, correspondence was immediately opened with the officers, of whom there are twelve, and at present writing eight have favored Tuesday, Wednesday and Thursday, May 31, June 1 and 2, one has voted for the original dates, and three have not been heard from. Therefore the executive committee have decided that the meeting will be held in Washington on these days last named, and a notice to this effect will soon be sent out.

THAT NEW TROUT OF SUNAPEE LAKE.

Editor Forest and Stream:

In your last issue I said something on the embryonic markings of this trout, which was intended to elicit some information on the coloration of the embryo blue-backed trout of Maine, and confirm or overthrow my suspicions that the Maine fish did not have, in the embryo state, the white line on the two outer rays of the caudal fin, a suspicion that was based merely on the lack of any remembrance of such colors. Mr. E. M. Stilwell, Commissioner of Fisheries of Maine, writes me that he cannot make any observations on the coloration of the embryo *S. oquassa*, because there are none in the State hatchery, and it is nearly ten years since they hatched any of this species. Therefore we are no nearer a conclusion on this point than we were before.

As th e object of my former article was to get at the truth and not to confirm any theory as to whether the big Sunapee fish was identical to or distinct from the little blue-backed trout of Maine, I regard the matter as standing where it did and do not wish to be quoted as taking sides in the discussion further than to say this: If the blue-backed trout has not, in the embryo stage, or before the absorption of its sac, white lines on the upper and lower sides of its caudal fin, then the two fishes referred to are distinct. My statement was that, while I had hatched the blue-back I did not remember to have seen this mark. I can now say the same of the Michigan and European grayling. I have just hatched some of the latter which have the white margins on the caudal, referred to above, but do not remember to have seen the marks in the Michigan fish which I hatched many years ago. FRED MATHER.

FIXTURES.

DOG SHOWS.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 5 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

Sept. 1 to 3.—Inaugural Dog Show of the Pacific Kennel Club, at San Francisco, Cal. J. E. Watson, Secretary, 516 Sacramento street, San Francisco, Cal.

Sept. 12 to 17.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary.

Oct. 12 and 13.—Stafford Kennel Club Show, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4968.**

THE PHILADELPHIA DOG SHOW.

THE show held last week in Philadelphia was the fifth given under the auspices of the Philadelphia Kennel Club, and we have pleasure in being able to say was a success in more ways than one. The entries were not numerous and this may be accounted for by the club's tardiness in getting out the list of judges. In regard to the quality of the exhibits it was excellent in some classes, but below the average in others. As to the management, it was one of the best conducted shows we have seen in this country, and much credit is due Mr. John Read, whose civil tongue, vigilance and forethought have won him a host of friends.

The benches were nicely arranged and of course were supplied by Spratts Patent, whose system of benching is so vastly superior to all others that no good show can afford to overlook it. The same firm did the feeding and we did not hear a complaint. Undoubtedly Spratts Patent has come to stay.

Several of the judges were novices at the business and we have been compelled to criticise some of the awards rather severely, especially those in the dachshund class, but much of the work was well done and reflects credit to the debutants. The show was boomed for all it was worth in the local papers and the "gate" showed a nice balance at the right side of the books.

It is the early bird that catches the worm, and if Philadelphia is alive to her interests she will come out in good time next year with a liberal premium list, a strong lot of judges and then take her place at Boston's right hand. We wish her the success she deserves.

MASTIFFS—(MR. BARLOW).

The quality of these classes was not what we expected to find, and we know the cause of the falling off. Mr. Montgomery, whose name appeared in the catalogue as judge, did not feel equal to the task of doing justice to the classes, and Mr. Barlow was asked to act in his stead. The judges' names should be advertised before the entries close, and recent events have shown that the mastiff men have fully made up their minds not to exhibit their dogs unless experts are appointed to handle them. Exhibitors no longer care to pay a thousand dollars for a dog to have him experimented upon by "jolly good fellows," and they are right. Mr. Montgomery acted wisely and honorably in refusing to handle the classes. But why in the name of common sense and justice did he ever undertake the task? His name as judge must have reduced the entries by at least one-half, and it was not until too late and the mischief had been done that he fully realized the injustice he had done himself, the club and intending exhibitors. There were four entries in the class for dogs, and the champion classes were both empty. Lion II. was Mr. Barlow's choice for first place. He is not a good one. Muzzle and ears too light in color, skull lacking in volume, muzzle too long and not of correct formation—too shallow and narrow—back hollow, quarters light, tail longer than we like and not well carried, forelegs not well placed and not quite straight, good feet, moves well. We would have placed him third. Brother, second prize, was in his right place. This dog has fallen away considerably since we last saw him, and his head color has gone. Skull of fair shape, would do with more bulk; muzzle too long and lacking in volume, eyes and ears fairly good, chest, loin and quarters above average, back hollow, hocks not quite right, tail carried too high, forelegs not quite straight, good coat and fairly good feet, a little dog. Wacouta Nap, third prize, was our choice for first; he shows more character than anything in the class, but is a long way removed from first-class form. He was fully described in our Buffalo report. Gilliard, hc., is not a show dog. In the bitch class The Lady Clare fairly smothered her opponents, who were somewhat better than the company she met at Pittsburgh, but the class was not a good one. She is a fawn with a nice black mask and ears, white on breast, and feet shaded with white; good skull, muzzle not perfect, but very much above the average; eyes too light, ears rather large and not carried quite close to head; wrinkle fair; underhung; a nice head, showing considerable character; wide deep chest; back very slack; loin fairly good; body of good length; hocks straight; forelegs not quite right and feet open and flat; good coat and color; not a big bitch, but one that shows considerable character and quality. We did not describe this bitch in our Pittsburgh report, and of course those who copy their reports from these columns had little to say about her. Now that we have told them her good and bad points they will be in a position to tell their readers something about her and will have no need to excuse themselves of ignorance, which is usually done as follows: "A strange fact is that we cannot come up with this bitch; we looked for her, but she had just been sent away." German Empress, second prize, is away behind the winner in good looks; mask and ears not dark enough; skull not first-class; muzzle much too long and pointed; eyes, ears and expression fairly good; good chest; fair good loin; quarters rather light; good feet; hocks not quite right; tail coarse; coat too long; a bitch of fair size, but not massive. Chinalette was third. Wacouta Rose, hc., was not in good shape—light of flesh—but after Lady Clare she showed more character than anything else in the class and we would have given her second. The puppies were a wretched lot and none of them will be heard of in the future. The winner turned up in Ajax, a son of Hero III. and Nell. Head color smutty; skull not good; muzzle much too long and neither deep nor wide enough; eyes rather light; ears heavy and not well carried, but may improve; loin and chest fair; cowhocked; tail long, coarse and badly carried; good shoulders and forelegs; excellent feet; coat too long; has plenty of size, but lacks character. Alice, second prize, was not entitled to notice. Adonis and Adele, unnoticed, are much better than she. Color smutty; white breast; forefeet and near hindfoot white; skull small; muzzle wretched, in fact not a mastiff muzzle; ears large; back and loin strong, but too short; quarters very light; cowhocked; coarse and badly carried tail; poor pasterns; light in bone; feet fairly good; body color not clear; too light all over; shows neither quality nor character; not a show dog.

ST. BERNARDS—(MR. MONTGOMERY).

The judge, who has had some experience as exhibitor and breeder of St. Bernards, handled his classes fairly well. Otho and Swiss Beda had the champion classes for rough-coats to themselves. The winners in the open class for dogs, with the exception of Bryan Borru, are well known. The new-comer, who took third prize, is too full in cheeks, muzzle pointed, stop not well defined, expression not correct, ears fairly good, chest and back above average, loin rather light, hocks too close, good brush carried too high, forelegs not quite straight but of good strength, good feet and coat; a dog of fair size and a better mover than the average. Bonivard II., vhc., is very snipy. The judge blundered in the next class. Norah, second prize, is undoubtedly a better specimen than Jeanne d'Arc, who took first. The latter is too full in cheek and pointed in muzzle; stop not well defined, eyes fairly good, ears not carried close, a very poor head; chest fairly good, back slack, loin flat but strong, good quarters and hocks, nice shoulders, legs and feet; fairly good brush, markings not correct, coat flat, carriage good, not a big bitch. Norah is well known to our readers, as is also Margery, third prize, and Tromba, c. Sheba, vhc., is faulty at both ends. Mona, c., has a fairly good head, but her nasty, washy color is against her. General Butler, first prize in the puppy class, has size to commend him, but he will never win in good company. Cheeks full, stop not well defined, muzzle pointed, eyes light, ears fairly good, good chest, back too short and hollow, loin fair, stifles and hocks straight, good brush carried too gaily, forelegs of good strength but not quite straight, small feet, coat too curly, lacks character. Silverhorn, second prize, shows more quality than the winner, but she will never be up to first-class form. This was a poor class. Hector, Mont Rose, Wotan, Queen of Sheba and Kader, winners in the classes for smooth-coats, are all well-known and were correctly placed. Leo, third prize in the open class for dogs, is too full in cheeks and not square in muzzle; ears fairly good, underhung—a serious defect; chest, back, loin and quarters fairly good; hocks not quite right, tail carried too high, legs straight but too light, good feet, coat better than average, not a big dog. Rigi was absent.

NEWFOUNDLANDS—(MR. MONTGOMERY).

Folly, by no means a good one, was the only decent specimen in these classes, and all other prizes and commendation cards should have been withheld. A wretched lot.

COLLIES—(MR. TERRY).

Scotilla, the Chestnut Hill Kennels' beautiful son of Dublin Scot and Flurry II., scored his first win in the champion class. This good-coated, clean-headed, and truly bred dog should improve the collies of this country. The four entries in the bitch class were owned by the judge, but none of them were present. Dublin Scot proved an easy winner in the open class for dogs. He has a grand frame and the best of legs and feet, but his head, while not bad, is not first-class. Strephon, second prize, should have given way to Clipper. These dogs are well known to your readers. Master Roy in his present condition was not worth vhc. He is very coarse in head, has poor ears and eyes, and is soft and short in coat, rather common but serious defects. The bitch class was well handled, Flurry II., Luella and Clifton Maid being placed in the order named, with Spoiled Miss vhc. All are well known. Dr. Vernon, vhc., is soft in coat. The judge blundered badly with the dog puppies. Roderick Dhu, a prick-eared one, was given first. We need hardly say that a prick-eared collie, however good in other respects, should not go forth as a first prize winner. But Roderick Dhu is chock full of other faults and should not have been noticed. Coat soft, head too round; poor eyes; expression dull; back too short; stifles and hocks straight; dew claws; legs and feet fairly good; does not move well behind. Not a show dog. Hector, first at Pittsburgh, Scotia, vhc., at Newark, and Albe Thorpe, are decidedly better than the winner. The bitch puppy class was a repetition of the judging at Newark. Scot's Bairn first, Hazel Thorpe second, Rutland Maid, hc. They were properly placed.

DEERHOUNDS—(MR. BARLOW).

Chieftain and Wanda again scored in the champion class, the former securing the special for best deerhound in the show. Highland Laddie, placed over Robber Chieftain, got more than his deserts in the open dog class. Good dog that Laddie undoubtedly is he cannot beat Robber Chieftain who is vastly his superior in loin, legs, feet and coat, and at least his equal in other respects. If all goes well with this grand young dog he may prove a dangerous opponent even to the great Chieftain. We like him better than any puppy we have ever seen. Duncan, from the same kennel, would not have disgraced the three letters. Berga, Heather Belle and Thora, also owned by Mr. Thayer, were placed in the order named. Clearly the judge got the worst bitch first; in fact she is the worst specimen Mr. Thayer has exhibited this year. Heather Belle should have been first, Thora second, and the winner third. Robber Chieftain and Lorna Secunda, the Boston winner, had the puppy classes to themselves. The quality of these classes was excellent.

GREYHOUNDS—(MR. BARLOW).

Pembroke, well known, was alone in the champion class for dogs. This is a valuable dog. His record has been equaled, but only once. Three weeks ago he blossomed forth in the open class at Boston. (Memnon was entered in the champion class.) He did not compete at Pittsburgh, and yet by some mysterious process he becomes a champion in time for the Philadelphia show, and walks away with the prize, there being no competition in the class. This is a bad case. Mother Demdike, looking fairly well, was the only entry in the corresponding bitch class. Balkis, second to Melton in the open class for dogs, should have won, being vastly superior in head, neck, loin and quarters. Lancashire Witch had the next class to herself. This is a grand bitch; her skull is a trifle round, and her neck, while long, is not well arched; back and quarters excellent. She might be a trifle deeper in chest and better in formation of ribs, and her tail is rather coarse. She stands on the best of legs and feet, and does not carry an ounce of lumber. Stormy Day was entered in the puppy class and another dog substituted for him. The club's attention being called to the matter, the dog was promptly disqualified. No excuse can be advanced in palliation of such work as this. Queen in Black (sire Clio, dam Double Shot—a queer pedigree) took second and is not a good one. Skull fairly good; weak before the eyes; ears and eyes fairly good; neck not clean; ribs not well sprung; loin light; tail badly carried; stifles and hocks fair; shoulders not quite right; good legs and feet. Lady May, vhc., is too weedy. A poor class.

POINTERS—(MR. WINSLOW).

The quality in these classes was not up to what we expected to find. The judge, who made his debut as pointer judge, made few mistakes, and his awards were well received. Nick of Naso, Mr. Peshall's well-bred and workmanlike-looking dog, had the champion heavy-weight dog class to himself, and in the open class for dogs Sachem, a muscular quartered son of Beaufort and Zuba, scored an easy win. He has a fairly good head, excellent chest and loin and a good stern, but is faulty in hocks and not straight in front. Jimmie got the place which should certainly have belonged to Mascot. The latter, while not first-class in head, eyes, pasterns or hindquarters, is decidedly a better show dog than Jimmie. Arsenic, vhc., is also a better dog than Jimmie, although very deficient in eyes, muzzle and neck. Clover, first in the corresponding bitch class, stands on excellent forelegs and feet, but is off in eyes, neck and tail. Devonshire Countess was second. Cheeks too full; muzzle not clean below the eyes, and rather snipy; back and chest fair; loin flat; quarters better than average; hocks not well bent; tail too long and not well carried; wide in front; shoulders rather heavy; stands out a trifle at elbows and over at the knees; good bone and feet. Beulah, vhc., is quite as good as Devonshire Countess in their present condition. There were no entries in the champion classes for light-weight dogs and bitches, and Naso of Kippen scored his third win in the open class for dogs. He has a clean-cut head, which is spoiled by a light eye; good ears; neck of nice length, but not clean; good chest, loin and quarters; tail rather coarse, but fairly well carried. His forelegs are good down to the knees, but his pasterns are not quite right or his feet well placed, defects which would handicap him heavily in a long day's work. He is a very small dog, but has plenty of bone, and should prove an excellent mate for large, light-limbed bitches. Leaving Brackett out of the question, he is the best light-weight pointer on the bench in this country. Bowdoin, in excellent condition, made a good second. Adonis, hc., is faulty in eyes, head and tail. Bitches, with the exception of Queen Bow, the winner, were a very seedy lot, and we never expect to see a worse lot than the puppies. Pommery Sec may fill out and be heard from again, but Grapnel, Grandee and Lady Graphic will never make show dogs.

ENGLISH SETTERS—(MR. OHL).

Old Foreman, looking fairly well, was alone in the champion dog class. He slipped his collar early on the morning of the last day of the show, and, judging by his appearance in the evening, must have had a rattling time somewhere. Royal Albert and Royal Prince II. was again the order of things in the open class, Glen Rock, equally well known, being third. Clyde, hc., is very faulty before his eyes and wide in front, and should not have been noticed. Moorefield, vhc., is a useful looking dog, not first-rate either in head or ears. Bruce, c., is not a show dog. Pride of Dixie, reserve, was fully described in our Buffalo report. Mavis, second at Newark, got a peg higher on this occasion; we thought the fight lay between Lady Rock, second prize, described in our Pittsburgh report, and Fairy Belle, vhc., shown by the Blackstone Kennels; the latter is faulty in ears and is not first-rate in head, but she is a better bitch than Mavis. Blitz II., third prize, is a catchy-looking bitch; skull fairly good; muzzle not square enough; eyes light and not well placed; ears rather short; good neck, back and chest; loin rather long and flat; quarters drooping more than we like; tail long and badly carried; fair good legs and feet; coat and color very nice; a rather small and weedy bitch. Wee Clara, c., is not good at either end. Cassino Gladstone, hc., is snipy, short in ear and too full in eye. Mamie, hc., has a fairly good head but is lathy. Petrel IV., hc., has many good points, but her very bad eyes will always handicap her on the bench. Only one puppy was entered, and he is not a good one; skull fair; muzzle not cut out clean below the eyes, and stop not well defined; eyes rather light; neck and ears fairly good; chest and back fairly good; loin light and flat; quarters fairly good; limbs light; knees and pasterns deficient; feet large and open; coat harsh (may improve); tail ropy and quarters curly; will not develop into a good one.

IRISH SETTERS—(MR. WENZEL).

These classes were very carefully handled and little fault can be found with the awards. Blarney and Bruce again met in the champion class. We were the first to say that Mr. Clark's dog should beat Bruce, and when he was two years old he could do it, but he has not retained his good form, having grown very coarse in neck and heavy in shoulders, while Bruce looks almost as well as he ever did, and his typical head is as clean in all directions as it was when he first made his bow to the public. Molly Bawn, the best bitch on the bench was, of course, first in the champion bitch class. The open class for dogs did not bring out a good one, and it is a notable fact that the old champions are away ahead of any of the youngsters that have been shown this season. Donnybrook, first prize, is a long way removed from high class form. Head too wide and flat; muzzle tapered some; eyes too light; ears and neck fairly good; chest hardly deep enough; loin a trifle light, would be better if arched; quarters fairly good; hocks would be better with more bend and placed lower; shoulders not very well placed; good legs and feet; feather scanty; color not quite first-rate. Prince was second. Head too wide and flat; muzzle rather shallow; eyes very light; ears placed rather high and not well carried; neck not quite clean; back, chest, loin and quarters fairly good; nice flag; hocks not well bent; legs good and strong to knees; stands over a trifle at knees; feet large but thick through the pads; good coat, color and feather; not a big dog, moves gaily. Bismarck made a good third. Head flat, good muzzle, stop not well defined, eyes rather light, ears fairly good, neck rather short and not quite clean; back, chest and loin much above average; quarters light, hocks straight, tail carried too high, shoulders fairly good, stands over a bit at knees

and would do with more bone above them; good feet; color on legs and quarters too light, a large dog carrying more lumber than we like to see. It was a close thing between these three dogs. Glenchovic, c., is faulty in head and eyes and is rather coarse. Laura B., the first prize bitch, was carefully criticised in our Pittsburgh report. Nellie, second prize, was at Boston, where she took first. Lady Fawn, third prize, has a good muzzle and fairly good skull to commend her. Bessie Glencho, vhc., was described in our Newark report. Irish Laddie, the first prize dog puppy, was first at Newark and Boston; he won easily here from Nicho. The owner of the last-named dog is going the right way to get himself into trouble. The animal entered as Nicho is not Nicho, neither did he win first prize at Buffalo. Laura Townsend, in the same ownership, should also be disqualified for incorrect description. She did not take first prize at Buffalo. This sort of thing must be stopped, and the Philadelphia Club must protect its patrons as well as itself. Louisa, second prize, is not a good one.

GORDON SETTERS—(MR. BERGEN).

These classes were not well represented. Royal Duke, Nora, and Roxie are much better than the average, but are not first-class specimens of the breed. They have been fully described in these columns and are well known to our readers. The winners in the open class for dogs are a long way removed from first-class form, and would not be noticed at a show like Birmingham. Alp, first prize, is dished before the eyes and heavier in skull than we like, eyes rather light, good ears, neck short and not clean, back, chest and loin fairly good, quarters light, hocks not well bent, flag fair, shoulders, legs and feet above average, color light, coat not flat, feathered below the hocks. Bob was second. Head fairly good, stop not well defined, muzzle not cut clean below the eyes, ears fairly good, eyes light, ribs not well sprung, loin light, stifles and hocks straight, shoulders fairly good, good legs down to knees, pasterns not upright, good feet, stands too low at the shoulder, color fairly good, not a show dog. Dee, vhc., is very deficient in head and coat. The puppies were a bad lot—not show dogs.

SPANIELS—(MR. WEST).

The entries in these classes were light, but the quality was fairly good. Patsey O'Connor, described in our Pittsburgh report, made an example of his opponents in the class for dished; ears very short and placed high on the head; light eyes; body very short; loin flat; stifles and hocks faulty; very light of bone; knuckles over; skin tight; coat not very good; color and markings very poor. Flirt, second prize, is of similar type and has the same faults; she should not have been noticed. The next best specimen in the class to Rubenstein was Ruby, who got a vhc. card.

BULLDOGS—(MR. BARLOW).

Tippoo, Rhodora, Hillside Josephine and Carmen (formerly Patti) were Mr. Thayer's winners. Tippoo, who was shown in poor condition at Pittsburg, has not improved and needs rest. Gimlet, second prize in the open class for dogs, is a promising young dog. Skull for a puppy large and well-formed; good eyes and ears; plenty of depth in muzzle; will grow more up-faced with age; body not first-class at present; fair good legs and feet.

FOX-TERRIERS—(MR. KELLY).

Lucifer, who is vastly superior to Belgrave Primrose and Splauger, showed them a clean pair of hocks, and Safety, looking very well, was alone in the corresponding class for bitches. It is a pleasure to note the condition Mr. Belmont's dogs are now shown in as compared with their wretched form last year. We cannot indorse the awards in the open class for dogs, which were as follows: Bacchanal first, Raby Jack second and Raby Mixer third. It is always a close thing between Bacchanal and Mixer, and we think the former's cankered mouth should place him behind Mr. Thayer's dog. Raby Jack should have been third. It is unnecessary to call attention to the good and bad points of these dogs, we have done that so often. Diadem is a better terrier than Richmond Myrtle. The latter is not very good in front, but beats Diadem behind. These were the only two shown. Lady Warren Mixture, first in the puppy class, was quickly claimed by Mr. Rutherfurd at catalogue price, $35—a very cheap bitch. She is very nice in front; ribs not well sprung and quarters light; coat rather open at present. This bitch should improve and be heard from again. Of the twenty-three fox-terriers entered only fifteen were shown, and we think the fox-terrier men might have given the judge a better entry. But things are no longer as they once were, and a judge must be known, or he cannot draw a large entry.

OTHER TERRIERS—(MR. BARLOW).

All of Mr. Dole's entries were absent from the bull-terrier

THE BENCH SHOWS.

DETROIT.

WE HAVE received the premium list of the Michigan Kennel Club's inaugural dog show, to be held at Detroit, Mich., May 24 to 27. The first premium offered is for "English setters, extra champion dog." Whatever that may mean we fail to comprehend. The rules of the A. K. C., under which the show is held, make no provision for any such class, on the contrary, Rule 10 expressly forbids it. This rule says: "Dogs that have won in a champion class shall be continued in said class." No construction of this rule, compatible with common sense, can justify any legerdemain that removes a good dog from a champion class in order that not so good a one may win the honor. The managers of the Michigan Kennel Club undoubtedly have been badly advised, and the proper thing for them to do is to at once cancel the extra champion classes and thus save the local delegate to the A. K. C. the trouble of enforcing Rule 22 of that Association. The prize in champion classes for English and Irish setters and pointers is $15, with $10 in the others, and $10 and $5 in the open, except in a few minor classes, where only one prize of $5 is offered. The puppies in the more important classes receive $7 and $3, the other classes $5. There are 138 special prizes offered, some of them quite valuable, and several others are promised, probably enough to bring the number up to 150.

SAN FRANCISCO.

At the regular monthly meeting of the California Kennel Club, held in San Francisco April 13, the executive committee was empowered to make arrangements for holding a dog show at as early a date as they may deem advisable.

ST. PAUL.

St. Paul, Minn., April 21.—Please make dates for our show read as follows: Sept. 13, 14, 15 and 16. We made dates 12 to 17 for local dogs only.—W. G. Whitehead, Sec.

STAFFORD SPRINGS.

The show of the Stafford Kennel Club will be held at Stafford Springs, Conn., Oct. 12 and 13.—R. J. Hicks, Sec'y.

PITTSBURGH.

The signature of Mr. Chas. H. Mason should have been appended to the Pittsburg show report in our last issue.

AMERICAN MASTIFF CLUB CHALLENGE CUPS.

Irishmen, and Duchess II., well known to our readers, should have been second. King Marsh, second prize, is a very poor specimen of the breed. He has a bad front, is of poor color, and his coat is not right. Johnny again beat Drake in the Clumber class, and we are solemnly told that this is quite right because Drake is good in body, "but his head is quite domed." It would spoil a great deal of fun were we to inform the unfortunate gentleman, who has never seen a typical Clumber, why Drake is a much better dog than Johnny. Bob had the champion class for field spaniels to himself, and in the open class for dogs Newton Abbot, the Buffalo winner, was well ahead of Bonanza. Critic and Lady Abbot was the order of things in the bitch class. Brant, Ned Obo, Little Red Rover, and Juno W., all well known, won the cocker prizes. Only two puppies were shown. The winner Midnight II. will not make a good one. Very weak and pointed muzzle; ears short; eyes rather light; back, loin, quarters and chest fairly good; forelegs straight, but light of bone; coat just fair; rather weedy.

FOXHOUNDS—(MR. HOFFECKER).

Three classes were provided and there were three entries, but Gypsey was the only one present—not much of a compliment to the judge. She is a very ordinary specimen. Her head is the best part of her; chest shallow; loin flat; shoulders badly placed; legs not straight and very light of bone; feet not first-class; tail not well carried; coat and brush poor.

BEAGLES, BASSET HOUNDS AND DACHSHUNDE.—(MR. ASHBURNER).

The winners in the beagle classes have been fully described time after time in these columns. The only new one was Stovella, given third prize in the open bitch class. She is not a good one. Head moderate; muzzle coarse; ears badly carried; too wide in front and out at elbows; legs and feet fairly good; coat rather soft and brush very poor.

Ele, the only Basset hound shown, is not a show dog, being deficient in head, ears, body and limbs; her coat and tail are by no means first-class.

The judging of the dachshund class is fairly entitled to precedence as the worst on record, and the awards in the English setter and mastiff bitch class at Pittsburgh must make way for stranger things. Here is another illustration of a judge undertaking to pass on a breed he knows nothing about, and, as usual, the exhibitors are the ones to suffer. Rubenstein, unquestionably the best dachshund ever exhibited in this country, and three times more valuable than all of his seven opponents, was not even commended. We have seen better dogs than Rubenstein, but he is a good one, and the dog has not been shown this season that can approach him in good looks; skull a trifle flat; muzzle might be longer and more tapered; ears much above average; eyes a shade too light; body of great length and well let down; crook much above average, but not quite first-class; coat and skin excellent. Gretchen, first prize, is not a show dog and should not have been noticed. A standard would have to be specially prepared to admit such a specimen into a prize list. Head very wide and flat; muzzle short, weak and classes. The winners, Baron, Mark-Eyed Victor, White Violet, Modjeska and Bess are well known to our readers. Modjeska has a wall-eye, and we would have placed her behind White Violet and Bess. Geesela once more beat Greymount in the Irish terrier class, and Mr. Sanderson's well known Skyes Jim and Lass O'Gowrie were well ahead of their opponents. Yorkshires were a poor lot. The first prize winner's coat looks suspicious and we would advise the owner not to exhibit her again in like condition. Jennie, much too dark in color and very scanty in coat and faulty in hindquarters, should have changed places with Lady, vhc. The latter is too light in color; in fact, she is neither a blue and tan or a silver; still, she should have been second. We liked Queenie, the second prize toy better than the unnamed winner; not so good in coat, but much better in head.

PUGS—(MR. BARLOW).

Max, Doctor, Othello, Buff, Vesta and Psyche are known to your readers. Duke, second prize in the open class for dogs was, by permission of the veterinary surgeon in charge, removed from the show before we had a chance to examine him. Yuma Yuma, third prize in the bitch class, should have been placed over Vesta, who was badly shown, thin as a rail.

OTHER TOY DOGS—(MR. BARLOW).

Banjo (this dog, like Mr. O'Shea's Irish terriers, has more than one name) was the only entry in the toy spaniel class. The Italian greyhounds shown are much too large, and in good company would not receive mention. We don't know what the fair owners would think could they see a Bankside Daisy or a Molly. C. H. Mason.

Some of the special awards as published last week were misleading, as it was not stated for what they were intended. Below will be found a complete list:

SPECIAL PRIZES.

Kennel of rough-coated St. Bernards, Hospice Kennels; smooth, same; greyhounds, C. D. Webber; pointers, Clifton Kennel; English setters, Blackstone Kennels; Irish setters, Chestnut Hill Kennels: beagles, Woodstock Kennels; collies, Chestnut Hill Kennels; pugs, Dr. M. H. Cryer; best rough-coated St. Bernard, Hospice Kennels' Otho; Newfoundland, W. W. Silvey's Folly; greyhound, C. D. Webber's Mother Demdike; English setter dog, Blackstone Kennels' Foreman; bitch, J. S. Clarke's Mavis; Irish setter, owned in Philadelphia, Chestnut Hill Kennels' Mollie Bawn; Gordon setter, E. Maher's Royal Duke; cocker spaniel in open class, Fay & Baxter's Ned Obo; beagle dog in open class, Woodbrook Kennels' Chimer; bitch, same kennels' Lou; fox-terrier, owned by a member of the Fox-terrier Club, Blemton Kennels' Lucifer; pug, dog or bitch, shown with two of their progeny, Dr. M. H. Cryer's Dolly, with Max and Doctor; deerhound, J. E. Thayer's Chieftain; collie dog in open class, Chestnut Hill Kennels' Dublin Scot; bitch, same owner's Flurry II.; dog puppy, owned by a member of the Collie Club, G. A. Smith's Scotia; bitch puppy, Chestnut Hill Kennels' Scot's Bairn.

THE IRISH SETTER CLUB.—Hoboken, N. J., April 24.—*Editor Forest and Stream:* Please to call a meeting of the Irish Setter Club for Tuesday evening, 8 P. M., May 3, at Madison Square Garden. Urgent business requires the attention of every lover of the breed. For the committee, Max Wenzel.

THE AMERICAN MASTIFF CLUB CUPS.

WE give this week cuts of the challenge cups given by the American Mastiff Club for American-bred mastiffs. There are three cups. The largest for the best dog or bitch bred in the country; it is open to all. Two cups of the smaller size are offered for the best dog and bitch respectively, owned by members of the club.

The cups originally intended to cost $150 and $100 have cost nearly twice those amounts. They are of solid silver and are manufactured by the Gorham Manufacturing Company of this city. In artistic excellence the cups surpass any bench show trophy heretofore given in this country. Only one of the smaller cups is shown; the other is like it with the exception of a different portrait. The cups will be first competed for at New York, where they will be on exhibition.

MADGE AND THE MOUSE.—*Editor Forest and Stream:* I have often read in your paper peculiar incidents, such as known facts of cats taking care of birds, etc. Briefly let me relate my little story: A field mouse had got into my kitchen, and by some bad luck in seeking about for food or shelter or both, the other morning had tumbled into a wash tub which had some four inches of water in it. I knew nothing of the circumstance until my Clumber bitch (18mos. old), as I went through the kitchen, drew my attention by whining to the tub. I passed on without further notice, but seeing her impatience, standing over it, I said, "What is it, Madge?" when she immediately put her head into the tub and carefully drew out, without injuring it in the least, in her mouth, the unfortunate drowning mouse, and laid it on the floor in a fainting or half gone state. She did not attempt to hurt it, but only stood over it and looking at me and whining. I took the poor little animal up on a sheet of paper and put him out by the root of a tree in the sun, with a few crumbs of cheese on the paper. In an hour he was all right. But I can't help thinking, as the bitch is in pup for the first time, the maternal instinct was asserting itself, unknown to her, and she could not bear to see the little mouse in trouble in the water, and so carefully lifted it out. Was it not strange?—F. H. D. V. (Ottawa).

LITTLE RED ROVER.—*Editor Forest and Stream:* In your issue of this week, in prize list for Philadelphia you give Mr. Laidlaw as owner of cocker Little Rover Rover, second prize dog. Kindly correct this, as I have owned him nearly a year, and entered him myself in my own name.—Chas. M. Nelles (Brant Cocker Kennels, Brantford, Canada. [Our correspondent probably means Little Red Rover instead of "Little Rover Rover." The last recorded sale of the dog was by Mr. Kelly to Mr. Laidlaw, and in lack of any record of sale to Mr. Nelles or any particulars in catalogue, we presumed he was still owned by Mr. Laidlaw.]

"THE HISTORY OF THE MASTIFF," by M. B. Wynn, is the best book on the subject, and should be carefully studied by mastiff fanciers.

THE HARTFORD DOG SHOW.

[Special to Forest and Stream.]

HARTFORD, Conn., April 27.—The dog show given by the Hartford Kennel Club opened here to-day with 260 dogs of the 347 dogs on the bench. The judging resulted in the following list of

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* Absent. *Bitch:* No entry.—OPEN—*Dogs:* 1st, E. H. Moore's Orion; 2d, J. G. Monk's Paris. Very high com., G. H. Gallup's Leon. *Bitches:* 1st, G. & H. P. Cromwell's The Lady Clare; 2d, E. H. Moore's Southern Belle. Com., C. C. Richardson's Victoria.—PUPPIES—*Dogs:* 1st, Dr. P. H. Ingalis's Brian; 2d, C. C. Richardson's Count Bismark. High com. and com., Tyrone Kennels' Girth II. and Harold. *Bitches:* No entries.

ST. BERNARDS—ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitch:* R. S. Sawyer's Swiss Beda.—OPEN—*Dogs:* 1st, 2d and very high com., Hospice Kenneis' Hadjar, Eiger and Alvier. *Bitches:* 1st and 2d, Hospice Kennels' Jeanne D'Arc and Tromba.—PUPPIES—*Dogs:* 1st, H. S. Pitkin's Prince Barry. *Bitches:* No entries. SMOOTH-COATED.—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* No entry.—OPEN—*Dogs:* 1st and 2d, Hospice Kennels' Montrose and Wotan. *Bitches:* 1st, E. H. Moore's Gip; 2d and very high com., Hospice Kennels' Queen of Sheba and Kader.—PUPPIES—*Dogs:* Absent. *Bitches:* No entries.

ULMERS.—1st, Osceola Kennels' Don Cæsar.

NEWFOUNDLANDS.—1st, R. O. Beach's Colonel, 2d, W. B. Martin's Tag.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Wanda.—OPEN—*Dogs:* 1st and very high com., J. E. Thayer's Robber Chieftain and Duncan; 2d, J. A. Butler's Braie. High com., Tyrone Kennels' Samuel. *Bitches:* 1st and 2d, J. E. Thayer's Heather Bell and Thora.—PUPPIES—*Dogs:* 1st, J. E. Thayer's Robber Chieftain. *Bitches:* 1st, J. E. Thayer's Lorna Secunda.

GREYHOUNDS.—CHAMPION—H. W. Huntington's Lancashire Witch.—OPEN—*Dogs:* 1st, H. W. Huntington's Balkis; 2d, E. Boardman's Prince. *Bitches:* 1st, H. W. Huntington's Cassandra. *Puppies:* 1st, withheld; 2d, E. Pyatt's Queen in Black.

POINTERS.—LARGE—CHAMPION—*Dog:* Absent. *Bitch:* Clifton Kennels' Clover.—OPEN—*Dogs:* 1st, F. R. Hitchcock's Tammany; 2d, Clifton Kennels' Sachem. Very high com., J. A. Butler, Jr.'s Sancho. High com., S. H. Hubbard's Plunger. *Bitches:* 1st and 2d, Westminster Kennel Club's Bellona and Kate VIII. Very high com., A. H. Aldrich's Nell. High com. S. T. Colt's Phyllis, and J. White's Lilly Faust.—SMALL—CHAMPION—*Dog:* Westminster Kennel Club's Naso of Kippen. *Bitch:* Clifton Kennels' Queen Bow.—OPEN—*Dogs:* 1st, F. L. Reed's Dash III.; 2d, R. J. Gladwin's Don. *Bitches:* 1st, H. L. Rice's Belle Randolph; 2d, Westminster Kennel Club's Glauca. Very high com., Dr. W. F. Spring's Model Doodle. High com., Greenfield Kennels' Lalla Crosteth, W. B. Martin's Lady Nell.—PUPPIES—*Dogs:* 1st, S. S. Bank's Ned B.; 2d, Clifton Kennel's Pomery Sec. Very high com, C. A. Van Wie's Hartford. High com., W. E. Miller's Jimmie, Jr. *Bitches:* 1st, G. L. Wilms's Mayflower 2d, Greenfield Kennel's Lalla Croxteth.

ENGLISH SETTERS.—CHAMPION—*Dog:* F. Windholz's Rockingham. *Bitch:* F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, F. Leonard's Royal Prince II.; 2d, Cohannet Kennels' Phil Warwick. Very high com., G. W. Neal's Pride of Orleans, A. H. Saxton's Dashing Sport, Cohannet Kennels' Rock Bondhu, E. V. Hale's Pride of Dixie. High com., H. Bryant's Dash H., A. J. Lee's Don Belton, R. B. Penn's Duke of Wellington, Warwick Kennels' Yale Belton. Com., G. W. Trantum's Pride of Dixie II., Dr. C. L. Stanley's York, Blackstone Kennels' Don Petrel.—OPEN—*Bitches:* 1st, G. W. Neal's Daisy Foreman; 2d, N. Wallace's Jennie III. Very high com., J. Lewis's Lady Rock, Warwick Kennels' May, Blackstone Kennels' Lulu and Fairy Belle. High com., Blue Belton Kennels' Maud, H. F. Nichols's Grace. Com., W. T. Cornell's Beauty Bondhu. PUPPIES—*Dogs:* 1st and 2d, Blue Belton Kennels' Blitzen and Blondin. *Bitches:* 1st, J. K. Lanman's American Girl; 2d, J. M. Mohr's Queen. High com., Blue Belton Kennels' Blue Lorna.

IRISH SETTERS.—CHAMPION—*Dog:* Max Wenzel's Tim. *Bitch:* Max Wenzel's Yoube.—OPEN—*Dogs:* 1st, F. Cheney Jr.'s Jerry. *Bitches:* 1st, J. M. Leckley's Laura B.; 2d, W. C. Cheney's Perdita. High com., Max Wenzel's Ready. PUPPIES—*Dogs:* 1st and very high com., F. Chenoy Jr.'s Jerry and Tim; 2d, H. A. Fisher's Arrowwanna. *Bitches:* 1st, O. L. Kelsey's Curror Bell.

FIELD SPANIELS.—CHAMPION—A. C. Wilmerding's Newton Abbot Lady. OPEN—1st, T. G. Benham's Jet; 2d, A. C. Wilmerding's Newton Abbot and Donnil Dhu.

COCKER SPANIELS—ANY COLOR—CHAMPION—J. P. Willey's Miss Obo II.—OPEN—LIVER OR BLACK—*Dogs:* J. P. Willey's Dandy W. *Bitches:* 1st and 2d, J. P. Willey's Beatrice and Chloe W. Reserve, J. P. Willey's Dido W. Very high com., F. B. Root's Hebe, C. M. Nelles's Juno W. ANY OTHER COLOR—1st, C. M. Nelles's Little Red Rover; 2d, W. Dougherty's Dora. Very high com., G. H. Gilman's Snip. PUPPIES—*Dogs:* 1st, J. P. Willey's Dandy W.; 2d, G. H. Carr's Obo V. High com., Miss Jarvis's Montague. *Bitches:* 1st, J. T. Benham's Nelly; 2d, W. O. Partridge's Bessie.

CLUMBER SPANIELS.—CHAMPION—*Dog:* M. Richardson's Newcastle. OPEN—1st, Meiner & Hill's Drake; 2d, M. Richardson's Tyne.

COLLIES.—CHAMPION—*Dog:* Hempstead Farm Co.'s Glengarry. *Bitch:* Hempstead Farm Co.'s Zulu Princess. OPEN—*Dogs:* 1st, J. A. Smith's Brian Boru; 2d, C. Bryant's Ben Lomond. Very high com., Hempstead Farm Co.'s Ronald. *Bitches:* 1st and 2d, Hempstead Farm Co.'s Lady Alice and Lass O' Lowrie. PUPPIES—*Dogs:* 1st, Lothian Kennels' Lothian Chief. *Bitches:* Prizes withheld. Com., W. T. Well's Katrina.

FOXHOUNDS.—No entries.

BEAGLES.—CHAMPION—*Dog:* A. H. Wakefield's Little Duke. *Bitch:* A. H. Wakefield's Twinkle.—OPEN—*Dogs:* 1st, A. C. Krueger's Cameron's Racket; 2d, H. F. Schellhass's Trailer. Very high com., A. H. Wakefield's Fitz Hugh Lee and Leader, Laick's Rattler. High com., A. H. Wakefield's Rover, Jr. *Bitches:* 1st and com., A. C. Krueger's Vickey and Maida; 2d, A. H. Wakefield's May Belle II. Com., J. E. Lord's Snow Flake. *Puppies:* 1st, A. C. Krueger's Whisper; 2d, H. W. & E. E. Lord's Dot.

BASSET HOUNDS.—1st, C. B. Gilbert's Bertrand.

DACHSHUNDE.—Absent.

PUGS.—CHAMPION—*Dog:* Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st, Dr. M. H. Cryer's Doctor; 2d, Forest City Kennels' Santa Claus. *Bitches:* 1st and 2d, Dr. M. H. Cryer's Daisy and Vista. Very high com., T. W. Eastbrby's Daisy. *Puppies:* 1st, Dr. M. H. Cryer's Psyche; 2d, withheld. Com., F. E. Bliss's Bennie.

BULLDOGS.—LARGE—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, J. E. Thayer's Hillside; 2d, C. D. Cugle's Tostig. *Bitches:* 1st, E. S. Porter's Belle of the Ball; 2d, J. E. Thayer's Carmen.—SMALL—CHAMPION—*Dog:* J. E. Thayer's Moses. *Bitch:* J. E. Thayer's Juno.—OPEN—*Dogs:* 1st, E. S. Porter's Caliban; 2d, C. D. Cugle's Merry Monarch. *Bitches:* 1st, J. E. Thayer's Juanita.

BULL-TERRIERS.—CHAMPION—W. J. Comstock's Victoria.—LARGE—OPEN—*Dogs:* 1st, W. J. Comstock's Jubilee; 2d, W. W. Silvey's the Baron. *Bitches:* 1st and 2d, E. D. Morgan's Grand Duchess and Queen of Milan. Very high com., G. D. Woodill's Modjeska. SMALL—1st, H. A. Waldron's Silver; 2d, H. W. Holmes's Bess. PUPPIES—1st, W. J. Comstock's Jubilee.

FOX-TERRIERS.—CHAMPION—*Dog:* Blemton Kennels' Lucifer. *Bitch:* Blemton Kennels' Safety. OPEN—*Dogs:* 1st, F. Hoey's Luke; 2d, J. E. Thayer's Raby Jack. Very high com., W. Meggat's Nobby. High com., Mrs. Amther Cheney's Piccinino. OPEN—*Bitches:* 1st, Blemton Kennels' Marguerite; 2d, J. E. Thayer's Richmond Myrtle. Very high com., W. Meggat's Allspice. High com., C. Fletcher's Minnie. PUPPIES—*Dogs:* 1st and very high com., J. E. Thayer's Shameless Mixture and Sandy Mixture; 2d, Blemton Kennels' Mephisto. *Bitches:* 1st, Blemton Kennels' Gretchen. WIRE-HAIRED—No entries.

Black and Tan, Irish, Dandie Dinmont, Yorkshire and Toy Terriers.—No entries.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock; 2d and very high com., W. H. Russell's Sentinel and Elswick Sue. Very high com., W. W. Silvey's Rock.

SKYE TERRIERS.—1st, C. A. Shinn's Lady Kate; 2d, H. S. Stearns's Highland Nelly.

KING CHARLES SPANIELS.—CHAMPION—W. Phillips's Rosclus.—OPEN—No entries.

BLENHEIM SPANIELS.—CHAMPION—W. Phillips's King Pepin.—OPEN—1st, Miss L. Hart's Little Bangj.

POODLES.—1st, J. A. Loring's Soot.

ITALIAN GREYHOUNDS.—1st, W. E. Moore's Cute; 2d, Mrs. A. A. Morehouse's Minnie. Very high com., J. H. Hawkins's Fleet.

MISCELLANEOUS.—Equal 1st, Glencoe Collie Kennels' Sir Lucifer and Excelsior Kennels' Coleen O'Donoghue. Very high com., F. W. Stockey's Patsy O'Connor and W. Hazelton's Waldo.

Special prizes will be given next week.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the 140 dogs entered in the April number of the *American Kennel Register:*

BEAGLES.

4828. Blue Bell III., McFarland Bros.
4829. Daisy III., H. A. Merrill.
4830. Dude, H. A. Merrill.
4831. Little Swell, A. C. Krueger.
4832. Sprat, John Bateman.

CHESAPEAKE BAY DOGS.

4833. Sailor, J. F. Byers.

COLLIES.

4834. Alta B., E. J. Spencer.
4835. Bessie of Clifton, Dr. T. A. Cloud.
4836. Blue Bell, James Reidy.
4837. Bruce VIII., G. A. Fletcher & J. Houghton.
4838. Collet, John Gribbel.
4839. Collie II., A. M. Webb.
4840. Daisy III., H. A. Thomas.
4841. Donald VI., H. S. Barnes.
4842. Donald Dhu, G. A. Fletcher.
4843. Dot II., W. A. Burpee & Co.
4844. Dundee II., R. J. Curry.
4845. Elspeth, Herbert S. Barnes.
4846. Felecie, W. F. Osborne.
4847. Flirt II., Jason Houghton.
4848. Flora IV., W. W. McKee.
4849. Jacob Gladstone, Jacob Bros.
4850. Kiowilla Carl, Margaret P. Sherwood.
4851. Kiowilla Jessie, L. C. Root.
4852. Lord Donald, Mrs. S. H. Davis.
4853. Lucy Cloud, Dr. T. A. Cloud.
4854. Meg V., Charles R. Hone.
4855. Model, James Reidy.
4856. Nellie of Kennett, Dr. T. A. Cloud.
4857. Prince II., H. T. Dillard.
4858. Sable Scot, R. Torpin.
4859. Shepress Girl, S. H. Seamans.
4860. Skip, John Johnston.
4861. Trix, C. H. Sanford.
4862. Vivacity, James Reidy.
4863. Wallace III., Jas. Reidy.

DEERHOUNDS.

4864. Juno, P. E. Brady.

GREAT DANES.

4865. Helen, F. C. Evans.
4866. Thyrus II., F. C. Evans.

MASTIFFS.

4867. Beech Grove Toby, G. Jackson.
4868. Beech Grove Wanda, J. P. Sharp.
4869. Beech Grove Zeus, J. A. Moore.
4870. Clapham's Duchess, Geo. Jackson.
4871. Count of Bismark, C. C. Richardson.
4872. Countess of Woodlands, Victor Kennels.
4873. Deacon, J. S. Wright.
4874. Gulnare, C. E. Barber.
4875. Jumbo II., E. L. Bartlett.
4876. Lady Mac, R. C. Pate.
4877. Lara, G. D. Burton.
4878. Leo, H. H. Davis.
4879. Leo III., C. E. Barber.
4880. Madge III., C. H. Pratt.
4881. Peer, G. Moores.
4882. Tor, A. M. Fletcher.

POINTERS.

4883. Belle of Maine, G. Lovell.
4884. Coronet, H. G. Preston.
4885. Hugh, S. Ayres.
4886. Lady Maine, H. Farnham.
4887. Lass of Maine, H. Farnham.
4888. Match Boy, H. G. Preston.
4889. Max, W. L. Woodnutt.
4890. My Queen, J. A. Robinson.
4891. Rex III., E. Orgill.
4892. Rose Michel, E. J. Spencer.
4893. Ruby, E. Orgill.

PUGS.

4894. Dixie, Goguac Kennels.
4895. Nellie, George E. Peer.
4896. Phillibuster, H. R. T. Coffin.
4897. Ruby, R. P. Cornell.
4898. Tillie Doe, Jessie D. Welsh.
4899. Trojan, R. C. Pate.
4900. Tuck, C. Henry Amsden.
4901. Twinkle, R. C. Pate.

ST. BERNARDS—ROUGH-COATED.

4902. Bernard, F. N. Woodward.
4903. Don Quixote II., Otto W. Volger.
4904. Fay, F. N. Woodward.
4905. Freda Valentine, George B. Vandervoort.
4906. Hildegarde II., F. N. Woodward.
4907. Josie, H. A. Thomas.
4908. Jovis, L. F. Beckwith.
4909. Juno of Clover Patch, Geo. J. Geer.
4910. Jupiter of Clover Patch, G. J. Geer.
4911. Lorna Doone, H. R. T. Coffin.
4912. Madchen, Adolph Hucky.
4913. Merchant Hero, Henry Sherman.
4914. Merchant Prince, Jr., H. R. T. Coffin.
4915. Merchant Princess, H. R. T. Coffin.
4916. Norfolk Leo, E. W. Lovejoy.
4917. Tania, L. F. Beckwith.

SMOOTH-COATED.

4918. Belle Meade II., Warren J. Potter.
4919. Ermine, J. O. Thurston.
4920. Flora III. of Clover Patch, Geo. J. Geer.
4921. Leo II., D. F. Willard.
4922. Lyon, James A. Holden.
4923. Minnehaha, J. R. Draper.
4924. Nanon, J. O. Thurston.
4925. Noble III., F. K. Locke.

SETTERS—ENGLISH SETTERS.

4926. Clifford Berwyn, J. B. Robertson.
4927. Crackshot, Will G. Comstock, Jr.
4928. Duke of Morris, H. B. Green.
4929. Gladstone's Mark, W. F. Streeter.
4930. Low, J. C. Lincoln.
4931. Rolfe, A. Robinson.
4932. Roy Gladstone, W. F. Streeter.
4933. Storm, C. R. Hodge.
4934. Westmoreland, T. Steadman Appleby.

GORDON SETTERS.

4935. Duke of Gordon, E. A. Mumford.
4936. Fanchon, J. M. Crawford.
4937. Frank, W. O. Lumpkin.
4938. Lark, E. P. Morse.
4939. Rex IV., P. Clagstone.

IRISH SETTERS.

4940. Dude III., R. W. Aldrich.
4941. Red Biz, F. Pauster.
4942. Red Rob, W. E. Lippencott.
4943. Roger, M. R. Bingham.
4944. Toby D. Glencho, Felix V. Riviere.

SPANIELS—FIELD AND COCKER SPANIELS.

4945. Ben II., J. T. Benham.
4946. Bess, E. Hayes.
4947. Bess II., A. H. Williams.

A SKY TERROR.—The Portland (Conn.) *Record* records: A very large bird of prey, supposed to be of a species of eagle, was seen in Pacousett last Saturday. It sailed overhead with quite a large dog alive in its claws, and alighted near the small pond. Being frightened, the eagle let go of the dog, which went limping across the meadows, while the eagle sailed northward, casting a shadow as it passed over (as an eye-witness says) "like that of a small tree." The bird was seen by Edward Markham, Edward Button, and Mrs. Hall and daughter, also by several children. All were considerably excited, and say that it "was an immense fellow and could have carried off a child as easily as it did the dog." It was seen in the same neighborhood the next day.

FOX-TERRIERS AT PITTSBURGH.—Blemton Kennels, Hempstead, L. I., April 25.—*Editor Forest and Stream:* My attention has been called to your reporter's comments on an article appearing in one of your contemporaries *re* the fox-terriers Richmond Olive and Safety, and taking an unwarranted liberty in using my name in connection therewith, as also accusing me of prejudiced statements and criticism. I beg to say I know nothing of the report in question nor have I seen it; he had better try back, as he has overrun the scent this time. Trusting to your well-known sense of fair play to give this contradiction the same publicity as the false accusation.—GERMAN HOPKINS.

WEIGHT OF SPANIELS.—Warren, R. I., April 22.—*Editor Forest and Stream:* I am sorry that I cannot testify as to the weight of Miss Newton Obo. In regard to Black Pete I am solid. Having been connected with the "musicale" at our Providence show, about dog weights, I felt a lively interest in the subject, and as I stood comparing Pete with a "dog that varies in weight," I asked Willey how much Pete weighed. He told me to weigh him. I did so, and found he balanced the beam at just 27lbs.—no more and no less. I did not remove his collar nor unhitch the chain. That was just previous to the judging. Am sorry I did not weigh the bitch. Mr. Willey returned home immediately after the judging, and for the remainder of the week I had a care over his dogs, and shipped them to him on Saturday, directed to Salmon Falls, not to Boston; and what possible excuse the express company can give for landing that box in that cellar (or basement), is more than I can conceive. If they had not been entered at Boston they might have remained there a whole week, unless Mr. Willey had hunted them up. I call it a piece of rank carelessness on the part of the express company, and trust they will dig open their eyes in the future, and not carry all dogs to one place because the majority of boxes are so directed. No member of the American Spaniel Club, nor any spaniel man, that knows J. P. Willey, will believe him guilty of misstating the weight of his dog. If Miss Newton Obo was under weight at Boston, who can wonder. No provision was made for the care of his dogs from Saturday until Tuesday, because Mr. W. expected them to arrive at Salmon Falls by Saturday night, instead of staying four in a box three days in a cellar, unfed and unwatered. Miss Newton Obo was one of the four. Does any one wonder if she lost flesh? If any one doubted the weight of these dogs why did they not complain the day of judging, and not wait till the last gun was fired, and then start in? I am not prejudiced in my writing, and have met Mr. Willey but three times, but I dislike a post "mortem."—CHAS. S. DAVOL.

GREYHOUNDS AT PHILADELPHIA.—New York, April 25.—*Editor Forest and Stream:* I inclose you a copy of protest made against C. D. Webber's greyhounds at Philadelphia last week, and hope you will give it space in this week's issue of your paper.—H. W. HUNTINGTON. PHILADELPHIA KENNEL CLUB.—*Gentlemen:* I wish to enter a protest against all awards of D. C. Webber's greyhounds at your show, and especially in the champion greyhound dog class. He enters Pembroke in the champion class. How does he get there when two weeks ago he was entered in the open class at Boston and took third prize to my Balkis's first? The dog was not eligible as he was absent from Pittsburgh, the only show held since Boston by a member of the A.K.C. He is clearly not entitled to the award under Rule 7, as in the event of the Boston entry being fraudulent the owner would be disqualified as "guilty of misconduct," and consequently ineligible to exhibit at any show given by a member of the A.K.C. In the puppy class he substituted one dog for another, which act I characterize as contemptible and ungentlemanly, to use the mildest terms. He has, consequently, made himself doubly amenable to Rule 17, which I shall do all in my power to have enforced. Such a gross insult and indignity to your club, and lovers of dogs in general, I feel sure will be justly dealt with, and that by enforcing Rule 17 you will disqualify all dogs shown by him, thus protecting yourselves and exhibitors from similar sharp practices in the future. In case he has already received the awards of money, medals, etc., he should not be allowed to follow the dangerous precedent adopted by the W.K.C. at Boston two years ago, but be made to disgorge. The unrighted evil has borne its fruit at last. Believing I have your hearty coöperation in putting a stop to all such disreputable practices, and that full justice will be meted out by you, I have the pleasure to subscribe myself, fraternally yours, H. W. HUNTINGTON.

WHISK BRUSH MASSAGE.—South Woodstock, Conn.—*Editor Forest and Stream:* Please accept my very warm thanks for your most kind favor of 7th inst., duly received. The little terrier is better, apparently well, frolicking and with good appetite, although his nose is dry too much of the time, I fear. Your prescription must surely be excellent. Again, thanks. I have an item from my own experience which may possibly interest you and help some one in trouble similar to that I once had. A little black and tan terrier which I owned was suddenly attacked with complete paralysis of the hindlegs, they looked as if they only hung to him by the skin, and the legs entirely useless and dragging after him as he attempted to move; a most pitiable sight. The little fellow was only a few months old, a choice thoroughbred, but I could find no one and no book to help me, and dared not delay long in doing something. I concluded the trouble must arise from over-feeding and lack of exercise, so commenced a strict diet (though I feared he would starve to death, he was so dainty), and taking a short, very stiff whisk brush, I commenced brushing him briskly down the spine and hindlegs especially, though rubbing the whole body some too. I used all my strength and followed up this course for several hours each day, and for some six weeks or more. He rewarded me by living until almost his seventeenth birthday, and was a healthy, happy doggie through all these years, dying at last of old age.—PET LOVER.

PATTI M.—Cleveland, O., April 23.—*Editor Forest and Stream:* Fair and unprejudiced criticism by a reputable journal like the FOREST AND STREAM of dogs exhibited at bench shows is never feared by those interested, but when a reporter's statements are so far from the truth as Mr. Mason's, in saying what he has in regard to the pointer bitch Patti M. in his report of the Pittsburgh show, it is time to protest against such criticism. The record of Patti M. on the bench, as winner of fourteen prizes, under Major Taylor and Mr. John Davidson, defeating such dogs as champions Vanity, King Bow, Robin Adair, Nick of Naso, Lady Croxteth and others, who have many times been pronounced good ones by the FOREST AND STREAM, refutes Mr. Mason's opinion of this bitch. That she has her faults I admit. Show me one that has not; but when Mr. Mason says that she is a second rater, it convinces me, if he means what he writes, that his judgment of pointers should never be sought by breeders. The owner of Patti M., who willingly exhibits her at shows under any judge, has never found it necessary to placard her stall with the information that she is a pointer, as Beaufort's owner had to do at New York, after suffering defeat by Meteor and Croxteth.—C. M. MUNHALL.

A FAMOUS HOUND.—Oxford, Me., April 18.—In reading the FOREST AND STREAM recently I saw the article about the Worcester fox hunt. Among the hounds used in this hunt was the foxhound Jumbo, the property of Mr. Jacobs. This dog was originally owned by the Edwards Bros. of Oxford, Me., and was one of the most celebrated dogs at that time in Oxford county. Articles respecting this dog's hunting qualities were published in all the leading papers, and a description of him appeared in the FOREST AND STREAM under the heading of "Old-Fashioned Fox Hunts." This description was published some time during the month of February, 1883. One time during a hunting expedition, the hunters were met by an old fox-hunter, some sixty odd years of age. After looking at the dog a while, and seemingly surveying his huge proportions, he at length said, "I have hunted foxes for forty years, but this is the first time I ever saw foxes chased by a two year old bull."—JOSH JEEMS.

DEERHOUNDS AT PROVIDENCE.—*Editor Forest and Stream:* A handbill printed in New York on the 9th inst. and subsequently distributed at the Philadelphia dog show, contained the following malicious statement: "Mr. Mason inquired of her keeper 'Can she gallop?' 'Of course she can,' replied the keeper, naturally enough, and then the blue ribbon was given to the large and 'catchy' bitch, while the perfectly sound Thora, who *can* gallop, was given second." The above effusion, like very many others in the same sheet, is absolutely false in every particular.—ALFRED HEALD. (In charge of Mr. John E. Thayer's dogs.)

THE EASTERN FIELD TRIALS DERBY.—The entries for the Derby of the Eastern Field Trials Club close May 1. This will undoubtedly be the most important event of the kind that has ever been run in this country, and the honor of winning will be of far greater value than the amount of the prizes. The stake is for a purse of $900, with $400 to first, $200 to second, and two equal third prizes of $100 each, and a $100 cup to the breeder of the winner. Ten dollars forfeit with $20 additional to start.

ENGLISH SETTER JUDGE AT NEW YORK.—New York, April 26.—*Editor Forest and Stream:* I have just received a telegram from Mr. J. M. Tracy saying that it will be impossible for him to be at New York to judge English setters, on account of illness. Mr. J. O. Donner will take his place.—W. R. HITCHCOCK, Sec'y W. K. C.

CURRENT NOTES.—There is considerable talk among the sportsmen of Portland, Me., of forming a kennel club and holding a dog show next season.... The Stafford Kennel Club will hold their third annual dog show in connection with the Stafford Agricultural Society's fair at Stafford Springs, Conn., on Oct. 12 and 13.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Sandycroft Boast, Sandycroft Brag, Sandycroft Burly, Sandycroft Baffle, Sandycroft Beauty, Sandycroft Belle and Sandycroft Bessie. By Sandycroft Kennels, Milford, Del., for four fawn, black points English mastiff dogs and three bitches, whelped April 9, 1887, by Hero III. (A.K.R. 1765) out of Nell (A.K.R. 3847).

Sport. By D. A. Williams, Lynn, Mass., for Gordon setter dog, whelped May 10, 1883, by Jet out of Daisy.

Pink. By Chas. York, Bangor, Me., for white, black and tan English setter bitch, whelped March 9, 1887, by Gun (A.K.R. 1538) out of Victoria Laverack (A.K.R. 4677).

Count Rex. By H. S. Humphrey, Indianapolis, Ind., for dark brown Irish water spaniel dog, whelped July, 1886. Pedigree unknown.

Patti Croxteth. By C. M. Munhall, Cleveland, O., for liver and white pointer bitch, whelped Dec. 28, 1886, by Croxteth (Young Bang—Jane) out of Patti M. (Donald—Devonshire Lass).

NAMES CHANGED.

Nahmke to Bellfore. By W. H. Fuller, New York city, for black, white and tan English setter dog, whelped June 25, 1885 (A.K.R. 3422).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Ripple—Rum. Dr. Greenough's Chesapeake Bay bitch Ripple (A.K.R. 68) was bred to his Rum (A.K.R. 2807), April 14 and 16.

Norah—Fleetwood. W. S. Clark's (Linden, Mass.) beagle bitch Norah (Lee—Juliet) to Pottinger Dorsey's Fleetwood (Searcher—May Belle), April 17.

Lady Alpha—Hector. Alta Kennels' (Newport, Ky.) St. Bernard bitch Lady Alpha (imported Tell—Noma) to Hospice Kennels' Hector (Apollo—Thyras), March 18.

Jolie—Buckellew. T. A. Gill's (West Park, N. Y.) English setter bitch Jolie (Laithrop's Dick—Ely's Sylph) to Duke Rhoebe Kennels' Buckellew (A.K.R. 30), April 21.

Mydona—Buckellew. A. A. Francis's (Rochester, N. Y.) English setter bitch Mydona (Druid—Whirlwind) to Duke Rhoebe Kennels' Buckellew (A.K.R. 30), April 14.

Nettle—Marchboy II. F. W. Wheaton's (Wilkesbarre, Pa.) beagle bitch Nettle (Rounce—Spot) to W. F. Streeter's Marchboy II. (A. K.R. 2919), April 4.

Lizzie—Marchboy II. F. P. Quimby's (New York city) beagle bitch Lizzie (Ringwood—Norah) to W. F. Streeter's Marchboy II. (A.K.R. 2919), April 6.

Blonde II.—Foreman, Jr. Chas. Kimberly's (New Haven, Conn.) English setter bitch Blonde II. (American Belton—Blonde) to E. J. Calahan's Foreman, Jr. (Foreman—Jolly Nell), April 11.

Jolly Nell—Fairy King. Andrew J. Calahan's (New Haven, Conn.) English setter bitch Jolly Nell (Goodsell's Prince—Jolly May) to G. E. Osborne's Fairy King (Foreman—Jessie), April 15.

Daisey A.—Foreman, Jr. Chas. Kimberly's (New Haven, Conn.) English setter bitch Daisey A. (Tom—Fleet) to E. J. Calahan's Foreman, Jr. (Foreman—Jolly Nell), April, 1887.

Fannie Turner—Spot. G. A. Wynkoop's (Leesburg, Va.) pointer bitch Fannie Turner (Sensation—Queen II.) to his Spot (Joker, Jr. —Fussie), April 2.

Mina—Rex Gladstone. J. M. Gould's (Trenton, N. J.) English setter bitch Mina (Calibar—Beauty) to Wm. A. Poland's Rex Gladstone (Royal Gladstone—Molly Druid), April 19 and 20.

Elmo—Rex Gladstone. Robert Chambers's (Trenton, N. J.) English setter bitch Elmo (St. Elmo—Lizzie Lee) to Wm. Poland's Rex Gladstone (Royal Gladstone—Molly Druid), March 24 and 26.

Idylwoof—Buckingham. A. S. Hoffman's (Morrisville, Pa.) English setter bitch Idylwoof (Antic—Princess Mix) to George De Haven's Buckingham (Clinton T.—Kate Gladstone), Feb. 6 and 8.

Daisy A.—William Tell. C. A. Parker's (Worcester, Mass.) pointer bitch Daisy A. (Pete, Jr.—Daisy) to his William Tell (A.K. R. 2640), March 16.

Zadie—Bradford Ruby. Thos. Hildreth's English pug bitch Zadie (A.K.R. 2753) to City View Kennels' Bradford Ruby, March, 1887.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Roxy Vera. C. A. Parker's (Worcester, Mass.) pointer bitch Roxy Vera (Pete, Jr.—Roxy), March 14, nine (five dogs), by his William Tell (A.K.R. 2640).

Idylwoof. A. S. Hoffman's (Morrisville, Pa.) English setter bitch Idylwoof (Antic—Princess Mix), April 11, eleven (seven dogs), by Geo. DeHaven's Buckingham (Clinton T.—Kate Gladstone).

Dixie. J. J. Nussbaumer's (Okawville, Ill.) Scotch terrier bitch Dixie (A.K.R. 4604), April 10, one dog, by his Zip (A.K.R. 4606).

RANGE AND GALLERY.

THE CREEDMOOR PROGRAMME.

FOLLOWING is the programme of the fifteenth annual meeting of the National Rifle Association of America, to be held at Creedmoor, commencing Sept. 12, 1887, and continuing six days:

No. 1. Directors' Match.—200yds, open only to Directors of the N. R. A., rounds five, position standing, any military rifles, including specials.

No. 2. Judd Match.—Offered annually, under resolution of Board of Directors N.R.A., to commemorate the services rendered by Hon. David W. Judd in securing the passage of the law by which the Association was enabled to obtain its range. Open to all comers; any military rifle, including specials; Remington rifles, State model, .50-cal., will be allowed one point on each score, 200yds., position standing; rounds 7, entrance fee $1 each, only three entries allowed to be shot on each day, match to occupy two days. Prizes.—Cash presented by N.R.A. $200, divided into 25 prizes, viz.: $25, $20, $15, $10, six of $8, seven of $6, and eight of $5 each. The aggregate of the two scores to count for the first four prizes.

No. 3. Wimbledon Cup Match.—Open to all citizens and residents of the United States, 1,000yds., thirty shots, any rifle within the rules, cleaning allowed, position any without artificial rest, entrance fee, $2.

No. 4. President's Match for the Military Championship of the United States of America.—First stage—200 and 500yds., seven shots at each distance, open to all members of the Army, Navy, and Marine Corps of the United States, or the National Guard of any State. Rifles—Remington State model and Springfield .45-cal., three-grooved, and chambered for 2 1-10in. shell only, or any rifle issued by any State to its National Guard; Remington rifles, State model, .50-cal., allowed one point; twenty-three prizes, viz.: $25, $20, $15, ten of $10, and ten of $5 each; total $210; entrance fee $3 to both stages. Second stage—Open to all prize-winners in the first stage, 600yds., number of shots 10, position any, rifles same as in first stage, but .50-cal. Remington State model will receive one point allowance. Prize—The Mid-Range Championship of America for one year, and cash $25, to be awarded to the competitor making the highest aggregate score in both stages.

No. 5. The ——— Match.—Any military rifle including specials, 800, 900 and 1,000yds., any position, open to all comers, ten shots at each distance, entrance $3; eight prizes, aggregating $75, viz.: $20, $15, $10, $8, $7, and three of $5 each.

No. 6. Tiffany Continuous Match.—All-Comers' Continuous Match, 200yds., position standing, number of shots seven, on the American standard target, any rifle within the rules. Cleaning will be allowed between shots for rifles other than military, or special military. The aggregate of three scores to count for all prizes. Entries unlimited; fee $1 each ticket or three for $2 if taken at one time. Allowance, special military rules, 3 points; other military rifles, 4 points; Remington State model, .50-cal., 5 points, on each score. The allowance for military and special military rifles will be added to the total scores made. In case of ties the tie in each case will be decided in favor of the competitor having the fewest shots of low value. Prizes.—First prize, a silver cup, presented by Messrs. Tiffany & Co., Union Square, New York city; 31 other cash prizes, viz.: $30, $25, $20, $15, 5 of $10, 7 of $7 and 15 of $5 each; total, $264. Extra prizes of $5, $3 and $2 will be awarded each day to the competitors making the highest single scores in order of merit.

No. 7. Governors' Match.—Seven shots at 500yds., position any, any military rifles, including specials, open to all comers. Entrance fee $1 each or three for $2 if taken at one time, re-entries allowed, the aggregate of three scores to count for all prizes, ties in totals to be decided by the next best score or scores. Allowance, Rem. rifle, State model, .50-cal., 4 points, and other military rifles 2 points, on three scores, and in same proportion for single scores; $200 divided into 25 prizes, viz.: $25, $20, $15, $10, 6 of $8, 7 of $6 and 8 of $5 each.

No. 8. All-Comers' and Marksmen's Badge Match.—Open to everybody, 200 and 500yds., position standing at 200, prone at 500, five shots at each distance, entrance fee $1, or three for $2 if taken at one time, re-entries allowed, Remington rifle, .50-cal., State model. Thirty-one prizes, $240, viz.: $25, $20, $15, 8 of $10 and $5 each. The firing at both ranges must be done on the same day or the score will be considered void.

No. 9. Hilton Trophy Match.—Open to teams of 12, from A—The Army of the United States, one team from the troops stationed within each of the three military divisions. B—The United Navy. C—The National Guard or ununiformed militia of the several States and Territories. D—Other countries. 200, 500 and 600yds., 7 rounds at each distance, position standing at 200yds., any at 500 and 600yds., any military rifle which has been adopted, authorized or issued as an official arm by any State or government, ammunition any, entrance fee $2 each man. Prize—A trophy, presented by Hon. Henry Hilton, of New York, to be shot for annually, value $3,000; also a medal to each member of the winning team.

No. 10. Short-Range Team Match.—Open to teams of 4, from any regularly organized rifle club or association or military organization; no limit to number of teams from one organization, but no competitor can shoot in two teams; 10 shots at 200yds, position standing, any rifle within the rules, standard American target. Teams using the Remington rifle, State model, .50-cal., will be allowed 28 points, and 16 points will be allowed to teams using other military or special military rifles. Entrance fee $5 per team; re-entries allowed, but only the highest score to count. Four prizes, viz.: $40, $30, $20 and $10. Cleaning will be allowed between shots for rifles other than military or special military. Members of teams will be allowed to use any rifle within the rules. The allowance for the Remington rifle, State model, will be 7 points; for other military or special military rifles 4 points each. The allowance for military and special military rifles will be added to the total scores made. In case of ties, the tie in each case will be decided in favor of the competitor having the fewest shots of low value.

No. 11. Inter-State Military Match.—Open to one team from each State or Territory in the United States, consisting of 12 members of the regularly organized and uniformed National Guard or Military of such State or Territory. 200 and 500yds., position at 200yds. standing, at 500yds. prone, any military rifle which has been adopted, authorized or issued as an official arm by any State or Government. Prize—To the team making the highest aggregate score a large bronze "Soldier of Marathon," value, $350; also a medal to each member of the winning team.

No. 12. Inter-State Long-Range Match.—Open to teams of 4 from all rifle associations or clubs in any State or Territory in the United States. 800, 900 and 1,000yds.; 10 shots at each distance, any rifle within the rules. Entrance fee, $10 each team. Prize.—A trophy, to be held for the year by the successful team, which shall be deposited in some central place in the State whose team may win it; also a medal to each member of the winning team. Cleaning will be allowed between shots for all rifles.

No. 13. New York State National Guard Match.—Open to teams of 12 from each regiment, battalion or separate company of infantry of the National Guard of the State of New York. 200 and 500yds., position, standing at 200, prone at 500yds.; the Remington rifle, State model, or such others as may be authorized or issued by the State; 5 shots at each distance. Prize—A trophy, value $300.

No. 14. First Brigade National Guard Match.—Open to teams of 12 from each regiment, battalion or separate company of infantry in the first brigade of the National Guard of the State of New York, 200 and 500yds., 5 shots at each distance, Remington State model rifle, position standing at 200, at 500yds. prone.

No. 15. Second Brigade National Guard Match.—Similar to No. 14.

No. 16. General Sheridan's Skirmishers' Match.—Open to teams of 6 from the regular army, navy, marine corps, National Guard, volunteers, or militia or any county, State or Territory, 600 to 200yds. and return, second class targets, the military rifle with which the organization has been regularly armed, unless such be a magazine gun, in which case any military rifle which has been adopted as an official arm by any State or Government. Entrance fee, $5 for each team. The first prize in this match is a trophy presented by S. D. Schuyler, Esq.; value $150. Also a bronze medal to each member of the winning team. Won in 1884 and 1885 by 4th artillery, U.S.A. Won in 1886 by Engineer Corps, U.S.A.

No. 17. Steward Match.—Open to all comers, 200yds., Creedmoor targets, 5 shots, position sitting, kneeling or standing, any military or special military rifle; an allowance of 2 points will be given to competitors who use the Remington rifle, State model, the allowance to be added to the aggregate of the three scores. All prizes to be won on the aggregate of three scores. Entries, 50 cents each, or three for $1 if taken at one time, entries unlimited, match open every day. Prizes for this match will be announced later. Ties in totals to be decided by the next best score or scores.

No. 18. Revolver Match.—Open to all comers, 50yds., 5 shots, American standard target, position, standing, off-hand, the use of one arm only allowed, revolver not to exceed 2¾lbs. in weight, maximum length of barrel (exclusive of chamber) 7½in., minimum trigger pull 3lbs., plain, open sights sufficiently strong for service purposes, cleaning allowed between scores only, any ammunition, the aggregate of three scores to count for all prizes. Entrance fee, 50 cents each, or three for $1 when taken at one time. Prizes —$75 divided into eleven prizes, viz.: $15, $10, $8, $7, and seven of $5 each. Revolvers must not be loaded until the competitor has taken his position at the firing point; the muzzle must always be kept vertical or pointed toward the target. In case of a miss-fire the cartridge that fails to explode must be extracted before another one is inserted.

WILMINGTON VS. WILLIAMSPORT.—The much postponed "telegraph" match between the Wilmington, Del., and Williamsport, Pa., rifle clubs was shot, April 21, by the former, the Williamsport having shot April 7. Standard target, 200yds. off-hand:

	Record Match.									
C Heinel, Sr.	10	5	6	5	5	6	7	6	6	4—60

A Connor	8	2	3	10	5	5	5	9	2	3—49
G Rash	8	4	7	2	5	4	3	0	7	2—42

LAWRENCE, Mass., April 23.—The following scores were made at the regular weekly shoot of the Lawrence Rifle Club this afternoon, 200yds., standard target:

E F Richardson	10	9	7	5	9	9	10	9	8	9—85
C M Hill	7	9	9	9	7	8	6	10	9	10—84
E N Archibald	9	8	7	8	7	9	9	6	10	8—82
W Fisher	6	9	9	9	5	8	9	10	9	7—81
F Clark	7	9	9	9	7	8	6	6	9	10—80
M Beal	7	6	6	8	5	6	7	6	4	4—59

HOLYOKE, Mass., April 23.—Silver Cup Match, 200yds., off-hand, Hinman target, new handicap rules. Rain and fog interfered so that it was impossible to see the target, and some of the scores could not be finished:

A James	7	7	19	7	8	6	5	8	10	10—100
S Winchester	8	3	7	7	8	4	5	6	6	10— 86
A Negrath	8	2	6	4	3	5	5	0	6	9 —72
Dun Well	8	8	9	4	7	7	9	3 ret.		
H E Ferry	10	3	2 ret.							PAPER CITY.

JAMESTOWN, N. Y., April 23.—At the regular club shoot for the medal yesterday, 200yds., off hand, Creedmoor target, Mr. W. H. Ross, a man who two months since was contented if he could get a bullet to hit the target, but who now thinks its "damned funny" if the bullet does not hit the bull, captured the medal on 45, shooting in a very ugly 5 o'clock wind, with occasional fits of rain and hail. Two of the "crack shots" missed the entire target; one of them did not get off the back stop, but the other evidently left the country entirely, and the Dr. and "Kap" will shoot off their discomfiture at short notice:

Ross	4445455455—45	De Lisle	4444434444—39
Baker	4445434545—44	Kapple	4444054554—39
Burns	4456554444—43	Dr Blanchard	4544544404—38
Lonagren	4445334445—40		ZERO.

HAVERHILL RIFLE CLUB, April 13.—Record match, 200yds., off-hand, standard target:

H Tuck	6	10	9	6	10	8	9	8	9	10—85
J Busfield	6	9	7	9	5	10	10	9	7	7—79
A Edgerly	8	7	10	10	8	6	9	8	5	7—78
S E Johnson	5	7	10	8	6	9	9	5	7	10—76
R Griffin	8	7	9	10	10	7	9	4	4	6—74
F Merrill	4	10	6	8	8	5	4	7	4	5—61
C B Wright	9	4	7	6	8	2	5	4	6	9—60
L Jackson	5	6	3	7	9	5	10	5	4	5—59

A variable 10 o'clock wind made good scores hard to get.

TOPEKA, Kan., April 22.—The Topeka Rifle Club held their regular weekly shoot yesterday. There was a strong 12 o'clock and somewhat tricky wind:

J L Paine	10	8	10	7	7	10	8	7	10	7—84	
	7	7	6	9	8	8	6	10	7	5—73	
	8	6	8	7	8	10	9	4	9	5—74	
	10	7	8	6	6	7	8	5	10	7—74	305
Robert Thompson	10	9	8	5	10	6	9	6	6	10—79	
	5	9	9	5	8	5	7	10	7	8—73	
	8	10	7	8	6	9	6	8	6	7—75	
	10	9	9	9	7	10	6	9	4	5—78	305
F G Minkler	7	10	7	6	7	8	8	7	8	10—78	
	5	6	7	10	6	6	5	9	10	8—72	
	10	10	5	7	5	9	8	8	9	8—77	
	9	10	10	6	10	4	6	8	5	8—76	303
C R Paine	8	10	10	9	5	9	6	7	7	7—78	
	5	8	8	7	9	7	6	6	9	10—75	
	7	6	8	6	9	9	9	8	3	6—71	
	6	8	10	8	5	9	6	7	5	8—70	294
Reed McCarter	6	8	8	5	7	4	8	5	4	6—61	
	10	7	5	2	5	10	8	7	6	3—63	
	6	5	6	5	7	4	8	7	8	6—62	
	6	5	9	7	8	7	9	5	6	4—66	252

T. R.

BOSTON, April 24.—The attendance was large and the shooting very fine at Walnut Hill range to-day. Mr. Charles made a score of 89, decimal count, using a military rifle, and in a regular match Mr. Munroe made one 100 and seven 99s in the rest match. Following is the result of the day's shooting:

Decimal Off-hand Match.

W Charles, B (mil)	10	7	10	8	9	10	9	7	9	10—89
	8	9	7	8	10	9	9	8	9	7—84

J B Duffey	46	46	45	45	45	44	43			—314

The prizes this month consist of silverware, gold and silver badges, three prizes in each match.

NEW ORLEANS, April 19.—The following is the result of the recent contest between the Eicke Rifle Club and Olympic Club, both clubs shooting their third teams, at the Eicke Club grounds, distance 50yds., bullseye 13, possible 325:

Eicke Team.		Olymyic Team.	
J Swan	265	L Ruch	258
F Daubert	262	P Bruder	231
J T Seaward	255	E Miller	241
H Kenny	233	G W Miller	239
H Eicke	231	A Twigler	214
	1246		1183

In the contest for the shotgun put up by the J. V. Guillotte Rifle team, the following gentlemen tied and then shot off according to the subjoined score:

H C Claiborne	316	W North	282
H Miller	305	F Delaten	261

GARDNER, Mass., April 21—Regular meet of the Gardner Rifle Club, Hackmatack Range. Hinman target, 200yds., off-hand:

F E Nichols	87 83—170	H C Knowlton	75 83—158
I N Dodge	90 80—170	W C Loveland	77 77—154
G F Ellsworth	79 83—162	S L Walker	71 76—147
G C Goodale	81 80—161	C J Crabtree	64 62—126

MASSACHUSETTS MILITIA MATCH.—The first of a series of matches at 200yds. between teams composed of privates of Company C, of Newton, and Company B, of Cambridge, of the Fifth Regiment, was held on the 23d at the Newton company's range in Newtonville. The following is the score:

Company B.		Company C.	
Swain	22	Purdy	19
Morse	20	Warren	24
Fitzgerald	27	Spaans	24
Lounsbury	22	Cormick	24
Henderson	28	Hodgson	22
Clark	25	Hayden	23
Chittick	27—171	Burns	23—156

The next match in the series will be shot at Company B's range in North Cambridge, on a date to be decided upon later.

WHITE ELEPHANT.—The latest feature in rifle shooting at the White Elephant Rifle Range, which is managed by the veteran Conlin, is the running-man target, at which some very good scores have been made up to date. Mr. Bowen heads the list with

THE MAN TARGET USED IN CONLIN'S GALLERY.

a score of 40 in a possible 42; J. W. Bowen 40, J. J. Eyre 38, Capt. N. B. Thurston 34, J. S. N. Crane 33, J. C. Jackson, 31, H. L. Noble 32, Wm. C. McCoy, 31, R. McLear 29, H. A. Alexander 32, D. Bacon 28, W. H. Anser, 23, A. R. Page 29.

BRITISH COLUMBIA RIFLE ASSOCIATION.—The annual general meeting was held on the 17th ult. The association decided to renew the lease of the present rifle range at Clover Point until September next, though the present site is considered too exposed. The province will be represented by a team of five at the annual meeting of the Dominion Rifle Association at Ottawa in September next. The following council was elected for 1887: Mr. E. C. Barker, M.P.; Lieut.-Col. Wolfenden, Maj. McDonnell, District Staff, and Major Prior, Surg. Trew, Capts. Peele, Bowles, Jones, Fletcher, Dorman and Woolacott, Sergt. H. H. Roper, Gr. Winsby and Messrs. C. E. Pooley, M.P.P., and Geo. Thompson, M.P.P. A meeting of the newly elected council was afterward held and the following office bearers were elected: Pres., E. C. Barker, M.P.; Vice-Pres., Lieut.-Col. Wolfenden and Capt. Peele; Sec., Capt. Fletcher; Treas., Capt. Dorman; Auditor, Capt. Snowden.

THE JAMESTOWN MEETING.—A tournament to decide the relative value of muzzle and breechloading rifles, open to the sportsmen of the world, will be held at Jamestown, Chautauqua county, N. Y., May 17, 18, 19 and 20, under the auspices of the Anderson Rifle Club of Syracuse, of which C. H. Reimer is president. The home of the champions of the muzzleloading rifles is at Jamestown, and for this reason the Anderson Rifle Club have secured the use of the range at that place, which is owned by the New York, Pennsylvania and Ohio Shooting Club, and known as the Nypano Club Range. The programme of the tournament is based upon guaranteed cash prizes of $300. Matches will be called at 10 A. M., the first day of the tournament, and at 9 A. M. on each succeeding day, and five strings will be shot each day.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a prize for competition on May 30, to be known as the "FOREST AND STREAM DECORATION DAY TROPHY." It is a solid silver cup, specially manufactured for the FOREST AND STREAM by the Whiting Manufacturing Company, of New York, at a cost of $100. The TROPHY will become the absolute property of the club which shall win it. For conditions see last week's issue or send for circular. Club secretaries are requested to give early notice of intention to enter. We hope to have an illustration of the TROPHY in our next issue.

TORONTO, April 16.—The Toronto Gun Club held their weekly shooting tournament this afternoon at Woodbine Park, clay-pigeons and Canada blackbirds being the targets. There was a large attendance of members and some very fair shooting:

First sweepstakes at 10 clay-pigeons, 18yds. rise:

W Felstead	9	W Jefferson	6
W McDowell	8	A Ellis	6
E Edwards	8	G Pearsall	6
R J Kidd	7	D Black, retired	

Second sweepstakes at 10 clay-pigeons, 18yds. rise:

W Felstead	10	D Black	6
A Ellis	7	E Edwards	6
W McDowell	7	W Jefferson	5
R J Kidd	6	H Newman	4
G Pearsall	6		

Third sweepstake at 10 Canada blackbirds, 18yds. rise:

A Ellis	8	H Newman	6
W McDowell	8	G Pearsall	6
W Felstead	7	E Gardener	6
E Edwards	6	C McClure	4

Ellis and McDowell shot off at 10 birds each, 21yds. rise, Ellis hitting 8 and McDowell 7. In a double rise sweepstake at 5 pair, Ellis and Felstead scored 7 each and divided first and second money.

JERSEY CITY HEIGHTS.—A goodly number of the lovers of trap-shooting assembled at the grounds of the J. C. H. G. C., Marion, on the 20th inst., to witness the match between W. C. Cannon and George Davis, but owing to a misunderstanding, Mr. Davis not receiving notice of the postponement of the match in time, and being under considerable expense in getting his share of the birds on the ground, etc., the match was declared off, Mr. Cannon manfully paying the forfeit, $25. The following match was then made between the two men for the 21st of May, on the same grounds. Match for $250 a side, 50 birds each, Hurlingham rules. $50 forfeit each was put up. The following sweeps were then engaged in. A fine lot of birds was furnished by "Old South Paw," and Duke the incomparable did the retrieving. A great, a wonderful canine is Duke, and no biped takes the solid enjoyment of a trap shoot like unto him, and no shooter knows better than he whether a bird can be safely gathered. Sweep No. 1, 4 birds, entrance $2, birds extra, Hurlingham rules:

Dickens	2012—2	Robby	1022—3
Davis, Sr	1100—2	Quinlan	1120—3
Day	0021—2	Geohegan	0011—2
Terry	0121—2	Lindsley	1201—3
Cook	1111—4	Wm Siegler	0221—2
Keark	2112—4		

In shoot off Cook and Keark divided first, Terry and Quinlan second, Siegler third.

Second sweep, same conditions:

Dickens	1211—4	Vogel	1111—4
Quinlan	1101—3	Hughes	0110—2
Smith	1211—4	J Von Lengerke	1211—4
Cook	0022—2	Seney	0201—2
Lindsley	2100—2	Cannon	1000—1
Day	1112—4	Willis	1100—1
Collins	0100—1	Creely	0121—3
Jim B	1012—3	William	1010—2

Dicker, Day and Von Lengerke divided first money, $16; Quinlan, Jim B. and Creely divided second, $10. Cook, Lindsley, Hughes (Old Reliable No. 1), Willis, Jersey, and Williams agreed to let the highest score on next sweep decide the third money, and as the result will show, Old Reliable knew what he was about.

Third sweep, 4 birds, $2 entrance: J. C. H. G. Club rules:

Jersey	1	0	½	½—2		Hughes	1	1	1	1—4
Day	0	½	0	1—1½		Jim B	1	0	1	1—3
Cook	½	½	0	0—1		Vogel	0	1	0	½—1½
Lindsley	1	0	0	1—2		Smith	1	½	1	0—2½
Cannon	1	0	0	1—2		Burdett	1	0	0	1—2
H Siegler	0	1	1	1—3		Williams	1	0	1	1—3
Dickens	1	½	1	0—2½		Collins	½	1	0	½—2
Wm Siegler	0	1	½	1—3½		J Von Lengerke	0	1	1	1—3
Willis	0	1	0	1—2		Quinlan	1	0	1	1—3

Old Reliable taking first money, third money in former sweep. Wm. Siegler took second, and in shoot off H. Siegler and Quinlan divided third.

During an interval a match between Day and George Davis was was shot, 10 birds, Hurlingham rules:

Day	2111001211—8	Davis	2121001120w—6

The return match between the Middlesex G. C. and the Essex G. C. (each club having won a match on their own grounds), will take place at Marion, on the grounds of the J. C. H. G. C., on next Thursday, the 28th, when a hot time is expected, as there is considerable interest already shown. Both clubs have been adding largely to their members and not a little money is up; 20 men, perhaps 25 a side, 10 birds each, Hurlingham rules, with exceptions as to weight of gun and armpit instead of shoulder. After the shoot a few friends accompanied Old Reliable to ye Hostelrie of one Duke in Hoboken, where ample justice was done to O. R.'s reliability at the trap, only equaled by his guests as trenchermen. And thus closed a very enjoyable day in Jersey.—JACOBSTAFF.

SAN FRANCISCO, April 16.—The San Francisco Rifle Club met this afternoon at Adams Point to contest for the second medal shoot of the season. Twelve members faced the traps and shot at as fine a lot of birds as could be found in any part of the country. The figure 2 in the following score denotes the use of the second barrel when occasion required a second shot to keep the bird within the limit—80yds. The shoot was governed by Hurlingham rules. Score:

Ewing (32yds)	1112212012w0— 9	McShane (26)	1110210210w2— 9
Babcock (33)	1021011011w1— 8	Butler (30)	1110212212w1—11
Jellett (20)	2121011111w1—10	Orr (32)	1111102121w1—10
Lewiston (28)	2111111202w0— 9	Golcher (29)	2211022112w0—10
Sweet (28)	0110202121w1— 7	Laing (30)	2101110111w0— 9
Hanson (28)	1112202012w2— 9	Wilson (30)	0111001011w1— 8

Following the regular shoot came two freeze-out matches $2.50 entrance, 30yds. rise. Result:

Babock	1220	Hanson	2210
Jellett	1111	Orr	0
Ewing	1112	Lewiston	10
Laing	1111		

Jellet, Ewing and Laing divided the pot. Second freeze out:

Babcock	2110	Lang	1210
Jellet	1110	Hanson	2210
Ewing	1212	Orr	2212

Orr and Ewing divided. The day's sport terminated with two matches; the first at 3 double birds and the second at 2 pairs, 21yds. rise. First match:

Jellet	00	Hanson	10 00
Ewing	00	Orr	11 10 11
Laing	10 01	Butler	10 11 11

Orr and Butler divided. Second match at 2 pairs:

Jellet	10 10	Laing	10 10
Ewing	00	Hanson	11 01

Hanson killing three of the birds took the pot.

SACRAMENTO, Cal.—The Forester Gun Club held its first meeting of the season at Agricultural Park on the 10th of April, and though the weather was far from being settled, eighteen members took part in the medal shoot. The eighteen were divided into two teams, one captained by Henry Eckhardt and the other by Otto Miller. For the first time in Sacramento ground traps were used (three), and as their construction is such that the birds are placed in them with their heads furthest from the score, they are almost always "tailers" when the traps are pulled. The birds were old and very strong, and when they left the traps and skimmed almost straight away for several yards, only a few feet above the ground, the shooters found it difficult to bring them to grass, especially the blue pigeons, so nearly resembling the color of the vegetation. At the end of the team shoot it was found that each side had scored 66, there were but four birds remaining. It was agreed that the captains should shoot off the tie, but each of them missed once and the tie still remained. The score was as follows:

Miller's Team.		Eckhardt's Team.	
Miller	000001111111— 7	Eckhardt	010001001101— 5
J Gerber	011101111111—10	Todd	101001010111— 7
H Gerber	110101111111—10	W E Gerber	100010100101— 5
Ruhstaller	000001101111— 6	Chapman	100111111011— 9
Kane	010010111110— 7	Schroth	111111111001—10
Coffey	110011000101— 6	Tebbets	000110010110— 5
Ankener	110110100001— 6	Vermilya	101100111111— 9
Bronner	011010111111— 8	Verity	030001111101— 6
Starr	001110011010— 6—66	Watson	101101111111—10—66

KNOXVILLE GUN CLUB.—Knoxville, Tenn., April 15, gold medal shoot, 25 Knoxville blackbirds, 18yds., 3 angles, very windy:

T C Eldridge	1001100001111011010101101—15
C M Woodbury	0001111110101001011110110—15
J E Ross	1100001101011111101011011—15
J M Ross	1101010001111001100010111—15
A E Mead	0101101101100100011101010—11
F H Post	0000000110000111000110101— 9

T C Eldridge won the medal on the shoot off.

Cleveland blue rock match, 9 single, 5 pair doubles, other conditions as above:

Eldridge	111111111101110011— 16	A Mead	010010111110101010101—11
J Ross	111111100101111101—15	J E Ross	101001110001000000— 7
Woodbury	101011110000101111—12	Post	110000000001000100— 4

PHILADELPHIA, Pa., April 23.—Wayne Gun Club. The day was disagreeable. Ligowsky pigeons, 1 trap, Wayne Club rules:

Sam Davis	1010000111—5	Gus Hessler	0100101010—4
Thomas Scargle	0301000111—4	E Shea	00010w
P F Yost	1011110011—7	George Scargle	1011111010—7
C Briney	1000100110—4	F Hessler	1111011111—9
E Hausberry	0300100103—2	W Ulary	0000011010—3
J Sparks	0110101100—5	H Kane	1011011111—7

WINCHENDON, Mass., April 21.—The Winchendon Gun Club have purchased a handsome badge, which is to be contested for each week the present season. At the regular meet yesterday was the first contest and of 10 birds the following were broken by each man: P. S. Davis 7, H. J. Lawrence 6, F. F. Hapgood 5, Dr. J. G. Henry, E. M. Whitney, A. O. Lawrence and Chester Houghton each 4.

LEOMINSTER, Mass., April 22.—The Leominster Gun Club has organized as follows: I. F. Gorham, President; C. H. Rice, Vice-President; R. B. Adams, Secretary; A. G. Powers, Treasurer; A. W. Woods, A. Thompson and E. Bartlett, Directors. The personal property and real estate of the club is valued at $125.

WASHINGTON, D. C., April 20.—At the bi-weekly shoot of the Capital City Gun Club, held on Analostan Island, the following scores were made. Those marked * are for record:

*Mills	1111110101111111—13	Collison	1100101101101101— 9
*Green	1110111101101101—11		

April 23.—N. G. A. rules, 5 traps:

*Mills (16)	1111011011111111—13	Whitman (18)	1001100111100001— 8
Godey (16)	1101111010011111—11	Williams (18)	1010000111100010— 7
Green (16)	1101011100111011—10	Adams (6)	0000011000000000— 2
*Collison (18)	0111000101011111— 9		

JAMES M. GREEN, Treas.

BROOKLYN, April 20.—The members of the Washington Gun Club had a good day's sport to-day at Dexter's Park. The shooting was very good for the club badge. Only eleven members shot for it, the conditions being seven birds each, both hands, club handicap. E. Rockefellar, 23yds., proved to be the winner, killing his seven birds straight. Six came in the second class, killing six birds each. The score follows:

Club Shoot.

R Monsees (25yds.)	0111101—6	H Winans (23)	1111101—6
A Rockfellar (23)	0011000—2	B Munch (21)	1111110—6
C Smith (23)	1111011—6	S Newton (25)	0111011—5
W Denyse (23)	1111011—6	J Simpson (25)	1001101—4
R Rockfellar (23)	1111111—7	H Kampfmuller (25)	1111101—6
A C DeGraw (25)	1111011—6		

Referee and scorer, C. A. Dellar.

Sweepstakes, 25yds.

A Rockfellar	01111—4	J Simpson	01101—3
S Newton	11111—5	R Monsees	11100—3
B Munch	10001—2	W Denyse	00000—0
A C DeGraw	11000—2		

SOLOMON CITY, Kans., April 22.—At the annual meeting of the Solomon Gun Club, the following officers were elected: Pres., E. E. Crooks; Vice-Pres., C. F. Dewar; Sec. and Treas., T. J. Edworthy; Executive Com., Chas. Pattison, W. T. Shane and John Dewey. Shoot, April 22, Peoria blackbirds; wind blowing a gale and sun bright, which accounts for some making poor scores:

T Robertson	0111101010101001— 9	J Kmenchi	0000001100011011— 5
T J Edworthy	1111001011101111—11	C F Dewar	0100101011000101— 6
E E Crooks	1110101110111011—11	W T Shane	1001011000000001— 5
C Pattison	0001010011001100— 5	John Dewey	0001010011011001— 6
M Robecker	0000000010000000— 1		

ABSIT INVIDIA.

WORCESTER, Mass., April 20.—The Worcester Sportsmen's Club held their regular meet yesterday at Coal Mine Brook range. There were 11 events, aggregating about 150 entries. The last event was the most interesting of all. It was 20 birds, shot in strings of 5, and resulted in detail as follows:

J B Tougas	00111111100111111001—15
E T Smith	01110111111001000111—13
G W Russell	10011011111010111001—13
E F Swan	11001101101110010111—13
G Frank	01111110011010111010—13
H W Webber	11001011111010001110—12
E Whittaker	01110111001101100011—12
F Stone	11100110110011100100—12
W R Dean	01010011001111010001— 9
G J Rugg	11101101010010000010— 9
A B Franklin	10001101110010000100— 8

TORONTO, April 22.—The Toronto Gun Club commenced a series of ten weekly shoots at the Woodbine to-day. The targets were clay pigeons and Peoria blackbirds from five traps. The weather was very stormy and rain fell during most of the match. There are three prizes in each class. Those making the highest total scores in the ten shoots will be the winners.

20 birds, 18yds. rise, 5 traps:

R J Kidd	18	G Pearsall	12
W Felsted	17	M Gardener	11
W McDowall	17	J Kipp	10
G George	14	J Ayre	10

The shoots will be continued alternating from Friday to Saturday until the competition is finished. The members of the club have been divided into two classes, first and second. Three suitable prizes will be offered in each class. The contestants are to shoot at twenty birds each. Any member missing one shoot will be accorded the privilege of shooting two strings the following week. An entrance fee of 25 cents will be charged to the opening shoot. The prizes in each class will go to the three highest total scores.

NEWARK, N. J.—Champion William Graham, the English pigeon shot, has named Erb's grounds, Newark, as the place where his two matches with Dr. Carver are to come off, and selects May 5 and 6. Dr. Carver will then come East from Kansas City, where he is now residing. He has not accepted Graham's offer to bet $500 on each match. Dr. Carver has accepted William Tell Mitchell's challenge, and this match is to come off also at Erb's after the Graham matches. Nothing as yet has been heard by either Grahm or Carver from Capt. Bogardus.

WELLINGTON, April 23.—There was a large number of gunners at the grounds of the Wellington Club to-day, and the pleasant weather made the sport quite agreeable. Following are the first prize winners in the several sweeps: 1. Stanton and Schaefer. 2. Schaefer and Swift. 3. Swift and Gerry. 4. Ames and Warren. 5. Warren. 6. Warren and Gerry. 7. Ames. 8. Schaefer and Stanton. 9. Casey and Clark. 10. Stanton and Casey. 11. Stanton and Schaefer. 12. Schaefer and Stanton. In the medal match Ames won in class A, Baxter in class B, and Clark in class C.

BRIGHTON, Mass., April 23.—This afternoon the Brighton Gun Club held their first shoot for a diamond medal. This medal is open to club members only, and will be shot for fortnightly. The shooter winning it the greatest number of times between April 23, 1887, and Jan. 1, 1888, will on the latter date become sole owner. To-day's scores were close, McDonald making the highest, 15 clays and 15 bats:

McDonald	443253—21	Whicher	223431—15
Temple	434233—19	Grace	211333—13
J Coyle	324342—18	O'Connell	421132—13

The optional sweeps upon the same 30 birds followed.

TORONTO, April 23.—The Owl Gun Club held their first of a series of five shooting competitions at Peoria blackbirds for three gold rings to-day on Charles Ayres's grounds, Eastern avenue, 15 Peoria blackbirds, 10yds. rise, from three screened traps:

J Jobbett	1110101011111011—12	J Wells	1110110001101011— 9
W McCowall	1110101111111001—12	A Ellis	0111111010100010— 9
J Humphreys	0110101011111111—11	C O'Leary	1110011111010000— 9
J Colborne	0111011111101110—11	C Ayre	1100100011101110— 8
C Harrison	1011011110111101—11	W Lush	1010001111101100— 8
J Douglas	1010100111111011—10	W Stuart	0101011000101010— 6
J C Unwin	0001111111111010—10	W Taylor	0111001000101000— 6
W Smith	0011010111110111—10	G Fogg	0010011000100000— 5
A Lockhart	1101011111100011—10		

BUFFALO, N. Y., April 25.—Big scores were made at the live bird shoot for $400 and the championship of Buffalo to-day. Jacob Koch killed 97 and William Schieber 95 birds out of a possible 100. Two of Koch's birds fell dead outside the line, so he missed but one. The best previous record in Erie county was 89 birds.

Canoeing.

FIXTURES.

The Royal C. C. will sail their Challenge Cup Race on Hendon Lake, on June 11, 1887, and invite American canoeists to attend and compete.

MAY.

8. Oakland, Edwards Cup.
28-30. East. Div. Spring Meet, Haddam Island.
28-30. Hudson Meet, Croton Point.

JUNE.

5. Oakland, Edwards Cup.
18. Brooklyn, Annual, Bay Ridge.
25. New York, Annual, Staten Island.

JULY.

3. Oakland, Edwards Cup.
4. Passaic Meet, Dundee Lake.
18-31. W. C. A. Meet, Ballast Island.
24. Oakland, Mayrisch Badge.

AUGUST.

1-12. Northern Division, Stony Lake.
7. Oakland, Edwards Cup.
12-26. A. C. A. Meet, Lake Champlain.
13. Lake St. Louis Chal. Cups, Lachine.

SEPTEMBER.

4. Oakland, Edwards Cup.

OCTOBER.

9. Oakland, Edwards Cup, Mayrisch Badge.

NOVEMBER.

6. Oakland, Edwards Cup.

DECEMBER.

4. Oakland, Edwards Cup.

BROOKLYN NOTES.

Editor Forest and Stream:

The Brooklyn C. C. has taken an early start this season, and for the last five weeks has had a good flotilla afloat every Saturday and Sunday, testing new rigs and preparing for the season's work at Bow-Arrow Point. There is but one new boat in the club, although at least four built last year are now being tested for the first time. Mr. Wilkin's new Peterboro has a new rig of his own invention, which is in appearance not unlike a fan, or a bat's wing; to the surprise of the connoisseurs it made an admirable flat sail, and seems to reef satisfactorily, although with the disadvantage of having to shift the jaw when reefing. It is certainly a very pretty sail, and while not of the largest size, promises to make a noteworthy cruising rig. Mr. Brokaw's boat, No. 570, also sports a new rig, a balance lug, which will have altogether about 85ft., with bamboo spars and battens. It is made of a very close sort of twill, and as the boat is undoubtedly fast, we are looking forward to the first race for our Brooklyn Cup, of which he is the holder, with interest. Another cruiser gone wrong is Mr. Harry Ward, who has the racing fever badly, having purchased a new Sunbeam, which is to be fitted with a larger sail plan, not unlike that described in your columns by your Colorado correspondent. This will also have bamboo spars, and from the experience of Mr. Ward in sailing larger boats, we anticipate a good place for him.

Among other new rigs is a marvel of ingenuity, devised by Mr. Weeks, of which the principal feature is an upright brass rod fixed on the after side of the mast, and on which the sail and spars travel by means of spontaneously detached hooks on the mast, and his sails are the admiration of all who have seen them for their flatness and compactness; this will be used for cruising only on another "Sunbeam." The Commodore has not yet shown his hand, so we can do nothing but imagine what his improvements may be; that he has something under way is pretty sure. Two members are daily practicing paddling tandem, but whether simply for company and exercise or with a view to Champlain flags, we do not know. Mr. Whitlock's Yvonne will take the name of his old boat, the Guenn—now offered for sale. This boat has been thoroughly overhauled, and the much-experimented-with sliding gunter is to be used on it, an after centerboard has been put in, a new rudder shipped, and the mast tube moved further forward. She will carry a 95ft. mainsail.

The new boat is Mr. Tucker's, built by Joyner, which, while not a Pecowsic, has many of its salient features; Mr. Tucker has not rigged her yet. The club also has a novice in training, who has a good fast boat, but his ardor is for the present restrained by the older members until the water gets warmer. The club house has been thoroughly rearranged, so as to accommodate now 34 boats. Ridgewood water has been introduced, giving us a shower bath and washing appliances; new lockers upstairs have been added, and the club house has been painted, and is altogether more comfortable this year. In addition a sleeping room has been hired on the bluff, which can be used as a club reception room during the day; this has been prettily hung with pictures, and adds greatly to the attractiveness of a visit to Bay Ridge.

The club propose to send a large delegation to the Haddam Island meet and will also spend July 4 at Dundee Lake with the Passaic boys. They propose to cruise to the A. C. A. meet in force, from the head of Lake George, through that lake and Champlain, and hope to have some of their members represented in the team for the division race, now being considered by the regatta committee. Their regatta on Saturday, June 18, is an open one, and it is cordially invited by visitors from all clubs able to reach there, will be represented. A camp-fire on the bluff is proposed and no pains will be spared to make the visit a pleasant one.

I have to add a chronicle of the first upset of the season, which occurred April 24, during a trial of speed between three of the boats. Nine boats were out under sail and seventeen of the members were at the house busy in various ways over their craft, when a flaw struck the Guenn, taking her mainmast out of her—dropping her captain with great suddenness into the drink to windward. As the temperature of the aforesaid beverage was too decidedly like ice to be pleasant he did not stay long, and in fact got back so quickly that he might have escaped detection but for his wet clothes. A brisk paddle in, soon warmed him and set matters straight. The accident, as usual, was found to be caused by the tacks fastening on the leather band at the foot of the mast which was in this instance 2½ inches thick. Moral: Put no tacks anywhere in your mast.

GUENN.

A CRUISE IN A FOG.

TWO weeks before Liberty Day a friend invited me to go double with him in an 18ft. cedar canoe, and as my own is a small canvas craft I cheerfully accepted. "The more, the merrier," he said; and so in a few days we had increased the prospective party by four more weather-beaten, salt-water canoeists.

We arranged to meet at a boathouse on the Passaic and sleep there on the night of Oct. 27, if the weather should be propitious for the trip; but, as every one knows, it rained that night, and so we agreed to meet just above the Erie bridge in Newark, at 8 A. M. the next morning.

We met, Mac and I, and waited till 8:45 for the rest of the party, and then decided to start on our way. It was about two hours before high tide, and we paddled at an easy gait down stream. Near the Pennsylvania bridge we overhauled a 14ft. sloop-rigged craft, beating down and bound for Liberty Island like ourselves.

When we had passed the plank road bridge, we hoisted our tall balance lug and sailed away with a good whole-sail breeze on our quarter. We sailed merrily along past the meadowwater and out into Newark Bay; then the fog began to get thick, but we kept in the track of the excursion steamers and held our course for the draw of the Central Railroad bridge. A tug went through just ahead of us and the bridge tender left the draw open; but before we reached it a passenger train came up from the west and stopped on the bridge. The engine was gaily decked with flags in honor of the day, and we thought it might grow impatient at the delay, so I picked up a half-paddle and we went through flying.

The wind had been freshening all the while and we laid to just beyond the bridge and tied down a reef. Before reaching the bridge we saw the little sloop go by in tow of a steamer. Soon after entering the Kills we lowered sail and, taking to the paddle against the wind, we overhauled the sloop again, beating through the Kills and making about 3ft. on a tack. As we were passing the Standard Oil Company's docks the captain of one of the vessels tied up there hailed us and asked where we were bound. We told him we were pulling for Liberty. "Do you call that fun, pulling against such a tide?" "Certainly, Captain." "We poor sailors go skimping up the mast while the landlubbers lie down below—below—below; while the landlubbers lie down below." "You fellows are the chaps." "We know it, Captain. Good-bye."

Then we settled down to a hard pull up the bay; we could not have made any headway by sailing against the strong tide and it was necessary to move along for it was now after 12:30 P. M. We paddled on for awhile, keeping over toward the Jersey shore and by and by began to search around for Liberty. Once or twice we thought we had discovered her, but it proved each time to be some object in Greenville. Finally we pulled up under the lee of some crib work, distant about 1½ miles S. W. of the statue, and ate an appetizing lunch; when this was over it was time to start for home.

We pushed on ahead intending to carry over into the canal at the pier in front of the Idle Hour. As we were making a landing here the piercing tones of a calliope were borne to our ears from a point about a quarter of a mile eastward along the shore. I blew an answering blast, and discovered a figure in yellow oilskins standing on the rocks and shouting "Hello, John! Hello, John! Hello! Hello! Hello!" "That's J. L. D.," said I to Mac, and returned the shout with "Hello, John! Hello! Hello!" Running along to where the yellow oilskins stood, we found three of the party who didn't start with us. They had come along about an hour and a half behind, and had now just finished their noonday meal, of which flapjacks formed the *pièce de résistance*, so they averred, with a little sand for ballast. They were going to see the ceremonies and then run down to Staten Island, leave their canoes there and come home by rail, going down for the canoes again some future day. We, however, were obliged to get our boat home that night, so we exchanged the compliments of the day, mutually requesting each other's company.

We made the best we could of the carry into the canal, and after paddling about half a mile came to the little house of the canal company's sergeant-at-arms. Pleasure boats are not allowed on this particular portion of the canal, and it is this man's duty to see that they are kept out. He was sleeping soundly when the other boys came past, so they told us, but he had roused himself by this time, and pounced upon us at once. "Say! you fellows can't go by here." "Why; what's the matter?" "Don't you know pleasure boats ain't allowed on here? The company's got signs up all along." "Is that so? We didn't see any." In the meantime we were paddling slowly by. "Well," he said, "I ain't the regular keeper here; he's gone down to the locks, and don't let him catch you. He'll make a big fuss if he knows I let you by. Don't tell him you saw me." We thanked him, congratulated ourselves and passed on, keeping a sharp lookout for the prospective fussmaker. We had gone about a half mile further when there was a shot and a tremendous roar behind us; but it wasn't the keeper, it was part of the celebration. That roar was kept up steadily for about five minutes, increased at intervals by the rattling fire of gatling guns, which sounded to us very much like rapid beating of drums.

A mile or so beyond this we came to the lock. I got out to look at the situation, while Mac remained aboard; and while I was looking I heard a deep voice say: "You take that boat out of here just as quick as you can." "That's what we are doing," replied Mac. "Where are you going, anyhow?" "Up to Newark." "Don't let me ever catch you in here again, you, nor anybody else." We did not dare to answer for anybody else, but busied ourselves about the canoe to hide a smile. The last portion of the carry was very trying; it was necessary to keep right side up while shuffling along a board walk which the silt deposited by the retreating tide had made as slippery as polished ice, moreover, the path was not level, but dropped down two steps at one place and at another vanished into a prospect of muddy water, seen through a 3ft. break. I didn't see Mac cut up any antics, but the crossing of that break nearly caused me to take a bath in the mud below.

The trip up the Passaic was chiefly and solely noticeable for the frequent and ever recurring dip, dip, dip of our blades as we fought our way against the strong ebb tide. We reached the boat house at about 5:30 P. M., having traveled 27 miles and not having obtained a single view of Liberty on account of the thick fog that prevailed all day long. One night, however, a few days later, we had the pleasure of viewing the brilliant illumination from a distance of 13 miles. A week or two after the trip, happening to meet one of the sand eaters, and inquiring as to when he got home I received the reply: "We haven't got home, yet." J. V. L. P.

A CRUISE ON LAKE MICHIGAN.

IT may interest Eastern canoeists to know that far out here on the bleak coast of Lake Michigan we have a canoe club, now in its infancy, and growing with fair prospects of success as a permanent institution, consisting of eight members and seven canoes, with three more to join in the spring. Every man speaks of his membership with pride, as belonging to a gentlemanly order, and with pleasure as he recalls the past season's many cruises—cruises fraught with excitement in every puff of wind and flying whitecap, with interest at every stroke of the paddle and with fond recollections of the camp-fire's many pleasing incidents.

Our canoes, two modeled from the lines of the Clyde canoe Laloo, one Racine and four others of indifferent model, are all good sailors, handy under paddle and fine sea boats, for we must cruise on the broad and open waters of Lake Michigan, and the length and breadth of the treacherous Muskegon.

Aug. 15, 1886, was the time chosen for the first cruise of the Muskegon C. C., the course being up the coast of Lake Michigan to Grand Haven, thence up the Grand River to Grand Rapids and return, a distance of 110 miles. Six boats with crews made the start. All hands were at the club house late Saturday night after business hours, off for a ten days' recreation. With canoes well provisioned and stocked with fishing tackle, shotgun, photographic outfit, etc., all being nicely stowed, the word was given to cast off, a few strokes, a rush out into the gloom of a smoky night and the little white-winged fleet had vanished, bound six miles down Muskegon Lake to the entrance of Lake Michigan, where all arrived at 12 o'clock, after a brisk run before an east wind. Here we lay to for consultation, for the more timid of the fleet hesitated at the ominous swash of the surf outside, through the thick night, which reached our ears. Yet as time was precious and next day was Sunday, it was determined we should head for Lake Harbor, seven miles up the coast, that night, and we flew along under full canvas, every nerve taxed to its utmost and on the alert for the powerful puffs of wind that swept down from the towering sandhills along the shore. It was a hand to hand struggle and every moment it seemed that the giant elements must conquer, but the daring little fleet worked nobly, with booms close hauled and stems to windward in one long stretch for our destination. We reached it, after a hard run of an hour and a half, the canoe Black Diamond being the first to round the piers of Lake Harbor, hard pressed by the Spear, with the Gale, Commodore, Amazon, Zephyr and Enchantress close in the wake. We cast anchor in the dark waters of Black Lake, a beautiful summer resort, made more attractive by numerous cottages and hotels, accommodating many guests from abroad during the warm season.

It was now close to 2 o'clock, and all hands turned in, under canoe tents, fatigued more or less by the hard work of the night, and it was not long before the sonorous sounds of the sleepers issued from each tiny craft that lay rocking the dreamless slumberer peacefully on the quiet rolling billow.

The morning woke bright and clear as a summer Sunday morning generally does, and ended in a dashing rain squall that tested our tents thoroughly and found them waterproof and comfortable. This being our first day in camp it was decided not to continue our course up the lake that day, but spend the time in a way that none but canoeists know how, and I shall not attempt to tell, for my simple words would fail to describe the glorious invigorating freedom of such sport.

The long calm Monday morning, heavy sea rolling outside, wind blowing half a gale from N. W., we lay under cover of our little fort all that morning, when, about 11 A. M., wind shifted and came light from W.; all sail was immediately set for Grand Haven, eight miles up the coast, where we arrived at 2 P. M., after a pleasant run with a light wind on our starboard quarter and a long-rolling dead swell with its unpleasant effects. The end of our trip up the lake was welcomed with feelings of relief as we now enter the broad and beautiful Grand River, which is truly grand in nature as well as name, the beginning of the first canoe cruise ever made on this stream. We now enter with a fair breeze over our stern as we ascend the sluggish current. When the wind blows our way all goes well, but we anticipate many a long pull with the double blade, as our destination lies forty miles up its winding course. Our camp-fire was lighted that night on the bank of Spring Lake, opposite the beautiful village of Spring Lake, three miles from Grand Haven. The special artist proceeded at once to photograph the first camp on the river trip.

A splendid bill of fare was prepared by the Doctor, which was speedily dispatched as all were as hungry as wolves. The evening was passed with many strangers in camp, all anxious to inspect our little fleet. Next morning, the wind fresh and fair, canoes all under way at 10 A. M., made rapid headway for four hours through a perfect panorama of natural grandeur. As we sped by the many little villages that dot the river banks, men, women and children, and even the dogs, would run out to catch a glimpse of the curious little ships that would soon disappear round some quick bend to plunge through the midst of a dense wood, or dart through the open country with rich farms on either side, sloping to the water's edge like a vast lawn.

We sighted the village of Spoonville at 2 P. M., where we came alongside the incoming steamer to the next town, and were informed by a half dozen wide-open mouths all at once, that it was just six miles further up. The wind had dropped to a dead calm, and the paddles taken its place, a short pull in the afternoon under broiling rays, against a current, and all hands were willing to accept the cool inviting shade of a spreading maple that sheltered a little valley and budding spring, where our tent was pitched for the remainder of the day.

On the 19th we got under way in a great hurry, as a steam tug brought a scow in for a load of gravel just at our landing place and we were routed out like so many bees, every man hurrying here and there with his arms full of dishes, pots, pans, etc.—all tumbled aboard pell mell, and shoved off up stream again, under full sail, with a very light wind. All day we drifted lazily along, slowly creeping mile after mile at a snail's pace. The village of Eastmanville hove in sight around a curve, and was passed about 10 A. M. Further up we landed alongside a farm for fresh milk, apples, potatoes, etc. Lunch was taken aboard, as we proceeded on our course, occasionally stopping to fish in some shady pool.

In the distance was sighted the beautiful village of Lamont, just half way between Grand Haven and Grand Rapids, situated high above the river and nestled among the hills. As we silently approach, one must almost hold his breath to hear a single sound, so quiet is the sleepy little town, only the tinkling of a distant cow bell, or the occasional bark of a dog is heard to disturb the dreamy repose of the villages. We went into camp for the night just above the town on the opposite side of the river. The Doctor immediately made preparations for dinner, which was the royal feast of the trip, and here is the bill of fare, I remember it as if it was but yesterday, so well did it taste: Green or moss-back turtle soup. Roasts—Young wild duck, blackbirds and snipe, or fried frogs legs and snipe. Boiled—Green corn and potatoes. Rye bread and butter, fresh milk, tea and coffee, wine and cigars.

All hands decided to remain in camp until next day in hopes of getting a fair wind, but we were doomed to disappointment, as the morning of the 20th broke clear and calm. The paddles were manned for two hours, when a light breeze arose and we made but slow headway for the remainder of the day, and went into camp at the clay banks, 12 miles below our destination.

Next day, Aug. 21, a dead calm struck the little fleet, not a ripple on the glassy surface, and Grand Rapids twelve miles away. The hot sun shone hotter, and the stiff current grew stiffer, while faint hearts grew fainter, yet Grand Rapids must be reached that day, as almost a week had elapsed since we first set sail, so every canoe shot out under paddle for a long, steady pull. With belts tight-

ened and sleeves rolled to the elbows, all hands worked manfully for what seemed to be about five miles, when we asked a farmer how far it was to Grand Rapids. He said it was just thirteen miles from his place, which put us back a mile from where we started that morning. The Doctor immediately fainted, and we went ashore for fresh water and the cool shade of a leafy grove. Somewhat refreshed, we embarked again for another long pull. Farm after farm was passed as mile after mile we ascended, the ever increasing current slowly but surely shortening the distance. The villages of Blendon and Granville were passed about mid-day, the remaining six miles of the hardest pull to accomplish yet. All landed for refreshments and for the Doctor to catch up, as he had dropped far in the wake.

A fresh start was made, every canoe hugging the short side of the bends, shortening the distance to four miles, then to three miles, two miles, when an afternoon breeze sprang up in our favor and the little fleet entered Grand Rapids under full sail, with colors flying, rounding to at the boat landing at 3:30 P. M., Aug. 21.

The return trip was made in two days and a half from Grand Rapids to Grand Haven by canoe, from Grand Haven to Muskegon by steamer, as our time was limited. T. X. S.

EASTERN DIVISION MEET.

THE following has been sent out by the officers of the Eastern Division, A. C. A.:

It having been decided by the Executive Committee and approved by the Commodore, the annual meet of this Division will be held on May 29th, 30th, and 31st at Haddam Island, opposite Rock Landing, on the Connecticut river, 33 miles below Hartford, and 25 miles from Saybrook, at the mouth of the river. The island is charmingly situated, easy of access, with a fine stretch of water for sailing and paddling courses. The island is admirably adapted for camping and there is a good hotel at Rock Landing, a regular landing on the east bank for all river steamers, where meals and lodging can be obtained at reasonable cost for ladies and those who do not care to camp and cater for themselves. Arrangements will be made with the Connecticut Valley Railroad, which follows the west shore of the river from Hartford to Saybrook, to stop all trains at Walkley Hill, a flag station, directly opposite the island. The camp can be reached by steamer daily from New York, Hartford, or from any of the river landings. Those who desire can come by rail to any of the following points and then cruise to camp: To Saybrook, by New York steamer, and cruise up with the flood tide, 25 miles. To Lyme, on the New York and Boston Shore Line and cruise up with the flood tide, 24 miles. To Springfield, by Boston & Albany, Conn. River, or New York, New Haven & Hartford Railroads, and cruise down about 53 miles. To Hartford, by N. Y., N. H. & H., New England, or Conn. Western railroads, and cruise down 33 miles, or go by river steamers or C. V. R. To Middletown by N. Y. Line, Conn. Valley or Berlin Branch N. Y., N. H. & H., and cruise down 11 miles. Some pleasant cruises can be taken from the island, viz.: To and up Salmon River, 7 miles from camp; to Whalebone Creek and Selden's Cove, 17 miles. The Connecticut River itself is worth a visit and one would be well repaid in charming scenery in a cruise from Springfield, Hartford, or even higher up, to its mouth. The famous Connecticut River shad which are caught in great abundance near the island will be just in their prime at the time of the meet.

Quite a number of canoeists from New York, Brooklyn, and adjacent waters have already signified their intention to be present, and everything points to a large and attractive meet. The regatta committee are preparing a programme of races which, with other important information, will be issued later. You are cordially invited to be present and to extend this invitation to canoeists in your neighborhood, whether they be A. C. A. men or not. It is also hoped, if you are not already a member of the American Canoe Association, that you will join and induce brother canoeists to do the same, and thus avail yourself of the many advantages secured by such membership. By sending your name and address to Mr. Wm. Carter, Sec'y-Treas. of the A. C. A., Trenton, N. J., together with $3 ($1 initiation, $2 yearly dues) your application will receive immediate attention and upon election you will be at once a member of the A. C. A. and this Division, provided you are a resident of New England.

OAKLAND C. C.—April 12 was a great day for the Oakland C. C., as it celebrated its housewarming in the enlarged quarters, and also the birthday of its commodore and most active supporter, Mr. W. W. Blow. In the afternoon a race was sailed for the Edwards cup, the entries being Waif, F. Tallant; Shadow, George Wright; course, three miles. Waif won in 1h. 22m. Next came the ladies' race, with four entries: Mystic, Com. Blow and Mrs. C. A. Tuttle; Flirt, Vice-Com. A. D. Harrison and Miss Lanbreth; Gipsey, A. Blow and Miss Sawyer; Zoe Mou, H. Darneal and Miss Gibbons. Gipsey won in 19¼m. with Mystic, Flirt and Zoe Mou in order. The next race was under the following peculiar conditions: To start from line at the signal call, sail to first stake, one-half mile distant, double reef mainsail and prepare for storm, putting on storm hatch, etc.; sail from thence to half-way stake; on and after rounding the stake, out reef, put the canoe in fair weather trim and bear away for home. When off the first stake each canoe shall make a "pilot luff" twice in succession, then lay the course for the home stake. Should any canoe omit any of the preparations, either in reefing, etc., or setting full sail and then win the race, she will be debarred and the next successful canoe be counted the winner. The entries were Mystic, Gipsey, Sampler and Flirt. Mystic had the best of it from the start, and Commodore Blow managed her very well, going through all the manœuvers skillfully, and bringing her back to the home stake in 23m. The others in order, Gipsey, Sampler and Flirt. Judges, Dr. R. Harmon and C. P. Holbrook. In the evening a large party assembled and dancing was kept up until late. During the evening a fine field glass was presented to Commodore Blow, and a silver sugar bowl and tongs to Mrs. Englebrecht, the only lady member, the mother of two of the members and friend of all the club. The new entrance to the club house is by a plank walk from Alice street bridge through the side of the building into the first boat room, which is 18x36ft. From this is another boatroom 18x45ft. which leads to the apron down which the boats are carried to the water. On the east side of the house has been built a member's dressing room 18x24ft. Off of the club room is a dressing room for ladies and the pantry, and off from the members' dressing room is the bathroom and lavatory. The dressing room is fitted up with twenty-seven lockers, in which the members keep their uniforms and other effects. Around, leading from the water front of the house, which is made entirely of glass, to the east side of the building, is a broad platform covered with red and white awning, which is really the reception room, as it were, for here the guests have to muster to gain entrance to the club rooms. These rooms are all tastefully and comfortably furnished and decorated with relics and belongings of the Mystic Club.

THE PASSAIC RIVER MEET.—The following invitation has been sent out by the canoeists of the Passaic River: "The Passaic River canoeists extend a cordial invitation to all canoeists to join them at their Fourth of July camp on Dundee Lake, near Paterson. A large camping party is already assured, and the various committees necessary to attend to all matters in connection with the meet have been appointed and are now busy getting things in shape. The Regatta Committee have drawn up a programme of eighteen races so distributed among the various classes of boats that all styles are about equally provided for. Saturday, Sunday and Monday are the days included in the camp, but the races will be held only on Saturday afternoon and Monday. Don't fail to bring your racing gear and tents.—JAS. CLOSE, J. V. L. PIERSON, Committee."

A. C. A. MEMBERSHIP.—Trenton, N. J., April 25.—*Editor Forest and Stream:* The gentlemen named below have applied for admission to the A. C. A.: F. L. Dunnell, Brooklyn, N. Y.; A. I. Wright, Lakefield, Ont.; S. Britton and J. G. Montgomery, Lindsay, Ont.; W. J. Read, Geo. Beck and F. Minns, Bobcaygeon, Ont.; H.W. Stock and J. J. Turner, Peterboro. Wm. Bradburn, Ornemee, Ont., Jas. L. Powers, Boston, Mass.—WM. M. CARTER, Sec.

CANOES VS. SAILING BOATS.—On April 9, Mr. Tredwen sailed the Pearl in the race of the Thames Valley Sailing Club, against five of the crack gigs and took second prize, the Ruby being first. On the following Monday Pearl entered again in the race of the Thames Sailing Club, on Teddington Reach, the smallest of nine starters, but withdrew in consequence of fouling a buoy.

MAP OF LAKE CHAMPLAIN.—The location of the A. C. A. camp for 1887 is marked in the last edition of the map of the Adirondack region, published by R. G. Fuller, Saratoga Springs, N. Y.

CRUISES ABOUT PHILADELPHIA.—A correspondent writes to know a suitable river near Philadelphia for a cruise of two or three weeks in a small canvas canoe.

THE A. C. A. CONSTITUTION.—The Committee on Revision of the Constitution will meet in Albany on April 30, at the Delavan House, at 8 P. M.

MISTICKE C. C.—Winchester, Mass.—Officers: W. D. Richards, Capt.; Geo. B. Riley, Lieut.; Dr. Daniel March, Purser; W. W. Holt, Sec.

A. C. A. MEMBERSHIP.—Mr. F. L. Dunnell, Brooklyn, N. Y., has applied for membership.

24. Great Head.

ARROW AND THE QUEEN'S CUP.

BESIDES the telegram published last week, Mr. Chamberlayne has written to Mr. Burgess as follows: "I am sorry you can not agree to my conditions, which were, I contend, framed solely with the object of preventing either vessel from having an unfair advantage over the other. I take it this argument is invulnerable. Either the centerboard is an advantage or it is not; if it is an advantage, its use should be restricted so as to place the other yacht on even terms if the latter has a fixed keel; if it is not an advantage, no exception can be taken to any interference with it. If you were left to manipulate your centerboard as you pleased, I am certain the result of the contest between the Mayflower and the Arrow would be a foregone conclusion, and you are, I am sure, too good a sportsman to care about carrying off the cup under such circumstances as that."

This excuse is all very well now that Arrow's owner is seeking a way out of the race proposed by himself, but before arguing on the truth of his propositions, it must first be determined which is the better boat, and this can only be done by a race under equal conditions. When Mayflower has beaten Irex, Wendur and the rest, it will be time for them to ask odds, but just now the question is, can she beat them? It is evident that Mr. Chamberlayne has had the aid of the editor of the *Field* in framing his conditions, and, from such statements as this, one might suspect that the humorous Mr. Gilbert had also been called upon to assist.

The *Field* of last week attempts to aid Mr. Chamberlayne out of a bad box by shielding Arrow behind Irex, but while this opens up another important question, it does not help Mr. Chamberlayne's case in the least. The *Field* says:

"It must be borne in mind that when Mr. Chamberlayne offered the Queen's cup as an international challenge cup that he did not contemplate a contest with centerboarders, and there is no denying that a contest with the Arrow would be a very cheap victory for the Mayflower, with or without restrictions as to the centerboard.

"But supposing that his conditions rendered a contest with the Arrow impossible, that surely would not be a sufficient excuse for not sending the Mayflower across to try conclusions with the Irex for the Cape May and Brenton Reef cups.

"The vessel, as holder of the two American cups, is a standing challenge to American yachts, and until they have recovered possession of the cups on their conditions as to rules, it is the merest trifling to discuss and decline the conditions of a race with a sexagenarian vessel like the Arrow."

What Mr. Chamberlayne contemplated we cannot say, but what he actually said in his original challenge was, "I hope this challenge will catch 'the eye' of some enterprising owner of one of their (American) beautiful sloops. It is, of course, unnecessary now to speak of conditions, but I will name three: 1. The challenging yacht must be a cutter or a sloop." As there was no keel singlesticker in the American fleet that could take up this challenge, unless Bedouin, of 70ft., be owned, it would seem either that a centerboard boat was intended, or else the object was a cheap game of bluff; a challenge to American keel boats when there were none in existence.

Of course, a race with Arrow would mean a cheap victory for Mayflower, or even for Puritan or Priscilla, the two boats at whom the original challenge was aimed; but this should have been considered before the offer of the cup was made. Once made and accepted, the only manly course open was to meet the issue squarely and lose the cup if need be. That Arrow is no fit match for Mayflower is evident to all, and the honors of the contest would have inevitably gone to the smaller boat, no matter who took the mug.

Mr. Chamberlayne, on the contrary, has chosen a directly opposite course, and has made a square backdown from his open offer which is in no way lessened by such pleas as that he did not contemplate centerboards, that Irex is a better match for Mayflower than Arrow is, and the ridiculous argument first quoted above. It is also reported that, while withdrawing his own cup, he has offered to aid in securing other cups for Mayflower to race for should she cross.

Continuing on the same subject, the *Field* speaks as follows:

"A very unpleasant matter has just come to light here in connection with the talked of visit of the Mayflower. It had already been announced that that yacht had been sold to Mr. Barron, but this appears to have been a mistake, and to make it clear that the Mayflower is still in the market, the New York correspondent of the *Standard* has telegraphed to that paper the following dispatch, dated New York, Wednesday night: 'In reply to an inquiry from abroad, General Paine has stated that the Mayflower is for sale at the cost price.'

"It is very unfortunate that this sort of advertising should be possible through such a channel as the *Standard*, and coming close on the heels of the Coronet business, it cannot fail to make a bad impression among British yachtsmen, and may cause them to view with suspicion challenges from America.

"At any rate the current belief here now is that the Mayflower would have been sent across to defeat the Arrow so long as it was a certainty that she could do so, as an advertisement, but that the outcome of a contest with the Irex would not be risked at any price.

"But fortunately we know too much of the chivalry and singleness of purpose of the great body of American sportsmen to believe that they place a pecuniary estimate on the chances of success or defeat in competitions they enter upon."

It may not be known abroad, but the sale of nearly every leading yacht in the fleet to Dr. Barron has been negotiated during the past winter—by the daily papers. Dr. Barron made an offer last fall which was not accepted and since then Mayflower has been openly for sale at her cost price. When the challenge was sent to Mr. Chamberlayne she was withdrawn from the sale list, but now that this is off and her owner has a new yacht under way she is probably in the market again. The experience here has been that winning races does not sell a yacht at a big price, as Puritan only brought half her cost at the end of her first triumphant season and in spite of the enthusiasm over her victories. It is a pity to have to admit that the Coronet speculation will strengthen these reports abroad, but none familiar with the owner of Mayflower would suspect him for a moment of any similar transaction. In regard to Mr. Chamberlayne's course we have received the following from a gentleman intimately connected with international racing:

Editor Forest and Stream:

In your issue of the 21st inst., you say, "But this is not enough. Every English yachtsman should enter his protest against this surrender and in favor of a fair fight with no odds on either side." Will you kindly allow me to enter my protest in your columns, as an English yachtsman, and one who has had more experience of centerboards than any of my fellow yachtsmen. First, let me say that I acknowledge that the centerboard type is the best for match sailing in the large classes in American waters, and that my wish is to see both types fairly tested in English waters in order that we English yachtsmen may learn which is the best type for our waters. I regret, as I well know all English yachtsmen do, that Mr. Chamberlayne should have put any restrictions whatever on the centerboard in the proposed race for the cup won by his father, whom I well remember as one of the first sportsmen and gentlemen of the day. We regretted his death at the time, but how much more so now when his presence among us would bring about a meeting in English waters between the types of yacht as advocated by two friendly nations. Mr. Chamberlayne and a few English yachtsmen claim that the centerboard type of yacht will gain an advantage through being able to sail in shallow waters. Of course she will if you let her go there, but why let her go there? Why not do as the America's Cup Committee of 1885 and 1886 did at the request of Sir Richard Sutton and Lieut. Henn, and name so many buoys as in the course that the centerboard cannot possibly go inside them with advantage; this would be more to the point than putting 10 per cent. on the tonnage. Or, better still, why not sail the race over the Plymouth course, the course *par excellence* in England, where there are no centers to be cut off? Another error these f. w English yachtsmen fall into is, that a centerboard craft can work the slack with her board up. True, a boat like one of the older type, such as Fanny or Mischief, might do so, but a Puritan or Mayflower never; such boats as these who cannot reduce their draft beyond 9ft. 6in. to 10ft. 6in., cannot turn to windward with the board up to any advantage, and as a proof of what I say is the fact that the owner of Mayflower is willing, and I believe would prefer to sail in open waters where his craft would always be fathoms over the ground.

A great deal has been said as to England giving a perpetual International challenge cup. In regard to this proposal I would ask if "one" international challenge cup be not enough for the world. Is there not the America's Cup, and if so, what is the use of another? So long as that remains in America how can any other cup be called an International one? No, no, my hope is that my English fellow yachtsmen will, as I have been content to do, acknowledge the America's Cup as the sole International champion cup of the world, and devote all their energies to win it.

J. BEAVOR WEBB.

Now that the negotiations with Mr. Chamberlayne have fallen through it is definitely decided that Mayflower will not cross, and the preparations have been abandoned. That this is so will be a cause of sincere regret to all, but if she is hunting for glory or scalps there really seems no reason why her trip should be given up. The race with Arrow would at best have been a mere side show; what all want to see is a match between her and Irex, and it so happens that two opportunities are still open. After the action of Arrow's owner and the decision of some of the clubs in regard to centerboards in the Jubilee races, it is safe to be expected that an American yacht would cross for a race unless all conditions were fixed finally before she starts, but just now two cups are held in Great Britain by the yacht which is confessedly the best of her class, both of which cups are unhampered by any conditions of measurement or time allowance, or by any restrictions on the use of the board.

The only value which can attach to a cup comes from constant competition, making it an actual badge of superiority. As long as it lies unchallenged in the lockers, or is kept by any unfair restrictions, it is worthless as an international emblem. Who will say that the America's Cup has not robbed its value as a prize in the past two years? The Cape May and Brenton's Reef Cups were almost forgotten when Genesta took them, but just now they stand at one end of a long, deep-water course, unhampered by any conditions and only waiting for an American yacht to challenge for them. This is the chance that Mayflower should avail herself of if she wants to meet a foe really worthy of her. If it was deemed worth while to go 3,000 miles for an old pot whose possession, apart from sentimental associations, would mean nothing; and for a race with a competitor entirely beneath her, certainly it is well worth the same trip for two prizes, which would carry with it the supremacy of the yachting world. Though Arrow's cup may lie undisturbed in its case for another quarter century it will affect no one but the owner; but with two living and valuable prizes before them American yachtsmen cannot afford to rest content with the present advantageous position in which Mr. Chamberlayne's withdrawal has placed them.

AMONG THE BUILDERS.

WITHIN the last few years a great change has taken place in that classic locality known as Gowanus, once the home of the large portion of New York ship building. About the "Foot or Court street" as a center were "Hen" Smedley's, Lennox's, Frank Bates's, John Mumm's, Wallin & Gorman's and any number of smaller places devoted to the building of new craft and the repair and sale of old ones, the latter branch being a specialty with the denizens of this region. Here "Penny Bridge" has given its name to a large class of fast open boats, while "Seeley's" is responsible for the early nautical training of many well known yachtsmen who made their first ventures afloat in the old man's boats and under his instruction. The glories of this region departed, however, when the encroachments of wharves and similar improvements made the mud flats of some commercial value, and drove out the host of squatters and lessees to seek less central quarters down the shore. To-day the flats have been largely filled in, so that any of the old frequenters of the spot would be at a loss to locate their former anchorage grounds under the new lots and graded streets, while long piers and wharves run far out into what was once the open bay. This past winter has wiped out one of the best known of the peculiar institutions of the locality, the "Morgue," as it was familiarly known, where floating property of all ages, sorts and conditions brought up as a last refuge, and where a boat of some kind could be found to the purse of the humblest purchaser. Driven first from Gowanus Bay it took refuge further down, but now the new ferry to the foot of Thirty-ninth street has a large and handsome ferry house on its site, the old hill has been leveled and used for filling in the approaches, and the whole character of the place has been altered so that it is unrecognizable. The ferry will at once lead to the building up of the entire locality, new streets are to be cut through and another street railway is talked of, and soon there will be no vestiges left of the sandy beaches and mud flats that were the favorite haunts of the past generation of boating and sailing men. The rowing clubs have followed the sailboats, the Nereids to Sheepshead Bay, the Alcyones to Bay Ridge, and others to points down the shore.

It seems, however, that yacht building has not entirely forsaken its old home, but that the "Foot or Court street" may in the future become far more famous than in the past, as the birthplace of yachts. The same encroachments have been going on further up the East River, and of late two yards there have been compelled to seek larger and better quarters. Mr. Piepgrass has moved to City island, taking the yard formerly owned by David Carll, while the Messrs. Poillon have moved down stream and are now located on made ground at the present foot of Court street. Here they have built a large wharf, running out to the channel, a building for offices, mould loft, etc., and a new and extensive sawmill.

The first work in the new yard, besides two pilot boats for the Delaware service, is now partly completed, two centerboard sloops, both from models by Mr. Philip Ellsworth. The first and smaller of these, now planked up, is for Com. Henry Pierson, of the Jersey City Y. C. Her length over all is 40ft., l.w.l. 33ft., beam, 14ft. 2in.; draft, 3ft. 9in. The stem is plumb; the keel has very little rocker, but rises nearly straight from the heel to the forefoot, the draft being greater aft than forward, while the forefoot is quite square. The sheer is very straight and with a long counter, all the overhang being aft, and there is little of the old fashioned sloop cut about either. The sternpost is nearly plumb. The keel is shaped as in all the new boats, being 18in. square at midship section. It is 10in. wide on bottom and 4in below the rabbet, but is shaped to the midship section. This has a rise of about 8in. to the foot, with a very little hollow in the fore body, an easy bilge and a moderate amount of flare above water. The deck line is fair and narrows in aft much less that Crocodile and other Ellsworth boats, and the counter is quite different, being entirely above water and of good length and not so deep through at the archboard, while the triangular stern of Kangaroo, Elephant and the rest is altogether missing. The bow is shorter than in Arab, built last year, and the fore and after bodies are far better balanced than in Arab and Atlantic. The scantling is: Keel, oak, 18×18, 10in. on bot

tom and 4in. below rabbet; frames, oak, sided 3in., moulded 5 and 2½in., spaced 2in., clamps, yellow pine, 4×6in.; deck beams, 4×4in.; planking, four oak wales and garboards and broads, rest yellow pine, 1¼in.; stanchions, locust, 2½×3in.; headledges, 4×6in. sides of trunk 2½in.

The other boat, for Mr. J. G. Prague, bears the formidable name of Anaconda, and is to race in the class with Clara and Cinderella. She is 60ft. over all, 52ft. l.w.l., 18ft. 4in. beam, and will draw about 5ft. Her displacement is estimated at about 40 tons, and she will carry about 18 tons of lead, all inside, as in the smaller boat. She was not yet in frame last week, but will not differ greatly from the latter, having the same sheer plan and counter, but less flare aloft at the midship section. Her keel is 18in. square, 10in. wide on bottom, and 4in. outside of rabbet; stem sided 9in., sternpost sided 7in. and moulded 14in. at heel; frames sided 4in., moulded 6 and 8in., and spaced 27in., all of hackmatack. In both of these models Mr. Ellsworth has departed widely from his two ventures of last year, Atlantic and Arab, and with good results as far as may be judged from the present state of the boats. Both are of the class in which he has been most successful, and the faults that have appeared in the two attemps at deep, lead-keeled boats are not visible in these. The displacement in both is far better distributed than in the others, the area of midship-section is less, and the bows are shorter, the consequence being that the models are more symmetrical and better balanced fore and aft. The counters are different from those on the well-known Ellsworth boats, being longer and lighter, and without the triangle that finishes most of them, and that part beyond the sternpost is not immersed. The sheer, too, is very different from the much criticised Atlantic and smaller counterpart, and is fair and pleasing, with a good height amidships.

How long it will be before Bay Rigde shares the fate of Gowanus and the present headquarters takes another step seaward is a difficult matter to predict, but just now it is in full flower and the yards there are all busy. To meet the growing demands Mr. Sawyer is about to build a large sail loft and storage house near the Atlantic Y. C., a move that will meet the approval of all who visit Bay Ridge in yachts. The work can then be done on the spot, avoiding the long journey to the South street loft, that has always been necessary for all but the most trifling repairs.

At Mumm's yard there is plenty of work in hand. The Atlantic is hauled in the basin and delivered over to the painters, who are hard at work scraping the hull to the bare wood, while the priming coat of white looks as though she would try the virtues of the winning color. The caulkers are busy on deck and she will soon haul out for another try at the leaks in her keel as well as for some twenty tons more lead there. A lead keel on Pocahontas will no more make her the equal of Titania than a white hull will put Atlantic even with the other Burgess boats, but at any rate it will be tried, and she is now on Mumm's ways. Her old oak keel 14in. deep and 10in. on bottom, and under this a lead keel 9in. deep has been run for the whole length, being in five sections. Bolts of 1in. composition are first driven into the old keel, blunt-pointed and headed, each being driven at an angle. A section of the keel is then boxed in with 2½in. yellow pine plank, the trunk being cored to leave the slot for the board, and the lead is then poured. The entire hull has been refastened, the old square rudder has been improved in shape as far as was possible, the rail, bulwarks and stanchions are new, and the hideous square balk of timber that does duty as a bowsprit, will be hewn into some shape; the chain plates are now, three outside ones on each side in place of the old two, and all is coming on finely, and she will at least look more like a yacht than she has ever done in the past. The work on Venture is nearly completed and Mr. Mumm has made a very creditable job of it. The new sheathing is all on and planed down and the stem and new bowsprit are completed. Just ahead of her, on shore, is the new steam yacht for Mr. Aspinwall, his own design, we believe. She may very appropriately be described as a hollow-ground razor, thickened a little at the middle and on the back or top. The bow is so hollow that the first 15 or 20ft. is nothing but deadwood, a sort of scag; the midship section is light and the run is hollowed out as the bow is, the frames immediately abaft being an S in shape, which increases rapidly. The boat is built for speed and will have little room inside, but though all else is sacrificed for fast traveling it is very doubtful whether this single end will be gained.

Of course the most interesting craft about Bay Ridge at present is the new Shamrock, to be launched next Monday, by far the best looking boat that the locality has yet turned out, and one that will do credit to her sponsors this season. It may be noted here that Rule o' Thumb has had no hand in her production, but that, though the work of amateurs, the design has been worked out very carefully, and the elements of the boat have been calculated in advance. Should she prove a success, as now seems likely, she will open the way for still greater improvements in models and methods in this locality. The design was made by her owner, Mr. J. R. Maxwell, and Mr. H. C. Wintringham has made the calculations. The midship section is of the fashionable type, wide keel, well hollowed about the garboards, good deadrise, and a moderate bilge, with good freeboard. The keel has a very little rocker, the lowest point being a little forward of the stern-post, but it rises quickly to the forefoot, giving considerable drag. At the forefoot it makes a quick turn and rises from the water-line in a clipper stem of the ordinary shape. The sternpost has a moderate rake, and the counter is long and well shaped. The rudder is of peculiar shape for so deep a boat, carrying as it does a wide, 3ft. 8in., almost to the heel. The bowsprit, 14in. square in the knightheads, is round from the stem out, with a jibboom beyond, making a long horn. Over the saloon is a trunk 20ft. long and 18in. high, forward of which is a skylight and a hatch. Below there will be very good accommodations, considering the racing board and its trunk. The hull is now painted, decks caulked, bowsprit in place, mast (a 16in. spruce stick) ready on the ground, and the joiners are well advanced inside.

At Wallin & Gorman's yard, Dr. Loring's new cutter is ready to go overboard from the railway at any time and is practically finished. Though wide and with a centerboard she is such a near relative to her predecessors that like them she may be dubbed cutter, rather than sloop. With 29ft. l.w.l., 11ft. beam and 4ft. draft, she has the room below of many craft of much greater beam and length, as her owner's main object was to have a roomy boat of moderate size, and to this end the model is very full, being really a keel boat in proportions, with the keel cut off. The present lead keel is wide and shallow, but carries some 7 tons of lead, and the bolts are left long so as to add more if desirable. The beam, with the overhang of 7ft. aft, gives great deck room, and the cabin house is kept low. The freeboard is very high, and there is consequently good head room below, even in the forecastle. The cabin is specially fitted up for two persons, though there is room for four with a different arrangement of berths and lockers. Of these latter there is an abundance, fitted according to the owner's taste, and they give stowage room in plenty. The forecastle has a berth for one hand, galley and pantries, being quite roomy and convenient. The yacht will be cutter-rigged, but with fixed bowsprit and jib on stay, the latter probably being rigged to slack off and allow the jib to be handled from the deck. The boat will be used about an island where there is little more than 4ft. of water.

Besides a number of catboats and ducking skiffs Messrs. Wallin & Gorman have built this winter a small cruiser that is now nearly ready for the water. She was designed for singlehanded work about Long Island Sound, to give the largest possible cabin with a hull easily handled by one man, and to this end speed has not been considered in the design. In proportions she is much the same as the little Windward, which has proved such a success as a cruiser, half a dozen being built from the same design, but the necessity for less draft has made the use of a board compulsory. This boat, the Primrose, is 18ft. l.w.l., but has a long overhang, the working of which does great credit to the builders. Her beam is 7ft., draft 3ft. and freeboard 18in. The ballast is all lead, 1,500lbs. of it being on the keel. The trunk is 7ft. long and beneath is sufficient head room to allow a man to sit erect on the lockers. These make a bed on each side for two men, while there is plenty of room for stove, icebox, stores and cruising outfit. The cockpit is quite large with wide rail, and there is plenty of deck room aft. The deck line is kept very full forward in order to give room to work at the anchor and setting sail. The rig will be adapted for cruising with single jib and pole mast. The boat is very conveniently fitted up and the workmanship throughout is excellent. The frame is of oak, planking of cedar and yellow pine, all fastenings of copper, lead ballast and composition bolts, decks of selected pine. The topside will be white with a gold stripe, the bowsprit is round with bright locust bitts, very yachty in shape, and the rail is also bright. The coaming and rail of cockpit, the slide and doors and the trimmings of cabin are of mahogany and the rest of the inside work of clear white pine varnished, making a light and attractive cabin. There are four heavy oval windows in the sides of house and a 5in. deadlight for air in the fore side.

There are plenty of places where just such a boat is needed, small and easily handled by one man, with room for two to live aboard and live nicely if they enjoy the work and fun of yachting and do not merely wish to be sailed about by some one else, and room also to take along a party of half a dozen for an afternoon, while the light draft and low ballast make the boat suitable for most harbors and yet capable of good work in all weather from port to port, as far as is consistent with such small size. Messrs. Wallin & Gorman are also about to build a centerboard catboat for Mr. Thos. R. Sherman, from a design by Mr. Burgess. She is 20ft. 10½in. over all, 18ft. l.w.l., 8ft. beam and 2ft. 6in. draft.

A CATBOAT CRUISE UP THE HUDSON.

"PASS down those potatoes and look alive." It was Aug. 8, 1886, and all was bustle on the wharf at Communipaw, N. J., where the yacht Cyclone, formerly a sloop-rigged boat of about 25ft., but changed to cat-rig during the previous week, was moored. The crew were busy passing aboard the necessary cooking utensils, blankets, canned goods, etc., for the annual two weeks cruise up the Hudson to Albany, and the skipper, Mose Mulhall, was busy stowing the canned goods in the stern locker. It was he that shouted the above order, being anxious to get to New York that evening, for it was now 5 o'clock, and the start was to be made from New York, bright and early on Monday morning.

In answer to the order Joe came down the gang plank to the float with a box of potatoes on his head, and in his anxiety to prevent some of them from rolling off, tripped and made a very creditable dive overboard. When Joe came to the surface the box was floating serenely away, and he didn't care very much about looking alive when he was pulled up on the float. Soon all was in readiness and the start made for New York, which was reached about 6:30 P. M.

The next morning was bright and clear, but very little wind was astir, and the tide on the ebb. After passing aboard the oil stove we were ready to start. As all of the party could not take their stations at the same time, it was arranged that the Skipper and Will should start, the others joining further up the river. A third, George M., joined for a couple of days, and a party of friends from New York went as far as Yonkers, where they left the boat, returning by rail.

After they left we purchased some bread and milk and started off about 5:30 o'clock. We tried to pull the small boat on deck, but it fell off and filled, so we had to come to and bail it out. We continued our course, now keeping a lookout for a good anchorage for the night, for it was getting late and the shores were being lit up here and there as the many villages on the river. We pointed for a group of lights on our starboard bow, and the Skipper, who had the tiller, had just shouted, "Stand by the anchor," when a gruff voice yelled, "Can't anchor here." Looking up we saw a man on the dock, which was nearer than we had supposed. "What place is this?" "Sing Sing Prison," answered the sentry, for such he proved to be. We did not care about landing there and did not stop to dispute his right, but held to the wind until we reached the village and made fast at a pier loaded with lumber. Here also was a coal barge, and the captain had a fine charcoal fire on deck. We found the captain, exchanged remarks about the wind, weather, etc., and then asked the privilege of using his fire, which he readily consented to, and even offered his cabin as a shelter for the night, not knowing that we had aboard our yacht the appurtenances by which we could rig as comfortable a bed and shelter and sleep as well as if we were at home. We cooked a supper of fried ham, potatoes, stewed tomatoes, coffee and preserves, after which we took a walk up to the village, the captain of the coal barge keeping a lookout on the yacht while we were gone. We returned about 9 o'clock, rigged up the boat tent, which we lashed on the boom with a ridge rope, and then strapped down the sides outside of the coaming, which gave it a bell shape, and getting out our blankets and soft sand bags, carried for the double purpose of ballast and pillows, we turned in.

August 10 dawned bright and clear; light wind from the south. We cooked breakfast, washed down decks, took a swim and then left Sing Sing about 8 o'clock A. M. We found we had run pretty well into Croton Bay, near Sing Sing, during the night, and we had to hold the wind on our beam for about a mile, when we squared off to make the run through Haverstraw Bay.

The wind being light it was about 4 o'clock when we reached Peekskill, and we had eaten a small lunch while under way. Soon after leaving Peekskill behind us, the wind increased almost every minute, and it was not long before the Cyclone was bowling along with the water at her stern bubbling over the top of the rudder. At Iona Island it grew to quite a squall, so we came to and anchored, took a walk through the grove, where there was an excursion from New York, and filled our water cask; then putting in a reef, we weighed anchor and started again, before a good breeze from the southwest.

At West Point the water was as rough as New York Bay, while around the bend, at Cold Spring, it was like a lake, the wind being shut out by the Highlands. Here we lay in a calm for about fifteen minutes, when we managed to make fast to a tow of coal barges bound for Newburgh, about seven miles up the river. It was about 7 o'clock when we reached Newburgh, where we cooked supper and put up for the night.

Wednesday morning we were up about 5. George M. had to leave this morning, taking the steamboat home. We left for Poughkeepsie at 7:30, and arrived at 11 o'clock, making fast to the wharf. Will then telegraphed our other friends to come up on the night boat. We moved up a little further and lay in the old ferry slip, washed down decks, put on our good clothes and visited the city, relieving one another on watch. At 9 o'clock P. M., the Skipper went to the wharf to meet W. and H. on night boat, but neither appeared, so we turned in. Will S. was up at 2 A. M. to meet the other night boat but with the same result.

They were both up about 5 o'clock Thursday morning and had a swim, after which they cooked breakfast, then waited for the New York boat, which arrived about 1 o'clock. It was about 11 o'clock when a shout from two young men in a rowboat attracted their attention. They proved to be the missing ones who had come up by train, and arrived about 1 A. M. After searching quite a while they went to the steamboat wharf and slept on some bags of oats. In the morning, a joker seeing them there shouted, "Come, pay your bill and get out;" this woke them up, and hiring a rowboat, they rowed around the different wharfs until they found us.

We then cooked dinner and started again about 1 o'clock, after staying twenty-six hours at Poughkeepsie. We had ebb tide and puffy head winds and could make little or no headway, so we dropped anchor and waited for a tow that was in sight. W. got in the skiff and towed the yacht near the tow, while the Skipper handled the tiller and threw a line to the men on the tow. This was caught and made fast; we then invited the men to come aboard the yacht and eat dinner with us. At Esopus Island the canal men took on water casks from the river, as this is claimed to be the best water. At Port Ewen the tow stopped, when we bid the canalmen good-by and hoisting sail, made for Rhinecliff, arriving about 8 o'clock. After supper W. and H. turned in and the Skipper, Will and S. went to town, bought some bread, milk and fresh meat, and wrote some letters, arriving at the yacht about 9:30, when, after taking a smoke, they turned in.

Next morning we cooked breakfast and left Rhinecliff at 8 A. M. There was a flood tide but dead calm, so while drifting up river we took a swim. We must have been becalmed about an hour and a half, when a slight breeze from the southwest sprung up, and at 11:30 we had reached Coat Island, 90 miles from New York.

By 1 o'clock the wind, which had been increasing, had settled down for a good blow, and we put in at Germantown and reefed, at the same time eating dinner. We left here at 3:15 under reef, and forty-five minutes later we were entering Catskill Creek.

Here we intended to stay until Monday morning, so we furled sail and made everything as ship-shape and snug as possible, then visited the town, wrote some letters and went to the Grant House to see a friend who was stopping there.

We were surprised next morning to find a little colored fellow rowing Joe M. up to the yacht. He had come up on the night boat; and our crew was now complete. This was Sunday with us and we proceeded soon after breakfast to wash and mend everything that required it.

After dinner the Skipper, W. and H. got in the skiff and rigged up a sail with a piece of awning. They had hardly gone 20yds. when the boat capsized, throwing them into the water.

In the evening we went to town for some bread, butter and milk, cooked supper and then went to the Grant House, where there was a fancy dress ball. It was very late when we got back to the yacht that night.

Next day was Sunday. We had an early breakfast and went to church, but the late hour of retiring the night before began to tell, for we were all nodding before we were twenty minutes in the church. The most comical part of it was, when the congregation rose up at a certain part of the services, the boys stood up also, but nodded to sleep, and when all the people had sat down they were still standing up, their chins resting on their breasts, while every one was snoring in a different tone, like a quartette of singers. They were waked up by Will S., who made a terrible lurch forward, which was occasioned, he said, by a dream that the Cyclone had run into another boat. A more sheepish looking lot of fellows than those coming out of that church that Sunday morning could not be found. When we reached the yacht, which was about noon, we found some friends awaiting us who had come from New York on a short trip to the Catskills.

Next morning we left Catskill Creek about 8 o'clock A. M. under a spruce breeze. After getting into the Hudson we were favored with a little breeze from the south. At Athens it blew too hard for full sail, and we had to reef. By the time we reached Coxsackie it was blowing great guns, and we put about to put in another reef; found it was five minutes of 12, so we anchored for dinner. Meanwhile the wind shifted to the north, and it commenced to rain; so we rigged up the boat tent, got out the oil skins and rubbers, and took turns on watch, for it was blowing furiously and we expected to see our anchor drag every minute.

Toward evening the wind moderated, and putting up our anchor light, we turned in. We were waked up during the night by loud talking. On looking out Will S. reported a tow of canal boats going down the river within twenty-five feet of us, and our anchor light had blown out. This he relit and then turned in again. We were waked for the second time by a scrimmage between Will S. and Joe, who were trying to reach the laps of the tent to get out. A passing steamboat had caused the yacht to pitch and toss, and as the previous nights had been spent very quietly in the creek, this was unexpected and gave them a scare.

We were up a little later than usual next morning and found the wind blowing very hard from the north; this, with an ebb tide, prevented our making much headway. We anchored for the tide to change. While eating dinner, the preserves we had attracted quite a number of bees and one of these landed on a piece of bread that H. was about putting in his mouth; of course the bee went with it and H. was stung on the tongue. There happened to be a little fellow from the town near by at the time, and within half an hour all the little fellows in the town came down to the beach to see "the fellow that tried to eat the bee." About 1:30 we started out to catch a tow of canal boats bound up river. When we got near enough the line was thrown and caught by the canalmen on the second boat, and there were about eight boats in line. The next thing done was to cut the tow line between the Cyclone and the skiff in which the Skipper sat waiting for us to come up to him and pick him up. It came up sooner than he thought and passed him. He then tried to hold the fender of the fifth boat, which he had caught; this upset the skiff and he was thrown out; climbing in again (although he doesn't know to-day how he did it) he waited for the next canal boat, which was the last, and he jumped, leaving the skiff, which was almost full of water. In the meanwhile those on the yacht had seen the whole thing and had let go from the tow. Coming near enough the Skipper jumped aboard the yacht and we went back for the skiff. Fortune favored us, however, for an hour afterward we made fast to another tow with better success, and we arrived in East Albany that evening.

In the morning, after a visit to the Capitol, we left to commence our trip homeward. We had a favorable tide and a strong breeze from the north that made the rigging groan under the pressure. We ate a small lunch under way and did not stop for dinner. At 8 o'clock we had reached Rondout; here we put up for the night.

Friday morning we were up early, and found a light wind from north. We then cleaned up and made for a tow bound down, as we had but two days to finish our cruise. We had made fast to a brick barge on this tow, and sought the captain who had just got up. We received his permission to remain fast to his boat, and in return we turned over to him some onions, potatoes and smoked beef, a surplus of which we had. He allowed us the use of his stove in his cabin; this saved us the bother of using the oil stove, and where possible we always built a fire on shore.

While cooking supper S. left the lifter of the stove on the stove, where it was soon warmed to a pretty high degree. Soon after Joe had occasion to use that very lifter without thinking of the consequences. It was dusk just as we entered the Highlands, and one could not ask for a prettier sight.

Saturday morning found us at Fort Lee where we dropped off the tow. Will S. and H. went ashore to cook breakfast, while the others put things in shipshape, and washed down decks.

We left Fort Lee about 8 o'clock and drifted down, for there was no wind. When off the Pennsylvania ferry the tide changed and we had to resort to rowing until off the Battery, where we got enough wind to reach our mooring, thus bringing to a close a most enjoyable cruise. M.

A LONG OCEAN CRUISE.

THE following additional particulars concerning the cruise of the Homeward Bound, whose arrival was noted in the FOREST AND STREAM of April 14, are given in the *Pall Mall Budget*:

"The Homeward Bound lay at rest in Dover Harbor after her ten months' tossings in two oceans, a weather-worn cockle-shell, sea-stained and barnacle-covered. It was Sunday, and the little boat was hung with streamers of bunting, their bright colors contrasting oddly with the wo-begone appearance of the hull. The day was brilliantly fine, and there was a constant stream of visitors to see the Homeward Bound after her adventurous voyage. The captain was at home, and he hailed to me to come aboard, which I did with some difficulty, for the Homward Bound is not an ordinary craft, but canvas-covered and cramped as a bit of cork.

"The crew consists of Capt. Nilson, his brother, and a blacksmith, one Olsen, who a couple of years ago were working together at a little settlement in the Orange Free State. The captain, who had been at sea for many years previously, had a store, a blacksmith's shop, a few horses, and a bit of land; and his brother and Olsen were in his employment. They had often discussed the question whether it was possible for an open boat to weather the towering winter waves off the Cape of Good Hope, and trade not being overprosperous they determined to try their luck. They had their project in mind

had taken out his papers from a very moist portmanteau on board, but we adjourned to his lodgings and examined its contents at leisure, for the crowd was a little too curious, and the cabin was exactly the place for an interview. Every bit of paper was endued with a romantic halo. There were all manner of mysterious packets done up in scraps of old newspapers, certificates, mail papers, note-books and photographs. But the log-book was the most interesting item in the collection, for Capt. Nilson has had a careful training, and his log-book has been kept in the most minute manner.

"In this voyage the crew was divided into two watches, the captain taking the first four hours, the other two taking the next four, and so on. They suffered much from want of sleep, the longest spell being three days and three nights. It is remarkable that they shipped a rat on board somewhere, and only got rid of him after a long chase, driving him clean overboard. In the tropics a huge shark followed them for a week, which was a little uncomfortable, but it sheered off eventually. Capt. Nilson was put to some queer shifts during his voyage. He had no chronometer, and it was often difficult to take the sun, owing to the lowness of the boat in the water, so that many of his courses were steered by dead reckoning alone, but the constant handling of the boat had reduced the uncertainties of the log to a minimum. St. Helena, which is but a spot on the ocean, was hit, so, too, was St. Michael, in the Western Islands, and Dover after a while. After leaving the Azores the log-line was lost, and then the eye alone measured the distances run, but still she hit the Isle of Wight. The little boat was in a sad plight more than once, the whole deck being submerged over and over again."

BOAT SAILING ON THE SCHUYLKILL.—Norristown, Pa., April 20.—The Montgomery Sailing Club was recently organized at this place, the officers being: Com., E. A. Leopold; Mate, E. P. MacAllister; Sec.-Treas., Wm. Sullivan. The racing rules of the Seawanhaka Corinthian Y. C. were adopted with slight modification, to suit the small boats used by members of the club. The boats vary in length from 12 to 16ft., and the handicaps in racing are based upon the rule of the Thames Valley Sailing Club of England. The following table gives names of boats and owners, with main dimensions and cubical contents of hull of each boat:

	Length. Ft. In.	Girth. Ft. In.	Cubic Feet.
Little Tycoon, Palmer and Boucot	16 00	10 06	54
Igideous, Wm. Rotchell	15 05	10 04	51
Flying Eagle, J. Berndt	15 04	10 04	51
Josephine, E. Sowers	15 05	10 00	48
Cocktail, Max Berndt	14 09	10 00	46
Elsie, E. P. MacAllister	14 10	09 00	38
Ino, Sullivan and Pickering	15 02	08 11	38
Gracie, E. A. Leopold	12 00	07 04	20

The club course is 5 miles, 2½ miles up the Schuylkill River and return to starting point. The first club cruise took place April 17, and the boats were timed as follows:

	Start.	Finish.	Corrected.
Cocktail	8 59 00	10 34 59	1 34 59
Josephine	8 59 30	10 34 59	1 34 54
Elsie	8 56 00	10 35 30	1 36 38
Igideous	8 50 30	10 38 32	1 39 02
Flying Eagle	8 59 05	10 48 20	1 49 15
Gracie	8 58 00	11 00 30	1 53 27

The Josephine was the winner by 5s. The wind was fresh from the northwest, making the first half of the course a beat almost dead to windward. The Josephine carried 27yds. mainsail, Cocktail 20yds., Igideous 28yds., Flying Eagle 18yds. These are tuck-ups, and the measurement of sails is Philadelphia style, 6ft. to the yard. The Elsie is a ducker, and carried 18yds. The little Gracie carried 66ft. in main and mizzen, and led the Flying Eagle over the first mile of the course, after which she was terribly blanketed by a large boat which was not in the race, and was forced off her course several times. This latter boat is a hiker, 15ft. in length, and carries a mainsail of 50yds. The conduct of the captain was freely commented on by those who witnessed the occurrence.—E. A. L.

NOTES.—The model of the schooner Fortuna, designed by Mr. A. Cary Smith, which was sent some time since to the Liverpool Exhibition, has been sent to Havre, to be placed in the Exposition du Havre Maritime National.....Anixa, sloop, left Moorehead City, N. C., on April 21 for New York. Her owner, Mr. T. B. Asten, has returned by rail ...Reva, steam yacht, Mr. Pierre Lorillard, has been hauled out for cleaning at Greenpoint, after a winter in Southern waters.....Clytie, schr., is now at Beverly, Mass., in charge of Capt. Stone, who is refitting her for her new owner.... Fortuna, schr., has left her berth and is refitting at Foster's Wharf, Beverly.....Ex-Com. Hovey is expected home soon from a trip to the Sandwich Islands....Latona, schr., has also left the Bridges at Beverly.....Rebecca, schr., will soon haul out. She will come out this year with a single spar for a bowsprit and jib and staysail....Prince Karl—Mr. E. L. Williams, has launched his new cutter and has made several trial trips. She will sail in the South Boston Y. C. regatta....Puritan is to have a new jib and staysail made by Lapthorne & Ratsey....Cythera, yawl, was at Norfolk, Va., at last reports.....Angler, sloop, has been sold to Mr. Burrowes.....Viola, steam yacht, has been sold by Mr. Schroeder to Mr. L. S. Bent....Hope, sloop, Mr. J. H. Benedict, has been sold to Mr. H. G. Seguine.

RESTLESS.—This steam yacht, built for Mr. W. M. Singerly, by Houston & Woodbridge, Marcus Hook, Pa., was launched on April 20, being christened by Miss Mabel E. Meredith, grand daughter of the owner. The yacht was lately described in our columns.

GEN. PAINE'S NEW YACHT.—No official statement of the dimensions of the new yacht have yet been made, and her exact beam is as yet unknown. She will have a housing bowsprit, and Captain Hank Haff, of the sloop Fanny, will command her.

COMET, schooner, Mr. W. H. Langley, is at Jones's Railway, Port Richmond, Staten Island, for a new deck and other repairs.

QUAKER CITY Y. C.—This club has lately adopted the measurement rule of the Seawanhaka C. Y. C., with the following classification: Schooners—First class, over 60ft. l.w.l.; second class, under 60ft. Sloops—First class, over 38ft.; second class, between 32 and 38ft.; third class, between 27 and 32ft. Open yachts—All yachts under 27ft. l.w.l., shall be designated as open yachts, and shall be subdivided into classes as the regatta committee shall direct. The committee is required to keep a record of such division and to hand to the secretary a copy at least forty-eight hours before any regatta. The time allowance in the last sailing class is to be calculated by an allowance of one-half minute for each ten miles of the course to each foot or less of length on load waterline plus one-half of the overhang. From this is to be deducted one-half minute to each ten miles for each 25sq. feet of excess of sail area of standing sail.

A NEW CRUISING SCHOONER.—Mr. A. Cary Smith has received an order from a yachtsman, whose name is withheld for the present, for a cruising schooner of 110ft. l.w.l. She will be built of steel, will have about 25ft. beam and 13ft. draft or over, with all lead in keel. The design is not yet begun, nor the exact dimensions settled upon. Messrs. Harlan & Hollingshead will build the boat, pushing the work as rapidly as possible. Mr. Smith has lately completed a design for a centerboard cruising yacht of the Cinderella type, 40ft. l.w.l., 14ft. beam, 6ft. draft, with 7 tons of lead in keel. The stem is plumb, but the counter is similar to Cinderella's. The rig will be the modified cutter, with laced mainsail and fixed bowsprit. Poillons will build her at once.

SANS PEUR.—Steam yacht, arrived at Hamilton, Bermuda, on April 15, from Fernandina, with the owner and friends on board, and sailed on April 20 for England via the Azores. Her winter cruise has been as follows: Left Plymouth, Dec. 16, 1886; arrived at Bermuda Dec. 27, 1886; sailed from Bermuda for Charleston, S. C., Jan. 1, 1887; encountered cyclone Jan. 2; arrived at Charleston Jan. 4; sailed for Fernandina Jan. 13; thence to Havanna, remaining there for three weeks; thence to Key West, Goram Pass, Bow Pass, Charlotte Harbor, Tampa Bay, Tarpon Springs, again to Tampa Bay; then to Pensacola, St. Andrew's Bay and St. Andrew's Sound; thence to Fernandina, returning to Bermuda on April 17.

YACHT DESIGNING IN BOSTON.—Besides the two large yachts for Gen. Paine and Mr. Iselin, Mr. Burgess has designed this season a steam yacht for Mr. J. M. Forbes, a 45ft. l.w.l. schooner, a 42ft. l.w.l. cutter for Mr. Max Agassiz, a keel catboat for France, a 30ft. centerboard sloop for Japan, a 27ft. sloop for Wisconsin, a 30ft. l.w.l. cutter for Mr. C. F. Adams, 2d; a 32ft. 6in. l.w.l. centerboard sloop for Mr. Allen Ames, of Oswego; a steam yacht for England, a 27ft. centerboard sloop for Florida, a passenger steamer for Portland, Me., the 90ft. l.w.l. fisherman for Boston owners, a 35ft. centerboard sloop for Judge Brown, of Newburgh, a 22ft. 6in. cutter for the Messrs. Cunningham and six catboats.

THE JUBILEE RACE.—Genesta is having a new outfit of spars and canvas for the B Class, and will enter for the Jubilee Race around Great Britain. The other proposed entries thus far are Aline, schooner, Prince of Wales; Gwendoline, schooner, Major Ewing; Cetonia, schooner, Sir E. C. Guiness; Waterwitch, schooner, Lord Revelstroke; Dawn, yawl, F. Harris; Wendur, yawl, H. R. Laing; Florinda, yawl, J. E. & E. Jessop; Corisande, yawl, F. Sartoris; Bridesmaid, ketch, E. W. Fuller; Sleuthhound, cutter, Lord Francis Cecil. The race will start on June 14, from the South End pier, at the moutn of the Thames, and finish on a line from Dover pier to the High Light, on the South Foreland.

THE LAUNCH OF THE THISTLE.—The new challenger for the America's Cup, the Scotch cutter Thistle, was launched on Tuesday last at Henderson's yard, Partick on the Clyde. Besides her designer only a few of those directly interested in her were present. The yacht was hung about with canvas from deck to keel, so that nothing could be seen of her form as she slid into the water. She stuck for a moment on the blocking, but was soon hauled off. She will be rigged at once and will sail her first race on May 28, in the Royal Thames Y. C. match from Southend to Harwich.

A CHALLENGE FROM THE CRUISER.—The following letter from the owner of the well-known Cruiser explains itself: April 22.—*Editor Forest and Stream:* The open boat Cruiser (20ft. 6in.) would like to sail a number of matches during the month of June with boats under 22ft. Should any of your readers who are interested in sport of this character desire such a contest, a communication to the following address will receive attention: "Cruiser, 114 East Twenty-second street, New York."

OSWEGO Y. C.—The first of the annual club books we have received is that of the Oswego Y. C., one of the largest and most active clubs on the lakes, though only in its seventh year. The roll includes 143 active and 24 honorary members, and the fleet numbers 20 yachts. The book is neatly bound in canvas, and contains the constitution, rules, etc., with code and allowance tables.

RESOLUTE.—The old schooner Resolute, lately purchased by Mr. C. A. Postley, will soon haul out at Poillon's for a new bow and other alterations under Mr. A. Cary Smith's direction. The bow will be lengthened some 8ft. on l.w.l., with a modern overhang forward, the masts will be moved forward, mainmast lengthened and jibboom cut off, the sail plan being much improved.

AN EARLY OPENING.—The deadly catboat has begun in good season, and has scored six drownings by the middle of April. Four of these were made at one time on April 17 by the capsizing of a catboat from Communipaw, all on board being drowned.

SEAWANHAKA C. Y. C.—A meeting of the S. C. Y. C. was held on April 25, at which the new constitution was submitted and the by-laws adopted. Twenty candidates are before the club for admission, and fifteen more have been proposed.

SOUTHWARK Y. C.—Officers: Com., James Daley; Vice-Com., V. Y. Dorp; Rear Com., A. Troutt; Measurers, William Baitzel and George Creasey; Sec., Francis George; Treas., Isaac Sharp; Steward, John Snyder.

GITANA.—In addition to a round bowsprit Gitana will, this year, carry a jib and staysail only, sloop fashion. She is now nearly ready and will soon have her new suit of sails, by Wilson, ready for trial.

WONA.—Mr. E. E. Cunningham's cutter, also building by Higgins & Gifford, will be christened Wona. She is 27ft. 8in. over all, 22ft. 6in. l.w.l., 8ft. 6in. beam, and 4ft. 10in. draft.

TRUDETTE.—This name has been given to the cutter built by Higgins & Gifford for Mr. L. M. Haskins. She is 29ft. 3in. over all, 23ft. 10in. l.w.l., 9ft. beam, and 4ft. 6in. draft.

A YACHTSMAN'S SCRAP BOOK.—Under this title Brentano Bros. will shortly publish a book by Mr. J. F. Loubat, one of New York's oldtime yachtsmen.

SAN FRANCISCO.—Mr. H. Peterson has had built by W. G. Stone a schooner yacht 65ft. long, 18ft. beam, which he has named San Diego.

MR. EDWARD BURGESS has been appointed by Secretary Whitney to the commission to consider the designs for the new warships.

HELEN.—Schooner, Mr. C. D. Middleton, arrived at Philadelphia on April 24, after a cruise of six months in Southern waters.

HOPE LESLIE.—This schooner, built last year, is out at East Boston for a 16-ton lead keel. She is a keel boat.

ENTERPRISE, cutter, now owned by Mr. H. H. Hogins, has had a new mast stepped, 5ft. longer than the old one.

VARUNA.—George H. B. Hill, owner of Miranda, has sold his schooner Varuna to Mr. G. L. Rives.

NAMOUNA.—Mr. Jas. Gordon Bennett's yacht was at Colombo about April 1, from Bangkok.

MR. FORBES' STEAM YACHT.—The plating has been completed on this boat.

UNA.—Schooner, will have a shoe added to her present keel at Lawley's yard.

LURLINE.—Schooner yacht, arrived at Georgetown, S. C., on April 2.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

X. Y. Z.—The shells have been tried, but not exhaustively. Of ten shots fired some did just what was desired, others went as solid balls.

H. S., Toronto.—You will find good black bass fishing in Lake Erie either at Kelley's Island near Sandusky, at Point Pele Island below Detroit, or on the St. Clair Flats. In Wisconsin go to Fon Du Lac or Green Bay.

C. H. M.—The New York seasons are: Trout April 1, black bass June 1, with exceptions; ruffed grouse Sept. 1, woodcock Aug. 1, gray squirrels Aug. 1. For Vermont law address Fish Commissioner Herbert Brainerd, St. Albans, Vt.

EAGLE ELK.—1. There are a few buffalo outside the limits of the National Park, but we do not know where they are now to be found. 2. Bozeman, Montana, will be the point to fit out from, and there guides may be had. 3. The arm is large enough.

J. B. A., Wakefield, Kans.—Will you kindly answer through your valuable paper—1. What time black bass bite best in the extreme northern part of Michigan? 2. How early do they commence biting? 3. What are the best localities in those waters to find them? Ans. 1. June, July and September are the best months. 2. June. 3. Bays and inlets.

A. B., South Boston, Va.—1. Where can I obtain a supply of black bass fry? 2. Will California trout live in a pond as far south as lower Virginia? If so, where can I get them? Ans. 1. Write to Col. M. McDonald, U. S. Fish Commission, Washington, D. C. 2. It is very doubtful. Col. McDonald is the fish commissioner of your State and can furnish them.

W. H. B., Nashua, N. H.—I have a 12g. gun, 7 lbs. 6 oz., 31½ in. barrels. It is the best shooting gun I ever owned, the only possible faults being the length of the barrels, and too close shooting with the right. Am thinking of having it cut down to 28in. What effect will that have upon its shooting (barring cutting off choke) as regards pattern, penetration and amount of powder burned? Will it do as good service for an "all round" gun as in its present length? Shall have the right barrel bored cylinder even if I do not have it cut off. Ans.: We have known some guns to shoot better with shortened barrels than they did before. The result cannot be determined with certainty beforehand.

T. M. D., Wheeling, W. Va.—I have a large galvanized iron can holding about 50 gallons of water, for transporting minnows for fishing; the top of the can is pierced with small holes to give them air; it seems almost impossible to keep them from dying, even by constant watering. 1. Is the galvanized iron injurious to minnows or fish? 2. Should the top of can be almost entirely open for air? 3. What number of minnows should be allowed to each by gallon of water, when transported, when watered occasionally? 4. Does pounded ice injure them when put in the can for transportation? Ans. 1. No. 2. Yes. 3. Not more than ten if the fish are over 3in. long, or twenty if under 2in. 4. No, ice is good for them. The colder the water the better they keep. Put in some water plant with fish and they will keep better. We would prefer smaller cans and more of them because of ease in handling. Wrap a wet blanket around your can to cool it.

THE TRAVELERS, of Hartford, does not have to rely on "growth" for the security of its policies; its surplus of $2,089,000 is a sure foundation.—*Adv.*

Round Section Bamboo Rods.

Having been the pioneers in the manufacture and introduction of Section Bamboo Rods, we have always taken great pride in securing and perfecting every improvement in order to maintain our position as the makers of the very best rods. Knowing not only theoretically, but also by long experience, that a properly made round rod is the only absolutely perfect rod, we have invariably refused, and still do refuse, to put our name to any but our "Best" round section rods. While our prices for these round rods are only a trifle more than the prices asked by any other makers, the rods are widely known to be *incomparably superior* and *guaranteed* in the most liberal manner.

We have just finished and put on the market a *new caliber* round rod, 10 feet long, and weighing with the solid reel seat only 7 ounces. This rod has stood the most severe tests, and found capable of killing the largest black bass. The many expert anglers who have handled this rod pronounce it the *best balanced and most perfect rod* in the market.

THE NEW L. C. SMITH HAMMERLESS GUN.

This new gun embodies all the essential features of our hammer gun, together with a new oscillating cocking mechanism and automatic and independent safety combined. This gun is not equalled in ease of manipulation, symmetry, durability and shooting qualities by any hammerless gun made.

Of the eleven gentlemen who broke 100 straight inanimate targets for a place in the Chamberlin Cartridge Tournament prizes, five of them used the "L. C. Smith" gun. The following are the gentlemen: D. C. Powers, Cleveland, O.; Andy Meaders, Nashville, Tenn.; H. McMurchy, Syracuse, N. Y.; Fred Erb, Jr., La Fayette, Ind.; J. C. Hendershot, Cleveland, O.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

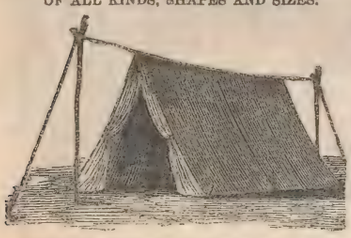
This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is



Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., 39 Park Row.

SPORTSMAN'S
Camping or Fishing Tents
OF ALL KINDS, SHAPES AND SIZES.

Yacht and Canoe Sails of most approved styles. Also awnings for store fronts, windows, yacht boats, etc. New style of Canoe Tents made at low figures Flags, Burgees and covers of all kinds.
